FROM PRINCIPAL'S DESK ………………..

It's a matter of great pleasure that our college is organizing One Day International Conference on 16th February, 2019. The purpose behind this intellectual activity is to provide an opportunity to students, teachers, scholars and academicians to assemble at the one platform and get their ideas exchanged. The title of the conference incorporates multidisciplinary stand-points from where it would be possible to get the present status of changes taking place in each field.

The theme of the conference is quite important as it suggests the growing interest of the students as well as the scholars in management studies and in information technology these days. I highly appreciate this step because a conference on topic like this and that too on an international level is a big challenge to the organizers.

In today's world of globalization where the stream of Commerce is growing and expanding with amazing speed, such seminars and conferences play a very vital role in creating insights among the participants regarding several issues. Today, it is necessary for the students as well as the teachers to acquire application-oriented knowledge. I firmly believe that it should go with solid plans and designs in mind.

Let's therefore go forward with an intense sensibility to acquaint ourselves with new global scenario and innovative techniques that we need to be equipped with the multi tasking capabilities. It becomes our responsibility as an individual to restructure our personality in a new era.

This conference is a step forward in acquiring such capabilities. I sincerely hope that this event might inculcate some application-oriented knowledge among all the participants. The Journal of the conference being presented in six volumes shall be fruitful and meaningful.

It is my duty to express deep sense of gratitude towards the office bearers of Shri Venkatesh Mahavidyalaya, Ichalkaranji as well as the stake holders for their kind support for organizing this conference.

I wish you all the best on this occasion.

Prin. Dr. Vijay Annaso Mane

EDITORIAL …………………..

I am immensely delighted to present this journal of One Day International Conference on '*Advanced and Innovative Practices in Commerce and Management, Science and Technology, Humanities, Languages and Their Role in Achieving Exponential Growth*' being held on 16th February, 2019. This conference will prove to be an excellent opportunity for the participants to interact and exchange their ideas and to discuss new developments in various disciplines. I sincerely hope that the conference will open new avenues and enrich new perspective about many disciplines and the purpose of the conference will be served through discussion of the most of the relevant issues by the resource persons and participants.

The 21st Century is characterized by the rapid pace of change which is transforming the whole world in many ways. From the first Industrial Revolution (IR-1.0) in the late 18th century with steam power and mechanization, the second revolution (IR-2.0) starting in the late 19th century with electricity and leading to assembly lines, and the third revolution (IR-3.0) starting somewhere in the mid-20th century, powered by new Information Technology and Automation, now the business has been riding on the fourth revolution (popularly known as Industry 4.0), with a wide range of new technologies and innovations. The spectrum of fourth revolution encompasses many new technologies and innovations like Artificial Intelligence (AI), Virtual Reality (VR), smart robots, chatbots, the Internet of Things (IoT) and 3D printing and so on and so forth. The fourth industrial revolution is characterized by the increasing digitization of the entire value chain and resulting in interconnection of people, resources, tools and systems, objects and entities through real-time data exchange. The concepts of paperless offices and man-less factories are getting firm roots in the society. Every entity has to live and work in the environments endangered by high levels of Volatility, Uncertainty, Complexity and Ambiguity, popularly termed as VUCA. These aspects of growth and development have touched almost all aspects of human life. This pace of change has raised many questions for which the research scholars have to find the solutions in coming times. The present conference will hopefully give an insight to various such aspects.

As convener of the conference, I take pleasure to welcome all resource persons, delegates, scholars and our knowledge partners on our campus. I consider it my prime duty to express here the sense of gratitude towards all office-bearers and trustees of Shri. N.B. Education Society for their continued patronage, the office-bearers of Shivaji University Commerce and Management Teachers Association (SUCOMATA) and Dr. Sachin Vernekar of Bharat Vidyapith Deemed University's Institute of Management and Entrepreneurship Development (IMED), Pune for being our Knowledge Partners, members of Advisory Committee, Prin. Dr. Vijay Mane for giving me an excellent opportunity to convene this conference, all my colleagues including non-teaching staff and everyone who has directly or indirectly helped me in organizing the conference.

I extend my thanks to Mr. Pramod Tandale for publishing the Special Issue of the conference in his reputed journal 'Aayushi International Interdisciplinary Research Journal (AIIRJ), Mr. Khalil Bablu Mulla for cover design, Mr. Mubin Naushad Mujawar for data and typesetting and Mr. Aslam Makbool Mujawar of Ajij Printers, Kolhapur for timely printing and bringing out the various volumes of the said journal.

Dear participants, we must confess that there is a lot left in us as a teacher and a researcher and the best is yet to come. I hope that all participants in whatever capacity they might have participated in the conference will be contented with our earnest efforts to provide the common platform for deliberations.

A lot of thanks to all of you……………………….

Dr. Naushad Makbool Mujawar,
Convener

THEME OF CONFERENCE ……………….

The conference, founded on four pillars namely internationalism, interdisciplinarity, inclusiveness and interaction, aims to bring innovative academics, researchers, practitioners, scholars and budding students on one common platform to present and discuss the most recent innovations, research concepts, trends, results, experiences relating to several disciplines with a view to foster research relations between universities and industries to gear up the growth and development at a faster rate.

This conference will bring together the best and innovative minds from academic fields and social and corporate world to discuss the issues, challenges, new trends, strategies, innovations and best practices in Commerce and Management, Economics and other Social Sciences , Science and Technology, Computer Science and Information Technology, Humanities and Environment, Education , Literature and Law and the like.

CONFERENCE OBJECTIVES ……………….

(1) To provide a platform for interactive sessions between researchers, practitioners, policymakers and academicians from a range of disciplines and countries

(2) To provide a networking opportunity for exchange of multidisciplinary ideas with a hope to develop the solutions to the current issues that hinders the momentum of economic growth and development

(3) To provide an opportunity to participants to learn about the best and state-of-art technologies, the best practices in various disciplines and global experiences

ROLE AND IMPORTANCE OF HUMAN RESOURCE IN FASHION INDUSTRY

Dr.Sachin S. Vernekar
Dean FMS BVU and Director of Institute of Management and Entrepreneurship Development (IMED) Bharati Vidyapeeth (Deemed to be University), Pune, India
Dorsa Heidari (Iran)
Research Scholar of Institute of Management and Entrepreneurship Development (IMED) Bharati Vidyapeeth (Deemed to be University), Pune, India

Abstract:

To initiate any industry, Money (financial aspects), Material(Raw Material) and Machinery (Technology) are like the fuel , in lack of each and every one of them, that industry does not perform perfectly so that there would not be profitability improvement, nor proper strategy to move accordingly and not even a clear vision and mission implemented for the future of the industry. All the mentioned process above needs to be done by human capitals/resources, and HRM plays a crucial role for this arrangement. Fashion Industry also is one of those fields that needs a unique culture in the organization in order to create the relationship among employees and also between employees and customers; and this target is not achievable but with a real HRM department. (Fashion Apparel)

Key Words: *Human Resource Management, Fashion Industry, Human Capitals*

1. Introduction:

All departments of a company should follow the objectives of the company and try to accomplish them. Strategies designed by human resource department, make this achievement easier .HR is in charge of motivation of employees specially who are often reluctant , dealing with interpersonal or company disputes, increase in sale by helping marketing department and contract management and make the way for new technologies. When the need of an industry depends upon its creativity and design, then employees and human resource looks more important. (Pike, 2018) HR is an important aspect of any industry, from manufacturing, to retail, and in case of fashion industry, to the runway (Gordon). Therefore, in all facets of a company related to fashion, HR is an important function. This industry is a service-based manufacturing field which is always in confrontation with customers and sometimes not even usual ones! Therefore, it is always important to have satisfied and motivated human capitals in the company which unfortunately does not happen frequently in fashion industry. HR is a safe bridge between employees and the customers of the company which are the main part of organizational objectives. The key factor of HR resource in fashion industry is proper staffing, it helps to keep a positive organizational culture which causes happiness and loyalty for employees because every loss in case of human capitals in any corporate causes more consequent problems.

2. Literature review:

Manpower in fashion industry known as the greatest capital for each company in this industry, therefore we can say that human capitals play a vital role in augmentation of productivity and improvement of company's fame, development and they are one of the competitive advantage elements in the organization. The Conference Board Business research association say that, the chief executives across the globe believe in importance and challenging nature of human resource, but they still put it in the 8^{th} or 9^{th} rank of preference. (Pike, 2018)

Function of human resource management in fashion industry is given in a graph below:

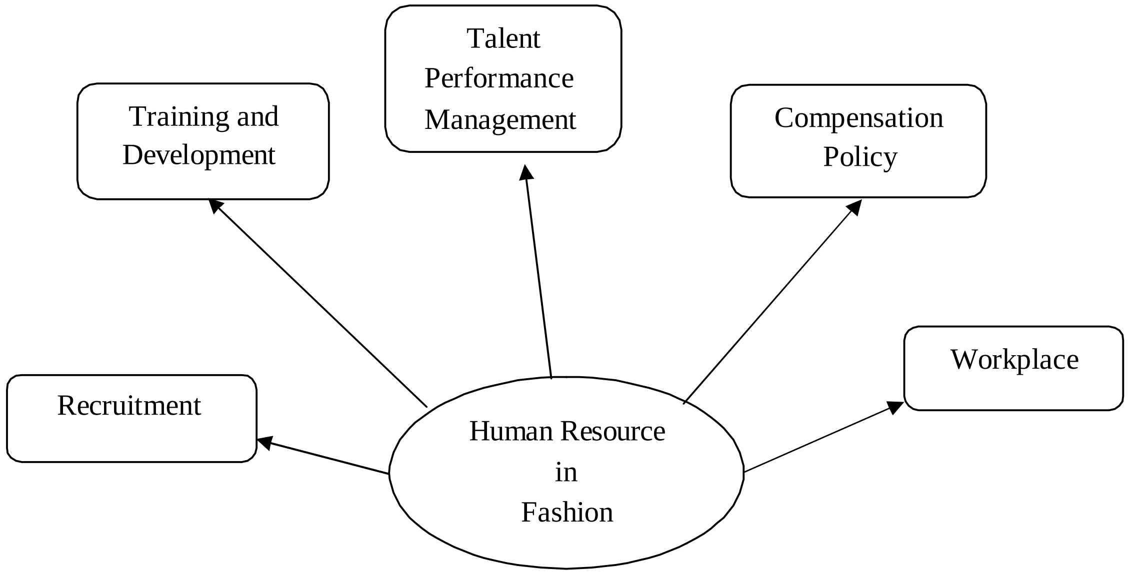

Fig 1: Human Resource in Fashion Industry

As it is shown in the figure above, the importance of human resource management in fashion industry is focused of human capitals more. In fashion industry human resources are the assets of the company so their level of life, comfort and satisfaction must make sense for the managers. Many issues for the survival of a company such as profitability, social compliance, labor problem are for the betterment, so, now it is HR's role to act a chain ring between employees, managers, and customers for satisfaction of all. (Fashion Apparel)

Marcus Wainwright and David Nevillethe designers of Rag & Bone brand, hired Traci Wilk as the vice president of human resources. Now, their company has 550 employees and a Six-member HR team. Traci Wilk says:" Hr should not be an afterthought". She also believes that paying attention and giving value to employees have a direct relation with the result of your business, which is a part of fundamental to Rag & Bone's growth strategy. According to Boston Consulting Group (BCG) , revenue growth among firms that excel at recruitment is three and a half times faster, and profit margins twice as robust. (Pike, 2018)

3. Objectives:

After all the information got through the literature review about Human Resource Management and its importance and impact on fashion industry, now there would be a claim, regarding forming a strong and organized HR for all the fashion companies with the help of objectives below:

- To immune fashion companies from usual HR challenges.
- To utilize the new methods of talent recruitment (i.e. Hire Vue) in fashion industry
- To give more importance to Human Resource Department in fashion industry.
- To develop another attitude about role of human capitals among fashion industry legends. (Pike, 2018)

4. Human Resource Management key functions in Fashion Industry:

Human Resources in all the organizations are one of the key factors, without which running any business is almost impossible. Human Resource department has various functions among which, recruitment, training, talent development, compensation and work environment management are listed as the most important ones in Fashion Industry.

Recruitment

Fashion industry is all about pattern production, designing, styles, ramp walks, it means the face- to-face relationship with human resources, therefore, the recruitment strategies should designed perfectly in order to hire professional manpower. They have the direct impact on customer relations, production, sales, marketing and at the end the financial aspect of the company (Fashion Apparel). But in reality, because of the less attention of fashion companies to the HR , their recruitment practices follow the traditional ways and sometimes it happens by outsourcing of manpower through recruitment agencies. According to the BCG/BoF report, about 40 percent of fashion companies, follow these channels yet, that is exactly why, the rate of job rotation across talents is high among these companies. (Pike, 2018)

According to Dunn, taking a wrong job, for both, candidate as well as employer is a major problem, because it takes at least a year to evaluate it from different aspects. As meticulous as the process of recruitment takes place, chance of hiring more qualified and motivated employees would be higher. They will be more loyal, because they know the value of their job and workplace. (Pike, 2018)

Training and Development

Employees training is another part of HR department in order to make employees familiar with organizational culture and new technologies used in that organization, for betterment of production in that competitive fashion market. This function of human resource takes place in a format of training courses for employees and soft skill trainings for marketing and sales department. There is also existing and new employee's qualification system to assess their work and better determination of their requirements. It is recommended that Human Resource department also needs to align their programs with international ones for better achievement of objectives. (Fashion Apparel) Unlike the mentioned background of importance of training, but according to -the partner and managing director and topic lead for luxury, fashion and beauty at BCG, and one of the authors of the BCG/BoF report- Sarah Willersdorf "Unfortunately, most of the fashion companies do not pay attention to the HR aspects and functions such as planning and training in comparison with the other companies." She also added " sometimes it is matter of HR team but in other cases the issue is resources, because even the heads of departments are aware of problems but they do not give attention to this area of industry as much as the others."(Pike, 2018)

Talent performance management

Effective talent management and leadership development are two important functions of HR, if any fashion business follows, can get a fantastic result. At Rag & Bone, Wilk overcame to this problem with a help of an strategy in the name of "employee-led development" program, which gives employees the ownership of their developments and do not let them sit back and wait for the managers to make them develop. (Pike, 2018)

According to The Boston Consulting Group (BCG) and The Business Of Fashion (BoF) repot on fashion and luxury brands competitions for talent identification, talent gap was known as the greatest challenge in this industry during next 10 years. Half of the international fashion and luxury brands believe this fact, and around 67 percent of companies complained about difficulty in finding creative directors. (Pike, 2018) Another example of successful companies in fashion industry, HUGO BOSS is recognizable.

According to the head of HR, Alicia Gangell, even for famous companies, fight for talents is a not a new challenge. She also claimed about building a talent pipeline with the help of our candidates and other retailers as well. She , as the head of HR prefers to hire according to the attitude and passion of the candidates which means less importance to the resume and more attention to their attributes, so that they follow the "Hire Vue" method that is based on video interviewing. One of the advantages of "Hire Vue" is ease of candidates in pre-recording his/her interview in a preferred place; therefore there would not be any tension or interruption for them while recording. This method can be another form of their CV, Gangell said. "It can be called as one of the best and new ways of interview. Moreover it gives the chance of better recruitment to both candidates and HR people to have access to more talented and eligible individuals. In this way also videos can be saved and utilized for the future" Gangell said. (Bolza, 2016)

Compensation Policy

Salary is one of the motivations for each and every one! Therefore, the designed strategies of salary and compensation should be encouraging enough to keep existing employees continuing and quite attractive for new comers. The salary level should stimulate the competition among workforce. Some motivational payments such as instant bonuses for sale sales team when they get contracts done can help them to reach the performance target. There might be also foreign employees whose compensation should be based on company regulations.

The other way of managing employees effectively, is to involve them in a part of the business. According to Dunn, the founder of Bonobos, "giving personnel, the stock option gives them the feeling of belongingness and importance. No matter who they are, they are having the feeling of being invited." (Pike, 2018)

4. 5. Workplace

Making working place a pleasant environment is a part of HR responsibilities. Employees should be physically and mentally in a safe and secured atmosphere. Implementing basic physical safety tools is the very beginner task for a workplace; such as fire alarms, first aid kits in all departments and monitoring systems. Providing a professional workplace, with all the task and responsibilities described without any confusion are the examples of healthy and safe psychological work environment. A free-communication and respectful workplace can mostly be productive if managed correctly. (Gordon)

5. Methodology

This article is an outcome of a library work and extracted from secondary data like books, websites, reports, articles and case studies (in case of examples). Therefore, the findings, are analyzed, categorized and classified according to a rational order.

6. Findings:

HR must consider the following steps for a much needed organizational development in the fashion industry:

- HR should align its aims and organizational objectives and missions, i.e. quality and productivity in different departments.
- Hr functions in fashion industry should get developed in a smart way for better and effective recruitment, development, training and talent management to support the goals of organization.
- The single focus of HR should move from candidate's CV to their talents and abilities (implementation of " Hire Vue") (Bolza, 2016)

7. Recommendation:

After all discussions and revision of all sources as secondary data, the recommendations are as follow:

- A routine rule regarding keeping the documentations for the employment of employees.

- Proper rules and regulations regarding wages and compensation and not only the monthly payments.
- Training opportunities should be for every employees equally and not only the old employees.
- HRM practices should be follow regularly and according to the conditions (in case of recruitment, training and development, talent management and etc.)
- To maintain a physical and mental secure and safe workplace according to the labor rules and regulations.
- Implementing of new strategies in recruitment for getting access to the skilled and talented candidates and not only the educated ones.

Conclusion:

Fashion industry as one the leading industries in recent years have caught many attentions due to its high recruitment and talent utilization. In addition, fashion industry has two aspects, one aspect is nature of fashion industry manufacturing and the other aspect is service-orientation nature of this industry, which attaches this industry to the customers. Therefore, we can say it is more depended on the human capitals to produce and attract customers with the productions and their behavior. Despite all these facts, the attention to human capitals in fashion industry seems to be very less, therefore, during this article the author finds out various strategies and practices to honor human resource more than expectation.

E-mail: litton1983@gmail.com.

Abstract

Entrepreneurship is the key to the creation of new enterprises that energize and revitalize an economy. In under developed and developing economies, the need of entrepreneurship is been recognized as the major factor of growth in an economy. Entrepreneurship serves as a major and unavoidable catalyst in the process of industrialization and economic development. It is a known fact that for achieving the goal of economic development, promotion of entrepreneurship both qualitatively and quantitatively in the country is imperative. Around the globe, for sustainable and lasting development undertaking of a nation, women's empowerment is an inseparable part of economic development discourse. Since women's empowerment cannot happen without various development activities; therefore it is observed that the involvement of women in various entrepreneurial activities has empowered them in social, economic and cultural fields. Women constitute no more than 14% percent of total entrepreneurs of India. And in Bangladesh, women constitute only above 10% percent of the total number of entrepreneurs in the country. Many women have surpassed their male counterparts especially in the small and cottage industries like handicrafts sector; while many brave & courageous entrepreneurs have excelled in Small and Medium Enterprises (SMEs).However, despite recent progress and empowerment, the majority of women still remain vulnerable at the clutches of lack of quality education, poverty, social stigma, exploitation and deprivations. Women entrepreneurs are often in a less favorable position compared to men in terms of accessing commercial credit from formal financial service providers, more lucrative markets than the traditional local ones, and technology and information to establish and grow their businesses.

Keywords*: Women Entrepreneurship, Entrepreneurial Women, Problems and Challenges, Entrepreneurship in India, Entrepreneurship in Bangladesh.*

Introduction:

Entrepreneurship is the act of creating a business or businesses while building and scaling it to generate a profit. But it is not limited within that, it is also about transforming the world by solving big problems. Like initiating social change, creating an innovative product or presenting a new life-changing solution. Government of India has defined women entrepreneur as "an enterprise owned and controlled by a women having a minimum financial interest of 51% of the capital and giving at least 51% of the employment generated in the enterprise to women.

In India, 'women are no longer restricted to being homemakers that condescending and rather patronizing 'vocation' thrust upon them. They have become newsmakers too in pretty much every aspect of society be it art, education, politics or business' (Nina Lekhi). Despite this development no more than 14% of business establishments in India are run by female entrepreneurs, according to the **Sixth Economic Census** by the National Sample Survey Organization (NSSO). India ranked 29th of 31 countries in the 2015 Global Women Entrepreneurs Leader report by ACG Inc, a consultancy, above only Pakistan and Bangladesh. With 17 points of a possible 100, India fared worse than countries such as Nigeria, Uganda and Ghana.

In Bangladesh, women constitute above 10% percent of the total number of entrepreneurs in the country. Many women have shown their exemplary business acumen and surpassed their male counterparts in the small and cottage industries, especially the handicrafts sector. In addition, many courageous and self-inspired women entrepreneurs have excelled in Small and Medium Enterprises (SMEs).However, despite all the recent progress in advancement and empowerment, the majority of women still remain vulnerable to poverty and social deprivations. Unfortunately, even today, women entrepreneurs faces more challenges compared to men in terms of accessing commercial credit, more lucrative market for their products, technical skills and mentorship, family support, technology and information to establish and grow their businesses.

Aims and Objectives:

The objectives of a research work set the stage for what is to be achieved at the end of the study. Without valid objectives that set the tone of the study, a good study cannot be complete. The main aims and objectives of the present study are:

- **a.** To have a snapshots of the recent development of Entrepreneurship in India and Bangladesh
- **b.** To address the key challenges (i.e. Socio-Cultural, Economical, Personal and Intra-Personal) faced by women entrepreneurs in India and Bangladesh.

Research Methodology:

Studying female entrepreneurship contributes to our understanding of entrepreneurship and human behavior in general, and allows researchers to ask questions that shed light not only on why women behave the way they do but also on the linkages between entrepreneurship and wealth creation, employment, human capital accumulation, labor market dynamics and many others (Minniti et al., 2010).The present study is descriptive in nature. Secondary data from journals, theses, research articles, newspapers, websites and other sources are the source for this study. The researcher has done a through literature review in order to find out issues and challenges pertaining to women entrepreneurs in India and Bangladesh.

Conceptual Development and Details of the Study:

Entrepreneurship is a term, which has acquired special significance in the context of economic growth in the rapidly changing socio-economic and socio-cultural climates both in developed and developing countries (Begum, 1993). It is a unique resource, which is indispensable for any country's economic development. Woman entrepreneurship development is the key variable, which connects socio-cultural environment with the rate of economic development. Women Entrepreneurs may be defined as the woman or group of women who initiate, organize and co-operate a business enterprise.

Development of Women Entrepreneurship in India:

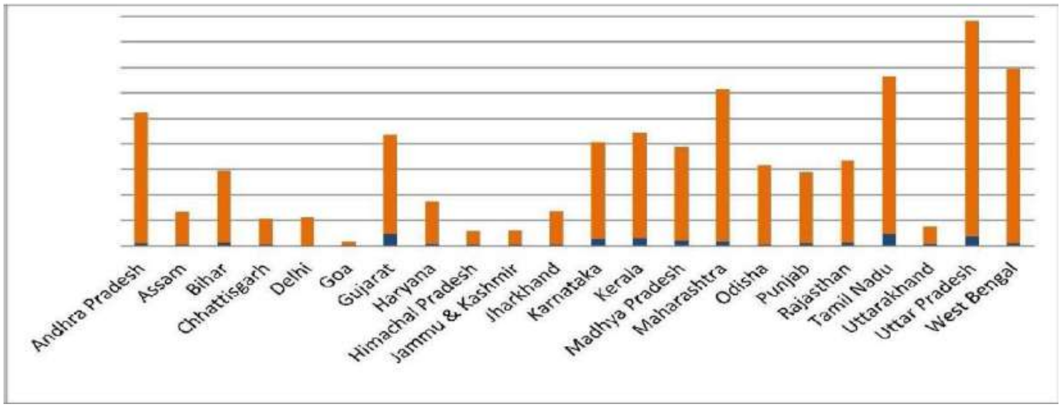
In India, though women have played a key role in the society, their entrepreneurial ability has not been properly tapped due to the lower status of women in the society. It is only from the Fifth Five Year Plan (1974-78) onwards that their role has been explicitly recognized with a marked shift in the approach from women welfare to women development and empowerment. There are 58.5 million businesses in India, of which 8.05 million are managed by women, employing over 13.48 million people. These enterprises range from corner shops to venture-funded startups.

Since the 21st century, the status of women in India has been changing as a result to growing industrialization and urbanization, spasmodic mobility and social legislation. Over the years, more and more women are going in for higher education, technical and professional education and their proportion in the workforce has also been increased. The Indian women are no longer like to be treated as show pieces to be kept at home.

Women entrepreneurs are key players in any developing country particularly in terms of their contribution to economic development. In recent years, even among the developed countries like USA and Canada, Women's role in terms of their share in small business has been increasing.

A study by Amit Singh Khokhar and Bharat Singh on the entrepreneurship situation in India for the MSMEs shows that entrepreneurship is mostly concentrated in unregistered or unorganized sector in India. The duo studied 22 MSMEs in India.

Figure 1: Number of Registered and Unregistered MSMEs in India



Source: *Asian Journal of Multidisciplinary Studies (Vol.4, Issue 5, April 2016)*

The statistics suggests that women entrepreneurship in India is relatively lacking in comparison to peer countries. The percentage of firms with majority share of women is alarmingly low at 2.8%. Also, the percentage of firms with female participation in ownership staggers at paltry 10.7 per cent. These statistics are disturbing and demoralizing.

Table 1: Participation of women in entrepreneurship (Organized Sector)

Economy or Country	% of firms With Female participation in ownership	% of firms With a female top manager	% of firms With majority female ownership	% of permanent Full-time workers that Are female
All Countries	33.9	17.3	10.9	32.9
High Income non-ECD	38.2	22.9	18.5	41.8
High Income OECD	35.1	14.7	9.8	33.7
South Asia	18.4	11.0	9.6	18.3
China	64.2	17.5	-	37.8
India (2014)	10.7	8.9	2.8	14.7

Source: *World Bank Enterprise Data - (Asian Journal of Multidisciplinary Studies (Vol.4, Issue 5, April 2016)*

Features and Categories of Woman Entrepreneur in India:

Women entrepreneurs in India are of various characteristics and categories. A study by Priyanka Sharma (2013) reveals that the women entrepreneurs of India can be divided into 3 categories: The first, are women entrepreneurs who are established in big cities, have professional qualification and deals with non-traditional items. Then the second, are the women entrepreneurs who are established in cities and towns, have moderate financial support and workable education. Finally, the third are the women entrepreneurs who are from village; they lack education, financial support, and business acumen. They are greatly in peril from all sides.

Woman Entrepreneurship Development in Bangladesh:

Many countries have made substantial progress and achievement by involving women in economic activities specifically in entrepreneurship.

In Bangladesh, the magnitude and momentum of women's involvement in economic activities is still very low. Begum (1993) stated that before 1985, Bangladesh had very few women entrepreneurs. In fact women entrepreneurship started developing in Bangladesh after the liberation.

From 1990s, Bangladesh along with other developing nations has started to place attention on women entrepreneurship. Women make about 50% of the total population indicating the opportunity of socio-economic development through their proper utilization. Study shows that the number of women entrepreneurs is around 3000, representing only 2% of the total entrepreneurs in the country, although women constitute about 50% of the population (Ahmed, 2003).

According to the 2010 Labor Force Survey (LFS), the labor force of Bangladesh was estimated at 54.1 million, more than 16 million being women. Not good enough employment opportunities for women are available in Bangladesh. In recent years, Women have achieved good prospects in industry, especially the small and cottage and micro-home-based ones. Their present involvement in manufacturing and in recent times, trends of their involvement in construction activities in growing numbers is likely to continue.

Starting from late 2000, several NGOs started contributing to women entrepreneurship development in the country. The major ones are the National Alliance of Young Entrepreneurs (NAYE), the World Assembly of Small and Medium Entrepreneurs (WASME) Rural Development and Self Employment Training Institute (RUDSETIs) etc.

Types of Industries run by Women Entrepreneurs in Bangladesh:

The entrepreneurship status of Bangladesh population shows that out of 46.8% self-employed citizen, women make only 8.3%. (Source: Statistical Pocketbook, Bangladesh 99, Bangladesh Bureau of Statistics, Government of the People's Republic of Bangladesh, Dhaka 2012 (Page 144). Previously, women's enterprises were confined in sectors that were dominated by traditional gender role, such as food and beverage, beauty parlor, health, education, webbing, tailoring and wholesale and retail apparel trade. But the situation is improving slowly; today women are also in occupations, which were solely controlled by the male before. Now, some of them possess top management post in private and public sector enterprises, sit in the most important policy making bodies of the country, are entrepreneurs and own enterprises. Women are now seen also as owners and managers of cold storage, shipping lines, advertising firms, travel agencies, interior decoration, engineering workshops and even garment industries, etc.

A study by Lamina Binta Jahan (2017) shows number of women entrepreneurs in different divisions of Bangladesh. These women are engaged in various sectors and excelling despite the challenges. The following table would enumerate the statistics:

Table 2: Women entrepreneurs of Bangladesh in 2015

Name of Division (Number of Districts)	Number of Women Entrepreneur	Percent of Women Entrepreneur
Dhaka (17)	155	33.4
Chittagong (11)	81	17.1
Rangpur (8)	68	13.9
Rajshahi (8)	52	12.5

Khulna (10)	46	11.1
Sylhet (4)	31	7.5
Barisal (6)	19	4.6

Source: *Field Survey, BB, 2015 - (European Journal of Business and Management, Vol.9, No.29)*

Despite, all the programs of development and empowerment of women entrepreneurs which have taken place lately; there are still numerous challenges that the women entrepreneurs of both India and Bangladesh are struggling with. These are not only issues for the sake of mentioning it; it is their stumbling blocks, their hurdles on the paths moving for success and living in full extent of their potentials.

Challenges of Women Entrepreneurs in India and Bangladesh:

a) Socio- Cultural Issues :

1) Patriarchal Mentality: Entrepreneurship in business has long been a male bastion, and the idea of women going toe to toe with them won't sit well always. Women are considered only good for home; their business passion is often considered rebellion against male society. Women entrepreneurs constantly have to battle with patriarchal male egos and mental barriers.

2) Religious Customs and Cultural Gridlocks: In rural areas, women are very much abided by cultural barriers, norms and customs (Rahman, Hossain & Miah, 2000). Female entrepreneurs operating in rural areas are bound to follow the cultural codes, religious customs and social norms. Moreover, restricted societal norms do not always allow women to go outside their homes and to be involved in different entrepreneurial activities. All these barriers are hurdles in the growth and development of female entrepreneurs.

3) Not Being Taken Seriously: Comparisons based on gender are cannot be avoided in the business space, and when a woman starts a business, even family and friends may tend to view it as a hobby or a side project to "just keep her busy". Not only family, even financial institutions don't provide ample space for women entrepreneurs in terms of financial support.

4) Work-Life Balance and Pressures: Women often want to please everyone. Women entrepreneur requires to be an "entrepreneur" and "business owner" in one hand and family maintainer on the other hand; these types of multiple roles and responsibilities are very challenging and to cope and maintain a balance is a huge pressure on them.

5) Family Conflicts & Restrictions: Women entrepreneurs face the conflict of performing of home role as they are not available to spend enough time with their families. Their inability to attend to domestic work, time for education of children, personal hobbies, and entertainment adds to their conflicts. In Bangladeshi society many women have to seek permission from their counterparts at every step of their life. A study in Khulna division showed that around 66 percent of the respondents had to seek permission to start-up their business.

b) Economical Issues :

1) Limited Access to Funds and Financial Resources: A prerequisite for starting a firm is to have capital in terms of financial assets and in terms of relevant knowledge assets. Women's position in society has led to a lack of assets in both these aspects. In additions, Bank and other Financial Institutions do not consider women entrepreneurs as proper applicants for setting up their projects and they are hesitant to provide financial assistance. Obtaining the support of bankers, managing the working capital, lack of credit resources are the problems which still remain in the males' domain.

2) Inaccessibility of Credit Facilities: Women's access to risk capital is limited. The procedures of bank loans are often complicated; the inordinate delay in obtaining the loans and running about involved do deter many women from venturing out to start a business. In Bangladesh, the interests' rates of banks loans ranges from 9% to 18%, the interest loan from micro-credits institutions ranges from 12% to

24%. These rates are too high for a prospective entrepreneur.

3) Problems of Women Rights: Women do not enjoy the right over the property of any form and they have limited access over external sources of funds, even getting loans from either a bank or financial institution becomes exceedingly difficult.

4) Shortage of raw materials: Women entrepreneurs find it difficult to procure the required raw materials and other necessary inputs for production in sufficient quantity and quality. The prices of raw materials are quite high and it fluctuates without notice.

5) Marketing Gridlocks and Hassles of Middlemen: Products and services created by women cannot reach the market without the support and channels of men entrepreneurs. Male middlemen suppliers, contractors and exporters dominate the industry. These men take advantage of women isolation in the home and lack of access to credit, supplies and knowledge about the economy of their work .Women find themselves handicapped in the current centralized wholesale market set-up controlled by men. Women entrepreneurs are often even cheated by their male partners in trade through unscrupulous means.

6) Stiff competition: Women entrepreneurs have to face severe competition from organized industries and male entrepreneurs having vast experience. Many of the women enterprises have imperfect organizational set up as refresher. Therefore facing competition from an organized sector becomes a barrier for them.

c) Personal and Intrapersonal Barriers:

1) Lack of Education: Women are generally denied higher education, especially in rural areas in India and even in Bangladesh. Often women are not allowed to enrich their knowledge in technical and research areas to introduce new products. According to UNESCO, Bangladesh has an adult literacy rate of 72.76%. While the male literacy rate is 75.62%, for it is females is 69.9%. This lack of knowledge and gap in education creates a vacuum for women entrepreurship growth and development.

2) Lack of Entrepreneurial Training: Large numbers of women don't have sufficient technical and professional training to set-up a new venture. Having no prior knowledge and technical business acumen, they face dire consequences and fail to survive in the business world.

3) Inadequate Knowledge of Technology: Production cannot meet the demand unless its quality is up to the market requirement (Rahman, Hossain & Miah, 2000).The rural women entrepreneurs are still left behind with traditional technology, which ultimately results into increasing inefficiency. Many of them are still ignorant of how to use modern technology innovatively.

4) Letting Fear Stand in the Way: In general, women can be less prone to taking risks and can let their own fears (such as the fear of failure, fear of success, fear of being on their own etc.) stand in the way of "going for it" and pursuing the path of entrepreneurship.

5) Lack of Network and Mentors: Women usually remain at home, their circle of friends are often limited within their known family members and near kith and kin. In India 14% and in Bangladesh, women constitute above 10 percent of the total number of entrepreneurs in the country, these leading entrepreneurs are rarely seen or can be reached to for assistance and guidance. Having few to guide and mentor, women entrepreneurs suffers for role models.

d) Other Issues:

1) Restrictions on Mobility: Due to primary household responsibilities towards her family, women entrepreneurs are often not in a position to travel frequently and be away for longer periods. Thus, her mobility is restricted. This also has an implication on business.

2) Legal Formalities: Women entrepreneurs find it extremely difficult in complying with various legal formalities in obtaining licenses etc. The procedures of paper submissions, follow ups and other lengthy legal processes are too strenuous for women to handle.

3) Safety and Security at Work place: Working at wee hours due to business reasons is often risky for women as roads and transportations are not safe. Ample amount of studies show how women are sexually exploited due to their weakness. Law and order are still not efficient enough to support the late hour working of women and safe passage to their home.

4) Lack of Infrastructural Facilities: Infrastructural facilities such as transportation, communication and supply of electricity are not at optimum level. These pose a great barrier for entrepreneurship development in the rural area. It is found that about 75% female entrepreneurs in Bangladesh viewed that underdeveloped infrastructure facilities affect the expansion of their businesses.

The government of India and Bangladesh has taken various steps to solve issues of women and women entrepreneurs. These programs are showing some positive results though in a limited way, only future would be determine when complete results of these programs can be tested. The problems enumerated must be resolved to create better environment for the growth of women entrepreneurs.

Conclusion:

Entrepreneurship plays a vital role in economic development and industrial growth of a country. As nearly fifty percent of total population of both India and Bangladesh is female, so it is obviously necessary to develop the women entrepreneurship for the achievement of economic development of the nation. According to Sixth Economic Census released by the Ministry of Statistics and Programme Implementation, India, the average employment in women-owned enterprises is meager 1.67. This is not only low but very pathetic. Women genuinely love their work, are willing to put in those extra hours to make the business succeed, and research ways to make the business better. But women entrepreneurs of both India and Bangladesh face challenges of lack of equal access to education, inequalities in the labor market, lack of finances, poor infrastructural support, less family support, social bias, violence and gender discrimination etc.

It is imperative that more and more government organizations, NGO and the private stakeholders engage to promote women entrepreneurship development and help the women to overcome the existing obstacles. In recent time, whatever development has been done in regards to women empowerment is praiseworthy but not sufficient. Without continuous and fervent efforts in eradicating evils and obstacles on the paths of women entrepreneurs, advancement of women will remain a distant reality and balanced economic development will not be possible.

Abstract

Alpha and Beta are the risk ratios, which are used for determining the return .Many investors prefer a high alpha alongside a low beta compare to the benchmark. This infers returns above market returns without the high volatility risk of large upward or downward swings in performance. This study was based on observed daily share prices on 50 listed stocks on NSE NIFTY Index from January2008 to December 2017 and we have computed log arithmetic for estimate annual alpha and beta coefficient through OLS regressions. Our results reveal that past alpha of the stock are 64 % are not statistically significant different from zero and only 0.08 % of the stock are positively greater than the benchmark index. Furthermore, only 3 companies namely Hindustan unilever Ltd (0.49), Dr Reddy lab (0.47) and Bharti Infratel (0.46) has very least beta co efficient. We conclude that, Alpha and beta are important tools for many investors when it comes to figuring out if their investments are doing well. Higher alpha suggest the potential of the fund manager as well as fund holdings of providing returns and lower beta suggest the lower volatility. JEL classification: G02, G11, G12

Keywords: *Alpha, Beta, NSE NIFTY, Regression.*

Introduction

The dialogue in modern finance stated in the Capital Asset Pricing Model (CAPM) developed by William Sharpe(1964) and John Lintner (1965), proposes that the expected return on an asset is the risk-free rate plus the product of the market return and the asset's **beta**, or its systemic risk. .According to CAPM model, the higher the beta, the higher the expected return should be. This is widely in business and among financial advisors in evaluating the performance of portfolios. The stock price volatility is called systematic risk in the security market. The volatility or unexpected variation in the price is called as systematic risk. The systematic risk or volatility is measured through the beta coefficient. Alpha and Beta are the risk ratios which are used for determining the returns. Alpha is the movement of a stock or portfolio relative to a benchmark index. An alpha of zero means that your stock or portfolio moves exactly the same as the benchmark index. Stocks with beta value greater than one are said to be more volatile compared to stocks with beta value below one. Alpha and beta are important tools for many investors when it comes to figuring out if their investments are doing well. Higher alpha suggest the potential of the fund manager as well as fund holdings of providing returns and lower beta suggest the lower volatility.

Many investors prefer a high alpha (or returns in excess of the benchmark's returns) alongside a low beta (implying that their investment is less volatile than the benchmark). This infers returns above market returns without the high volatility risk of large upward or downward swings in performance. However, if a fund manager or stock has had a high alpha, but also a high beta. Therefore, the researches and market participants are intensely interested in analyzing the alpha and beta movements of the stocks.

Literature Review

A number of empirical studies attempted to investigate the Alpha and beta coefficient of the stocks. Blume (1971) was the first researcher to explore the work on beta stability. Levy (1971) documents that the portfolio betas are stable, while individual security betas are unstable. Altman *et al*. (1974), supported this view that beta is extreme from being stable. Alexander and Benson (1982) find that stocks have varying betas. Black (1972), DeBondt and Thaler (1987) investigate the relationship the stock market and systematic risk. Vipul (1999) concludes that the stability of beta varies based on the size and liquidity of the firmCampbell and Vuolteenaho (2004) classified the betas into two types, good and bad beta, to capture the discount-rate and cash-flow, respectively. Irala (2007) investigated the randomness of beta by using monthly observations of BSE data. Das (2008) concluded that eighty five percent of betas are stable in the Indian financial market. Sarma and Sarmah (2008) used five stocks that are listed in the BSE to test the stability of beta. Balkrishnan and Rekha (2012), also conclude that the beta is not stable over the study period. Mallikarjunappa and Vasantha (2013) studied stability of the beta by using stocks which are part of S&P CNX Nifty and confirm that the market capitalisation, firm size, market development and seasonality in the market influence the stability of the beta. Xia *et al*. (2014) concluded that macroeconomic factors greatly affect company's beta. Dubey (2014) indicates that analysis of beta series helps to know the characteristics of the bull and bearish markets. Harish and Mallikarjunappa (2015), studied the Indian market Microstructure and motivate to analyze the structure of the beta series of the Indian market. Sathyanarayana and Harish (2017) investigates the stability of beta in Indian stock markets for longer time frame and the results show that beta of a portfolio as well as individual stocks vary across the study period. These factors motivate us to investigate the performance of alpha and of beta in Indian stock market. Thus, this study is significant and contributes to the existing literature on stationary of beta in Indian market**.**

Data & Methodology

The study is based on NSE NIFTY companies listed as on December 2017 .The data used for the analysis discussed in this paper are downloaded from the internet using the yahoo finance website .This study was based on observed daily share prices on 50 listed stocks on NSE NIFTY Index from January2008 to December 2017.we have computed log arithmetic mean returns for daily closing prices and to estimate beta coefficient through OLS regressions, we have used individual stock as dependent variable and NSE NIFTY Index as independent variable. We have the observation of totally 536 yearly alpha and beta coefficients for 50 companies, each company having a annual bet for 10 years, only for India bulls housing finance we have data available for 5 years and for coal India we have data for 8 years. Further we have extracted the data of only alpha and beta for all the companies and run descriptive statistics to identify their behavior.

Hypotheses

The null hypotheses are

H_0 : The Intercept (Alpha) is not significantly different from zero

$H_{0:}$ The slope (beta co-efficient) is not significantly different from zero

Empirical Results

We provide the descriptive statistics of yearly alpha and beta co efficient variables of the 50 companies included in the NSE NIFTY as the analysis is shown in the below table 1 & table 2 respectively. The descriptive statistics in the Table 1 shows that the alpha variable computed on a yearly basis for 10 years extracted from the Linear regression analysis conducted at individual companies on a yearly basis, further the this variable separated into two components having the value of alpha and beta value to run the descriptive statistics, this study having the total count of 10, the data for India bulls housing finance and coal India are for 5 and 8 years as available for the study. While similar process is conducted to receive the descriptive statistics shown in the table 2 for beta coefficient for all the NIFTY companies.

Table 1: Descriptive Statistics of Alpha of NSE NIFTY Companies

Source: computed data

We have to test the volatility of alpha value for the individual securities for the period of 2008 to 2017.The descriptive statistics are given in the table 1 where very clear that about 64% (32 out of 50) of the companies mean alpha (0.000), this means that momentum of stock prices of securities moves exactly the same as the benchmark index. Mean alpha values of (0.08%) companies having the positive value of (0.001) which indicate that momentum of the stock is greater than the benchmark index. The analysis shows that only one company (Either motors) have given higher positive mean returns (0.02) out of all the 50 companies analyzed. We find that 22 %(11 out of 50) companies was having negative mean returns of (0.001).

It could be noted that minimum value of alpha is observed for Vedanta limited (-0.013) and maximum value of (0.005) for Bajaj Finance Limited and Bajaj auto Limited. The results from Skewness show the asymmetry of the returns distribution around its mean .While for the Tata steels ltd(0.394) , Maruti Suzuki India Ltd (0.250) ,Hindustan Unilever ltd (0.210) and Cipla Ltd (0.320) has approximately symmetric of returns .The skewness are highly skewed for Asian paints (-2.776) and Bajaj auto ltd(2.394). This can confirm that returns were asymmetric and did not conform to normal distribution during the study period. We note that alpha value are not significantly zero for all the stocks, here we can partially accept the null hypothesis as 64 % of the stocks having alpha value near to zero in the selected sample.

Source: *computed data*

The descriptive statistics of beta co-efficient for NSE NIFTY have been presented in table 2. It could be observed that about 32% (16 out of 50) of the companies mean beta are greater than , this means stock prices of securities are highly volatile and move greater the benchmark index. Among this only 3 companies Hindustan unilever Ltd (0.49) ,Dr Reddy lab(0.47) and Bharti Infratel(0.46) has very least beta co efficient .the volatile stocks are found be Tata Motors (1.49) , Hindalco Industries (1.52) and ICICI Bank (1.53) are having higher movement of stock price compare to benchmark index . Among this 50 companies 62 % (31 out of 50) while have a beta values very less sensitive to benchmarks market index .As far as skewness is concerned 32 %(17 out of 50) of the companies has negatively skewed. We found the beta co-efficient are not near to zero and varying from the +1 to -1 volatility, therefore the null hypothesis can be strongly rejected.

Conclusion

This research paper contributes to the extensive literature on momentum of market variable identified by William Sharpe model on measurement of systematic risk and importance of Alpha and Beta Co efficient in the estimating the performance of the given securities. We have attempted to measure the volatility and predictability of the stocks by estimating the values on the basis of daily returns. First, we find historical alphas to which has power in predicting the individual returns over the benchmark index which shows the higher alpha stocks for better value investment. In addition, we also measure the beta co efficient, which shows higher, and lower return volatility. Our results reveal that past alpha of the stock are 64 % are not statistically significant different from zero and only 0.08 % of the stock are positively greater than the benchmark index. Furthermore, only 3 companies namely Hindustan unilever Ltd (0.49), Dr Reddy lab (0.47) and Bharti Infratel (0.46) has very least beta co efficient. Moreover, we gain further insight relate to behavioral movement of stocks in the index to and identified the low volatility stocks and high predictability stock in the National Stock Exchange of India Ltd which is the leading stock exchange in India and the second largest in the world by number of trades in equity shares.

RECRUITMENT TO RETIREMENT: A ROADMAP FOR TEACHERS IN HIGHER EDUCATION

Prof. A. M. Gurav
Dept. of Commerce and Management , Shivaji University, Kolhapur- 4, Maharashtra, India
e-mail: *annsahebg@yahoo.co.in*

Abstract

Globalization, Choice Based Credit System (CBCS), COs, POs, PSOs and Outcome Based Education (OBE) are the vibrant words in Higher Education. Due to globalization, really western doors are opened for higher education. The basic Indian higher education was, is and will be rich in the global context e. g. Takshashila and Nalanda Universities, Convents Schools, Samarth Ramadas's educational thoughts, Tukarama's educational thoughts and A.J. Kalam's education thought. At present HE is in dilemma due to different reasons including Recruitment, Temporary Teachers, Career Advancement Schemes, Faculty Training, Orientation Programmes, Refresher Courses, Workshops and Seminars. All stakeholders are the 'Pandawas and we teachers are the 'Sarathies' in Higher Education. To face the challenges in HE ancient and modern approaches are required for Recruitment to Retirement (R to R).

Key words: *CBCS, COs, PSOs, Sarathies, R to R.*

1. Introduction:

Globalization, Choice Based Credit System (CBCS), Course Outcomes (COs), Programme Outcomes (POs), Programme Specific Outcomes (PSOs) and Outcome Based Education (OBE) are the vibrant words in Higher Education (HE). Due to globalization, really western doors are opened for higher education. The basic Indian higher education was, is and will be rich in the global context e. g. Takshashila and Nalanda Universities, Convents Schools, Samarth Ramadas's educational thoughts, Tukarama's educational thoughts and A.J. Kalam's education thought. At present HE is in dilemma due to different reasons including Recruitment, Temporary Teachers, Career Advancement Schemes, Faculty Training, Orientation Programmes, Refresher Courses, Workshops and Seminars. It has observed that, from Recruitment to Retirement, there are number of issues, which affect on qualitative education. All stakeholders in HE are the 'Pandawas and we teachers are the 'Sarathies' in Higher Education. We Sarathies will not lift any weapon but we are the great warriors in Higher Education. To face the challenges in HE ancient and modern approaches are required for Recruitment to Retirement (R to R). The **W**orld is full of **T**hreats and **O**pportunities (WTO) where students have to face the challenges and for which teachers to make them competent. Considering vast history of Indian higher education, the all stakeholders includes Students, Teachers, Principals, Directors, Management, Parents, Society, Policy makers and Government have involved in 'Recruitment to Retirement: A Roadmap for Teachers in Higher Education'.

2. Objectives:

a. To study the Recruitment to Retirement activities of the Teachers in Higher Education.
b. To study the skill development of the teachers for employment enhancement of the students.

3. Research Methodology:

This research paper is an attempt to explore the Recruitment to Retirement of Teachers in Higher Education. The researcher has discussed with 20 Professors and Deans from India for three days in a round table workshop. The designated stall-ward Professors and Deans has contributed their views regarding Recruitment, shortage and recruitment of temporary teachers, career advancement schemes (CAS) in university and colleges, faculty training, orientation programmes, refresher courses, workshops and seminars etc. The rigorous discussion has undertaken in three days and the outcome of this discussion is this paper which is a conceptual nature. It is declaimer that the purpose of this paper is not to blame/ critics anybody, but only to put facts before the learnate academicians.

4. A Roadmap for Teachers and Teaching Skills:

I. Recruitment of Regular Teachers: It was observed that there is s shortage of faculty at all levels in colleges and universities. There are issues like state government is not allowing to recruit the faculty, lack of rolling advertisement, litigations, policy of UGC and state government differs, roster issues, student-teacher ratio, lack of financial autonomy, beaurocratic delay, short listing criteria are not uniform in all universities, local politics, confusion due to frequent amendments in regulations etc. Mostly sanctioned posts are filled as Contractual, Part Time base, CHB, Sahayak Adhyapak, Guest Faculty, Academic Consultant, Visiting Faculty, Adjunct Faculty, Emeritious Faculty, Term Based Contract etc basis. These teachers are not able to apply for research funding and not able to get any long term benefits. Due to uncertainty about the career of the contractual teachers, it is very difficult to maintain commitment as a teacher. It is noted that the contractual teachers suppose to do the non teaching work as an additional responsibility, which affect of academic performance.

II. Recruitment of Temporary Teachers (RTT): It is discussed on nomenclatures of temporary teachers. It include Contractual teachers on sanctioned post, Contractual teachers on non-sanctioned post, Full time guest faculties, Part time guest faculties, Ad-hoc teachers, Clock hour basis teachers, Adhyapak Sahayak, Visiting teachers, Adjunct faculty/professors, Academic assistants, Teaching assistants, Teaching associates, Lecturers, Guest assistant professors. The key issues of temporary teachers are recruitment policies and guidelines where most of the State Governments are reluctant in giving NOCs for the new posts in colleges and universities. Although UGC has clearly stated guidelines for the appointment of temporary teachers. Since the nature of employment is temporary, they don't have any rights or say on the issues like work lot distribution, the choice of subject or number of lectures per week etc. Usually employers exploit their helplessness by giving them more lectures and other duties like invigilation, assessment, (internal/external), responsibilities of curricular and extra –curricular activities. One of the major issues faced by the Temporary Teachers is that they are paid a meagre amount Rs. 15,000 to 35,000 per month, since the nature of employment is temporary, the candidates are appointed as per the need of the organization which ranges from 6-7 hours per week to a semester or 11 months period. Temporary teachers are not given importance in academic and research events like organizing any seminars/conference/workshop etc. Temporary teachers are not allowed to participate in academic programmes like refresher courses, orientation courses, seminars, workshops etc. They are not eligible for applying for research grants because their appointment is either for six months or for 11 months. They always feel job insecurity and fear of not getting extension of the service. It is also found that the dignity of temporary teachers not maintained in most case. Majority permanent teachers do not count them at par with them. These teachers' have works more but not on paper.

III. Career Advancement Schemes (CAS): UGC Regulations for promotion of teachers to next cadres under CAS are implemented across the colleges and universities. The understanding, comprehension, interpretations and implementations have variances in different Universities. The CAS promotions are not taking place on time in universities and colleges (except exception) due to number of reasons. The university follows the procedure as prescribed by UGC in their regulations time to time. The teachers who wish to apply for the same put their applications as per the notification of the universities. IQAC or any other similar body verify candidates' API scores and screen the applications. The scrutiny of the applications is done by IQAC Coordinator, Dean and HOD. The selection committee is formed with Vice Chancellor and the representative from Government such as Joint Director, Higher Education. The selection committee interviews the candidate and recommends to the higher authority. It has observed that the slight difference in procedure of State Universities, Central Universities and Private Universities CAS promotion. In some of the states, this activity is done on a mass scale. All the eligible teachers from Government aided colleges are called to a district level camp/ *mela* where the procedure is completed in a stipulated time of 3 days or so. This is an easier process as the teachers are called with their verified API scores; the Joint Director approves their placement in the higher cadres. Self Finance University departments and Un-aided colleges; where UGC scale of pay is given, is done at University/ college level. The Universities and Government Aided Colleges are routinely doing the CAS related activity and placements of teachers in the higher grades, but some time delayed some or other reason. There are many challenges and problems in the procedure. The changing UGC regulations are pivot source of interpretations. UGC regulations 2010, 2013 and 2018 on CAS are not implemented in word and spirit. The eligibility for placement/ promotions to higher cadre includes attending orientation and refresher courses. Most of the refresher/ orientation courses are over-crowded to accommodate more faculty members due for promotion. Hence the core purpose of the training is lost. Further there are some specialized subjects where no refresher programs are available. UGC regulation 2018 on CAS has created confusion in terms of requirement of attending orientation program and refresher courses. Self supporting institutions are not willing to send the teachers for orientation/ refresher programs. The UGC list of approved journals is also posing a challenge. As a teacher has published his work in some journal approved by UGC; but when he is going for CAS, the removal of the Journal from the UGC list; creates a problem. This needs to be addressed. UGC has proposed the online courses for the training of teachers/ faculty development. The online training courses are of 40 hours duration. The face to face mode of refresher courses is 21 day and every day-say 7 hours. How can we equate the two different modes of teacher training? Though; the UGC is promoting SWAYAM and online courses. One to one training programs are more effective. The disciplines of the teachers, who have been attending orientation / refresher courses, have issues. A teacher working in self supported, un-aided colleges/ department/ courses lose their years of experience if they want to apply for the aided college/ university department.

IV. Faculty Training, Orientation Programmes, Refresher Courses, Workshops and Seminars: It has observed that the teachers are less aware about self development, unaided college teachers are not getting any benefit of faculty development programmes, teachers are reluctant to join orientation programmes (OP) and refresher courses (RC), teachers' don't want to disturb their comfort, a few teachers are interested to acquire knowledge and skills through faculty development programmes, new and innovative ideas are not demanded from the teachers, limited funds to HRDCs, shortage of funds for seminars and workshops, duration for OP is 28 days and RC is 21 days; which is not suitable to the teachers for FDP, Principals/ Directors are not allowing to attend OP and RS because academic of the students will hamper in the respective college, ARPIT programme is 40 hrs and OP and RC courses duration is more. There is confusion regarding duration for FDP and equivalence, workshops, conferences, seminars participation and paper presentation duration is limited, which is not giving justice for FDP, seminar, conference and workshop mantra is "Seating- Eating-Chatting-Slipping-Whatsapping-Certificating etc". It is also observed that lack of good number of Resource

Persons in specialized areas, same Resource Person has invited repeatedly, Resource Persons caliber need to be checked and lack of updated Resource Persons. Along with these issues lack of five years plans for FDs, no long term policy for HRDCs, specific curriculum for OP but not for RC, temporary teaching staff is more, quality of OP and RC is doubtful, no tailor made programme for OP and RC, lack of innovation is OP and RC programmes, lack of proper examination/ evaluation system for OP and RC etc.

5 Suggestions:

I. RRT: It is suggested that State university teacher's recruitment should be as like Central University. Strict and uniform compliances of UGC Regulations, 2018 and as amended time to time from the State/ Central etc without an exception. Time bound recruitment programme has to introduce by the State Governments and reinstating the lapsed positions as that of IIMs, IITs and IISs etc. Teachers should be appointed as per student-teacher ratio. The ration should be maintained as 20:1.

II. RTT: Universities should have a well-defined ordinance for the recruitment of temporary teachers. The procedure for the appointment of temporary should be as per UGC norms and uniform pan India. Salary of temporary teachers should be on par with regular faculty members and should be revised from time to time on the basis of the principle of equal pay for equal work. Temporary teachers should be allowed to attend soft skill development and in-service education programmes (OP, RC, seminars and conferences, workshops, symposia and training programme). Temporary teachers should be given at least basic and HRA along with other allowances (Since HRA and other allowances are being given to the project assistant/ research scholars). Experience of temporary teachers should be considered for future permanent appointment. All types of leave should be granted to temporary teachers. Pay should be given to the temporary teachers based on their teaching experience and academic qualifications. Exploitation Prevention of Temporary Teachers Act/regulation should be prepared. UGC need to prepare comprehensive uniform policy for contractual teaches at national and state level.

III. CAS: CAS is very important motivational tool to the teachers. Grievance redressed procedure for CAS to be created at every university level to take care of the problems faced by the teachers. Periodically CAS should be exercised. It should be undertaken in once in three months. Administrative support should be extended to entire CAS process as full cooperation of the administrative staff is mandatory. UGC regulations should be kept consistent for a reasonable period of time. Self financing colleges where UGC pay scales are implemented should have CAS. The mass procedure may be conducted if the need be to address many cases at the same time. API scores, publications, need more rationalization considering quality and all faculty teachers cannot be compared on the same scale. In certain disciplines it is difficult to publications in scopus indexed journals, with impact factors and check for plagiarism as per UGC regulations, where some alternative arrangement should be made. .

IV. OP& RC: It is suggested to develop skills and employment enhancement of the students, teachers' participation in training programmes through OP and RC awareness. Private colleges should allow their teachers to participate in OP and RC. Medium of instruction is in regional language and Hindi. Self respect and moral value education should be provided to all teachers. Teacher should take minimum one activity every year e.g. research paper writing, book writing, e-material development, audio-visual material development, case writing, OP, RC etc. College should conduct two sessions per year for creation of awareness and brain storming session for FD. UGC, MHRD should provide substantial financial assistance to HRDCs and colleges. Central and State Universities should be funded substantially and equally. CSR funds can be diverted to FDPs. University affiliation fees should be spend on FDs. Independent body should be established for organization and monitoring seminars, conferences, workshops, OP and RC for self supportive and Government colleges. Short and long term programmes should be organized under OP and RCs. Ten days OP and RC should be organized. Daily 4 hrs programme should be organized, so local teaches will join along with their daily work. UGC must issue order to Principals and Directors to relive the Teacher for OP and RC. Face to face training is required and not online training. Seminar, conference and workshops should be arranged in minimum 3 years. University wise, State wise, Nation wise Resource Persons' list should be prepared. One Resource Person should be allowed only for three places and six sessions per year. Resource Person must be Ph D/ 10 year academic/ industrial expression. Impact of OP and RC should be measured. HRDC should function properly. OP and RC syllabus should be designed properly. Proper use of ICT is essential for FD. Interdisciplinary and multidisciplinary OP and RC should be organized. Temporary teachers should be incorporated for OP and RC. Tailor made and need based programmes should be designed. Bring innovation in OP and RC programmes as per subject. OP and RC examination system should be revised includes objective, descriptive, online, continuous evaluation, case study based etc. Participation-Teaching-Training-Learning-Evaluation quality should be improved. Regular accreditation of HRDC by NAAC is essential to improve the quality of HRDC.

6. Conclusion:

The above discussion and scenario is very depressing for the teachers working in universities and colleges. The motivation for the teachers to carry out their day to day teaching activities, research, publication, guidance etc gets hampered. If the process is on time and fair, the level of contribution and performance will increase and will benefit the organizations. In short Globalization, CBCS, COs, POs, PSOs and OBE are possible if teachers are appointed effectively and regularly. The basic Indian higher education will be rich in the global context if R to R is effective. Recruitment, Temporary Teachers, Career Advancement Schemes, Faculty Training, Orientation Programmes, Refresher Courses, Workshops and Seminars etc should be effectively implemented for the betterment of HE. The paper writer has been imparting different types of skills with the help of teachers. These activities have shown as follows.

Trainers Training at Infosys, Mysore

Skill on Wheel

Skill Training at Infosys, Pune 1600 students from SUK 19.1.19

Skill Training at College

Activity Base Skill Training

Skill Training to Trainers

Trained Trainers

Trainers Training at SUK

It is observed and studied by the researcher that Employability Skills should be provided to the students and for whivh OP and RC should be effectively organized. It is noted that 7 Ps (Product, Price, Place, Promotion, Purpose, Position and Proportion) and 7 Ss (Syllabus, Support, System, Strategy, Staff, Students and Studies) mix should be used for imparting the knowledge and skills. The employability skills are ….

I. Convergent Thinking Skills:		II. Divergent Thinking skills:

A STUDY ON AWARENESS LEVEL OF VARIOUS INTERNET SERVICES AMONG THE FACULTY MEMBERS WORKING IN THE MANAGEMENT INSTITUTES UNDER THE JURISDICTION OF SHIVAJI UNIVERSITY, KOLHAPUR

Dr. Mohite Pratapsinh.V.
Associate Professor & Head, Department of Commerce Arts & Commerce College, Ashta
Mr. Purushottam A. Petare
Assistant Professor, Sanjay Ghodawat University, Kolhapur

Abstract

The aim of the research paper is to study the awareness level of various Internet services among the faculty members working in the Management Institutes under the jurisdiction of Shivaji University, Kolhapur. The study demonstrates and elaborates the various aspects of internet services with respect to awareness such as E-mail, www (world wide web), Search engines, Remote login (Telnet), File Transfer Protocol, Archie, Discussion Group & Blogs, Bulletin Board Service, Frequently Asked Questions (FAQs), Chatting/ Networking Sites etc. for the present research study the data was collected from 143 faculty members through the structured questionnaire which consist demographic questions like Age of the faculty, Academic qualification, Designation, appointment type, and years of Experience etc. researcher has made an attempt to test the hypothesis statement Ho Knowledge level of faculties for internet services do not varies as per their demographics. To study the knowledge level of the faculties for internet services the list of internet services was prepared as faculties were asked to grade their knowledge level for those services on five-point scale. Here 1 represents not at all aware and 5 represent fully aware. As per the hypothesis testing it is concluded that, Knowledge level of faculties for internet services do varies as per their demographics.

Keywords: *Management Faculty, Internet Services, Demographics and Awareness Level*

Introduction:

The internet provides wealth of information to the faculty members to get current trends and knowledge about the various subjects. The ICT tool internet provides a wealth of information to the faculty members as well as students. In modem information era, internet has become an invaluable tool for teaching, learning and research. It has changed the traditional methods of research, preserving, retrieving and communicating of information to academic community. The benefits are so great that there is no aspect of life untouched without an ICT &internet application. Internet can help faculty members to get the variety of information in their concerned subjects without time lag and that can be incorporated into their teaching.

Research Methodology:

A) Primary Data Collection: - The study includes both primary as well as secondary data collected from 143 MBA faculty members. (The data was collected through structured questionnaire from the faculty members working under jurisdiction of Shivaji University, Kolhapur.)

B) Secondary Data Collection: - The secondary information has been obtained from the books, websites, magazines, journals and newspapers to study the relevant aspects.

Data Analysis And Interpretation Gender—wise distribution: Table depicting the Gender—wise distribution.

Particulars	Gender wise Distribution Frequency	Percent
Male	82	57
Female	61	43
Total	143	100

***Source**: Survey Data*

Table 4.l depicting the gender—wise distribution of the faculty members. it shows that out of 143 faculty members 82 are male& 61are female.

Table 4.2 Age—wise distribution.

Table 4.2 depicting the Age—wise distribution.

Age Years	Age wise Distribution Frequency	Percent
21-30	44	31
31-40	70	49
41-50	24	17
51-60	5	3
60+	0	0
Total	143	100

***Source**: Survey Data*

Table 4.2 depicting the age—wise distribution of the faculty members and it shows that 49 percent of faculty members are within the age group of 31-40 years. 31 percent faculty members are from 21-30 years of age group, 17 percent are from 41-50 years of age group and 3 percent faculty members are from 51-60 years of age group. It can be interpreted that, most of the faculty members are from age group of 31-40 i.e.49 percent followed by the age group 21-30 i.e. 31 percent. It is also interpreted that, there is no faculty member found from age group above 60 years.

Table 4.3 depicting the Academic Qualification.

Table 4.3 depicting the Academic Qualification

Particulars	Academic Qualification Frequency	Percent
M.Phil.	18	13
Ph.D	23	16
Pursuing Ph.D.	26	18
Pursuing M.Phil.	14	10
Master's	62	43
Total	143	100

***Source:** Survey Data*

Table No. 4.3 depicts the Academic Qualification of the faculty members. From the table & graph it shows that 43 percent faculty members are having Master's Degree, 18 percent are pursuing Ph.D. degree, 10 percent are pursuing M.Phil. Degree, 16 percent Faculty members are having Ph.D. degree and 13 percent are having M.Phil. Degree.

Table 4.4 depicting the Designation of the faculty members.

Table 4.4 depicting the Designation of the faculty members.

Particulars	Designation Frequency	Percent
Assistant professor	96	67
Associate Professor	32	22
Professor	8	6
Librarian	7	5
Total	143	100

***Source**: Survey Data*

Table 4.4 depicts the Designation of the faculty Form the table & graph it shows that 67 percent faculty are Assistant Professor, 22 percent are Associate Professor, 6 percent are Professor and 5 percent are Librarian.

Table 4.5 depicting the Appointment Type

Table 4.5 depicting the Appointment type.

Particulars	Appointment type Frequency	Percent
Permanent	66	46
Probation Period	15	11
Ad-hoc	53	37
Visiting	9	6
Total	143	100

***Source**: Survey Data*

Table 4.5 depicts the Appointment type of the faculty members. From the table & graph it shows that 46 percent faculty members are permanent, 37 percent are on Ad-hoc Basis, 11 percent are on Probation Period and 6 percent are Visiting Type of Appointment.

Table 4.6 depicting the Teaching Experience

Table 4.6 depicting the Teaching Experience

Particulars	Teaching Experience Frequency	Percent
Less than 1 year	4	3
1 to 5 year	44	31
6 to 10 years	64	45
More than 10 years	31	21
Total	143	100

***Source**: Survey Data*

Table 4.6 depicts about the Teaching Experience from the table & graph it shows that, 31 percent faculty members having 1 to 5yearsof teaching experience. 45 percent faculty members are having 6-10 years of teaching experience, 21percent are having more than 10 years' of teaching experience and 3percent faculty members having less than 1 year of Teaching Experience.

Table 4.7 depicting the Experience of Internet Use.

Table 4.7 depicting the Experience of Internet Use

Particulars	Experience of Internet Use Frequency	Percent
Less than 1 year	0	0
1 to 5 year	12	8
6 to 10 years	67	47
More than 10 years	64	45
Total	143	100

***Source**: Survey Data*

Table 4.7 depicting the Experience of Internet Use. Form the table & graph it shows that; 47percent faculty members are having 6 to 10yearsof experience regarding using internet. 45percent faculty members are having more than 10 years of experience regarding using internet and 8percent faculty members are having 1-5 years of experience of using internet.

Table 4.8 depicting the Frequency of Internet Use.

Table 4.8 depicting the Frequency of Internet Use

Particulars	Frequency of Internet Use Frequency	Percent
Daily	131	92
2-3 times a week	12	8
2-3 times a month	0	0
Once in a month	0	0
Total	143	100

***Source**: Survey Data*

Table 4.8 depicting the Frequency of Internet Use by the faculty members. From the table & graph it shows that, 92 percent faculty members are using internet Daily, and 8 percent faculty members are using internet 2-3 times a week.

Table 4.16 depicting the Awareness of Various Internet Services.

Table 4.16 depicting the Awareness of Various Internet Services.

Sr.No	Particulars	To full Extents Aware	To some Extents Aware	Neutral	To Little Extends Aware	Not at All Aware
1	Electronic Mail	124	19	0	0	0
2	World Wide Web	90	42	03	0	0
3	Search Engine	97	38	05	3	0
4	Telnet	17	51	34	22	19
5	File Transfer Protocols	27	54	30	14	18
6	Archie	19	44	33	15	32
7	Discussion Group /Blogs	33	43	22	23	22
8	Bulletin Board Services	18	44	28	22	31
9	Frequently Asked Questions	36	45	23	25	14
10	Chatting/ Networking Sites	40	72	7	15	9

Source: *Survey Data*

From the table it shows that, faculty members aware up to full extents regarding Electronic Mail i.e. 124 Faculty Members, 97 faculty members aware up to full extents regarding Search Engine and 90 faculty members aware up to full extents regarding World Wide Web internet services. From the table it is interpreted that, very few faculty members are aware up to full extents regarding Telnet service i.e. 17 faculty members. 27 faculty members regarding file transfer protocol and 19 faculties aware up to full extents regarding Archie internet services.

Hypotheses of the study:

- H0: The Knowledge level of faculties for internet services do not varies as per their demographics.
- Ha:The Knowledge level of faculties for internet services varies as per their demographics.
- **Independent Variable:** Age of the faculty, Academic qualification of the faculty, Designation, appointment type.
- **Dependent variable:** The Knowledge level of faculties for internet services
- To study the knowledge level of the faculties for internet services the list of internet services was prepared as faculties were asked to grade their knowledge level for those services on five-point scale. Here one represents not at all aware and 5 represent fully aware.
- The list is as follows.
  1.E-mail
  2. WWW (World Wide Web)
  3. Search engines 4.Remotelogin (Telnet)
  5. File Transfer Protocol (FTP)
  6. Archie 7.Discussion Group/ Blogs
  8.Bulletin Board Service (BBS)
  9. Frequently Asked Questions (FAQs)
  10. Chatting/ Networking Sites

Hypothesis Test used: Here respondent has graded their awareness level for each services. Hence it is measured at ordinal level, so to test the hypothesis non-parametric test is used. The Kruskal-Wallis test offer the solution to test the hypothesis that whether there are statistically significant differences between two or more independent groups (Kanji, 2006).

Hypothesis-H0: **The Knowledge level of faculties for internet services do not varies as per their demographics.**	**Calculated Value**	**Explanation**	**Accept /Reject Of H_0**
H0: The awareness level towards using internet do not vary as per the age of the faculty.	Search engines (P=0.027), Frequently Asked Questions (FAQs) (P value = .011).	search engines and frequently asked questions awareness level of the faculty differs to age of the faculty	Reject
H0: The awareness level towards using internet do not varies as per the qualification of the faculty.	Search engines (P=0.027), Achieve (P value=0.025), Discussion Group/Blogs (P value=.004) Frequently Asked Questions (FAQs) (P value = .027) and Chatting Networking Sites (P value=0.012).	Search engines, Achieve, Discussion Group/Blogs, Frequently Asked Questions (FAQs) and chatting Networking Sites for these internet services awareness level of the faculty differs to qualification	Reject
H0: The awareness level towards using internet do not varies as per the designation of the faculty.	Remote login (P value=0.041<0.05).	remote login internet service awareness level of the faculties differs to designation	Reject
H0: The awareness level towards using internet do not varies as per the nature of employment of the faculty.	for all internet services P value is greater than 5 percent level of significance	It is concluded that awareness level of the faculties for internet services is independent of their nature of employment	Accept
H0: The awareness level towards using internet do not varies as per the years of experience of the faculty.	for all internet services P value is greater than 5 percent level of significance	It is concluded that awareness level of the faculties for internet services is independent of their years of experience.	Accept

From the result of hypothesis testing it can be concluded that, Knowledge level of faculties for internet services varies as per their demographics.

Conclusion:

Drastic changing Developments in information and communication technologies due to internet have great influence & impact on each and every sphere of academic activity. We all are using Internet and its various tools in education for more than three decades, and today Internet is accepted “unconditionally” as an integral part of our whole educational system. The study reveals that the awareness level of the faculty members towards various internet services varies as per the demographics. Most of the faculty members are aware about the electronic mail, World Wide Web, search engines and chatting services provided by the internet but many of them unaware about telnet, Bulletin Board Services, Discussion Groups, Frequently Asked Questions and Archie services.

A STUDY OF ATTITUDES AND EXPECTATIONS OF CELL PHONE USERS OF KOLHAPUR DISTRICT

Dr. A. S. Bagwan
Assistant Professor, BMCC, Pune
e-mail id: *asmabagwan05@gmail.com*

Abstract

The present research paper has highlighted attitudes and expectations of cell phone users of Kolhapur district. The researcher has studied responses of 480 cell phone users on a five point Likert scale. The factors showing customer expectations are classified into three categories such as core benefits, life standard factors and entertainment benefits by applying factor analysis method. The paper further shows the relationship between demographic variables and customer expectations. It is concluded that most of the respondents expect full talk time offers, free SMS offers and mobile banking facility. Customer expectations do vary as per changes in demographic variables i.e. age, gender, education, monthly income, occupation, marital status and locality. The researcher has applied ANOVA to test the hypothesis.

Key Words: *Customer Attitudes, Customer Expectations, Demographic Variables*

Introduction:

Customer is the focus point of all marketing operations. In today's globalized era, it has become very difficult to retain the customer once acquired. Needs and expectations differ from customer to customer. Customer expectations are increasing day by day. It has become inevitable to understand customer expectations and preferences and fulfill it for retaining the customers. Indian cellular industry has been witnessing severe competition and rapidly changing business scenario after the entry of Reliance Jio. It has resulted in increased expectations of customers. In this research paper, the researcher has studied factors showing customer expectations and the relationship between demographic variables and customer expectations.

Objectives:

1) To study the factors showing attitudes and expectations of cell phone users
2) To test the relationship between demographic variables and customer expectations

Hypothesis:

H_o : There is no significant relationship between demographic variables and customer expectations.

H_1 : There is significant relationship between demographic variables and customer expectations.

Research Methodology:

The author has explored factors showing customer expectations and investigated the relationship between demographic variables and customer expectations. Hence, the present research is exploratory and investigative in nature. The primary data has been gathered through multistage stratified random sampling. Suitable statistical tools have been applied to analyse the collected data such as percentages, averages, exploratory factor analysis, one way ANOVA with the help of SPSS.

Data Analysis and Interpretation:

Table No.5.1: Factors showing customer expectations

Sr. No.	Particulars	Number of Respondents					Total
		1	2	3	4	5	
01	Full Talk Time	15 (3.12)	10 (2.08)	07 (1.46)	76 (15.84)	372 (77.5)	480 (100)
02	Free SMS	56 (11.67)	29 (6.04)	29 (6.04)	123 (25.63)	243 (50.63)	480 (100)
03	Mobile Banking	49 (10.21)	34 (7.08)	37 (7.71)	110 (22.92)	250 (52.08)	480 (100)
04	Ringtones	108 (22.5)	112 (23.33)	51 (10.63)	97 (20.21)	112 (23.33)	480 (100)
05	Astrology	215 (44.79)	128 (26.67)	63 (13.16)	34 (7.08)	40 (8.30)	480 (100)

07	Downloading	75 (15.62)	34 (7.08)	22 (4.58)	107 (22.29)	242 (50.43)	480 (100)
08	Games	123 (25.63)	68 (14.17)	53 (11.04)	99 (20.63)	137 (28.53)	480 (100)
09	Voice Mail	112 (23.33)	66 (13.75)	57 (11.88)	103 (21.46)	142 (29.58)	480 (100)
10	E-Recharge	70 (14.58)	34 (7.08)	33 (6.88)	129 (26.88)	214 (44.58)	480 (100)
11	Free Roaming	60 (12.50)	30 (6.25)	19 (3.96)	89 (18.54)	282 (58.75)	480 (100)
12	News Updates	86 (17.92)	52 (10.83)	32 (6.67)	94 (19.58)	216 (45)	480 (100)
13	E-Ticketing	120 (25)	51 (10.63)	70 (14.58)	97 (20.21)	142 (29.58)	480 (100)
14	Movie Clippings	155 (32.29)	74 (15.42)	64 (13.34)	85 (17.70)	102 (21.25)	480 (100)
15	Internet Packs	75 (15.62)	38 (7.92)	33 (6.88)	109 (22.71)	225 (46.87)	480 (100)

***Source** : Survey data*

Table No. 5.1 presents data for the factors that show customer expectations on a five point scale such as 1=Highly Undesirable, 2=Undesirable, 3=Neutral, 4=Desirable, 5=Highly Desirable.

Table No. 5.2: Means for the factors showing customer expectations

Sr.No.	Factor	Mean	Rank
01	Full Talk Time	4.625	1
02	Free SMS	3.975	4
03	Mobile Banking	3.9958	3
04	Ringtones	2.9854	11
05	Astrology	2.075	15
06	Cricket Updates	2.6854	14
07	Downloading	3.8479	5
08	Games	2.8916	12
09	Voice Mail	3.2020	9
10	E-Recharge	3.7979	6
11	Free Roaming	4.0479	2
12	News Updates	3.6291	8
13	E-ticketing	3.1875	10
14	Movie Clippings	2.8020	13
15	Internet Packs	3.7729	7
Mean of the Means = 3.434505			

***Source** : Survey Data*

Table No. 5.2 shows means for the factors showing customer expectations along with mean of the means. 'Exploratory factor analysis technique' is used to understand the factors showing customer expectations from their service providers. The result of factor analysis is discussed as follows:

Table No.5.3 KMO and Bartlett's Test		
Kaiser-Meyer-Olkin Measure of Sampling Adequacy.		.892
Bartlett's Test of Sphericity	Approx. Chi-Square	2500.781
	Df	105
	Sig.	.000

***Source** : SPSS Output*

As per the above table, the value of KMO Statistics is 0.892 which is greater than It indicates that factor analysis could be used for the given set of data. As per the Bartlett's test of Sphericity, P value is 0.000 which is less than 0.05 which indicates the rejection of hypothesis. Both the above test indicates that data is suitable for conducting factor analysis.

Table No.5.4: Total variance Explained

Component	Initial Eigen values			Extraction Sums of Squared Loadings			Rotation Sums of Squared Loadings		
	Total	% of Variance	Cumulative %	Total	% of Variance	Cumulative %	Total	% of Variance	Cumulative %
1	5.532	36.880	36.880	5.532	36.880	36.880	3.734	24.894	24.894
2	1.543	10.283	47.164	1.543	10.283	47.164	2.974	19.826	44.720
3	1.315	8.764	55.928	1.315	8.764	55.928	1.681	11.208	55.928
4	.889	5.926	61.854						
5	.836	5.575	67.428						
6	.664	4.430	71.858						
7	.634	4.230	76.088						
8	.581	3.872	79.960						
9	.514	3.424	83.384						
10	.507	3.381	86.765						
11	.466	3.106	89.871						
12	.438	2.918	92.788						
13	.382	2.545	95.333						
14	.360	2.400	97.733						
15	.340	2.267	100.000						
Extraction Method: Principal Component Analysis									

***Source** : SPSS Output*

The above table shows that all factors are extractable from the analysis along with their eigen values, the percentage of variance attributable to each factor, the cumulative variance of the factor and previous factors. From the above table, it is identified that there are three factors with eigen values greater than1.

Table No. 5.5: Based on the pattern of factor loading, labels were assigned to the factors as below

Statement	Factor Loading		
Downloading	0.57		
Voice Mail	0.575		
E-recharge	0.776		
Free Roaming	0.703		
News	0.626		
E-Ticketing	0.698		
Internet Packs	0.671		
Ring Tones		0.704	
Astrology		0.793	
Cricket updates		0.693	

Games		0.716	
Movie Clippings		0.509	
Full Talk Time			0.805
Free SMS			0.802
Mobile-banking			0.442

***Source** : SPSS Output*

The above table shows classification of factors based on patterns of factor loading.

Table No. 5.6: Levene's Test of Equality of Error Variances Result

		Customer Expectations		
		Core benefits	**Life Standard Factors**	**Entertainment Benefits**
Gender	F	2.926	0.249	0.896
	Sig.	0.088	0.618	0.344
Age	F	8.354	11.661	1.094
	Sig.	0	0	0.336
Education	F	0.564	0.56	0.168
	Sig.	0.639	0.642	0.918
Marital Status	F	11.843	21.824	0.148
	Sig.	0.001	0	0.701
Monthly Income	F	3.399	2.751	0.512
	Sig.	0.034	0.065	0.6
Occupation	F	6.69	12.072	2.653
	Sig.	0	0	0.048
Location	F	1.001	0.418	1.834
	Sig.	0.368	0.658	0.161

***Source :** SPSS Output*

The Levene's test Statistic shows that $p>0.05$. Henceforth assumption of ANOVA for homogeneity of variance has not been violated.

Table No. 5.7: ANOVA Result

		Customer Expectations		
Dependent Variable		**Core Benefits**	**Life Standards Factors**	**Entertainment Benefits**
Gender	F	1.183	1.816	8.725
	Sig.	0.277	0.178	0.003
Age	F	3.629	16.906	12.089
	Sig.	0.027	0	0
Education	F	0.269	2.228	0.517
	Sig.	0.848	0.084	0.671
Marital Status	F	3.997	29.48	29.184
	Sig.	0.046	0	0
Monthly Income	F	0.441	2.041	9.402
	Sig.	0.644	0.131	0

Occupation	F	1.92	9.757	12.719
	Sig.	0.125	0	0
Locality	F	0.967	1.362	2.894
	Sig.	0.381	0.257	0.056

***Source** : SPSS Output*

Conclusions:

After testing the hypothesis, it can be concluded that core benefits and life standard factors are not influenced by gender, but there is significant relationship between gender and entertainment benefits. There is significant relationship between age and customer expectations. Customer expectations are influenced by marital status of the respondents. Core benefits and life standard factors are influenced by monthly income, whereas entertainment benefits are not related with this factor. Life standard factors and entertainment benefits are influenced by occupation whereas core benefits are not related with this factor. There is no significant relationship between location and customer expectation.

OPPORTUNITIES AND CHALLENGES IN IMPLEMENTING IFRS IN INDIA

Prof. Yadav Sachin Vilas
Sadguru Gadage Maharaj College, Karad

Abstract

The economic integration of the world is compelling countries and industries to adopt uniform accounting standards. IFRS is no longer a buzz word but has become a necessity. It is used in many countries across continents. More than 120 countries around the world, including all of Europe, currently require or permit IFRS reporting. Approximately 80% of these countries require IFRS reporting for all domestic, listed companies. The US is also gearing towards IFRS progressively shifting from requiring only US GAAP to accepting IFRS.

In India, the Institute of Chartered Accountants of India (ICAI) has made IFRS mandatory for financial statements for the periods beginning on or after 1 April 2011. This is done by revising existing accounting standards to make them compatible with IFRS. Reserve Bank of India has stated that financial statements of banks need to be IFRS-compliant for periods beginning on or after 1 April 2011.

This research study makes a table top comparative analysis of the IGAAP and IFRS, and the advantages and challenges in its implementation. Adopting IFRS by Indian companies would help integrate with the world economy faster. Indian companies' image would improve internationally thereby enhancing their global rankings and competitiveness. While the challenges in implementation of IFRS in Indian Corporates are many, the advantages that accrue to the Indian industries and the Indian economy are far too many. Indian companies can tap international markets for resources. It will also create confidence in the minds of foreign investors for investing in Indian markets. It will throw up enormous opportunities for Indian Accounting and Risk management professionals in India and abroad with the Indian industries expanding their footprints in other countries. The convergence with IFRS standards is set to change the landscape for financial reporting in India. IFRS represents the most commonly accepted global accounting framework as it has been adopted by more than 130 countries of the world. While the Core Group of Ministry of Corporate Affairs (MCA) has recommended convergence to IFRS in a phased manner from 1 April, 2011, Indian corporate having global aspirations should consider earlier voluntary adoption. There are several similarities between Indian GAAP and IFRS, still there are differences which can have significant impact on the financial statements.

Keywords: IFRS, Indian Accounting Standards, Foreign investors, IGAAP, Financial Reporting, FASB

Introduction:

In the recent past Indian Economy is growing fast and simultaneously it is integrating with the global economies. Indian companies are also increasingly raising the capital from the international financial markets and have listed their stocks on the international stocks exchanges. Under the circumstances, it would be obligatory for Indian companies to adopt IFRS for their financial reporting. India has set a roadmap for convergence with International Financial Reporting Standards (IFRS) commencing from 1 April, 2011. The convergence with IFRS standards is set to change the landscape for financial reporting in India. IFRS represents the most commonly accepted global accounting framework as it has been adopted by more than 130 countries of the world. While the Core Group of Ministry of Corporate Affairs (MCA) has recommended convergence to IFRS in a phased manner from 1 April, 2011, Indian corporate having global aspirations should consider earlier voluntary adoption. While there are several similarities between Indian GAAP and IFRS, still there are differences which can have significant impact on the financial statements. This paper is aimed to highlight the significant features of IFRS and do the comparative analysis of on Indian Generally Accepted Accounting Principles (Indian GAAP) *vis-à-vis* IFRS.

Objectives of Study

1) To understand the concept of Accounting Standards.
2) To study the objectives, need and benefits of Accounting Standards.
3) To review the evolution of International and Indian Accounting Standards.
4) To appreciate the need for the adoption of IFRS by India.
5) To do the comparative analysis of Indian GAAP and IFRS.

Methodology:

The present study is exploratory cum descriptive in nature. It is based on the analysis of secondary data. The secondary data is availed from various journals, internet, and books. The data collected from these various sources has been analyzed and interpreted.

Meaning and need of Accounting Standards:

Accounting Standards (ASs) refers to a written policy documents issued by an expert accounting body covering the aspects of recognition, measurement, presentation and disclosure of accounting transactions in the financial statements. They provide a set of standard accounting policies, valuation norms and disclosure requirements so as to reduce the accounting alternatives in preparation of financial statements within the bounds of rationality, thereby ensuring inter-firm and intra-firm comparability of financial statements of different enterprises. Accounting standards reduce to a reasonable extent confusing variations in the accounting treatment used to prepare financial statements. There are certain areas where it is not mandatory to disclose some significant information. Standards may call for such information.

Evolution of Accounting Standards:

In the year 1932-34, the American Institute of Accountants (now known as American Institute of Certified Public Accountants), collaborated with the New York Stock Exchange in the formulation of five '*rules or principles'* of Accounting to narrow down the variations in accounting policies, recommend disclosures for significant items, and suggest improvement in disclosures required by accounting standards keeping in view the company law and other regulatory requirement. In 1959, the American Institute of Certified Public Accountants (AICPA) established Accounting Principles Board (APB) with the objective of carrying on research so as to provide a solid base for its opinions. In 1973 APB was replaced by Financial Accounting Standards Board (FASB). Currently, standard setting boards or committees are active in number of countries including the United States, United Kingdom, Australia, Canada, India etc. In June 1973 the International Accounting Standards Committee (IASC) was established at London and assigned with the task of developing International Accounting Standards. (ICAI 2009)

In the year 2001 the International Accounting Standards Board (IASB) replaced the IASC. The IASB's mandate is to develop International Financial Reporting Standards (IFRS). IFRS are high-quality, compatible accounting standards that could be used for both domestic and cross- border financial reporting. In 2005 the U.S. Security Exchange Commission (SEC) announced that it will accept form foreign filers in United States financial statements of listed companies prepared in accordance with IFRS, as issued by the IASB, without reconciliation to

U.S. GAAP. . Also, the SEC issues a Concept Release asking if U.S. public companies should be given an option to follow IFRS instead of U.S. GAAP. From 2011 Canadian and Indian companies begin using the global standards, and Japan is stated to have eliminated all major differences between Japanese GAAP and IFRS. (AICPA.IFRS.com).

The Accounting Standards Board of the Institute of Chartered Accountants of India ('ICAI') was constituted on 21 April, 1977, to formulate

Accounting Standards applicable to Indian enterprises. Initially, the Accounting Standards were recommendatory in nature and gradually the Accounting Standards were made mandatory. The legal recognition to the Accounting Standards was accorded for the companies in the Companies Act, 1956, by introduction of Section 211(3C) through the Companies (Amendment) Act, 1999,whereby it is required that the companies shall follow the Accounting Standards notified by the Central Government on a recommendation made by the National Advisory Committee on Accounting Standards (NACAS) constituted under section 210Aof the said Act.

The Reserve Bank of India ('RBI') in case of banks, the Insurance Regulatory and Development Authority (IRDA) in case of insurance companies and the Securities and Exchange Board of India (SEBI) in case of all listed companies, requires compliance with the Accounting Standards issued by ICAI.

ICAI, being a full-fledged member of the International Federation of Accountants (IFAC), while formulating the Accounting Standards (ASs), the ASB gives due consideration to International Accounting Standards (IASs) issued by the International Accounting Standards Committee or International Financial Reporting Standards (IFRSs) issued by the IASB, as the case may be, and try to integrate them, to the extent possible. However, where departure from IFRS is warranted keeping in view the Indian conditions, the ASs have been modified to that extent. (www.astuteconsulting.com)

The need for the adoption of IFRS by India:

IFRS are increasingly being recognized as Global Reporting Standards for financial statements. 'National GAAP' is becoming rare. As global capital markets become increasingly integrated, many countries are moving to IFRS. International analysts and investors would like to compare financial statements based on similar accounting standards. This has led to the growing support for an internationally accepted set of accounting standards for cross-border filings of financial statements for various purposes. Multiple accounting standards around the world create confusion, encourage errors and facilitate frauds. Hence it is detrimental to public interest. To cure these problems a single set of high quality global standards was essential. IFRS fulfill this deficiency by providing a single set of quality global standards that are universally acceptable allowing investors to compare the performance of business entities across geographic boundaries. The harmony in financial reporting around the world though IFRS would raise authenticity of accounting data displayed in the financial statements. It would boost the confidence of investors and agencies making decisions on the basis of such data. If accounting for the same events and information produces divergent reported financial statements due to adoption of different set of accounting standards, then reliability of accounting in the users of financial statement would be at stake. Also for the companies listing in both domestic and foreign countries, the convergence to IFRS is essential.

Following are some of the benefits of adopting IFRS –(IFRS – Indian Context)

(1) Improved access to international capital markets
(2) Lower cost of capital
(3) Benchmarking with global peers
(4) Enhanced brand value
(5) Avoidance of multiple reporting
(6) Reflecting true value of acquisitions
(7) Transparency in reporting

Presently more than 130 countries such as European Union, Australia, New Zealand and Russia currently permit the use of IFRS in their countries. ICAI / MCA has also expressed their view that IFRSs should be adopted in India for the public interest entities such as listed entities, banks and insurance entities and large-sized entities from the accounting periods beginning on or after 1 April, 2011. As a consequence the Indian entities will need to start preparing for convergence to IFRS, preferable much earlier. The next few years will be exciting, but challenging at the same time (www.astuteconsulting.com)

Phases for implementation:

On 22nd January, 2010, the Ministry of Corporate Affairs (MCA) issued a press release setting out the road map for convergence with IFRS. Accordingly, timelines of convergence to IFRS in India are as under:

Phase I - 1 April 2011*

a) Companies which are part of NSE Index - Nifty 50.

b) Companies which are part of BSE Sensex – BSE 30.

c) Companies whose shares or other securities are listed on stock exchanges outside India.

d) Companies, whether listed or not, which have a net worth in excess of Rs. 1,000 crores.

Phase II - 1 April 2013*

The companies, whether listed or not, having a net worth exceeding Rs. 500 crores but not exceeding Rs. 1,000 Crores.

Phase III - 1 April 2014*

Listed companies which have a net worth of Rs. 500 crores or less.

Impact of convergence with IFRS in India: The financial statements to which the IFRS apply are directed towards the common information needs of a wide range of users like the shareholders, creditors, employees and public at large. The IFRSs comprises of following: (Krutika Fadnis 2011)

International Financial Reporting Standards (IFRSs) 9

International Accounting Standards (IAS) 29

Interpretations issued by International Financial Reporting Interpretations Committee (IFRIC)16

Interpretations issued by Standing Interpretations Committee (SIC) 11

Moving from Indian GAAP to IFRS has significant accounting consequences and far reaching business implications. Some of the major areas affected due to convergence are as under: (M. Subramanian 2011)

Business Combinations: IFRS 3 (Revised) requires the net assets taken over, including contingent liabilities and intangible assets to be recorded at fair value, unlike Indian GAAP which requires, (in the cases of subsidiaries, associates and joint ventures) the recording net assets at carrying cost. Contingent liabilities of the vendor firm are not recorded as liabilities under Indian GAAP. Likewise, there are differences in treatment of amortization of goodwill, reverse acquisitions (Indian GAAP does not deal with reverse acquisitions), measurement of contingent consideration and other areas. The changes brought in by IFRS-3 (Revised) will affect all stages of acquisition process, from planning to presentation of the post deal results. The implications primarily involve providing greater transparency and insights into what has been acquired, and allowing the market to evaluate the management's explanations of the rationale behind a transaction.

Group Accounts: There are several crucial differences with regard to accounting for Group Accounts under IFRS. Under IAS 27 (Revised), Consolidated and Separate Financial Statements, the preparation of group accounts is mandatory, subject to few exemptions, whereas preparation of Consolidated Financial Statements (CFS) is required only for listed entities under Indian GAAP. Both IFRS and Indian GAAP require use of uniform accounting policies for preparation of CFS. However, Indian GAAP provides an exemption on the ground of impracticability.

IFRS allows a 3 month's time gap between financial statements of parent and its subsidiary, associate or jointly controlled entity. Indian GAAP allows a 6 months' time gap for subsidiaries and jointly controlled entities. For associates there is no time gap prescribed.

IFRS requires losses incurred by the subsidiary to be allocated between the controlling and non-controlling equity investment in the subsidiary. Under Indian GAAP, excess losses attributable to minority shareholders over the minority interest are adjusted against the majority interest unless the minority has a binding obligation to and is able to make good the losses.

Fixed Assets and Investment Property: As per the provisions contained in IAS 16, Property, Plant and Equipments (PPE) mandates component accounting, whereas AS10 recommends, but does not require component accounting. IFRS requires depreciation to be based on useful economic life of an asset. In Indian GAAP, depreciation is based on higher of useful life or Schedule XIV rates. Major repairs and overhaul expenditure are capitalized under IFRS as replacement costs, if they satisfy the recognition criteria, whereas in most cases Indian GAAP requires these to be charged off to the Profit & Loss Account as incurred. IFRS requires estimates of useful lives and residual values to be reviewed at least at each financial year end. In Indian GAAP, there is no need for an annual review of estimates of useful lives and residual values.

Both IFRS and Indian GAAP permit the revaluation model for subsequent measurement.

If an asset is revalued, IFRS mandates revaluation to be done for the entire class of property, plant and equipment to which that asset belongs, and the revaluation to be updated periodically. In Indian GAAP, revaluation is not required for all the assets of a given class. It is sufficient that the selection of the asset to be revalued is made on systematic basis. For example, a firm may revalue a class of assets of one unit and ignore the same class of asset at other location. Also, there is no need to update revaluation regularly under Indian GAAP. Under IFRS, depreciation on revaluation portion cannot be recouped out of revaluation reserve and will have to be charged to income statement over the useful life of the asset whereas, Indian GAAP permits depreciation on revaluation portion to be recouped out of revaluation reserve to the income statement.

IFRS provides detailed rules for classification of an asset as an investment property and allows subsequent measurement of investment property at cost or at fair value. Indian GAAP requires investment property to be recognized at cost less diminutions other than temporary diminutions in value.

Under IFRS, intangible assets can have indefinite useful life. Such assets are required to be tested for impairment and are not to be amortized. Under Indian GAAP, there is no concept of indefinite useful life.

Presentation of Financial Statements: IAS 1 (Revised) is significantly different from Indian GAAP in respect of Presentation of Financial Statement. While the former sets out overall requirements for the presentation of financial statements, guidelines for their structure and minimum requirements for their contents etc. the latter offers no standard outlines in respect presentation of financial statements. For example, in case of companies' format and disclosure requirements are set out under Schedule VI to the Companies Act, 1956.For banking companies the format of Financial Statements is given in Banking Regulation Act. For partnership firms the Indian Partnership Act does not lay down any specific format of financial statements. A suitable amendment needs to be brought into the Laws governing these entities enabling them to converge to IFRS.

Further IAS 1 (Revised) requires the presentation of a *Statement of Comprehensive Income* as a part of the financial statements. This statement presents all items all items of income and expense recognized in Profit and Loss Account together with several other items of recognized income and expense displayed in the form of *Other Comprehensive Income*. The concept of *Other Comprehensive Income* does not prevail under Indian GAAP.

1.8.6 Application of Fair Value Concept: Further the IFRS are principle based standards and their application requires the increased use of Fair Value Accounting (FVA) for valuation and measurement of assets and liabilities. Fair Value is defined as "An estimate of price an entity would realize if it had sold an asset or paid if it had been relieved of a liability on the reporting date in an arm's length exchange motivated by normal business considerations." Evidence shows that FVA would result in added volatility in earnings and equity especially for banking and financial institutions. Application of FVA to the assets and liabilities may cause evil effects on their working triggering of contagion effect on the entire banking industry and economy.

A STUDY OF PERFORMANCE ANALYSIS OF ADITYA BIRLA SUN LIFE TAX RELIEF '96-GROWTH EQUITY LINKED SAVINGS SCHEME

Mr. B. Ashok
Research Scholar, Department of Commerce, Yogi Vemana University, Kadapa

Dr. G. Haranath
Assistant Professor, Department of Commerce, Yogi Vemana University, Kadapa

Abstract

Mutual fund is an investment vehicle which pools the savings of small investors and the collected money is invested by the fund manager in different types of securities like shares, debentures, money market instruments etc. Mutual funds offernumber of schemes to the investor, based on the investment objective the investor chooses the particular mutual fund scheme to invest his savings. Thus investment in mutual fund is quite suitable to the common man and also it is an opportunity to the small investor to holding the units of diversified portfolio investment. Minimizing tax burden is one of the challenges to every assessee, because of tax benefit ELSS are popular investment vehicle among the mutual fund investors. Hence in the present research paper an attempt has been made to analyse the performance of Aditya Birla Sun Life Tax Relief '96 ELSS Mutual Fund scheme in terms of risk and return forthe period January, 2009 to December, 2018. The NAV results are tested through risk return analysis, Beta, Sharpe's ratio, Treynor's ratio, Jensen's measure, Fama's measure, M^2&R^2. The data used is monthly beginning and closing NAV'S of selected scheme and benchmark index. The results showed that the scheme performed better than the market.

Keywords –*Equity Linked Savings Scheme, Financial system.Net Asset Value, Risk and return, Bench mark.*

I. Introduction:

Mutual Fund is an investment vehicle for retail and institutional investors to benefit from the capital markets. Mutual funds provide various kinds of schemes based on investment objectives. Tax Planning is an integral part of financial year. Minimizing tax burden is one of the challenges to every Assesse. As per Income tax Act 1961 under section 80cwhatever invests in an ELSS scheme is deducted from total taxable income up to Rs. 1, 50,000.Investment in an ELSS schemes helps the investor not only to save tax but also create wealth. ELSS mutual funds has lock-in period of 3 years from the date of investment.

II. Review of Literature

Several studies are conducted by the researcher son the performance analysis of various schemes offered by Mutual Fund houses. The following are the important research studies.

(Bhayani, A study of recent trends in Indian Mutual Fund Industry, 2017) An attempt has been made to study the recent trends in growth of mutual fund industry on Total assets, Investors types and Location wise. "He observed that mutual funds have become significant part of investment medium. Investment industry in India has gone through huge pace of reinventions, given changes in monetary and political policies of government". At the same time the study focused on the major changes which can be marked for mutual funds as an investment options.

(Reepu, 2017) In this paper an attempt has been made by the author to know about the various Mutual Fund schemes, Structure of Mutual Fund Schemes, Advantages and Disadvantages of Mutual fund Schemes and analyse the different risk factors (i.e. Standard Deviation, Beta, R-Square, Alpha, and Sharpe Ratio). Finally, in conclusion part the author stated about management of risk through diversification and SIP and the author also stated that investment in mutual funds offer wealth creation and tax benefit to the investor.

(Ashraf Syed Husain, 2014) The paper entitled Performance Evaluation of Indian Equity Mutual Funds against Established Benchmarks Index, the authors analyses the performance of equity mutual funds industry against benchmarks return and risk free rate over the period of five years. The study covers10 samples of growths oriented-open ended- equity mutual fund schemes, out of

10 selected samples 5 are taken from private mutual fund companies, 2 are taken from Bank sponsored mutual fund companies. The Outcomes of the selected samples are tested by the authors through risk-return analysis Coefficient of Variation, Treynor's ratio, Sharp's ratio, Jensen's measure, Fama's measure and Regression. The data used for the study is monthly closing Net Asset Values and benchmark market index closing values, the study period is from April 2007 to March 2012. The conclude the performance of selected samples through the risk return analysis, while compare with the market in terms of Sharpe ratio 3 schemes are under performed and 7 schemes out performed with lower total risk. While compare with risk free rate all the schemes have given returns higher than risk free rates.In terms of Treynor ratio of 10 out of 10 scheme are outperform the benchmark market index. The result in terms of regression analysis recommends that benchmark market return index has statistically significant impact on mutual fund return at 5% level of significance.

(Dr. J K Raju, 2015)"In their paper an attempt has been made to study an over-view of Mutual Fund Industry and to understand investor's perception about Mutual Funds in the context of their trading performance, explore investors risk perception and find out their preference over top Mutual Funds. The research study is focused to understand and evaluation of mutual funds. The objective is to evaluate the investment performance of Indian equity mutual fund with risk adjustment by using the theoretical parameters as suggested by William, Sharpe's, Treynor, and Jensen model".

III. Objectives of the Research Study

The objective of the research study is to analyse the risk return analysis of Aditya Birla Sun Life Tax Relief '96-GrowthELSS and compare with the benchmark Performance (S&P BSESENSEX) by using various performance measures for the period 2009 to 2018.

IV. Research Methodology

The data used for this research is collected from the secondary sources of Data. The secondary data relating to Net Asset Value (NAV) of Aditya Birla Sun Life Tax Relief '96-Growth and market indices are taken on monthly basis for the period 1st January 2009 to 31st December 2018from the respective AMC website, as well as AMFI website& National Stock Exchange of India website. The risk free rate of return has been taken as 5.684 from the 91 days' treasury bills of Government of India. For the purpose of measuring the performance of selected scheme against the benchmark (i.e., S&P BSESENSEX) the following tools are used like risk return analysis, beta, standard deviation of the portfolio of the scheme and market indices, Sharpe ratio of the scheme and market indices, Treynor ratio, Jensen, Fama, Franco Modigliani and Lea Modigliani and Correlation-squared (R^2) of the scheme and market indices. The limitation of the study is that the NAVs were studied for only ten years.

V. Analysis

Performance Analysis of Aditya Birla Sun Life Tax Relief '96 with S&P BSE SENSEX from 2009-18

Year	Rp	Rm	Beta	SDp	SDm	S p	S m	Tp	Tm	J	Fama	M^2	R^2
2009	5.91	4.92	1.08	10.78	8.86	0.54	0.55	5.39	4.87	10.91	34.66	4.87	0.95
2010	0.35	0.88	0.80	4.53	4.79	0.07	0.17	0.37	0.82	0.96	0.23	0.37	0.86

Source: *Author Calculations*

The able table shows the performance analysis of Mutual Fund Aditya Birla Sun Life Tax Relief '96 growth Scheme with market index S & P BSE SENSEX.

The highest positive return of the Aditya Birla Sun Life Tax Relief '96 growth Scheme is 5.91 in the year 2009 and the benchmark return during the same year is 4.92 shows that the scheme has more return than the market return. The scheme returns are positive in 8 out of 10 years and the market returns are positive in 7 out of 10 years. Here the scheme is getting more returns than the market returns in 7 out of 10 years indicating that the scheme has outperformed the market.

The calculated beta values of the scheme are positive in all the years indicating that the investment's risk is going along with the market. Beta value of the scheme is less than 1 in 8 out of 10 years indicating that the scheme is less volatile than the market. Beta value of the scheme is greater than 1 in 2 out of 10 years indicating that the scheme is more volatile than the market. The highest Beta value of the scheme is 1.08 in the year 2009 shows that the scheme is more volatile and posing more risk with higher rate of return than the market.

The highest standard deviation of the fund is 10.78 in the year 2009 indicates that the fund is risky than the benchmark which is 8.86 during the same year. The fund is more risky than the market in 4 out of 10 years but less risky than the market in 6 out of 10 years.

The fund Sharpe ratio is better than market Sharpe ratio in 5 out of 10 years indicating that the fund shows better performance than the market.

The Treynor's ratio of the fund is better than market Treynor ratio in 6 out of 10 years indicating that the fund shows superior risk-adjusted performance than the market.

The highest Jensen ratio of the fund is 10.91 in the year 2009 shows that the highest superior performance of the fund. Jensen ratio is positive in 8 out of 10 years indicating that the fund return is higher than the expected beta statistic i.e., superior performance of the fund. Jensen ratio is negative in 2 out of 10 years indicating that the fund return are lower than the market return implying that the mutual fund manager would not have earned enough return given the amount of risk he was taking.

Fama's measure shows the highest value of the fund is 34.66 in the year 2009. Fama values are positive in 8 out of 10 years indicates superior stock selection skills of the manager. Fama value is negative in 2 years (i.e., 2015 & 2018) out of 10 years, indicating that the fund performance is poor in that year.

The highest positive M^2 value is 4.87 in the year 2009 shows that the scheme has outperformed the market. M^2 values are positive in 8 out of 10 years shows that the scheme has outperformed the market portfolio. M^2 values are negative in 2 out of 10 years shows that the scheme has underperformed the market portfolio.

The R^2 value is high in 5 out of 10 years indicating that the fund's performance moves relatively in line with the chosen index. The R^2 value is low in 3 out of 10 years indicating that the fund does not generally follow the movements of the chosen index.

VI. Conclusion

The study conducts a comparative performance between Aditya Birla Sun Life Tax Relief '96 growth Scheme and market index S&P BSE SENSEXover a period of 10 years. The results of Aditya Birla Sun Life Tax Relief '96 growth Scheme are tested in terms of return shows that Scheme is outperformed than the market indices in 7 years. The risk measure, beta is more than 1 in 2 years indicating that the scheme is more volatile than the market indices rest of the years the scheme is less volatile than the market indices. The risk adjusted measures are also shows that the scheme is outperformed the benchmark. The overall analysis shows that the Aditya Birla Sun Life Tax Relief '96 growth Scheme performed better than the market indices and risk free rate.

CUSTOMER OPINION OF RETAIL SERVICES IN SELECTED CITIES

Dr. C. S. Dalvi
Associate Professor, CSIBER, Kolhapur

1) Introduction

Retail market In India is estimated to grow by 60% to reach US$ 1.1 trillion by 2020, factors considering rising income & lifestyle changes by the middle class and increasing connectivity through the internet. The growth of the overall retail market is 12% per annum. Organised trade would expand twice as fast at 20% per annum and traditional trade at 10%. The e-commerce market in India is a fast-growing market in the world. The primary cause is growing no. of internet users. E-commerce sales in 2017 were $39 billion. By 2026, Sales through the internet is expected to cross $ 200 billion by 2026. Estimated shoppers to the tune of 530 million by 2025, reliable telecom networks growth in India, customers can cope up with changing technology. Jio mobile service provider is an accelerating factor for internet usage in India in the last three years. Luxury retail market of India is expected to grow the US $ 30 billion by the end of 2018 from the US $ 23.8 billion in 2017. (2, IBEF 2018).Retail shop industry is an upcoming industry in India. The growth of the retail industry is because of changes in lifestyles, tastes and preferences of the customers. Some other factors like changes in awareness about brand & various services offered are responsible for the growth of the retail sector. Indian customers' expectations are increasing day-by-day than ever before. The middle class is growing in new India, and hence they demand a quality product and looking for a change. They are in a transition state of lifestyle. As a result, the customers are shifting from traditional shops to organised retail shops. They not only afford to spend money but also have a strong desire for uplifting their lifestyle.The article discusses about the various services provided by the retail stores in the selected cities, i.e. Kolhapur, Satara, Solapur and Sangli. The services such as billing procedure, customer care, help desk, grievance only are considered in the present article.

2) Objectives of Study

1) To understand the Indian market of the organised retail industry.
2) To study the various service aspects of Organised retail stores in selected cities of western Maharashtra.
3) To asses customer attitude and opinion about organised retail stores in selected cities.
6. Research Methodology of the Study

3) Collection of Data

Primary data was collected from the shoppers of the organised retail stores from Kolhapur, Solapur, Satara and Sangli cities. They were contacted at the retail stores and information was sought from them. One thousand customers of the retail stores were contacted at different times. 1000 customers were contacted by using stratified disproportionate sampling method.

4) Data Analysis and Interpretation

Table No. 4.1: Provision of Hassle Free Complaint Handling

City	Kolhapur		Solapur		Satara		Sangli		Total	
Opinion	Frequency	%	Frequency	%	Frequency	%	Frequency	%	Frequency	%
Strongly agree	13	5.2	45	18	69	27.6	45	18	172	17.2
Agree	89	35.6	108	43.2	59	23.6	126	50.4	382	38.2
Undecided	125	50	83	33.2	112	44.8	68	27.2	388	38.8
Disagree	23	9.2	10	4	7	2.8	8	3.2	48	4.8

Strongly Disagree	0	0	4	1.6	3	1.2	3	1.2	10	1
Total	250	100	250	100	250	100	250	100	1000	100

It is observed from the above table that 55.4 % respondents were strongly agree that the hassle free company handling system exist at the retail stores. 38.8 % respondents gave no answer as they never faced any complaints from the retailers. This indicates that the retailers in the region are sensitive to the grievances of the customer. This will help the retailer in the future to increase the business as the complaints are handled smoothly by the retailers in the region.

Table No. 4 .2: Efficient Customer Help Desk Handling

City	Kolhapur		Solapur		Satara		Sangli		Total	
Opinion	Frequency	%	Frequency	%	Frequency	%	Frequency	%	Frequency	%
Strongly agree	55	22	96	38.4	100	40	61	24.4	312	31.2
Agree	108	43.2	107	42.8	84	33.6	142	56.8	441	44.1
Undecided	82	32.8	34	13.6	59	23.6	43	17.2	218	21.8
Disagree	5	2	11	4.4	6	2.4	3	1.2	25	2.5
Strongly Disagree	0	0	2	0.8	1	0.4	1	0.4	4	0.4
Total	250	100	250	99.2	250	99.6	250	99.6	1000	99.6

The above table states that 31.2% respondents were strongly agree that the help desk is efficient in handling the customer problems. More positive response was observed in Solapur and Sangli (38 to 40 %) as compared to Sangli and Kolhapur responses(22 to 24%). 44.1% respondents in the region were agree that the help desk is efficient in handling the customer problems.. Overall, it can be noted that 75.3% respondents are quite happy with the assistance provided by the retail stores in the region. 21.8% respondents unable to gave the answer because they may not have taken any help from the help desk at the retail stores. Only 2.5% respondents are unhappy with the assistance provided by the help desk.

Table No.4.3: Satisfaction about Billing Procedure

City	Kolhapur		Solapur		Satara		Sangli		Total	
Opinion	Frequency	%	Frequency	%	Frequency	%	Frequency	%	Frequency	%
Strongly agree	100	40	113	45.2	113	45.2	127	50.8	453	45.3
Agree	109	43.6	97	38.8	115	46	96	38.4	417	41.7
Undecided	1	0.4	9	3.6	1	0.4	3	1.2	14	1.4
Disagree	22	8.8	26	10.4	11	4.4	19	7.6	78	7.8
Strongly Disagree	18	7.2	5	2	10	4	5	2	38	3.8
Total	250	100	250	100	250	100	250	100	1000	100

The above table shows that 45.3% respondents are very happy about the billing procedure followed at the retails stores.50 % Sangli respondents are strongly stated about the satisfaction about the billing procedure which is maximum in the region followed by Solapur and Satara ((Around 45%). Kolhapur had shown 40% strong satisfaction level which is minimum in the region.41.7% respondents showed lower satisfaction as compared to the earlier category. This is almost same in the region. Overall , it can be noted that 87% respondents are satisfied with the billing procedure followed at the retail stores. It is observed that the retail stores have increased the number of counters for smooth handling of the billing procedure. 11.6 % respondents in the region were dissatisfied with the billing procedure followed at the stores.

Table No. 4.4: Conducive Environment of the Store

City	Kolhapur		Solapur		Satara		Sangli		Total	
Opinion	Frequency	%	Frequency	%	Frequency	%	Frequency	%	Frequency	%
Strongly agree	117	46.8	107	42.8	97	38.8	87	34.8	408	40.8
Agree	72	28.8	64	25.6	104	41.6	110	44	350	35
Undecided	19	7.6	15	6	10	4	13	5.2	57	5.7
Disagree	22	8.8	36	14.4	27	10.8	19	7.6	104	10.4
Strongly Disagree	20	8	28	11.2	12	4.8	21	8.4	81	8.1
Total	250	100	250	100	250	100	250	100	1000	100

The above table shows that 40.8 % respondents are strongly satisfied with the store atmosphere. Best atmosphere perceived by the Kolhapur respondents as compared to the other cities in the region.(46.8%) while 34.8 % is lowest observed in Sangli city. Satara and Sangli respondents have shown better response (41-44%) as compared to Kolhapur and Solapur(26-29%).. Overall 75% respondents felt happy in the store atmosphere. The stores have taken care to establish conducive atmosphere . 18.5 % respondents shows that they are not happy with store atmosphere. There may be some sections which has created bad impression on the mind of the customer. Some sections are crowed or the store itself is crowded market and not quite place being perceived by the customers. 25.6 % respondents of Solapur are most dissatisfied with store atmosphere which is highest in the region while 15.4 % Satara respondents are unhappy with the store atmosphere which is lowest in the region. Now a day's mall culture has grown in the metro cities. People who have visited the malls may have strong effect on the opinion about the store atmosphere.

Table No. 4.5: Opinion about Baggage Good Facility

City	Kolhapur		Solapur		Satara		Sangli		Total	
Opinion	Frequency	%	Frequency	%	Frequency	%	Frequency	%	Frequency	%
Strongly agree	65	26	96	38.4	46	18.4	55	22	262	26.2
Agree	83	33.2	88	35.2	109	43.6	98	39.2	378	37.8
Undecided	66	26.4	27	10.8	38	15.2	45	18	176	17.6
Disagree	28	11.2	29	11.6	28	11.2	43	17.2	128	12.8
Strongly disagree	8	3.2	10	4	29	11.6	9	3.6	56	5.6
Total	250	100	250	100	250	100	250	100	1000	100

The above table shows the opinion about the facility of the baggage deposited at the retail store. It shows that 26.2 % respondents are strongly agree that the baggage facility is secured one.37.8 % respondents agree that they have the opinion about the facility of the baggage. Overall 66% respondents have positive opinion about baggage facility. 73.6% Solapur respondents are happy with baggage facility(maximum) while 59.2% Kolhapur respondents are happy with the baggage facility.17.6 % respondents didn't give any opinion because they didn't use this facility.18.4% respondents are unhappy with baggage security.22.8 % respondents from Satara are not happy with baggage facility followed by Sangli(20.8%) ,This shows that the there is mix response for the baggage facility. Significant percentage respondents are not happy with baggage facility. There is need to improve this facility at the stores.

Table No. 4.6: Whether Testing Of Electrical/ Electronic Goods before Selling Done

City	Kolhapur		Solapur		Satara		Sangli		Total	
Opinion	**Frequency**	**%**	**Frequency**	**%**	**Frequency**	**%**	**Frequency**	**%**	**Frequency**	**%**
Strongly agree	97	37.6	71	28.4	102	40.8	118	47.2	388	38.8
Agree	73	36.8	97	38.8	76	30.4	75	30	321	32.1
Undecided	65	24	75	30	56	22.4	45	18	241	24.1
Disagree	15	1.6	6	2.4	16	6.4	11	4.4	48	4.8
Strongly disagree	0	0	1	0.4	0	0	1	0.4	2	0.2
Total	250	100	250	100	250	100	250	100	1000	100

The above table indicates that 70.9 % respondents were agreed about the testing of the electrical / electronic goods before purchasing. In Solapur, 65.2% respondents agreed about testing as compared to other cities where responses were in the range of (75-78%).24.1 % respondents in the region were not able to decide which may be because of non purchase of such items from the retail stores. Only 5% respondents were disagree about the testing of the products before purchasing. It also indicates around 70% respondents have purchased the electrical or electronic products from the retails stores in the region.

Table No.4.7: Sales Attendants are Helping in Nature

City	Kolhapur		Solapur		Satara		Sangli		Total	
Opinion	**Frequen cy**	**%**	**Frequen cy**	**%**	**Frequen cy**	**%**	**Frequen cy**	**%**	**Frequen cy**	**%**
Strongly agree	31	12.4	61	24.4	77	30.8	62	24.8	231	23.1
Agree	123	49.2	81	32.4	112	44.8	112	44.8	428	42.8
Undecided	33	13.2	32	12.8	13	5.2	28	11.2	106	10.6
Disagree	57	22.8	53	21.2	29	11.6	41	16.4	180	18
Strongly disagree	6	2.4	23	9.2	19	7.6	7	2.8	55	5.5
Total	250	100	250	100	250	100	250	100	1000	100

The above table explains that 23.1% respondents are strongly agreed that the sales attendants are helpful in nature. However, they are found less helpful in Kolhapur stores as the only 12.4 % respondents showed strong positive opinion about them.42.8% respondents stated that the sales attendants do help the customers. Overall 65.9 % respondents were happy with the sales attendants helping nature.10.65 respondents were not able to provide answer as they were neutral. 23.5 5 respondents are unhappy with the sales attendants. They felt that the sales attendants don’t assist them properly during the visit.

5) Findings

i) Staff:- There is a need to train the staff on various fronts. Customer friendliness, support to customers, behaviour at the stores, language used among themselves, complaints about the management, personal discussions etc. require great attention. When customer flow increases in future, then the store must able to handle these staff issues. Proper attitude personnel and training will solve this problem.

ii) Home Delivery:- Some stores provide home delivery while some don't . As a value addition to their service, they must attract the customer by providing home delivery. Those who provide home delivery, they don't promote home delivery. Old age people who are always looking for this facility.

iii) Billing Section:- Long queues are observed on weekend and first ten days of the months. There is a billing pressure on the billing staff. The staff try to shrug the responsibility by sending the customers to other counters. This disappoints the customers. Grievances are mainly poor service, poor product quality and non availability of products. Retailers need to take care of billing system . Proper training need s to be given to the billing counter people. It is hard earned money of the customers and hence confrontation must be avoided on billing issue.

6) Conclusion

In the 21st century, organised retail industry has taken birth. Day by day, macro environmental factors such as demographic, social cultural , economic. Technology, political, legal and natural environmental factors are undergoing changes. International environment has influence on Indian business environment. Everyone has understand the changes. It is difficult to stop the changes. In order to survive in the changing environment, it is essential to adapt to the situation and make necessary changes in oneself. Retail sector is going to grow with lips and bounds in a years to come as there is paradigm shift in the customer behaviour.

Abstract

An apple a day need not always keep the doctor away. Because many of the fruits including apples are wore with chemicals and pesticides to give them a longer life. Vegetables like cabbage and cauliflower which are supposed to be very important for women's health are dipped into two or three levels of pesticides to keep them fresh. Many garden lovers, environment friends have formed their groups. Through the social media like whatsApp and face book, these groups are connecting to many people from different cities in Maharashtra. They are undertaking awareness program through their monthly meet, organizing guest lectures, posting different articles, conducting workshops for farmers and local people. They have undertaken the zero waste management campaign and they are growing organic veggies on their terrace garden. The present papercontains both primary and secondary data. Survey is conducted from the group members to know awareness about the danger of pesticide loaded vegetables and fruits, measures to get rid of these dangers, practice of zero waste management by the respondents. This will help to know how the common people can grow the organic vegetables and fruits with zero waste management and maintain the pesticides at bay level.

Introduction:

Various surveys show, fruits, vegetables are on chemical content. Leafy green cabbages and other vegetables, bananas, oranges and apples may be overloaded with some of these harmful pesticides. According to study of the food safety and standard authority of India common food items contain banned pesticides in quantities a thousand times more than the permissible limits. Brinjal tops the chart with level of banned pesticides at 860% above legal limits, cauliflower and cabbage, wheat and rice too had these danger chemicals. The level of Aldine in wheat is 21890 times more than the permissible level. Chlorfenvinfos in rice has measured at 1324% above the allowed limit.

It's a time to reinvest traditional method of farming in India. Until the mid twentieth century, organic farming was the way of life because in that time the farmerswere not able to afford modern agriculture inputs, it was their way of life. Organic farming is native to this country. Traditional agriculture practices of India dates back to more than 4000 years. A closer look at some of the traditional techniques and practices integral to organic farming clearly indicates its linkage to traditional farming systems. The farmers maintain the local varieties for pest resistance and other disease control. They use their indigenous knowledge to predict good and bad harvest, seasons, behavior of the crops, condition of the soil and many other factors. In those days oorganic farming was not about only 'farming without chemicals' but also about the environment, agricultural traditions, traditional seeds, animal welfare, farming communities, and sensible energy use, soil and water conservation.

Because of low productivity, pest attacks on crops, low yield etc people started using more and more fertilizers and pesticides. Unfortunately, many of our farmers are totally forgot the traditional farming ie organic farming. Scientific developments, introduction of various chemical fertilizers and pesticides, changing expectations of farmers, grid to earn more and more money induced the farmers to leave up the traditional farming and adapt with modern farming system. The sorrow is that many people are not aware about the effects of eating pesticide loaded food items. There is an urgent need of reinventing traditional methods of agricultural practices for sustained agriculture production.

Objectives of the study:

1. To study about the awareness of organic products, its benefits and its availability.
2. To study the awareness about the impact of consuming pesticide loaded food products.
3. To study about growing fresh veggies by practicing zero waste management.
4. To give suggestions to implement zero waste management in our area.

Need of the study:

Many people are unaware about the bad effects of eating pesticide loaded food items. They are blindly purchasing the available veggies and fruits from the market. Farmers have different problems so they have given up the traditional method of farming and using chemicals and pesticides more than the required standards.There is a need to increase awareness about the evil effects of using nonorganic food among the common people, farmers and society at large. There is a need to make aware about the concept of zero waste management and make acquaint the common people that how it is possible to practice zero waste management and how it is possible to prepare compost for our garden though the zero waste management. This study focuses on the procedure and practices undertaken by the respondents for zero waste management and growing poison less veggie to protect their families from prospective endangers

Research Methodology:

In this paper both primary and secondary data has been used. Primary data is collected by undertaking survey method. Secondary data has been collected by using different links, articles, newspapers etc. Weighted Average mean and percentage are calculated to know the responses regarding the awareness and practice of zero waste management.

Population:

The primary data has been collected from 415 respondents who are the members of garden groups from Pune and Sangli. Researcher is the member of these groups. She has undertaken the survey and collected the data from these group members who are implementing the zero waste management. It’s a survey method of data collection where total population is considered for the study.

Meaning of organic cultivation:

Organic farming is a method of crop and lives stock production that involves much more than choosing not to use pesticides, fertilizers, genetically modified organisms, antibiotics and growth hormones. Organic production is a system designed to optimize the productivity and fitness of diverse communities within agro-ecosystem, including soil organisms, plants, livestock and people. Its main goal is to develop enterprises that the sustainable and harmonious to environment. It is nothing but reducing exposure to pesticides and dangerous chemicals, it builds healthy soil, combats erosion, fights with global warming and supports water conservation and water health. Organic farming is all about maintaining soil health and entails producing the highest yields possible, in sustainable, eco-friendly manner using a number of techniques. Many research studies proved that organically grown foods contain fewer pesticides residue than conventional food.

What are Pesticides?

Pesticides are chemical substances used to kill pests that might damage the crops and fruits. It is used abundance by farmers. The development in agricultural sector has evidently shown an increase in the use of chemical fertilizers and pesticides during the cultivation of soil. According to health experts these pesticides can prove fatal. Pesticides can affect vital organs like the kidney and lever as well as endocrine system. These are more dangerous for pregnant women.

How are Pesticides Harmful?

Regular intake of fresh fruits is extremely healthy for the body. Fruits contain all the necessary vitamins and minerals which also fit the body's need. But how safe and healthy are these fruits and vegetables? We think that eating well gives our body the essential nutrients that it requires when we consume fresh fruits and vegetables. This might come as a surprise to some of the people but most of the foods contain highly contaminated pesticides residue on them. , Pesticides are used to protect the crops from insects, germs and rodents when the plants are growing up. Residual amount of these chemicals are present on the food when it gets to the grocery store. The pesticide residue cannot easily be removed with plain water. When we consume a fruit, the pesticide residue goes into the body as they get stuck and can make you sick.

Following tables contains the primary data collected from the members of the garden groups to know their awareness about the organic products.

Table 1: Awareness of Evils of Pesticides

Statements	% of Awareness
Are you aware about the veggies and fruits available in market containing pesticides, chemicals?	100%
Are you aware about the health hazards linked with the use of pesticide-loaded food?	98%
Are you aware about pesticides in food can lead to the development of diseases such as cancer, kidney, lung ailments and other dieses	90%

Its true that all these members are environment friendly so all the respondents are well aware about the concept of organic products and all are aware about the numerous health hazards linked to the use of pesticides. They are all read about the evil effects of consuming pesticide loaded food items. Pesticides can have grave effects on the health of anybody consuming fruits or vegetables highly contaminated with pesticides. They are also aware about high level of pesticides in food can lead to the development of diseases such as cancer, kidney and lung ailments. Any exposure to these high chemicals residues in veggies and fruits can lead to childhood cancers, mental health problems and attention deficit hyperactivity disorders among the children.

Table 2: Sources of getting Organic products:

Statements	Agree	Neutral	Disagree
Buying from specific farmers who practice organic farming	300 (72.28%)	----	115 (27.72%)
Purchasing from specific shops that are known to sell organic products	60 (14.46%)	25 (6.02%)	330 (79.52%)
Practicing own organic farming	35 (8.43)	-----	380 (91.57
Practicing growing organic veggies & fruits from kitchen waste	300 (72.28%)	05 (1.21%)	100 (24.09%)

Out of total population, 72.28 % respondents prefer for buying from specific farmers who practice organic farming. All are aware about benefits of using organic food items but only 14.46 % respondents replied that they purchase from specific shops which are known to sell some of the organic products. Only 8.43% respondents have their own land that is practicing organic farming. 72.28% respondents are trying to grow organic veggies and fruits from their kitchen waste and compost.

Table 3: Reasons for buying/ Consumption of Organic Food

Statements	Agree 3	Neutral 2	Disagree 1	Wt.Avg.
They are healthy / nutritious	415	----	-----	3.00
They are safe to consume / not contaminated	330	15	70	2.62
They are tasty	400	10	05	2.95
They are readily available	60	12	343	1.31
Good for management of illnesses	374	05	36	2.81
They are environmental friendly	315	10	90	2.54
No specific reason / indifferent	40	07	468	1.20

The above table depicts the reasons for using organic food items by the respondents. As the Wt average of some responses is more than 2.5 , it means all the respondents are agree that organic products are healthy and nutritious, safe to consume, tasty, good for management of illness and environment friendly. Considering the responses regarding availability, most of the respondents denied that organic products are readily available. Many are taking efforts to grow veggies and fruits from their kitchen waste but in case of some selected veggies and fruits. They responded that, they are unable to get all the products they consume in organic nature

Table 4: Practice of Zero waste management

Statements	% of respondents agree
I believe in zero waste management	96.38%
I never throw degradable garbage in corporation ghantagadi	96.38%
I use all the kitchen waste, garden leaves for making compost for own garden	98.31%
I use all the compost for my garden	100%
Along with own use, I sell the compost to other garden lovers	6.02%
I grow selected veggies and fruits by using homemade compost	72.00%
I use the compost for growing flowers, show plants in my garden	15.67%

It is true that there is evidently some increase in awareness of organic foods and organic farming in these days. All the respondents are engaged in developing their own terrace garden and growing fresh veggies and fruits. The above table depicts that more than 96 % of respondents are implementing zero waste management. They use all the kitchen waste, garden waste to make the compost or vermicompost or for pot filling. 98 % respondents use all the prepared compost for their own garden and 6% respondents are selling the extra compost after using for their garden. Most of the respondents have started growing the veggies and fruits by using kitchen waste and traditional compost, vermi-compost, vermiwash, natural ingredients as pesticides 72 % of respondents are growing some selected veggies like fenugreek, coriander, shepu, mint, palak and other leafy veggies. They replied that they are growing drumsticks, pomegranate, pear, lemons and many more crops. They have planted medicinal plants like termerik, Aeglemarmelos, adulasa, mint, shatavari, tulasi, aloera, ocimumbesilicum etc.. Only 15.67% respondents use the compost for growing flower plants, indoor plants without growing veggies. They also told that they are not using any chemical fertilizers available in market.

Procedure and practice of Zero waste management:

These group members are not only promoting for organic farming but for zero waste management. They believe in kitchen gardening is the best solution to keep pesticides at bay. They said that vegetables can be grown in pots;grow bags even we are living in apartments. These ecofriendly groups are implementing zero waste management. They do not throw away any of the garbage, vegetable residual, food residuals outside the home. They use all the waste which is degradable except plastic for making compost or vermicompost. These group members assimilate the needed information and guide the group members in zero waste management and growing organic veggies and fruits in garden. Daily kitchen waste, dry leafs, stale food items etc can be used for making compost by using natural ingredients like buttermilk, slurry of co cow dung and cow-urine or readymade culture available any agro shop. They use organic things like turmeric, vekhand powder, kapoor, urine of cow, jivamrit ,Nim oil, onion and garlic paste etc. as a pesticide. They said that “Jiwamrit” is the best fertilizer and best pesticide. These group members mostly use Jiwamrit for growing organic veggies and fruits.

Jivamrit: They said that Jivamrut is really an “Amrit” for every plant and every crop. It is prepared by using 10kg cow dung, 5 lts. Of cow urine, 1 kg black jaggery, 1 kg lentil powder or Besan floor, handful of live soil and 200 lts of water. By adding all these ingredients, stir the solution daily in clockwise or anticlockwise (ie in one direction) and keep it for fermentation for 4 to 7 days. Jiwamrita will be ready to pour or spray as a pesticide. The crops, veggies, fruits grown on Jiwamrit will be pure organic, healthy and tasty.

Some of the respondents are using grow bags as a option for pots. Now a day’s grow bags are available which are less costly and durable in nature. These grow bags with many shapes and sizes costing Rs 20 to Rs 150 can be used to grow leafy vegetables and fruit vegetables and fruits on the terrace.

Findings:

1. All the respondents are aware about the numerous health hazards linked to the use of pesticides. They are aware about the high level of pesticides in food can lead to the development of diseases such as cancer, kidney and lung ailments.

2. 72.28% respondents are trying to grow organic veggies and fruits from their kitchen waste and compost and they for buying from specific farmers who grows organic products.

3. All the respondents are agree that organic products are healthy and nutritious, safe to consume, tasty, good for management of illness and environment friendly. But unfortunately, they also agreed that waste for making compost for their garden. Many of respondents are growing the daily used leafy veggies on their terrace garden without using any chemical fertilizers or pesticides.

4. All the respondents are aware about the zero waste management, they practice it and use all the compost prepared from home waste for their garden. All the respondents are engaged in developing their own terrace garden and 72 % respondents are growing fresh veggies and fruits.

Suggestions:

1. These groups should undertake awareness programmes in their own local places and guide the people for zero waste management.
2. Training should be provided to the prospective practitioners by local government authorities.
3. Awareness regarding ill effects of eating chemicals and pesticide loaded food products should be imparted among school children and their parents.
4. The environment friendly groups should undertake the zero waste management campaign with a tag line “our waste our responsibility” to increase awareness among the citizens.

5. These groups can induce the farmers for organic farming by taking the responsibility of marketing their organic products even at extra price. This needs time, efforts to induce the farmers and buyers to grow and consume the organic products only to get rid of ill effects of chemicals and pesticides.

Solution for those who can't grow organic veggies and fruits:

While discussing with them they have suggested measures to keep the pesticides on bay. It's not possible for everyone to go with zero waste management and growing organic veggies on the terrace or surrounding the bungalow. If they purchased organic products from the market, mall, but not 100 percent sure that those produce are really organic then they should try to keep at least these dangerous chemicals at bay level by adopting following measures.

1. Wash the fruits and vegetables in running water four to five times.
2. Soak the veggies or fruits in salt water for a few minutes. This will help to kill the germs.
3. Wash the vegetables or fruits with potassium permanganate solution and wash again with fresh water before consuming them.
4. Peel skin of fruit and vegetables if possible. Smaller the veggie is in size, more organic it is.
5. Washing the veggies with salt water will remove most of the pesticide residues that normally appear on the surface of the vegetables and fruits.

Conclusion:

Kitchen waste gardening to grow organic veggies is possible in every home, in every apartment. The need of an hour is that conducts an awareness programme, launch zero waste management campaign in every city. There is a need to increase awareness among the people that it will be better to buy organic products even if they are significantly more expensive than non-organic products to protect the family from future health problems. Making aware the people about the evil effects of using non organic food items will increase the demand for organic farm produce. It will help the farmers to get market. Even some social members, eco-friendly group members can come forward to organize the farmers who will supply the organic produce and these members will help them to market their produce so that organic veggies and fruits are readily available in the market. There is a need to undertake a survey to understand whether the customers are ready to buy or consider buying organic products even if they are slightly more expensive than non-organic products? All this will take time in implementation. So as a good citizen, one can start zero waste management and start growing veggies at initial stage which will satisfy his/her family need and help to protect the family health. Zero waste management will help to keep the environment clean and healthy.

CREATIVITY AND INNOVATION

Dr. Sawant Vitthal Kundalika
Associate Professor & HOD Commerce, Savitribai Phule Mahila Mahavidyalaya, Satara(M.S.)
E-mail:vksawant1965@gmail.com

Abstract

Creativity is the capability or act on conceiving something original or unusual. Innovation is the implementation of something new. Invention is the creation something that has never been made before and is recognized. Creativity is the ability of a person or group to make something new and useful or valuable or the process of making something new and useful or valuable. It happens in all areas of life- science, art, literature and music. As a personal ability it is very difficult to measure. Creativity is a function of knowledge, imagination and evaluation. The greater is our knowledge more ideas, patterns or combinations we can achieve. Merely having the knowledge does not guarantee the formation of new patterns; the units and pieces must be shaken and interrelated in new ways. Innovations lead to the overall socio-economic transformation of the society. In the last 50 years innovation has played significant role in improving health, education, transport, communication, infrastructure, energy and Government. "Knowledge can be converted into wealth only through the process of innovation. World leadership in every walk of life is dominated by those, who innovate aggressively and continuously." -{Raghunath Mashelkar}. If you are creative, innovative or driver of change, chances are you will emerge a winner. To be innovative requires creative skills, removal of mental blocks, and rewards for taking risks and challenges. In the present paper an attempt has been made to elaborate creativity and innovation from which we may clear understood relevance of creativity and innovation in well being of the society.

Key Words: *Change, Creativity, Innovation, Society.*

Introduction:

Creativity by individuals or teams is a starting point for innovation. Creativity is concerned with making something useful. Creative ideas may be generated at the individual level or the group level. Creativity cannot be limited and anything which limits cannot contain creativity. Creativity neither denotes super human ability nor a divine gift. Innovation can be simply defined as a "new idea, creative thoughts, and new imaginations in form of device or method". Innovate or evaporate is the watchword of today's competitive environment. Competition is the key factor that rules the business as well as educational world. Advancement of knowledge is possible because of continuous research, learning nature, effective leadership and technology. Creativity and innovation relates with each other to some extent. On the other hand, there is a difference between creativity and innovation. For making non-programmed decisions on unique, novel and non-repetitive problems, it helps mangers to think creatively and innovatively.

Objectives: The specific objectives of present study are as under

- To know and understand concept of creativity and innovation
- To study process of creativity
- To depict need of innovation

Data Nature and Type: The present study is of descriptive in nature. The entire study is based on secondary sources of data. The secondary data has been derived from reputed books and websites in order to fulfill objectives of the present study.

Conceptual Framework of Creativity: The term creativity refers to the ability to produce something that is both new and valuable. Creativity may be defined as an ability to think originally and come out with some novel idea. It is a part of a genuine human thinking process by which a particular individual strikes an idea which may not occur to others. Creativity neither denotes super human ability nor a divine gift.

Creative ideas may be generated at the individual level or the group level. Interaction among members of the group is considered an important source of creativity. In every situation, creative persons go beyond the conventional and beaten track and come out with best ideas and new ways of doing things.

Creativity cannot be limited and anything which limits cannot contain creativity. Learning how to be creative is not the same as learning to bake a cake. Many artists and creators, in western society, creativity viewed as something to do. There is a perception that hard work is required to create the best work. Creativity is strongly linked to receptiveness to a life and what it has to offer us. Creativity flourishes when the truth about things is admitted to oneself. Creativity is a unending process.

Think: What can I do to increase my creativity?

Process of Creativity: There are **four stages** of Creativity process-

Preparation stage: Creative ideas need some preparation; they do not arise in a vacuum. This step involves looking at a problem from different angles.

Incumbation stage: If a creative person draws a blank during the preparation stage, he forgets the problem and concentrates on other problems or activities. After some time, he may experience sudden reflection on the problem, he had relegated to background. And, forms a new idea about the problem by default.

Illumination stage: In this stage, there is a sudden flash of an idea which was being hatched by the creative person. Once the idea is illuminated, the creative person experiences profound relief and satisfaction.

Elaboration stage: The illuminated idea conceived by the creative person has to be set in its right perspective. It is to be verified, revised and modified and accommodated to deal with specific problem.

Learning to be Creative: All persons are creative, the degree of creativity differs. Certain mental locks affect on creativity. Learning is a continuous activity, if the doors of the mind are unlocked:

Looking for the right answer: The given problem may have several right answers, depending on one’s perspective.

Insisting on being practical: Impractical answer to ‘what if’ question, can become a stepping stone to creative insight.

Avoiding ambiguity: Creativity can be developed by too much objectivity and specificity.

Fearing and avoiding failure: Fear of failure can propel us into not acting on our good ideas. This is unfortunate because we learn many valuable and lasting lessons from our mistakes.

Not wanting to look foolish: Humour can release tension and unlock creative energies. Seemingly foolish questions can enhance understanding.

Saying, “I am not creative”: By nurturing small and apparently insignificant ideas we can convince that we are indeed creative.

Creativity Kit-Wisdom from Great Men: The kit-wisdom from great men about creativity quoted below-

- **Abraham Lincoln-** The best thing about the future is that it comes one day at a time.
- **Aristotle-** We are what we repeatedly do. Excellence, then, is not an act, but a habit.
- **Benjamin Disraeli-** The secret of success is consistency of purpose.
- **Edgar Allen Poe –** All that we see or seem is but a dream within a dream.
- **Goethe –** Knowing is not enough, we must apply. Willing is not enough, we must do.
- **Goethe-** Nothing should be more prized highly than the value of each day.
- **Perry Paxton-** Excellence is in the details. Give attention to the details and excellence will come.
  - **Victor Hugo-** There is one thing stronger than all the armies in the world, and that is an idea whose time has come.
  - **William Blake –** Use what talents you posses, the woods would be very silent if no birds sang there except those that sang best.

Conceptual Framework of Innovation: The term 'innovative' involves describing is the any event slightly out of the ordinary. The term innovation appears more frequently in spoken and written transactions compared to scientific research. "Innovation is the process by which knowledge from Research and Development is converted into brands and services that are delivered to Customers" (Ganguly, 2000). Technically speaking, innovation is the process of creating a product or service solution that delivers significant new customer value. In other words, do things differently is the innovation. However, innovation is often also viewed as the application of better solutions that meet new requirements, unarticulated needs, or existing market needs. Such innovation takes place through the provision of more effective products, processes, services, technologies, or business models that are made available to markets, Governments and society.

There are other terms such as 'thinking out of box' or 'lateral thinking' which traits are considered essential for innovation. Free markets provide opportunities and powerful set ups to innovate. For broader socio-economic development, the Government of India has announced 2011-2020 as a decade of innovation. National Innovation Council has been set up to herald innovations for the next 10 years. The educational institutions like Indian Institute of Technologies (IITs), Indian Institute of Managements (IIMs), and Indian Institute of Science are noteworthy in this context. It is a high time now to make a case for academia-industry interaction for innovation. It is noticed innovation moves beyond Research and Development to mean new applications of old technologies, new processes and structures, organizational creativity. Fear of failure inhibits people from taking risks. Therefore, a creator or an innovator should be free from fair of failure.

Coverage of Innovation: The coverage of innovation is unlimited. Innovation involves –

- Thinking differently, creatively and insightfully that enables new inventions and solutions.
- A wide range of activities starting from the process of the origination of an idea to its transformation into something useful.
- In the organization context innovation may be linked to positive changes in efficiency, productivity, quality, competitive positioning and market share.
- Innovation has been studied in a variety of contents including in relation to technology, commerce, social systems, economic development and policy construction.
- All organizations can innovate including hospitals, universities and local Governments.
- Innovation in industry is possible through product or service innovation, new market innovation, operational innovation, disruptive innovation etc.
- Human resource innovation is the implementation of new ideas, methods and technologies to better meet the ever-evolving requirements of the organization and its workforce. It's about anticipating future needs and circumstances rather than simply finding a response to a changing present situation, etc.

Why Innovation is needed? : The robotics engineer **Joseph F Engelberger** asserts that innovations require only **three things** viz. a recognized need, competent people with relevant technology and financial support. The Innovation is needed for the following purposes

- Betterment of lives of people.
- Make a case for change
- Better quality of life i.e. to the advancement of society
- Making the voices of less powerful people heard
- Financial planning
- Cost Management
- Strategy Management
- Operational efficiency and financial performance

- Employee morale, motivation and productivity
- International perspectives
- Market driven studies
- Evaluation studies leading to alternative strategy formulation
- Produce evidence of benefits or harms of a particular policy
- Proposing a new or redefined policy based on evidences/ experiences
- Real life issues based research
- Positive transformation or development
- Real time learning
- Talent Management

Linking of Academia- Industry for Innovation: Progression is achieved through joint efforts of academicians and business leaders. Following type of joint exercises are useful for innovation.

- Contribution by industry to curriculum designing
- Work exposure and practical training to students in industry
- Readiness of industry to associate with university or college
- Joint Conferences
- Collaborative Research

Conclusion: Creativity is the ability to produce original and unusual ideas, or to make something new or imaginative. All persons are creative, the degree of creativity differs. Whereas Innovation can be simply defined as a "new idea, creative thoughts, new imaginations in form of device or method". Decision making and problem solving is a core function of management. Decision making is a complex mental exercise in reality. The webster's dictionary defines a problem as, "a question raised for inquiry, consideration or solution". If every problem can be considered innovatively for the purpose of appropriate solution then quality of situation will be definitely improve favourably. There is a joint responsibility of thought leaders and business leaders towards enhancing India's innovation capabilities. The whole human race whether pre-modern, modern or post modern is involved in a vast process of redefining identity. Success means growth and growth means change. To be innovative requires creative skills, removal of mental blocks, and rewards for taking risks and challenges. Innovation involves creating the best practices of tomorrow.

ESSENTIALS OF GOOD SAMPLING IN COMMERCE AND MANAGEMENT RESEARCH

Dr. Babasaheb. V. Mali

Head and Associate Professor, Department of Commerce, Kankavli College, Kankavli.

Dist: Sindhudurg (416602)

Abstract

A sample is a part of the universe that can be used asrespondents to a survey orfor the purpose of experimentation, in order to collect relevant. Sampling is an act, process or technique of selecting representative part of a population for the purpose of determining the characteristics of the whole population. The process of selecting a sample from a population using special sampling techniques called sampling. The basic assumption is that the sample selected out of the population are the best representative of the population under study. Good samples are those who accurately represent the population. Accuracy is the degree to which bias is absent from the sample and exactly represent the population. A good sample must be adequate in size and reliable. The sample size should be such that the inferences drawn from the sample are accurate to given level of confidence to represent the entire population under study

Introduction:

There is a need to select the right sample size in commerce and management research. Selection of sample size largely depends on the objective or purpose of the study. If study involves generalisation of findings based on sample survey to the population, the researcher should select large sample size so as to draw proper conclusion and make generalisation based on sample.

Though, sampling helps to improve the performance of the business organization, selection of appropriate sampling techniques generally depends upon geographical area covered under study and size and nature of population under study. Oversized sample of respondents may lead to waste of time, efforts and money. Undersized sample of respondents may lead to inaccuracy of data and therefore, poor research results. So, there is a need for appropriate size of sample of respondents for social sciences research activity.

According to Goode and Hatt, 'Sample is a smaller representative of larger whole'. In sampling, a part of the universe is selected for obtaining information. A sample is a part of the universe actually selected for data collection.

Objectives of the study:

The main objective of the study is to point out the essentials of good sampling in commerce and management research.

Methodology:

In the present study, use of secondary resource is made to evaluate the essentials of good sampling in social commerce and management research.

Essentials of Good Sampling in Commerce and Management Research:

This paper brings to light valuable analysis pertaining to essentials of good sampling in commerce and management research. Therefore, the following are some important essential characteristics of good sampling.

1. Representativeness:

Sampling is a part of representative of the population. It is a part of the universe selected for the purpose of study. The researcher should select the sample members, which have the characteristics of the representative of the universe. In measurement terms, the sample must be valid. The validity of a sample depends upon its accuracy and precision. When research is undertaken to study job satisfaction in police force, then the sample members must be the police personnel belonging to different levels in the police force.

2. Proper selection of sampling method:

The researcher must select proper method of sampling .These methods includes probability sampling and non-probability sampling. Some methods requires less time to complete the data collection. Particularly, convenience sampling requires less time to collect the necessary data.

Therefore, the researcher may select convenience method, if he has limitations of time.

3. Focus on objectives:

The sample size must be selected depending upon the research objectives. If a research is undertaken to find out the impact of unemployment on youth, then the sample size should be larger, as there are more unemployed youths everywhere.

4. Proper sampling frame:

The researcher should select proper sampling frame to collect required information. It is an instrument to obtain addresses or such other information about the various elements of universe. Such sampling frame includes telephone directories, register of members in business organization etc. Before selecting sampling frame, the researcher must take care in relation to representation of each and every unit of universe.

5. Area of the study:

The researcher must consider the size of the area for selecting the sample size. If the area coverage is large, then automatically the size of the sample must be large. In such situation, the researcher must adopt multi-stage cluster sampling. Sample should be selected depending on area coverage of study. Larger the area to be covered , larger will be sample. If study involves larger geographical area such as entire state, then the sample size should be large.

6. Economical:

A good sample should be cost effective. It should facilitate proper data collection without putting burden on available resources. A sample should be designed keeping mind availability of funds. The sample size must be economical i.e cost- effective. It should not put extra burden on the resources. The sample size should be such that it facilitates proper collection of data.

7. Proper sampling plan:

Researcher should execute his data collection, only after framing proper sampling plan. The researcher must prepare a sampling plan including sampling unit, sampling frame, methods of data collection, sources of data, resources required for the data collection, and time frame to collect necessary data. Proper sampling plan will help researcher to decide about the right sample size, which will help him to facilitate proper collection of data.

8. Suitability:

A good sample must be adequate in size in order to be reliable. The sample should be of such size that the influence drawn from the sample are accurate to the given level of confidence. The sample size should be suitable to collect relevant data. If the research is conducted to find out reading habits of college students in particular city, then the sample would be students from the colleges of that particular city and the sample size must be smaller.

9. Flexibility:

A good sampling is one which is flexible and not rigid. The sample size should not be rigidly followed. The sample size can be modified depending upon the circumstances. The sample size must be may be reduced, if sufficient information is already available or if there are some limitations of time and funds. However, sample size may be increased , if proper information is not available from the current sample.

10. Proper selection of sample Unit:

The sample unit must be appropriate depending upon the type of research. The Universe comprises of the elements, and each element can be further divided into units e.g if a study is conducted to study job satisfaction among bank employees, then the bank employees comprise the universe. The sample units may include male and female employees , junior or senior employees.

11. Accuracy:

Accuracy is defined as the degree to which bias is absent from the sample. An unbiased sample is one which exactly represents the population. It is free from any influence that causes any difference between sample value and population value.

12. Sampling techniques:

Researcher should select sample by using appropriate sampling techniques. He may use probability or non-probability sampling techniques depending on the requirement of the study and availability of resources.

13. Precision:

The sample must yield precise estimate. Precision is measured by the standard error or un-standard deviation of the sample estimate. The smaller the standard error or estimate, the higher is the precision of the sample.

Findings:

1. Good sample must be adequate in size in order to be reliable.
2. Sample is a part of the universe selected for the purpose of study.
2. A good sampling is one which is flexible and not rigid.
3. A good sample is cost effective.
4. Researcher selects sample by using appropriate sampling techniques.
5. Selection of sample depends upon area coverage of the study.
6. Sampling facilitate proper data collection without putting burden on available resources.
7. A sample must be representative of the population.

Suggestions:

1. Sample size should be suitable to collect relevant data.
2. A sample must be representative of the population.
3. The size of sample should be appropriate.
4. The sample size must be selected depending upon the research objectives.
5. The sample size should not be rigidly followed.
6. Researcher must select proper method of sampling.
7. The researcher should select proper sampling frame to collect information.
8. The sample size must be economical.
9. Sample size should be suitable to collect the relevant data.
10. The researcher must consider the size of the area for selecting the sample size.
11. Researcher should select sample by using appropriate sampling techniques.

Conclusion:

Researcher must first consider the availability of resources, and then plan for the sample size. He should select sample by using appropriate sampling techniques. He may use probability or non-probability sampling techniques depending upon the requirement of the study and availability of resources. Good sampling offers better quality results, so size of the sample should appropriate, depends on the size of universe.

STUDY OF AGRICULTURE FINANCING BY THE PRIMARY AGRICULTURE CO-OPERATIVE SOCIETIES AND ITS IMPACT OF NON- PERFORMING ASSETS AND THEIR PROFITABILITY

Dr. D.S. Borkar
Asst. Professor, Shahu Mandir Mahavidyalaya, Parvati, Pune- 411 009
Email: borkards.72@rediffmail.com

Abstract

Primary Agriculture credit societies (PACS) in draught prone area of Maharashtra are making loss every year, their accumulated losses increased year after year with huge amount o f over dues and poor deposit mobilization. Most of them are not viable to perform and full fill the credit needs o f their Members PACS being grass root level institutions providing credit and services to the agriculture members are not able to recover loans and mobilize their deposits due to low production and low income from the agriculture of this area. Therefore PACS in this area are making losses most o f the times and becoming Non-viable to perform their operations.

Keywords: *Primary Agriculture Coop. Societies(PACS), Non Performing Assets, Loans and over dues, Profitability.*

Introduction :

Agriculture is the backbone of the Indian economy. India is predominantly agriculture dominated country. According to the latest (2011) census report there are 6,40,867 villages spread all over India. Village continues to be the basic unit of Indian census. Agriculture provides livelihood to about 65 per cent of the labour force. 43 per cent of the geographical area is used for agriculture purposes. Even today the majority of the agricultural operations are carried out traditional manner. Majority of the agriculture is dependent on the vagaries of monsoon. As compared to the western world the productivity of the Indian agriculture is very less and steps are being taken to switch over to use latest technology.

India is a developing country wherein capital formation is low. Due to variety of reasons the Indian agriculturists are solely dependent on Bank finance. Over the years India has established several institutions which are catering to the financial needs of the agriculture sector. In the year 1969 the Govt. of India has nationalized 14 Indian commercial banks and one of the reasons for taking up this move was to ensure that the flow of credit which is scarce should go according to the Govt. of India's planned priorities. Until then certain vital sectors of the Indian economy like agriculture, small scale industry, transport operators, retail traders, professionals and exports were not getting priority in the matter of allocation of credit. Subsequent to nationalization the Reserve Bank of India had directed the nationalized banks to increase their direct lending to agriculture and had set out a target of 16% of the total credit given by the banks.

In the year 1991 the Govt. of India established National Bank for Agriculture and Rural Development to pay special attention to the agriculture finance as well rural development. During the course of the last decade even the urban cooperative banks have also been allowed to extend credit to activities allied to agriculture. Thus the flow of credit to agriculture has increased.

Objectives :

1. To study the present working of the PACS.
2. To study their financial standing
3. To analyze the causes of growing NPA and its impact on profitability

Research Methodology :

The study is based on Secondary data. The data has been collected from books, magazines and websites.

Cooperative movement in Maharashtra :

Co-operative credit System in Maharashtra has all along been a leader in cooperative movement. Cooperative has become a way of life for people in the State. Almost 50% of the State's population is connected to 1.78 lakh cooperative societies, covering different aspects of people's day to day life. We have about 20,000 primary agriculture credit cooperative societies and 31 district central cooperative banks. As against six villages covered by the society in the country, we in Maharashtra have one society for two villages. More than 10 million farmers are members of the primary societies. The cooperative credit system in the State accounts for 65% of the credit disbursements for agriculture as compared to 35% at national level. That is why, the State needs to ensure that the cooperative credit institutions remain vibrant and work in a professional and competitive environment.

Co-operative movement in Maharashtra is based on the remarkable developments in co-operative societies and co-operative banks. Various institutions in the above fields are playing vital role in the process of economical, political and social development of Maharashtra. Maharashtra state is one of the leading states in the co-operative movement in India. Co-operative in State of Maharashtra have made a tremendous development during the last four and half decade, several types of co-operative societies and banks stated in Maharashtra with mission to provide overall services to their members and after all to serve for the nation. In order to development the socio-economic conditions of the rural society's co-operatives have no challenge. Co-operatives have spread over all in each and every type of services which are necessary for a common man especially contributed a lot in the uplift of the rural people. Yet, it is observed that there are some weakness and some obstacles in co-operative movement, therefore, the movement is working only on the spirit of the people and this will give strength to

people to overcome on any challenge.

Banking Sector Reforms :

In the year 1991 the Govt. of India launched economic and banking sector reforms. The Reserve Bank of India accepted Basel Committee recommendation and introduced new accounting norms for the banking industry. These norms include Capital adequacy, Asset Classification and Provisioning. These were with a view to bring in greater transparency in the banking sector. These norms are gradually in a phased manner have been implemented by the Cooperative banking sector. In India the short term agricultural credit requirements of the agriculturists are met by the Primary Agricultural Coop. Credit Societies (PACS), which get funding through District Central Coop. Bank. These DCC Banks in turn get funding from the NABARD.

Because of the implementation of the banking sector reforms and due to variety of reasons the financial strength of the PACS has been worsening year after year. "Half of the Primary agriculture credit societies are heading to liquidation", During the past 5 years the number of PACS showing losses has increased by 540". Mohan Takalkar, Amaravati:

The PACS are the important institutions providing short term agriculture credit are now heading to liquidation. Currently there are 21,238 PACS of which 11,435 PACS i.e. 53% societies are showing losses and thereby these institutions have become handicapped.

PACS are performing a vital role in providing primary agriculture credit in the form of short term loan in the primary agricultural operations. However, during the last two decades the heavy percentage of overdue, thereby insufficient funds for lending, and the irregular availability of the funds for lending has resulted in weakening the PACS. According to the sources from the Cooperative Commissioner's office, at present there are 21,185 PACS are functioning wherein the working capital of about Rs.16,887 crores is there and there are total 35.01 lakh members, of which 28 lakh are small farmers and the remaining are marginal farmers. For various reasons totally 11,279 PACS are in losses and the percentage of these societies to the total PACS works out to 53.2 per cent. Therefore, the agriculturists have to approach the Sahukaras. PACS borrow from DCC Banks at 4 per cent and lend to their members at 6 per cent. However, on this margin of 2%, it is difficult to run the PACS throughout the year. During the last year the State Govt. has provided financial assistance to those PACS who have provided agriculture loan on the basis of their loans provided, but this has not been enough to arrest the sinking position of these PACS.

Reasons for Poor Recovery of Loans in PACS

A. INTERNAL REASONS	B.EXTERNAL REASONS
1. laxity in internal control system	1. change in policy environment
2. poor management information system	2. inadequate market linkages
3. low motivation and involvement of staff	3. change in economic conditions
4. poor industrial relations climate	4. change in technology
5. improper identification of borrower	5. political interference
6. under or over financing	6. target approach under government sponsored programmes
7. lack of post disbursement follow up	7. legal process
8. lack of appraisal skills	8. geographical factors
9. failure to ensure adequate, rapport with govt agencies	9. loan waiver, write off etc.
10. perception of bank as a charity institution	
11. delay in loan sanctioning	**C. EXCLUSIVE REASONS**
12. insufficient gestation or repayment period	1. lack of transparency
13. lack of borrower contact and poor understanding of rural clientele	2. lack of professional management
14. no thrust on recovery	3. inadequacy of non-official and member education
15. Personal accident, death etc.	4. imbalance among tiers
16. misutilization of loan	
17. willful default	
18. diversion of funds	
19. shifting of place of residence or business	
20. lack of technical and management skills	
21. poor maintenance of assets	

Causes of NPA of PACS :

Cooperatives in India were shaped with a view to provide formal credit to agriculture and rural cottage and village industries which in 50's were organised in the form of Cooperatives. Over the year, the cooperatives have lost the place of prominence which they once enjoyed and are now in the middle of massive transformation. Agricultural loaning has been plagued with uncertainties. Many times natural calamities have forced bank to restructure and write of old loans. Writing of old loans have become a big political issue which many feel tends to encourage culture of willful default. Large scale defaults of loans outstanding have the impact of eroding the financial soundness of the system, critically affecting the operational efficiency. Recovery of credit is absolutely essential for recycling of credit. Timely recovery of advances keeps the business running and continues flow of funds helps retaining the customers and reducing Non-Performing Assets [NPAs]. The paper intends to examine the magnitude of NPAs in the Cooperative credit system, causes for the same, strategies adopted by different banks in reducing the Non-performing assets and the future road Map.

The ever declining financial condition of PACS is a cause of concern for all. Therefore, certain urgent steps are required to be taken by the Govt. of India / RBI and the State Govt. For taking up some long term solutions the researcher is of the view that a detailed study of the current agricultural credit delivery system and monitoring needs to be looked into afresh. Then only proper and viable long term solution can be thought of.

Result of NPA on PACS :

Various performance indicators of Primary Agricultural Cooperative Credit Societies (PACS) in Maharashtra do show perceptible improvement over time, particularly in respect of their share capital, owned funds, deposits, working capital, loan advancement and profit profile. Nonetheless, the period gone by has also been marked with a declining trend in borrowing member per society, slower growth in recovery of loan and faster growth in loans overdue.

Conclusion :

With the above analysis, it is observed that the PACS are faced with bulging of NPAs resulting in lower income higher provisioning making a dent in their profit figures. Since NPA affects the profitability and financial strength of the PACS. The NPAs of PACS has been increased for the past years due to nil recovery from water supply's societies, spinning mills, fishery societies and poor recovery from agricultural sector, government sponsored schemes like gas loan etc. Loan borrowers are not able to repay their debts because their financial health is not good. Due to monsoon failure for the past few years the due from agricultural sector are also low. Government should help the bank because the financial strength of the weaver's societies, spinning mills and wholesale stores is not good. The DCC Bank would have been still in a better position; if the Government should help the bank to reduce their Non- Performing Assets which will helps to the Primary Agriculture Credit cooperative societies for improve their financial position.

A STUDY OF CUSTOMER SATISFACTION WITH SPECIAL REFERENCE TO INSURANCE COMPANY

Dr. Sunil Subhash Patil

Assistant Professor, Department of Commerce & Business Management, D.A.V. Velankar College of Commerce Solapur

ABSTRACT

The changing customer needs and wants competition, society and Government makes far reaching impact on today's business. Industrial and business growth can be achieved through the unique marketing policies and strategies. The marketing has special significance in underdeveloped as well as developed economies. A rapid development of economy is possible only by adopting modern of 'Marketing'. The primary objective of this study is to determine customer satisfaction among Life Insurance of Bajaj Allianz Customer-oriented thinking requires the company to define customer needs form the customer's point of view. Every buying decision involves tradeoffs and management cannot know what these are without researching customers thus a insurance policy buyers would like a safe, attractive bonus, higher interest rate, attractive accident benefits & so on, under the less price or lower premium. Since all of these desirable features cannot be combines in one policy, the designers must make hard choices based on knowing customer trade-off.

Keywords- *Customer, Satisfaction, Life Insurance, Policies, Strategies, Changing needs.*

INTRODUCTION

Today the world is moving with a pace of light, everything is now becoming lightning fast and in execution of any process of business the ultimate goal is Customer Satisfaction and Response. Every organization is keen that their customers are satisfied and they get their positive response. Companies wanting to win, let alone survive need a new philosophy, only customers centered companies will win, those that can deliver superior value to their target customer these companies will be adopt in building products they will be skillful in market engineering, not just product.

The Bajaj Group is amongst the top 10 business in India. Its footprint stretches over a wide range of industries, spanning automobiles (two-wheelers and three wheelers), home appliances, lighting, iron and steel, insurance, travel and finance. The group's flagship company, Bajaj auto is ranked as the world's fourth largest two and three wheeler manufacturer and the Bajaj brand is well-known in over a dozen countries in Europe, Latin America, the US and Asia.

Founded in 1926, at the height of India's movement for independence form the British, the group has an illustrious history. The integrity, dedication, resourcefulness and determination to succeed which are characteristic of the group today, are often traced back to its birth during those days or relentless devotion to a common cause. Jamanalal Bajaj, founder of the group, was a close confidant and disciple of Mahatma Gandhi. In fact, Gandhiji had adopted him as his son. This close relationship and his deep involvement in the independence movement did not leave Jamanalal Bajaj with much time to spend on his newly launched business venture.

Bajaj Allianz, Gadhinglaj Branch is established in 14th Jan. 2006. The Gadhinglaj Branch office is located Ajara-Sankeshwar Road, Daddi complex, Gadhinglaj. Current branch Manager is Mr.Vaibhavkumar Gurav (B.E Chemical, M.B.A Marketing). This branch is rating as "Excellent" in audit inspection. The branch is working with 7 development officers, 350 agents and 150 Lead Generators. All the branches of Bajaj Allianz are interlinked with the help of computerization and own intranet system using OPUS software systems.

OBJECTIVES OF THE STUDY

[1] To study the whole concept and system of organisation and also to know the awareness of Bajaj Alianz. Life Insurance Company Ltd.

[2] To study customer satisfaction for insurance products of Bajaj Allianz life Insurance Co. Ltd.

[3] To know response of customers regarding insurance products of Bajaj Allianz life Insurance Co. Ltd.

[4] To give suggestions to organisation after study to enhance customer satisfaction and earn positive response from customers.

HYPOTHESIS OF THE STUDY

[1] Competitive pricing & quick honest response may earn the customers trust with satisfaction.

[2] Services and Appreciation in investments provided by company to customers may lead company towards market leadership.

RESEARCH METHODOLOGY ADOPTED

Unit Selected- Bajaj Allianz Life Insurance Company.

Area Selected- For the purpose of research the researcher has selected rural areas of Gadhinglaj Taluka, District- Kolhapur, Maharashtra State.

Type of Research - Empirical Research facts finding investigation with adequate interpretation and identifying the various problems.

Data Source:

Primary source- collected by arranging extensive filed work, for this purpose questionnaire of selected question is prepared and distributed among policy holders, customers were interviewed, company personnel’s discussion and interaction was conducted

Secondary source- for secondary sources researcher has referred published literature by various magazines, research articles, seminar papers, company reports, manuals, database, dairy, website etc

Research Approach- Field Study Method

Research Instrument- Structured Questionnaire

Sampling Size- 200

Sampling Procedure- Purposive Convenience Sampling

Sampling Unit- Policy holders

Selection of Sample- 200 samples are selected from all the villages of Gadhinglaj Taluka through branch database.

Techniques Used- Likert Rank Scale and Garret’s ranking

RESULTS AND DISCUSSION

A. Occupation

By analysing the data it is found that out of total respondents (44%) of the respondent are belonging from agriculture sector. Since the study from rural area, majority are farmers. (22%) of the respondents are government employees, (10%) of the respondents are businessman, (6%) of the respondents are cooperative employees, (4%) of the respondents are private sector employees and (14%) of the respondents are in other category. So majority are farmer and government employees who approach for insurance policy of the company.

B. Monthly income

As far as monthly income is concerned, out of the total respondents it is found that (36%) of the respondents are belonging from >30,000 income group, (32%) of the respondents are belonging from 20,000-30,000 income group. Whereas (16%) of the respondents are belonging from 10,000-20,000 and <10,000 income group. So majority of the respondents whose income is high are farmers and government employees.

C. Priority for insurance policy

Priority for insurance policy is considered than out of total respondents (45%) of the respondents are taking the insurance policy for future provision, (29%) of the respondents taking the policy to eliminate risk and (26%) of the respondents taking the insurance policy to invest money for future benefit. So majority of employees take insurance policy for future provision and to reduce the future risk.

D. Information about policy schemes and facilities

The availability of information is considered about different policy schemes and facilities; it is found that out of total respondents (86%) of the respondents are able to get all information easily regarding the different policy, schemes and facilities offered by the company. (14%) of the respondents are not able to get the information easily.

E. Product satisfaction

Satisfaction regarding different products of the company is considered than out of the total respondents it is found that (80%) of the respondents are fully satisfied. (10%) of the respondents are partially satisfied, (6%) of the respondents are partially dissatisfied and (4%) of the respondents are fully dissatisfied. So it is indicate that the customers are satisfied with the different products of the company.

F. Policy premium

Policy premium is considered than it is observed that out of the total respondents (86%) of the respondents feel policy premium is reasonable, whereas (14%) of the respondents feels policy premium is high. So majority of the respondents feels policy premium of the company is reasonable to pay.

G. Satisfaction for mode of premium facility

Customer satisfaction for mode of premium facilities provided by the company is considered than out of the total respondents (100%) of the respondents are satisfied with the mode of premium facilities provided by the company. So the company is maintaining good customer relationship management.

H. Views regarding comfortable mode of premium facility

Customer views regarding comfortable mode of premium installation services is considered than out of total respondents (58%) of the respondents are comfortable to pay premium yearly, (37%) of the respondents are comfortable half yearly, (3%) of the respondents are comfortable single premium and (2%) of the respondents are comfortable with quarterly premium installation services. So majority of the respondents prefer yearly premium installation service.

I. Communication about dues/date of premium in advance

Organizational communication to the customers about dues and date of premium well in advance to the respondent is considered than out of the total respondents (100%) of the respondents are agreed that organization communicate about due and dates of the premium well in advance. So company is maintaining good customer relationship management.

J. Bonus rate

Bonus rate provided by the company is considered out of total respondents (78%) of the respondents are agree that bonus rates charged by the company is reasonable, (16%) of the respondents says bonus rate are low and (6%) of the respondents says bonus rates charged by the company are high. So majority of the respondents are agree that company charge reasonable bonus rate to the customers.

K. Loan facility provided to policy holder

Loan facility provided to policy holder is considered than out of total respondents (100%) of the respondents are agreed that company provides loan facility to the policy holder. So company makes the provisions for loan facilities to its customers.

L. Promotional activities

Fulfillments of promotional activities by the company is considered than out of total respondents (60%) of the respondents are agree that company provide the promotional activities whereas (40%) of the respondents say to some extent company provides but not as per the promise made by the company. So company should concentrate on promotional activates and try to fulfill them.

M. Satisfaction with insurance agent

Views regarding insurance agent is considered it is found that out of total respondents (78%) of the respondents are satisfied with the insurance agents. (18%) of the respondents are highly satisfied with the insurance agent and (4%) of the respondents are less satisfied with the insurance agent. So company agents provide all the necessary information to the customer regarding all the policy matters and their benefits which supports customers in decision making.

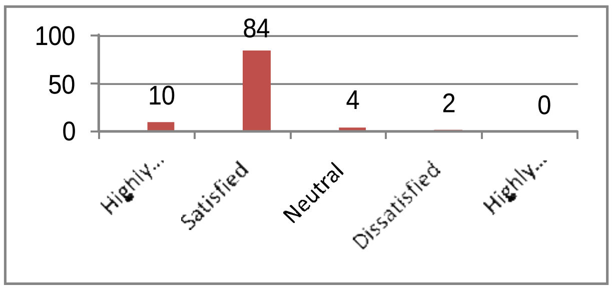
N. Satisfaction for services provided by the company Level of satisfaction with the services provided by the company is considered than out of total respondents (90%) of the respondents are fully satisfied with the services provided by the company, whereas (10%) of the respondents are partially satisfied with services provided by the company.

O. Satisfaction for services provided by the Gadhinglaj branch

Level of satisfaction with the services provided by the Gadhinglaj branch considered than out of total respondents (86%) of the respondents are fully satisfied whereas (12%) of the respondents are partially satisfied and (2%) of the respondents are partially dissatisfied. Overall it is observed that gadhinglaj branch customers are satisfied with the services provided by the company. So company is covering all the rural part of the Maharashtra, with good customer service support.

Testing Of Hypothesis (Descriptive Testing)

[1] Competitive pricing & quick honest response may earn the customers trust with satisfaction.



By applying Likert Rank Scale above graph shows that out of the total respondents (84%) of the respondents are satisfied with the company's customer care service. So the mentioned hypothesis by the researcher that Competitive pricing & quick honest response may earn the customers trust with satisfaction is <u>Accepted.</u>

[2] Services and Appreciation in investments provided by company to customers may lead company towards market leadership.

Garret's ranking techniques was used to rank the company preferred by rural customers. According to this technique the order assigned to different company by the respondents were converted into ranks by using the formula

$$\text{Percent} \qquad \frac{100\,(R_{ij} - 0.5)}{}$$

Where R_{ij} = Rank given to the i[th] attributes by j[th] individual

N_j = Number of the attributes ranked by the j[th] individual.

By referring to the Garret's table the percent position estimated were converted into scores (Garret's and WoodWorth 1969).Thus for each company, the scores for the various respondents were added and the mean score was estimated. The attributes with the highest mean value was considered as the most important one and the others followed in order.

Sr.No	Company	Mean	Rank
1	LIC	64.35	II
2	SBI Life Insurance	38.35	IV
3	Bajaj Allianz	75.25	I
4	ICICI Prudential	42.55	III
5	Others	34.25	V

From the above Garret's table shows the highest score for the Bajaj Allianz Company. So the mentioned hypothesis by the researcher that, services and Appreciation in investments provided by company to customers may lead company towards market leadership is <u>Accepte</u>d.

Conclusion

[1] As India is an agriculture oriented country it is the customers are from agricultural sector.

[2] Due to emergence of private companies in insurance sector, the people are more aware about insurance.

[3] As now people are more frequently traveling which has raise probabilities of uncertainties like

accidents so people want to cover these uncertainties and hence the insurance has become basic need of family.

[4] Number of insurance consultants is increased and these increased numbers of insurance consultants are reaching to more customers hence now customers are more informed about different policy schemes & facilities.

[5] Organization has developed new development 'Renewal vertical' for renewals which keep customers informed about due dates of premium so the customers can arrange their premiums before due dates.

[6] Organization has developed online premium payments, renewal cheque collection from customer's home so customers save their valuable time.

[7] Competition among insurance companies has forced them to give max possible bonus rate so customers are more satisfied with bonus rates.

[8] It is human psychology more it gets its better so customers are ready to switch to other companies if they increase their bonus rates.

[9] Bajaj Allianz has now become top private life insurance company and it has become a 'brand' now so customer are more willing to invest in Bajaj Allianz

[10] Nowadays insurance plans are linked to various funds like equities which are directly related to stock market hence returns are variable & fluctuating so companies cannot offer loans to customers.

[11] Company is more keen towards training & development of employees and agents hence they are more effective in market, and give more satisfactory services to customer.

[12] Bajaj Allianz is raising their each & every department to become more prompt & customer friendly. So the Gadhinglaj Branch is providing more & more satisfactory services to their customers.

Suggestions

[1] Company should introduce new plans with small premiums and Recurring Deposit (R.D.) schemes as customer is belonging from agricultural sector.

[2] Company should introduce more attractive pension & child plans because half of the customer have their monthly income around less than 30,000/- and they take insurance for future provision.

[3] Company should arrange seminars, workshops, public awareness, and camps to educate the customers about benefits of investing money in insurance than other sources of investment.

[4] Company should revise & raise their bonus rates more frequently.

[5] Company should make their renewal department more prompt & develop their communication skills to communicate due dates of premium well in advance.

[6] Company should more competitive with bonus rates and their times consuming services.

[7] Company employee and agents should be more customer friendly by taking care of their requirements.

[8] Company should focus more on rural parts and increase their penetration in rural markets.

[9] Gadhinglaj branch should frequently under take various activities such as dental checkup camps at school, drawing, competitions to aware their presence in city.

[10] Sometimes promises made during promotions are fulfilled up to some extent only so it is suggested to try fulfill the promises up to max possible limits.

[11] Company should advice their agent to get proper appointments of customer before visiting so it will take care of their convenience.

[12] Company should focus on more qualified insurance consultants so they can consult their customers with more ease and perfection.

GRIEVANCE MANAGEMENT IN INDIAN SMALL SCALE INDUSTRIES- A CHALLENGE

Dr. Bhore Nikita (Dr. S. B. Shete)
Assistant Professor, Department of Business Economics
Ganpatrao Arwade College of Commerce Sangli,

1. Introduction:-

In their working lives, employees occasionally have cause to be uncomfortable, disappointed or aggrieved either about certain managerial decisions, practices or service conditions. The question then is whether this particular symptom or feeling is given any attention or is ignored altogether. What are the pros or cons of each of the approaches. To a large extent, the approach will be governed by several variables such as the style of management, size of the enterprise, level of education of workforce, technology of the plant and extent of unionization of workforce.

In the present-day social context, especially in democratic systems, it is accepted that employees should be able to express their dissatisfaction, whether it be a minor irritation, a serious problem or a difference of opinion with the supervisor over terms and conditions of the employment. In respect of the latter, it could stem either from the interpretation of the contract, or in the absence of a negotiated collective contract between management and union.

In India, the government has been making a plea for grievance machinery at the plant level ever since 1956-58 when the standing committee of the Indian Labour Conference submitted a draft on the various aspect of a grievance procedure. The National Commission of Labour Set up by the Government as a tripartite body in 1969 also spelt out the nature of grievance and a model grievance procedure. However, this remains a recommendation and is not a statute yet. In effect, government machinery can only recommend but it is up to the respective managements of each enterprise to formally adopt, or reject, the grievance procedure. It must be noted, though, that there are very many instances in India today where the corporate management and union, through the collective bargaining process, have adopted the grievance procedure.

The grievance procedure is one of the more important means available for employees to express their dissatisfaction. It is also a means available to management to keep a check on relevant diagnostic data on the status of the organization's health. There are other means also for this, such as decline in production/output (other things being equal), change in an individual's work habit and approach to the job itself. Statistical indexes taken together and analysed to determine a pattern could also be revealing- indexes such as absenteeism rates, accident data, request for transfer, number of disciplinary cases and separation and quits. Besides, there are some employees who by nature are not forthcoming and hence may not like to avail the grievance machinery; in such cases these indexes have an added justification. Nevertheless, rather than wait only for the grievance mechanism to indicate the state of the organization's health. The management could use the above indexes in conjunction with the grievance procedure to anticipate problem areas and take corrective action, or introduce new policies, as the situation may demand.

Whether this channel of upward communication will, in the first instance, be implemented will depend on the management's approach, the extent of unionization, and the union's strength in each particular plant.

2. Understanding Employee Grievances In Industry:-

a) Step Ladder Method

In the step ladder method (also called the formal procedure), the aggrieved employee first places his grievance before his immediate superior/supervisor (who acts as a first level grievance machinery) for suitable consideration. If the employee is not satisfied with the decision given by his immediate superior, he is allowed to take his grievance to the departmental head and to higher levels if necessary.

b) Open Door Method

Open door method (also called informal procedure) is an alternative to step ladder method for the settlement of grievances of employees. Here, formal grievance procedure is not followed. An aggrieved worker is allowed to go directly to the top management executive with his complaint for consideration and suitable action (remedial measure). There is no formal procedure. The doors of the top executive/chief executive are always kept open to the employees and they are allowed to approach him directly with their complaints/grievances.

c) Observations

A manger/supervisor can usually track the behaviour of people working under him. If a particular employee is not getting along with people, spoiling materials due to carelessness or recklessness, remaining absent etc., the signals are fairly obvious. Since the supervisor is close to the scene of action, he can always find out such unusual behavior and report promptly.

d) Opinion Surveys

Surveys may be conducted periodically to elicit the opinions of employees about organization and its policies. Group meetings, periodical interviews with workers and collective bargaining sessions are also helpful in knowing employee discontent before it becomes a grievance.

e) Gripe Boxes

A gripe box may be kept at a prominent location in the factory for lodging anonymous complaints pertaining to any aspect relating to work. Since the complainant need not reveal his identity he can express his feelings of injustice or discontent frankly and without any fear of victimization. Gripe boxes are different from suggestions with name written on them.

f) Exit Interview

Employees usually leave their current jobs due to dissatisfaction or better prospects outside. Exit interview, if conducted carefully can provide important information about the employee's grievances. If the manager tries sincerely through an exit interview, he might be able to find out the real reasons why the employee is leaving the organization.

3. Nature and Causes of Grievances in Industry:-

(a) Grievance Resulting from Working Conditions:

- Improper matching of the worker with the job.
- Changes in the schedules and procedures.
- Non-availability of proper tools, machines and equipment for doing the job.
- Tight production standards.
- Bad physical conditions of workplace.
- Failure to maintain discipline (excessive discipline or lack of it, both are equally harmful).
- Poor relationship with the supervisor.

(b) Grievance Resulting from Management Policy :

- Wages payment and job rates.
- Leave
- Overtime
- Seniority
- Transfer
- Promotion, demotion and discharges
- Lack of career planning and employment development plan
- Hostility toward a labour union

(c) Grievance Resulting From Alleged Violation of:

- The collective bargaining agreement
- Central or state Laws
- Past Practices
- Company rules
- Management's responsibility

(d) Grievance Resulting from personal maladjustment:

- Over-ambition
- Excessive self-esteem
- Impractical attitude to life etc

4. Personnel Manger And Grievances Handling:-

(a) Role of Personnel Manager in Grievance Handling

Grievance and discipline handling are one of the personnel roles that few other people want to take over. Ambitious line managers may want to select their own staff without personnel intervention or by using the services of consultants. They may try to brush their personnel colleagues aside and deal directly with trade union officials or organise their own management development, but grievance and discipline is too hot a potato. Though it may seem like a thankless task that is 'pushed onto' personnel, it is now a major feature of personnel influence and power within the organization. The requirements of the law regarding explanation of grievance handling and the legal framework to avoid unfair dismissal combine to make this an area where personnel people must be both knowledgeable and effective. That combination provides a valuable platform for influencing other aspects of organizational affairs. The personnel manager who is not skilled in grievance and discipline is seldom in a strong organizational position.

(b) Reasons for Adopting a Grievance Handling Procedure

- Most grievances seriously disturb the employees. This may affect their morale, productivity and their willingness to co-operate with the organization. If an explosive situation develops, this can be promptly attended to if a grievance handling procedures already in existence.
- It is not possible that all the complaints of the employees would be settled by first-line supervisors, for these supervisors may not have had a proper training for the purpose, and they may lack authority. Moreover, there may be personality conflicts and other causes as well.
- It serves as a check on the arbitrary action of the management because supervisors know that employees are likely to see to it that their protest does reach higher management.
- It serves as an outlet for employee gripes, discontent and frustrations. It acts like a pressure valve on a steam boiler. The employees are entitled to legislative, executive and judicial protection and they get this protection from the grievance redressal procedure, which also acts as a means of upward communication. .
- The management has complete authority to operate the business as it seems fit- subject, of course to its legal and moral obligations and the contracts it has entered into with its workers or their representative trade union. But if the trade union or the employees do not like the way the management functions, they can submit their grievance in accordance with the procedure laid down for the purpose.

(c) Basic Elements of Grievance Handling Procedure

- The existence of a sound channel through which a grievance may pass for redressal if the previous stage or channel has been found to be inadequate, unsatisfactory or unacceptable. This stage may comprise three, four or five sub stages. The procedure should be simple, definite and prompt, for any complexity or vagueness or delay may lead to an aggrieved of the dissatisfaction of the aggrieved employee.
- The steps in handling the grievance should be clearly defined. These should comprise:

1) Receiving and defining the nature of the grievance;

2) Getting at the relevant facts about the grievance;

3) Analyzing the facts, after taking into consideration the economic, social, psychological and legal issues involved in them;

4) Taking an appropriate decision about the aggrieved employee;

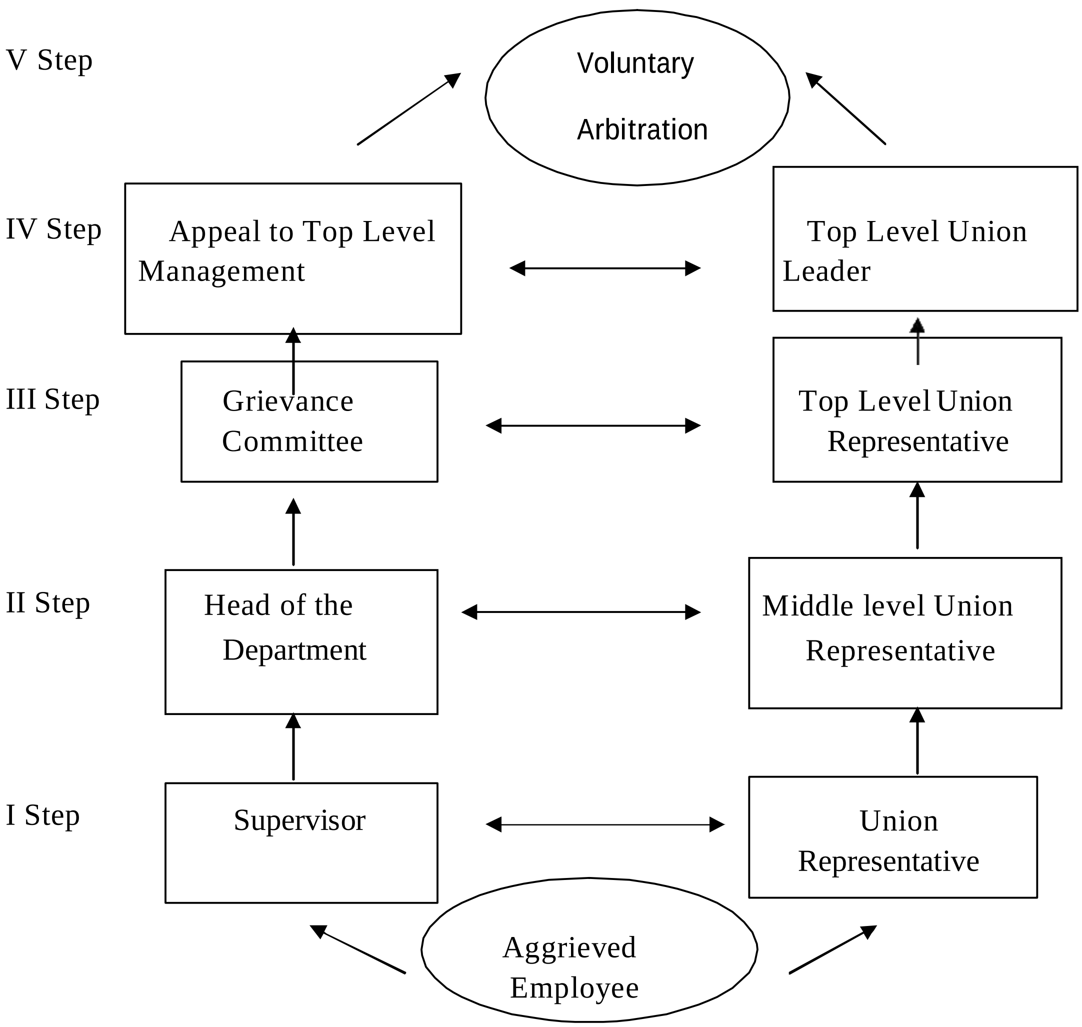
5) Communicating the decision to the aggrieved employee.

- Whatever the decision, it should be followed up in order that the reaction to the decision may be known and in order to determine whether the issue has been closed or not.

(d) Model Grievance procedure in India

The grievance procedure issue was discussed in the 15th Session of Indian Labour Conference held in 1957. In the 16th Session of the Conference (1958), a model grievance procedure was prepared

The following diagram shows five-step model grievance procedure (as suggested by Indian Labour Conference)



The steps in the procedure (as per the model grievance procedure) will be as follows

- **First step**: - Grievance is to be submitted in writing to the departmental representative of the management. Here the aggrieved worker can take the help of this union representative. He (departmental representative) has to give replay within 48 hours.
- **Second step**:- If the matter is not settled at the level , the aggrieved worker can take the matter to the head of the department who has to give the decision within three day.
- **Third step:-** If concerned worker is not satisfied at this stage, he can take his grievance to the Grievance committee**.** This Committee must make its recommendations to the management within seven days. The final; decision of the management on the report of the Committee is to be communicate to the

concerned worker within three days of the receipt.

- **Fourth step:-** If the worker is not satisfied even at this stage, he can make appeal for revision to the management and the management has to communicate its decision to concerned worker within seven days.
- **Fifth step:-** In the final stage, the grievance may be referred to voluntary arbitration.

5. Legislations Dealing With Grievance In India:-

In Indian industry, adequate attention has not been paid to the settlement of grievance. Legislative framework deals only indirectly with the redressal of individual grievance. At present, there are three legislation dealing with grievance of employee working in industries. They are:

1. The Industrial Employment (standing orders) Act 1946.
2. The Factories Act 1948.
3. The Industrial Disputes Act 1947.

The Industrial Employment (standing orders) Act 1946

Requires that every establishment employing 100 or more workers should frame standing orders. These should contain, among other things, a provision for redressal of grievance of workers against unfair treatment and wrongful exactions by employer or his agents.

The Factories Act 1948

The Factories Act 1948 provides for the appointment of a welfare officer in every factory ordinarily employing 500 or more workers. These welfare officers also look after complaints and grievance of workers. However, these provisions are not useful due to the dual role which these officers are called upon to play.

The Industrial Disputes Act 1947

The Industrial Disputes Act 1947 provides:

- The employer in relation to every industrial establishment in which fifty or more workmen are employed shall provide a grievance settlement authority.
- When an industrial dispute connected with an individual workman arises in an establishment referred to above, a workman or any trade union of workman of which such workman is a member may refer such dispute to the grievance settlement authority for settlement.
- The grievance settlement authority shall follow such procedure and complete its proceedings within such period as may be prescribed.
- No reference shall me made to boards, courts or tribunals of any dispute referred to in this section unless such dispute has been referred to the grievance settlement.

Authority concerned and the decision of the authority is not acceptable to any of the parties to the dispute.

Under section 2 – A of the Industrial Dispute Act (which was added to the act by an amendment made in 1965), the term “industrial dispute” includes all differences between an industrial workman and his employer connected with organizing out of his discharge, dissmaisal, retrenchment or termination not withstanding that no other workman nor any union or workman is a party of dispute. The effect of this provision is that the industrial grievance of a worker of the kind noted above can in future pass through the settlement machinery which has been provided for under the act.

6. Conclusion

The grievance procedure machinery decided by the Indian Labour Conference in 1957 was not working well due to lack of statutory backing. In 1982 the government amended the Industrial Disputes' Act providing for statutory grievance procedure in establishments employing 50 or more workers, but this was not notified by the government so far due to a decision of a tripartite meeting that the legal provision was dilatory and unworkable. The employers now want this amendment to be notified and make the grievance procedure unworkable.

Today if the filing of a claim is justifiably delayed by a union, the courts have powers to condone the delay. The employers now want that limit of three years should be fixed beyond which no claim should be entertained by the courts. The employers also want to keep only one year limit for filing claim of recovery of dues though the delay is due to the dilatory tactics by the employers.

Section 11-A of the Industrial Disputes' Act provides for modification of the punishment at the instance of the Labour Courts or the Industrial Tribunal. This section is provided due to arbitrary punishment imposed by the management by holding fictitious domestic enquiry. The managements want this section also deleted.

Section 17-B of the Act provides for automatic payment of the last drawn wages of the employees in case if the employers prefer to file an appeal in higher courts against the award. The employers now want to nullify the protection given to the worker and stop payment of wages. "Work to rule" or "mass casual leave" are protest actions resorted to by workers when managements resort to dilatory methods to deal with legitimate grievances of workers, but take action against the workers, when they arbitrarily change work practices calling it go-slow. The employers now want to ban these forms of action and they even quote Supreme Court judgment to justify their claims. They, however, want to preserve their right to arbitrarily declare lay off, lockout or closure, they even resort to non-payment of electricity bill and close down the operation of the unit.

KNOWLEDGE MANAGEMENT AND E-LEARNING TECHNOLOGY IN EDUCATION

Dr. Sonkamble C.P.
kadambari6@redimail.com
Mr.Mutnale Vijaykumar
vijay.mutnale@gmail.com

ABSTRACT

E-Learning technology today is used primarily to make available training courses about carefully selected topics for delivery to employees registered for those courses. Knowledge management technology is employed to rapidly capture, organize and deliver large amounts of corporate knowledge. The educational needs of modern virtual communities like company teams cause us to explore possible solutions and to integrate E-learning capabilities and advantages of knowledge management. In this paper we investigate on relations between E-Learning and Knowledge Management technology and then illustrate some suggestions to enhance the capture, organization and delivery of large amounts of knowledge by improving and enriching E-learning contents.

What is Knowledge management?

1. Management of organizational knowledge for creating business value and generating a competitive advantage. „

2. "Knowledge management is leveraging relevant intellectual assets to enhance organizational performance." (Stankosky, 2002)

3. Processes of creating, capturing, and using knowledge to enhance organizational performance. (Stacey, 2000)

What is E-Learning?

E-Learning has many interpretations but in short it stands for learning by electronic means. This means learning not directly from lecture notes, books or face-to-face from teacher but through electronic means. Common forms are computer-based training and web based lessons or on-line lessons. With the advent of advanced technology, lessons may be taken anytime anywhere. These lessons can be made more interesting using multimedia i.e. combination of text, graphics, sound and animation. Lessons can be delivered to the learner via various means e.g. PC, PDA, mobile phone and TV.

Knowledge management models

Perhaps one of the earliest **KNOWLEDGE MANAGEMENT** models is that of Nonaka and Takeuchi (1995) The model classifies knowledge into two kinds: tacit and explicit. According to this model, four different processes are involved in transferring knowledge, depending on its type:

1. Internalisation – We learn by acquiring public knowledge. This knowledge is internalised. We obtain general knowledge from books, the internet and other public sources.

2. Socialisation – We learn by socialising with other people, exchanging ideas and experiences. We observe our elders and they share their wisdom with us.

3. Externalisation – Personal knowledge becomes public or explicit knowledge through documentation. The knowledge of individuals is captured, classified and stored using appropriate knowledge representations and then made available for reuse by others.

4. Combination – Here explicit knowledge from different sources is combined, mixed or connected to create new knowledge, this can be done using groupware and wikis, which usually leads to new innovation.

Knowledge management and the e-learning process

That is why education has to be a process of sharing and adopting knowledge, skills and competencies. The advantages of **KNOWLEDGE MANAGEMENT** are very useful for that process. **KNOWLEDGE MANAGEMENT** is a core part of team training, so the process of capturing knowledge is very similar to the processes related to the selection of the most appropriate learning content in e-learning. The outcome of an effective learning process should be not only knowing facts for a separate subject, but also having practical skills and developing competency in the given domain, thus the acquisition of knowledge is a more precise measure of the learning outcome than learning facts for different yet related domain topics. Therefore KNOWLEDGE **MANAGEMENT** processes should be more deeply and successfully integrated in learning content delivery and in the organisation and support of learning.

Common requirements/characteristics of knowledge management and e-learning systems

E-learning and KNOWLEDGE MANAGEMENT systems share many features. Some of these are as follows (Denning, 2000):

• **System architecture –** KNOWLEDGE MANAGEMENT systems and e-learning environments share the same system architecture. Mostly implemented as slim clients offer access to the systems through the use of the internet or any other kind of network.

• **Collaboration and communication –** Both systems enable and support rather rich communication and cooperation features. Different kinds of synchronous and asynchronous communication are possible. Group scheduling, application sharing, instant messaging and other forms of cooperation are supported. These tools guarantee successful education and teamwork. Both systems also include different tools related to working in groups or different types of virtual communities. Students and teachers have to exchange information related to learning activities or specific topics of the proposed learning content. Participants in education involved in different types of groups have to exchange knowledge, skills and competencies.

• **Personalisation of delivered information –** Flexible e-learning systems and high-quality **KNOWLEDGE MANAGEMENT** systems offer the possibility of personalisation. The working environment can be adapted to the user needs and characteristics where both systems are not closed or isolated. Information is most often shared among several resources and can be changed, extended, modified or removed on demand. They are small, independent units of information and can be combined in different contexts and delivered even on mobile devices.

Integration of e- learning systems and knowledge management, the knowledge management model which is to be based upon should at first be determined. How this integration can be provided should be evaluated within the framework of the related model. This mentioned integration can basically be explained as follows based upon Nonaka and Takeuchi's Knowledge Spiral Model: The integration of the staff (employees) to the effective procedures is determined with respect to knowledge source maps and knowledge domains. Staff share their expertise and knowledge with each other by means of the interaction and collaboration options provided by the system; these options can be the chat rooms, discussion forums and coordination meetings thru internet calls. New possibilities for interaction and communication provided by knowledge management systems would definitely increase the efficiency at this stage (socialization).

Knowledge management and e-learning –

Knowledge management and E-learning characteristics research - project development, collaboration, Help desk, Learning Objects use for presentation of learning content and knowledge, and Content Management systems. Project development tools and capabilities of corporate (organizational) system is critical for execution of different team and individual tasks and delivery of necessary information, data and document in time. Use of project management tools is very useful in the process of education. It allows projects developed by students to be scheduled and implemented on time. Another advantage of their integration in education is students get used to work with the tools and they know which are strong point and drawback of project management tolls implementation in their work and how to manage existing problems related to their use and e-Learning enhancements to Knowledge Management as e-Learning technology has been evolving separately from knowledge management technology. There have been recent investigations into the integration of these technologies and its effectiveness of each of the five phases of knowledge management as shown below. A sixth phase, Feedback, has also been added.

• **Socialization:** Competency and skills measurements help identify the people with specific interests, skills and knowledge in the organization.

• **Externalization:** Knowledge is captured by the system with the intent of teaching that knowledge to other people. This improves the knowledge capture process.

• **Combination:** Knowledge about products and processes of the business is organized to make learning the knowledge more effective and efficient. Pedagogical techniques are embedded in the knowledge.

• **Internalization:** Competency and skills measurements help identify which people lack the knowledge to do their job effectively and provide them with online training. e-Learning will insure that a person has learned the knowledge using assessments and alternative learning methods, if necessary.

• **Cognition:** People can be provided with on demand performance support by getting just the training that they need at the time that they need it to complete a business task.

• **Feedback:** Assessments provide feedback concerning how well a person has learned and how well they have applied what they learned to a business problem.

Knowledge Management in e-Learning Environments It has been considered that e-learning is a tool for knowledge acquisition as it helps in extracting tacit knowledge to improve knowledge sharing . Knowledge management is significant for creating, using, International Journal of e-Education, e-Business, e-Management and e-Learning collecting, exchanging and retaining knowledge to add value . Knowledge management models still many challenges, such as the knowledge management model implementation and the lack of an evaluation of the structure of practice. It has defined three different types of learner knowledge which are about, from and for and it shows that the most important electronic mechanisms for management of the three major types of learner knowledge were introduced as "electronic community of practice", "learner complaining recording/satisfaction collecting system" and "web seminar"

Conclusion:

The integration model of e-learning systems and knowledge management should be determined so as for the Learners will be able to share their knowledge and skills with each other by means provided by the system where the next step will be the transformation of tacit knowledge into explicit knowledge. In the final stage of the explicit knowledge is transformed into tacit knowledge and it is defined as sharing knowledge, practices, and skills within learners. It is essential step in the process of knowledge management as knowledge can be transferred to other learners within the community where it will help in creating new knowledge and improving learning process.

AN OVERVIEW OF EMERGING TRENDS IN DIGITAL MARKETING IN INDIA

Dr. Sudhakar D. Bhoite
Associate Professor, Dept.M.Phil (Com & Mgt) CSIBER, Kolhapur
sdbhoite@rediffmail.com
Mr. Omkar N. Pethakar
M. Phil. Research Scholar, CSIBER, Kolhapur
pethakaromkar@gmail.com

Abstract:

In this booming age of dynamic change in technology marketers are relying more on the modern approach over being traditional. The Indian market is very huge and changing fast. The main advantage of digital marketing is getting to the target customers in real time. In India, peoples are spending more and more time on internet and day by day it is increasing rapidly. Digital marketing tools play vital role in their daily life. Every year we see the up and down of different trends that force the digital marketing world to evolve. Marketers should change their traditional marketing strategies to take competitive advantage.

Keywords: *E-Commerce, Online Marketing, Marketing Strategy*

I. Introduction

Digital Marketing trade in India is unfold to most of the business sectors. The growth in the online marketing trends is creating a substantial impact on marketing and advertisement. Digital Marketing means a term given to any variety of marketing products/services through online channels. Simply, Connecting and Marketing to the customers using online channels like website, apps, search engines, emails and social media is called Digital Marketing. The main difference of Digital marketing from traditional marketing is, it involves the use of digital channels and methods that enable organisations and businesses to monitor the success of their marketing campaigns, even in real time, which helps to understand what does and doesn't work. The businesses that are investing in digital marketing are growing fast and gaining profitable results too.

Digital Marketing is now a very important part of the Indian Economy. India is a fast paced nation towards digital economy and this has been accelerated with the demonetization of the Indian Currency in the year 2016. Indian government has launched various digital payment promotion schemes which motivated people in India to use more online medium. The telecommunication sector is also playing an important role in the digitalization of India. The free & unlimited internet facilities launched by reliance telecom Jio has played a revolutionary roll. The other telecom companies like BSNL, Vodaphone , Idea, & Airtel are also offering very attractive internet plans. Now a days, Indian banks are providing a lot of customer friendly & secure money transaction services too. People are spending most of their times online compared to previous years. So being present on the digital devices is a need of businesses, which will help for more opportunities and growth. Digital Marketing has a lot of opportunities for business growth, helps to create long lasting relationships, reach targeted customers, generate good number of leads and affordable.

Now consumer in India is spending more time on internet surfing and social media. So the reach, visibility of any product is more through online medium than traditional marketing methods. The main key players in Digital marketing are government, banking system, Shopping Portal in India, Internet Service Providers and Software Service Providers. Digital market needs digital marketing and promotion strategies. The recent Developing Digital Skills 2018 report showed, more marketers are now spending their more than 50% time of on digital marketing activities and also two of the three top job roles in marketing are related to digital, so it clearly indicates digital skills are needed for every managers and marketers.

Digital marketing techniques includes Website, Search Engine Optimisation(SEO),Search Engine Marketing(SEM), Social Media, Content Marketing, Mobile Marketing, Email Marketing, Blogging, Affiliate Marketing, Remarketing and Analytics.

a) Website:

Website is nothing but online address of your company. Every business should have proper responsive website to take advantage of Digital Marketing. The website must satisfies the very important things like responsiveness, user-friendliness, easy to navigate and consumer tracking tools.

b) Search Engine Optimisation(SEO):

There are many known search engines like Google, Yahoo, Bing, Baidu and Yandex.

Search engine optimization technique is used to increase the number of visitors to a website by getting a high-ranking placement in the search results page of a search engine (SERP).

c) Search Engine Marketing(SEM):

Search Engine Marketing is the methodology to drive traffic to your business through paid campaigns. We can say Search Engine Marketing as paid Search engine optimization. There are various platforms for SEM. Depending upon structure of business and strategies, businesses may choose CPM (cost-per-thousand impressions) model or PPC (payper-click) or CPC (cost-per-click) model.

d) Social Media:

Social Media Marketing is very important component of Digital Marketing. It involves driving traffic to your websites or business through social media sites like Facebook, Youtube, Twitter, Linkedin, Instagram, Pinterest, Google+, etc. In India Social Media startegies are very powerful due to population of India. So social media optimisation is the need of every business.

e) Content Marketing:

Content is the king of digital marketing. Content should be catchy and crispy. A good content is liked and shared very rapidly. So create content for various social media platforms are very important. Businesses need to engage their customers on a daily basis at least two to three times a day using blogs, articles, social media posts.

f) Mobile Marketing:

The mobile users are increasing day by day. The content, website, apps is being customized for mobile devices. People prefer Mobiles, Tabs instead of computers, Laptops so mobile marketing is the most effective way of marketing.

g) Email Marketing:

Email marketing is the strategy of sending commercial messages through email to a list of potential customers and prospects. With the help email marketing softwares, we can maintain email lists that are segmented based on different factors, including customers spending habits likes and dislikes etc. Email marketing is the very effective way of marketing in corporate world specially in service sector.

g) Remarketing:

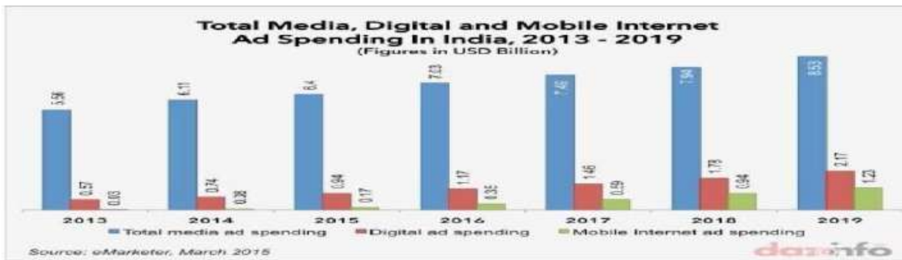
Remarketing is also known as retargeting. It is the strategy to target customers who have already visited or taken action on your website. Remarketing can help the businesses better engage with online customers. We can tap what are the interests of online customers which helps to engage these users.

h) Analytics:

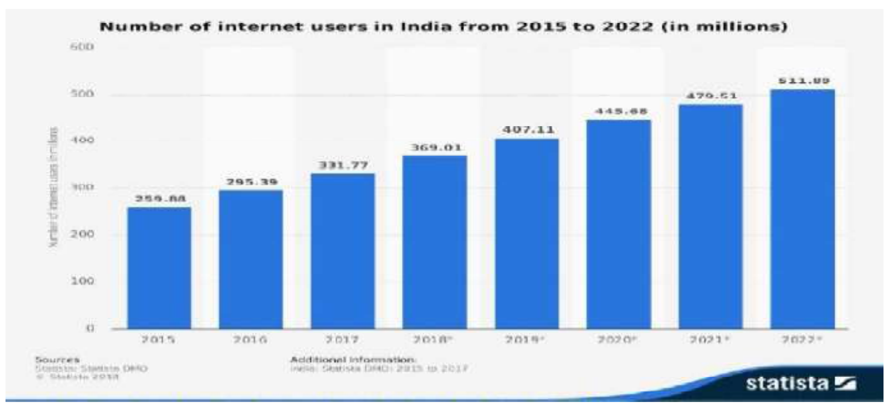
Analysis is focused on understanding the past, present and future; what happened, why it happened and what will happen. Web analytics is the process of understanding the behavior of visitors to a Web site. The Web analytics is a technique for measuring web traffic which can be used as a tool for market research, business strategies and to measure and improve the effectiveness of a website.

II. Future of digital marketing in India

Today, In India digital marketing industry is growing at its peak, and is still continuous. For this growth many factors are responsible. India is the second-largest online market worldwide. The consumer behaviour has greatly changed in the year past. People are using various digital marketing mediums. The number of ecommerce websites are increasing and E-commerce website are providing all the goods and services using online portals today. The report by the International Journal of Advanced Research Foundation showed that India is getting to see the golden period of the Online sector between 2013 to 2019 with incredible growth opportunities for E-Commerce, Online Content, Internet Advertising, Social Media, Search, , and Digital Marketing Services.



According to the Statista, the below figure indicates the number of internet users in India from 2015 to 2022. In 2018, India had 369.01 million internet users. This figure is expected to grow to 511.89 million internet users in 2022.



WARC Survey revealed that 35% of advertisers would increase their mobile advertising spend by 50% or more by 2020 in India. Several factors are responsible to contribute to the growth of digital marketing in India. In India, youth is very much technology friendly and also now there is a great change in the lifestyle of the middle class. The majority of people in India now have access to the internet. Internet and 4G technology revolutionized the marketing scenario for both marketers and the consumers. It was discovered that the standard of living and changes in lifestyle increased the level of consumption, quality and the pattern also. By 2019, mobile devices are expected to reach around 4.5 billion units worldwide. So as more people use smart phones, tablets and other different mobile devices, the potential of mobile market continues to grow.

Here are the leading digital marketing trends that will pave the path to innovative transitions in Digital Marketing and eventually shape its future.

a) Mobile Focused Digital Marketing
b) Marketing Automation
c) Personalization
d) Visual Search

e) Chatbots
f) Live Video
g) Virtual Reality
h) Smart Speakers And Audio
i) Visual content storytelling
j) Influencer Marketing
k) Artificial Intelligence
l) Big Data and Predictive Analytics
m) The Internet of things (IoT)

We are at the edge of an revolutionary stage, where marketers are evolving and bracing like never before. Businesses are trying to reach out to their relevant customers to build relevant and effective relationships. They are banking on social media, search, advertising, videos, podcasts, mailers and mobile technologies to create winning strategies and achieve real-time connections. 2019 will be about better customer experience with automation, personalization, and Artificial Intelligence technology.

III. Conclusion

In India, Digital marketing industry is still in its initial phase. Most of the businesses are still thinking to adapt to the medium while top businesses have already started exploring the digital marketing world. Digital marketing is very cost effective and having a excellent commercial impact on the business. The customers are looking and searching more on online medium to find the best deal from the sellers around India. Digital marketing such as website, search engine optimisation(SEO),search engine marketing(SEM), social media, content marketing, mobile marketing, email marketing, blogging, affiliate marketing, remarketing, web analytics, online reputation management, app store optimisation are becoming more and more common in our digital technology. We all are connecting through social media like whatsapp, facebook, instagram etc. Therefore social media is creating new opportunities in India for digital marketers to attract the customers through online platform. Many businesses will increase their ad spending budget to reach to the more and more customers to take competitive advantage. Businesses are experimenting on various new methods, technologies to reach out to their target audience. Thus, all surveys and reports conducted around the globe are revealing that the digital marketing will grow more in upcoming years in India.

BANKING AND TECHNOLOGY IN INDIA

Prof. Tarhal Banderao Anandrao
Assistant Professor, Dept.of Economics, Chandrabai–Shantappa Shendure College, Hupari

Abstract

In India, from the early I990's, electronic banking is gaining in popularity as an important distribution channel to provide banking services. This direction is being taken by the batiks to differentiate their services to the consumers to gain their loyalty. The strategies adopted by the Indian banks to survive the increased competition are the focus of this study.

Keywords: *E-Banking, M-Banking*, *EFT, Debit Card, Credit Card*

Introduction :

A sound and effective banking system is the backbone of an economy. The economy of a country can function smoothly and without many hassles if the banking system backing it is not only flexible but also capable of meeting the new challenges posed by the technology and other external as well as internal factors. The importance and role of information technology for achieving this benign objective cannot be undermined. There is an urgent need for not only technology up gradation but also its integration with the general way of functioning of banks to give them an edge in respect of services provided to the customers, better housekeeping, optimizing the use of funds and building up of management information system for decision making. The technology has the potential to change methods of marketing, advertising, designing, pricing and distributing financial products and services and cost savings in the form of an electronic, self-service product-delivery channel. The technology holds the key to the future success of Indian Banks. Thus, "Electronic Banking" is the need of the hour, which cannot be lost sight of except at the cost of elimination from the competition. The existence of Electronic banking also becomes inevitable due to the standards required to be matched at the international level. Thus, the domestic as well as the international standards mandates the adoption of Electronic banking at the earliest possible moment.

In India, from the early I990's, electronic banking is gaining in popularity as an important distribution channel to provide banking services. This direction is being taken by the batiks to differentiate their services to the consumers to gain their loyalty. The strategies adopted by the Indian banks to survive the increased competition are the focus of this study.

Technology is enabling banks to provide the convenience of anytime-anywhere-banking. Banks are now reengineering the way in which their services can be reached to their customers by bringing in flexibility in their "distribution channels". The earlier brick-and-monar branch is no longer sufficient; technology is now taking banks to the homes or offices, 24 hours a day, 365 days a year through ATMs, phone banking and PC banking. The financial supply chain is undergoing a fundamental strategic change.

Definition of E-Banking : E-Banking is defined as the automated delivery of new and traditional banking products and services directly to customers through electronic, interactive communication channels, E-banking includes the systems that enable financial institution customers, individuals of businesses, to access accounts, transact business, or obtain information on financial products and services through a public or private network, including the Internet. 3 Customers access e-banking services using an intelligent electronic device, such as a personal computer, personal digital assistant, automated teller machine, Touch tone telephone. While the risks and controls are similar for the various e-banking access channels, this booklet focuses specifically on Internet-based services.

Technology Used in E- Banking :

1. The Electronic Fund Transfer (EFT): This facility offers you to make payments to account holders of other banks in an efficient and fast manner. As against the physical clearing, where the cheques are cleared on presentment of the physical instrument at the clearing house, in EFT the transactions are settled electronically. EFT also provides you with an opportunity to move your collections to an electronic platform, whereby you can instruct your Dealers to pay through EFT, thus reducing the time for realization of funds. At present the electronic fund transfer facility is available in two modes and you can avail either of the following modes to transfer your funds:

I) National Electronic Fund Transfer (NEFT): This is the faster mode of fund transfer in which the funds are credited to the beneficiary's account on the same day. It is offered by computerized branches of certain banks.

II) EFT: This is the normal electronic fund transfer facility offered by the banks. It is similar to NEFT in all respects with the exception of the transaction cycle time – an EFT transaction takes a minimum of 3 working days to be credited to the beneficiary's account whereas in NEFT, the amount is credited on the same day of the transaction. The end to end transaction can be done through our Corporate Electronic banking wherein the request can be submitted online, either as a single transaction or through a file uploads. The key features that are common to both EFT and NEFT are: EFT/NEFT clearing is conducted by Reserve Bank of India (RBI) and it takes place thrice a day during Monday to Friday and twice on Saturdays.

The payment instruction can be given through the Corporate Electronic banking. Alternatively the instructions can also be sent to the designated branches.

Presently offered at more than 125 locations, which covers all the major cities of the country

2. Automated Teller Machines: The Automated Teller Machines are installed, now-a-days, at every nook and corner in most of the towns & cities. These are meant for balance enquiries, cash withdrawals and many other facilities depending upon the policies of the bank. This requires a valid Customer Id and password to log in and is therefore safe to be used. Despite of using ATM cards, Debit cards can also be used in the ATMs.

3. Debit Cards: Debit Cards is another advanced technology of the electronic banking, now-a-days. These cards are the multi-purpose cards and can be used in ATMs for balance enquiry and cash withdrawal or can be used for easy shopping at various counters. Debit Cards ensure the automatic deduction of amount from the account just by scratching it on the machine. It makes it easier for the consumers to go for shopping with and even carrying cash with them.

4. Credit Cards: Credit Cards, unlike debit cards, provide credit to the consumers. A credit card system is a type of retail transaction settlement and credit system, named after the small plastic card issued to users of the system. A credit card is different from a debit card in that it does not remove money from the user's account after every transaction. In the case of credit cards, the issuer lends money to the consumer (or the user). It is also different from a charge card (though this name is sometimes used by the public to describe credit cards), which requires the balance to be paid in full each month. In contrast, a credit card allows the consumer to 'revolve' their balance, at the cost of having interest charged. Most credit cards are the same shape and size, as specified by the ISO 7810 standard.

5. Charge Cards: A charge card is a means of obtaining a very short term (usually around 1 month) loan for a purchase. It is similar to a credit card, except that the contract with the card issuer requires that the cardholder must each month pay charges made to it in full -- there is no "minimum payment" other than the full balance. Since there is no loan, there is no official interest. A partial payment (or no payment) results in a severe late fee (as much as 5% of the balance) and the possible restriction of future transactions or even cancellation of the card.

6. Smart Cards: A card that is used for storing and retrieving personal information, normally the size of a credit card and contains contains electronic memory and possibly an embedded integrated circuit. The card can be used to do many tasks: Will verify the carrier of that card in order to access systems,Storing a patient's medical records, Storing digital cash, To use a smart card, either to pull information from it or add data to it, you need a smart card reader, a small device into which you insert the smart card.

7.Payment and Settlement Systems and Information Technology: The development of payment and settlement systems conforming to the best international standards has been a key objective of the Reserve Bank. A milestone was crossed during 2003-04 with the commencement of the Real Time Gross Settlement (RTGS) as a facility available for quick, safe and secure electronic mode of funds transfer. Preparation of the draft legislation relating to payment and settlement systems was another important development. The legislation aims at providing a sound legal basis to various payment and settlement systems operating in India and empowers the Reserve Bank to regulate and supervise such systems. It profiles the significant expansion of activity in the payment systems in India and the key drivers – retail payments and the rising popularity of card-based transactions, large value payments propelled by rising turnover in the inter-bank clearing, Negotiated Dealing System (NDS) and foreign exchange clearing segments. Noteworthy landmarks in the evolution of payment systems highlighted in this Section are the implementation of Real Time Gross Settlement (RTGS) system, the Special Electronic Funds Transfer (SEFT) system and the foundation being laid for the constitution of a Board for Payment and Settlement Systems as an apex regulatory authority. Reviewing developments in the settlement systems in India in 2003-04, the Section highlights the continuing preponderance of paper-based (cheque) clearing and the preparatory steps being taken to introduce cheque truncation to improve the speed and efficiency of paper-based settlement systems. The implementation of Online Tax Accounting System (OLTAS) to IT-enable tax payment as well as tax administration is brought out in this Section along with developments relating to the Indian Financial Network (INFINET) and Structured Financial Messaging Solution (SFMS). The role of central counter parties (CCPs) in minimizing settlement risks is underscored. The Section concludes with a review of the growing role of information technology (IT) within the Reserve Bank and the special emphasis being laid on information security and disaster recovery management.

Importance of E-Banking in Business: Businesses rely on efficient and rapid access to banking information for cash flow reviews, auditing and daily financial transaction processing. E-banking offers ease of access, secure transactions and 24-hour banking options. From small start-up companies to more established entities, small businesses rely on e-banking to eliminate runs to the bank and to make financial decisions with updated information. The importance of E-Banking are as follows:

1. **Activity Review:** Business owners, accounting staff and other approved employees can access routine banking activity such as deposits, cleared checks and wired funds quickly through an online banking interface. This ease of review helps ensure the smooth processing of all banking transactions on a daily basis, rather than waiting for monthly statements. Errors or delays can be noted and resolved quicker, potentially before any business impact is felt.

2. **Productivity:** E-banking leads to productivity gains. Automating routine bill payments, minimizing the need to physically visit the bank and the ability to work as needed rather than on banking hours may decrease the time involved in

performing routine banking activities. Additionally, online search tools, banking actions and other programs can allow staff members to research transactions and resolve banking problems on their own, without interacting with bank employees. In some cases, month-end reconciliations for credit card transactions and bank accounts can be automated by using e-banking files.

3. **Lower Banking Costs:** Banking relationships and costs are often based on resource requirements. Businesses that place more demands on banking employees and need more physical assistance with wire transfers, deposits, research requests and other banking activities often incur higher banking fees. Opting for e-banking minimizes business overhead and banking expenses.

4. **Reduced Errors:** Utilizing e-banking reduces banking errors. Automation of payments, wires or other consistent financial activities ensures payments are made on time and may prevent errors caused by keyboard slips or user error. Additionally, opting for electronic banking eliminates errors due to poor handwriting or mistaken information. In many cases, electronic files and daily reviews of banking data can be used to double or triple check vital accounting data, which increases the accuracy of financial statements.

5. **Reduced Fraud:** Increased scrutiny of corporate finances through audits and anti-fraud measures requires a high level of visibility for all financial transactions. Relying on e-banking provides an electronic footprint for all accounting personnel, managers and business owners who modify banking activities. E-banking offers visibility into banking activities, which makes it harder for under-the-table or fraudulent activities to occur.

Advantages of the Technology: The benefits and advantages of information technology for the smooth and efficient functioning of the banking business cannot be disregarded and sidelined. Its proper and methodical use can bring the following advantages:

1) An electronic delivery system brings an integrated trade services and cash management system to your desktop. This system delivers continuously updated information on your trade and cash account transactions.

2) Information can be retrieved by one office, multiple offices or from a regional office monitoring your group's receivables.

3) Export LCs issued in your favour, receipt of import bills and notification of discrepant documents, status of your import and export bills, credit and debit advices, and copies of schedules and tracers are electronically transmitted to your own systems for updating or further analysis.

4) Letters of credit initiation and amendments are easily handled as well as initiating direct collection letters and applications for export bills.

5. Instructions are easily prepared with customized templates, and databases that allow you to create, store and insert frequently used clauses, correspondent addresses and international commercial terms.

6) To complete your trade settlements, local and cross-border payments can be executed through the system.

7) All transactions are handled with a host of internationally approved security measures and transactions are processed efficiently, with minimal manual intervention.

8) It brings trade services to your desktop, with solutions for you to maximize the efficiency of your trade activities.

9) It ensures a Sound Payment System without any disruption in the flow of money supply in the economy. The payments in India are largely cash based although there are non-cash based payments as well. The various forms of electronic based payment, such as credit cards, Automated Teller Machines (ATMs), Debit Cards etc, are emerging at an incredible speed. Many banks have made initiatives aimed at electronic modes of funds movement.

10) It also ensures Monetary and Financial Stability. One of the critical activities undertaken by Central bank to ensure monetary and financial stability is to provide the banking sector with finality of settlement. The payment and settlement systems are the conduits through which monetary policy measures are transmitted to the financial and then the real economy. The information technology revolution has given rise to an extraordinary increase in financial activity across the globe. The progress of technology and the development of worldwide networks have significantly reduced the cost of global funds transfer.

Challenges of the Technology: The information technology in itself is not a panacea and it has to be effectively utilized. The concept of Electronic banking cannot work unless and until we have a centralized body or institution, which can formulate guidelines, regulate, and monitor effectively the functioning of Electronic banking. The most important requirement for the successful working of Electronic banking is the adoption of the best security methods. This presupposes the existence of a uniform and the best available technological devices and methods to protect electronic banking transactions. In order for computerization to take care of the emerging needs, the recommendations of the Committee on Technology Up gradation in the Banking Sector (1999) may be considered. These are:

1) Need for standardization of hardware, operating systems, system software, application software to facilitate interconnectivity of systems across branches.

2) Communication and networking – use of networks which would facilitate centralized databases and distributed processing.

3) Need of Payment systems which use information technology tools. The Reserve Bank of India has played a lead role in this sphere of activity - with the introduction of cheque clearing using the MICR (Magnetic Ink Character Recognition) technology in the late eighties.

4) Need for standardization – across hardware, operating systems, system software, application software to facilitate inter-connectivity of systems across branches.

5) Need for high levels of security – in an environment, which requires high levels of confidentiality, security is an important requirement.

6) Once both the above are achieved, the next logical approach would be towards communication and networking – use of networks which would facilitate centralized databases and distributed processing. Exploitation of computer networks by banks would result in savings in cost and increase in efficiency.

A STUDY OF RAISIN MARKETING WITH SPECIAL REFERENCE TO APMC TASGAON

Dr. Anil S. Patil
Arts, Commerce and Science College, Palus (Sangli)

Abstract

Today, the world has become global market. In India, production and marketing of raisin have become important. Maharashtra is leading state in cultivation and production of grapes. The net contribution of raisin industries to the food processing industries in the total economy had seen considerable increase in the recent past. The Indian raisin industry has been steadily growing over the last twenty years. In 2016, the raisin of the Sangli district is graded with G. I. status due to its taste (sweetness) colour (green & yellow) and skin thickness. As much as 80% of the grapes is used for making honey, crushes and jams, or consumed fresh or dry. The rest is used for raisin making. Because of this huge manufacturing & marketing of raisin Tasgaon tahsil is called as 'Drakash and Bedana Pandhari'.

Keywords: *Agro industry, Food product, Colour (green & yellow), Auction market, G.I. status.*

1. Introduction:

India is mainly an agricultural country. India is number two in the production of food grains and fruits and Maharashtra is leading in the production of fruits and vegetables. Even then India is lacking behind in the food processing industry. The fruits and vegetables are grown on large scale but rate of perishing is so high that 20% to 22% of the total production goes waste because there are no quick transport facilities and processing industries. The only way to avoid this is to give priority to the starting of processing industries. Grape growers have to concentrate on the processing and sales network which will ensure better income and employability.

The rate of processing in Philippines is 60%, Thailand 70%, Brazil 80% and Malaysia 83%. Comparing to this the India's rate is only 2.5% and that is why the agricultural produce of Rs.87,800 cores p.a. go waste as the processing industry is not developed and rate of wastage is very high. The main factors responsible are advanced transport facilities and shortage of processing industry. To overcome this problem, MIDC and APEDA have declared a policy to develop Agri Export Zone to facilitate grape processing and their products and by products. The food processing industry converts highly perishable grapes into non-perishable. Agro-based industry will generate major rural employment for unskilled labor. The Indian raisin industry has been steadily growing over the last twenty five years.. As much as 80% of the grapes is used for making honey, crushes and jams, or consumed fresh or dry. The rest is used for raisin making. In the present study attempts will be made to thoroughly investigate marketing of raisin located in Tasgaon (APMC). Through this research study, researcher will throw more light on the marketing of raisin. According to subject, history, taste and features of raisins from Sangli district are deeply studied. In 2016, these raisins were awarded with ***Geographic Index – G.I.*** due to its taste, colour and skin and it has become a dominant feature.

2. Objectives:

The present study has designed with following objectives.-

1. To study profile of APMC raisin market in Tasgaon.
2. To study marketing / selling method of raisin in study area.
3. To study raisin marketing practice in the study area.

3. Hypotheses:

The marketing of raisin through auction is better and assures better returns to the raisin producers.

4. Research Methodology:

Mainly survey method has been used to study the topic of research. The sampling unit for present is "register commission agent" of marketing committee. For the purpose of present study, primary data from the register agent will be collected. The data on various parameters such as production of grapes, resins, rate of resins per kg through auction will be collected through preplanned questionnaire

Determination of sample size:-

The present study deals with qualitative research regarding the study of marketing of resins with special reference to Tasgaon (APMC).

Here, we use the formula:

$N_{0=} z^2 P (1-P) / e^2$

Where, z is the 5% critical value of normal distribution

(Z = 1.96 for 5%)

P: Proportion of prevalence (determined from previous studies)

P=1.15

e : Allowable error (prefixed quantity)

e = 0.10 (or 10%)

$n_0 = 48.98$

Since, the population is finite N = 206, we use finite population correction as given below:

$n = n_0 N / n_0 +(N - 1)$

Where, N= population size =206

= 39.72 ~ 40

Research methodology: Methods and technique written by C.R.Kothari

The questionnaire consists of mainly the age, qualification, and family background, sources of income, financial position and raisin production. The collected information was compiled and analyzed by making use of statistical tool.

Sources of Data Collection:

The Researchers has used primary as well as secondary sources of data.

Primary Data: A well structured questionnaire was administered and along with in depth interview was taken and collected the data. **Secondary Data:** The secondary data necessary for investigator was collected from various sources by paying personal visits.

5. Profile of Agricultural Produce Market Committee (APMC) Tasgaon

Tasgaon Agriculture Produce Market Committee was established under vide Maharashtra Government Notification no. 5264/45 dated 27/1/1948 (The area under market committee is 1) acres and 100 sq. ft. (Gunta). The Bombay Act 1959 and Maharashtra Act. 1963 provided the principal market yard and the submarket yard. Section 16 of the Bombay Act 1963 empowered the Government to acquire a suitable land for the market committee and to transfer the land to the market committee on payment of the acquisition court. The market committee is responsible for constructing buildings and providing other amenities in the market yard. It allocates plots to the licensed traders for construction of their shops and godown. The area of this market yard measuring 11.10 acres has been acquired under the land Acquisition Act. The site for Tasgaon market yard is on Tasgaon - Vita road.

There is new advanced raisin market center established in near about 30 acres area near Sangli – Tasgaon road. New buildings are being built with all the advanced facilities. This work will be completed in upcoming year. For this centre the expenditure of 60 to 70 crore will be done by Maharashtra state agriculture marketing federation and government. All facilities will be available for farmers, commission agent, shopkeepers & merchants. 150 small & big shops will be built for raisin marketing. Moreover there will be guest house, parking zone, petrol pump, branches of different banks, ATM centers, transport offices & pre cooling units etc. As well as there will be facility to export raisin to various countries. This export centre is useful for farmers, commission agents, shopkeepers & merchants through late MLA R. R. Patil, Finally, the auspicious moment come with the help of tahasil representatives. In 1994, the direct transaction began in the yards of Tasgaon Market Committee on 13th March 1994. Raisin deals are taken on three days in a week: Monday, Thursday and Saturday. The turnover of each transaction is three and half crore. In this market the minimum turnover is Rs 42 crore and maximum Rs 525 crore per year.

6. Data Analysis and Interpretation:

The Tasgaon APMC established for regulating the marketing of different kinds of agricultural produce on 27th Jan, 1948 as well as regulating the raisin and marketing from 13th Mar, 1994 which is the first APMC in India regulating raisin sales.

Table No. 6.1: Total Sales of Raising in Maharashtra and its share of APMC Tasgaon

Sr. No.	Year	Sales of Raisins in Maharashtra (tones)	Sales of Raisins share of APMC Tasgaon		
			Sales(tones)	Turnover in (Crores)	% of total sale
1	2001-02	55,000	27,450	90	49.90
2	2002-03	57,000	24,000	60	42.10
3	2003-04	48,000	23,000	68	47.91
10	2010-11	90,000	26,200	210	29.11
11	2011-12	1,05,000	31,500	346	30.00
12	2012-13	1,60,000	48,000	320	30.00
13	2013-14	1,30,000	45,390	500	34.91
14	2014-15	1,80,000	71,350	651	39.63
15	2015-16	1,70,000	59,620	520	35.07
16	2016-17	1,80,000	49,385	596	27.43
17	2017-18	1,60,000	47,090	632	29.43

Source: *Record of APMC Tasgaon*

Table No. 6.1 shows total sales of Raisin in Maharashtra and sale of raisin share of Tasgaon APMC in total sales. This is first regulating raisin market in India started by APMC, Tasgaon. In the year 2001-02 there was 55000 tones raisin marketed in Maharashtra and its share of Tasgaon APMC having 27450 tones (50 %) and total turnover of this year is Rs. 90 Crores. Their after production and share of marketing is increased every year. From the year 2003-04 to 2007-08 there is huge decrease in raisin production due to draught condition in Maharashtra and particularly in Sangli district, Due to draught conditions grape growers in Sangli district draw their grape wine yard. From 2011-12 production & sale of the share of Tasgaon APMC is 30% and turnover is increased every year. The total turnover of APMC, Tasgaon in the year 2001-02 is RS. 90 Crorers goes to Rs. 632 Crores in the year 2017-18. Because of this huge manufacturing & marketing of raisin Tasgaon tahsil is called as *'Drakash and Bedana Pandhari'*.

Table No. 6.2: Commission agent in terms of types of organization

Sr. No.	Types of Organization	Frequency	Percentage
1	Proprietorship	30	60
2	Partnership Firm	02	04
3	Private Ltd.	08	16
4	H.U.F.	10	20
5	Public Ltd	00	00
6	Co-operative	00	00
7	Total	50	100

Source: *Field Work*

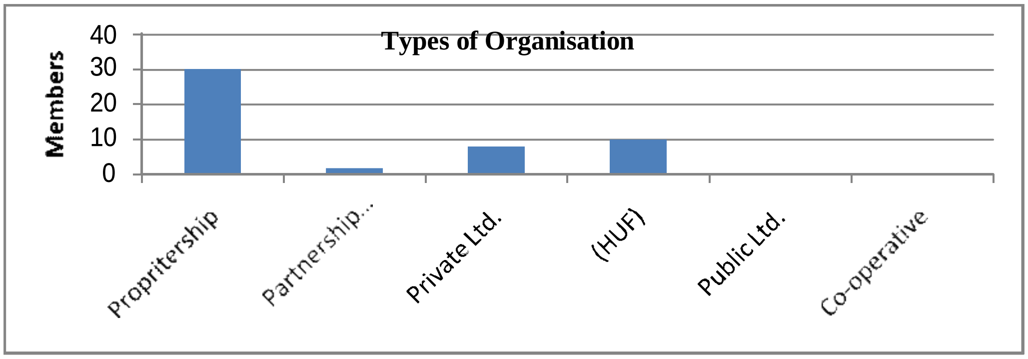

Table No. 6.2 show the classification of commission agent in terms of types of organization. It is found that in the sample areas have majority of commission agent i.e. 60%, 20% and 16% in proprietorship, H.U.F., and private limited respectively. It has also observed by the researcher that 4% of Commission Agent is partnership firm. It is also noted that maximum number of commission Agent i.e. 60% are operated in the proprietorship business.

Considering the above table and analysis, it can be interpreted that establishment of commission Agent as a proprietorship is more convenient due to mobility of capital and quick decision which is very much required for auction market of raisin. The huge initial investment can be shared by group together in the proprietorship. In the course of study, researcher observed that more working capital is required for commission agent business. Generally, an individual doing business of commission agent business is more confident and profit making. It is inference that agro based / raisin commission agent business is more suitable in proprietorship. It is although found that 96% of commission agent in proprietorship H.U.F and partnership firm at present in the sample area. The researcher has observed less number of commission agents (4%) in partnership firm.

Table No. 6.3: Commission Agent in term of method of sale

Sr. No.	Method of Sale	Frequency	Percentage
1	Auction Sale	40	80
2	Local Sale	05	10
3	National Sale	03	06
4	Export	02	04
5	Total	50	100

Source: *Field Work*

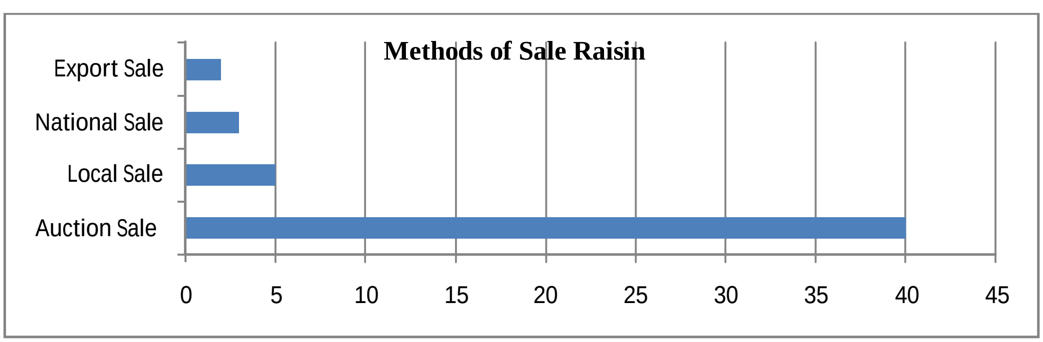

Table No. 6.3 shows the classification of Commission Agent in term of method of sale. It is found that 80% of the commission agent who have acting as a trader follows open auction sale method. The traders prefer this method because of no cheating transparent method and payment received in time. 10% of the commission agent sold raisins to local trader and 6% of commission agents sold raisins to traders came from all over India that is national market. Only 4% of commission agents exported raisin to gulf countries. It means that majority 80% of commission agents applied Auction sale method in APMC Tasgaon.

Considering the above table and analysis, it can be interpreted that commission agents normally takes over the physical handling of raisins arrange for its sale, collects the amount from buyers, deduct his commission and remits the balance to the seller. But some Commission Agents purchased raisin. When the prices has decreased and sold when, the prices has increased and favorable market conditions. It means that majority of commission agent are registered as trader. Normally raisin sold in open auction but some extent raisins sells directly in local, national and international markets. APMCs Tasgaon has develop export policy and applied short term course to aware trader. It is interpreted that majority of commission agent (80%) sale raisin of their client through open auction sale. In auction sale method trader and wholesaler take part, who has come from different part of countries payment received from purchaser guarantee no cheating, no bargaining and transparent transaction because of this commission agent prefer auction sale Method., it is also observed that very few commission agents 20% (10+6+4=20%) sale raisin of their clients at local market, national market and international market.

Table No. 6.4: Raisin producer in term of mode of sale

Sr. No	Method of Sale	Frequency	Percentage
1	Auction Market	39	78
2	Local Market	04	08
3	National Market	02	04
4	Export Market	00	00
5	Direct Market	05	10
6	Total	50	100

Source: *Field Work*

Table No. 6.4 shows the classification of raisin producer (respondent) in term of mode of sale. It is found that 78% of raisin producer sale their raisin in the auction sale 8% & 4% raisin producer sale their raisin in the local market means outside the regulate market and national market respectively. 10% of raisin producer sale their raisin by adopting the way of direct marketing to the local customer. A raisin producer or farmer himself does not export the raisin in global market.

Considering the above table and analysis, it can be interpreted that auction market is best option to the raisin producer. In the auction market their no cheating and misappropriation of raisin farmer/producer auction market is started Monday, Thursday, Saturday, and Sunday in the open hall in the market yard and various commission agent trader and wholesaler purchase the raisin in auction market in front of raisin producer. Open auction sale/market has started on 13th march 1994 in Tasgaon APMC. Before that there was no regulated market for raisin in India. After that Sangli, Nashik, Pandharpur and Bijapur APMC started the auction sale for raisin. Generally raisin is sold through open auction sale. A part from auction sale some raisin producer seller their raisin at local level, national and by direct marketing. It is noted majority of raisin producer farmer (78%) sale their raisin through open auction sale in organized market.

Test of proportion:

We want to know the proportion of auction market within the total population when we conduct survey. A test of proportion will assess whether or not a sample from a population represents the true proportion.

$H_0{:}p_0=0.5$

vs

$H_1{:}p_1>0.5$

Proportion formula

$$Z=\frac{p0-p1}{\frac{\sqrt{p0(1-p0)}}{n}}$$

$$Z=\frac{0.78-0.5}{\frac{\sqrt{0.5(1-0.5)}}{50}}$$

=3.95

Tabulated Z value at 5% level of significance is 1.645

Since calculated Z value is greater than tabulated value, i.e reject null hypothesis.

Conclusion: We conclude that most commonly used auction method for sale of raisins

7. Conclusion and Suggestion:

1. It is concluded that in Maharashtra majority of raisin production and sale of raisin in APMCs, Tasgaon. Raisins are marketed through organized market from 1994 in western Maharashtra.

2. It is concluded that on behalf of market committee commission agent provide varies facilities to raisin producer s that is transport, labor, market information, loan, internet, washing help in auction and guarantee of payment.

3. It is concluded that agro based / raisin commission agent business is more suitable in proprietorship. It is although found that 96% of commission agent in proprietorship H.U.F and partnership firm at present in the sample area. The researcher has observed less number of commission agents (4%) in partnership firm.

4. It is concluded that majority of commission agent (80%) sale raisin of their client through open auction sale. In auction sale method trader and wholesaler take part, who has come from different part of countries payment received from purchaser guarantee no cheating, no bargaining and transparent transaction because of this commission agent prefer auction sale Method, it is also observed that very few commission agents 20% (10+6+4=20%) sale raisin of their clients at local market, national market and international market.

5. It is concluded that majority of raisin producer farmer (78%) sale their raisin through open auction sale in organized market. It is observed that reasonable or extra price is received through sale proceeds in time and where, there is no cheating in transaction while selling raisin through open auction.

Suggestion:

1. It is suggested that the coming commission agent should go for private limited or public limited or co-operative formation or global type of formation for economic market viability

It is also suggested that all commission agent in local area APMC promote/motivate give licenses to global raisin agent. They purchase big quantities of raisin and reduced monopoly of local Commission Agent.

2. It is also suggested that the producer, marketer, commission agent and technician group can be formed for development of auction raisin market. They create market need and market situation in global.

3. It is suggested that the commission agents should pay the amount of sale proceeds of raisin with 20 days from the date of auction sale. It is also suggested that payment should be made through cheque mode, demand draft or cashless payment i.e. NEFT, RTGS etc.

4. It is suggested that APMCs should take sufficient deposits and security from the traders and purchasers APMCs should permit to take-in open auction sale with sufficient deposits and security, they couldn't pay the amount to commission agents of purchased raisin. It is also suggested that commission agent and APMCs jointly organize promotional activities (advertisement) of raisin products for expanding markets.

5. It is suggested that Association of Commission Agent and organized market publish weekly or monthly magazine and create awareness of raisin market to grapes farmer, commission agent, trader and dealer.

6. It is suggested that commission agent should use the marketing research activity in the context of raisin business in broad senses. They should fully concentrate raisin marketing research activity.

Conclusion:

The above finding and suggestion will help to expand the raisin marketing. It will also help to find out weakness and threats in raisin marketing. It will helpful to improve raisin marketing efficiency and quality of raisin for increase in the competency in the global market. It will be more beneficial to the raisin producer, grape farmer raisin industrialist, commission agent and traders to find out weakness in the raisin marketing.

RECENT TRENDS IN E-COMMERCE

Prof. Kanchan S. Khire & Prof. Dipti S. Jadhav
Vidya Pratishthan's Arts,Science and Commerce College, Baramati
Email: kdeshpande911@gmail.com

Abstract

E-commerce or Electronic commerce consists primarily of the distribution, buying, selling, marketing, advertising and servicing of products or services with the help of internet and other computer networks. The birth of companies such as eBay and Amazon (launched in 1994) really began to lead the way in E- commerce. In response to expert opinions, between 1998 and 2000, a substantial number of businesses in Western Europe and the United States built out their first rudimentary E-commerce websites. Now a day's E- commerce companies play most important role in world commerce. The E-commerce sector has seen tremendous growth in recent years. The growth was driven by rapid technology adoption led by the increasing use of devices such as smart phones, tablets, access to the internet through broadband, 3G, 4G and credibility of E-commerce companies etc., which led to an increased online consumer base. This paper describes the innovative trends in E-commerce business.

Keywords: *E-Commerce, Mobile Shopping, Video Marketing, Real-Time Analysis*

1. Introduction

Electronic commerce or E-commerce consists primarily of the distributing, buying, selling, marketing, and servicing of products or services over electronic systems such as the Internet and other computer networks. In the broad meaning electronic commerce is a means of conducting business using one of many electronic methods, usually involving internet, computers or both. E-Commerce is not about the technology itself, it is about doing business using the technology. It is an electronic business application and involves electronic fund transfer, supply chain management, online transaction processing, e-marketing, corporate purchasing, value chain integrations etc. E-commerce creates new opportunities for profitable activities online. It promotes easier cooperation between different groups, business sharing information's to improve customer relations, build new products or services, more personalization, better customer service etc. With the onset of information technology the way we do business has changed. It replaced from paper cheque or money to electronic payment system, from paper or postal invoice to electronic invoice and form traditional commerce to electronic commerce etc. Today we are live in the age of E-commerce and it develops from traditional commerce. The e-commerce is one of the biggest things that have taken the business by a storm. It is creating an entire new economy, which has a huge potential and is fundamentally changing way businesses are done .Here we try to analyse the innovative trends in e-commerce .They are as follows:

2. Recent trends in e commerce:

Improved mobile shopping experiences Mobile commerce is constantly growing. In the past, many challenges associated with getting people to buy through smartphones and tablets have arisen, but a lot of those kinks have been ironed out.

Difficult and lengthy checkout processes, for example, are finally getting whittled down to their core elements. After all, you're going to convert very few shoppers if they can't get what they want with the fewest number of taps or clicks possible.

What's more, some retailers are already taking things to the next level by offering live chat support. This creates an immediate point of connection with customers. If you can reliably and consistently offer them good advice via their devices, they are far more likely to become loyal customers over the long term. This has massive implications for brick-and-mortar stores that also have an ecommerce component.

Context will become the new personalization

Data-based, personalized shopping experiences are now the norm. And though many shoppers appreciate customized product suggestions, others are annoyed when a product they viewed just once on Amazon continues to follow them around for weeks or even months on sites like Facebook, regardless of their actual interest level.

So, retargeting may be effective, and even incredibly relevant, but it doesn't always take context into account.

The idea is that if you become a member of an ecommerce site, it will remember your preferences. And the same personalized experiences are now being offered even to those who aren't even registered or logged in.

This means less friction to the customer journey. By presenting the right content at the right time, your business can efficiently lead shoppers on to a buying decision. For example, different sales copy could be displayed depending on the preferences of the customer accessing your site.

Real-time analytics

Data is an invaluable resource in helping you determine how your business is doing. Unfortunately, with traditional analytics, spotting trends or problems was a time-intensive process. Traditional analytics also slowed things down because you couldn't provide immediate assistance to your customers before they left your site, perhaps for good.

This is where real-time analytics could be a game-changer. As you monitor customer and shopper behaviour, you'll be able to identify problems in your sales funnel. The problem could be an issue with checkout or a coupon code. A lot of sales can be lost that way. But when you can repair problems on the fly or interact with a customer before he or she abandons that shopping cart, you'll be able to increase your conversion rate dramatically.

.Video marketing

We've known about the importance of optimized product descriptions and high-quality photography for ecommerce sites for years. If you want to remain competitive, however, these are mere prerequisites.

Many businesses are now taking things to the next level, with branded, custom video content. Video builds a lot of trust with prospective customers.

Educating, entertaining and informative product videos that tell an engaging story are really just the starting point. Behind-the-scenes production videos, demonstrations, 360-degree product rotations and even live streaming are now being looked to as viable strategies.

Video can boost your site's SEO, increase conversions, make your content more shareable and help your shoppers consume more information in less time.

Social collaboration

Social collaboration is on the rise in the ecommerce world. It's one thing to have products your customers want. It's quite another to allow for further customization by the users, but this is exactly what's already happening on marketplaces like Etsy.

Social collaboration isn't just about having a site where shoppers can drop their templates into existing designs. Prospective customers can actually alter the designs of existing products and come up with beautiful, professional- looking one-of-a-kind wares.

Online Storytelling to Boost Sales Storytelling is essential to any E-commerce business for great way of selling. In the present time E-commerce vendors discover this truth, more of them will incorporate stories around their products, by way of written text or videos, reviews and other suitable format on their online stores. Its boost up sales and confidence in e- business

Increasing Trust in E-Commerce Companies

In the context of E-commerce trust is as great factor as anything. In the Past few years majority of the public looked upon equivocal about E- commerce business. Now the situation is changing-E-commerce companies could build up trust between buyer and sellers, electronic payment system, better security mechanisms and delivery systems. It helps increase in trust and sales of e-commerce companies

Invention of New Technology, and Device

New technologies like Facial Recognition, Virtual Fitting Rooms, etc. play most important role in current E-commerce system. The modern device like Google Glass, I Watch and other electronic devices help to ecommerce is greater access to consumers, easy like smart phones, laptops etc. And also these devices will put the Internet within easy reach and customers can rapid updates on price changes, promotions, and marketing incentives offered to more consumers more of the time.

3. Conclusion

History and life style of human beings are subject to modify depending upon the scientific development. These developments mastered all sectors in commerce, transportation, educations, management, communications etc. and every part of the human being. The world around has significantly changed- mobile phones, social networking, blogs, style of shopping, and also style of business. E-commerce is changing the shape and the concepts of business. New technologies that could significantly bring paradigm shift in the e-commerce. In the recent years innovative technologies emerge the E-commerce market is gradually changing and getting more and more attractive for consumers by offering them new advantages and unmatched conveniences.

Abstract:

Primary Agricultural cooperative credit societies plays very important role in agricultural development it considered as the pillars of the Agricultural development in India. Primary Agricultural Cooperative Credit Societies also issue loans for other agricultural purposes like purchase of farm machineries and for non-agricultural purposes including loans for the purchase of consumer durables, housing loans, education loans and professional loans. The present study is based on Primary and secondary data for the study purpose, information or data collected through Questionnaire, Observations, field visit and take interview of PACCS Secretary, Board of Director and five member of each society. In this paper Researchers have studied the Financial and social performance of Primary Agricultural Cooperative Credit Societies in Khatav taluka of Satara district.

Keywords: - *PACCS, Financial status, Members*

Introduction

India is known as agricultural country. About 70% of the people in India doing farming, and India have a large number of villages in the country. The main occupation of people in this village is agriculture. The development of agriculture sector is considered to be the development of the country and the economy. Many financial institutions are working for the development of agriculture. These financial institutions make important contributions to the development of agriculture business. PACCS, especially in rural areas, play an important role in the development of cooperative societies. Particularly the Primary Agricultural cooperative credit societies plays very important role in agricultural development it considered as the pillars of the Agricultural development in India. Primary Agricultural Cooperative Credit Societies also issue loans for other agricultural purposes like purchase of farm machineries and for non-agricultural purposes including loans for the purchase of consumer durables, housing loans, education loans and professional loans. Provide marketing facilities for the sale of agricultural produce etc.

In this paper, the researcher has studied 10 percent of the PACCS of Khatav taluka in Satara district. The main purpose of this study is to know the financial and social status of the societies and get the opinion of the constituents related to societies. In Satara district, there are 11 talukas and 951 PACCS are working. Researcher has selected Khatav Taluka for research this taluka total 103 societies. This taluka of Satara district is known as drought-stricken taluka. PACCS plays an important role in the development of agricultural sector in this drought condition. so the researcher has decided to study the financial and social factors related to the PACCS and to know the actual status.

Functions of PACCS

- It provides credit to the farmers, distribute inputs like fertilizers and also run outlets under Public Distribution System.
- The societies provide short term and medium term credit for agriculture and allied activities.
- Primary Agricultural Cooperative Credit Societies also issue loans for other agricultural purposes like purchase of farm machineries and for non-agricultural purposes including loans for the purchase of consumer durables, housing loans, education loans and professional loans.

- To provide marketing facilities for the sale of agricultural produce
- To associate itself with economic and social welfare programme of the village.

Objectives of the study:

1. To know the financial and social performance of PACCS in Khatav taluka.
2. To study the participation of members in decision making.
3. To know the perceptions of secretary, Board of director and members towards the society.

Methodology of the study

The present study is based on Primary and secondary data for the study purpose, information or data collected through Questionnaire, Observations, field visit and take interview of PACCS Secretary, Board of Director and five member of each society. Secondary data collected through Annual Audit reports of Primary Agricultural cooperative credit society's of Khatav taluka of Satara district. There are near about 103 Primary Agricultural Cooperative credit society in Khatav taluka. The Researcher has selected 10 % sample from population for study i.e. there are 103 Primary Agricultural Cooperative societies in khatav taluka of satara district from the population 10 societies are selected for the study.

Data Analysis:-

Table No. 1: Financial Status of PACCS (Rs. in Lakhs)

Year	Capital	Loans Issued	Reserves	Profit & Loss
2016-17	302.29	1370.06	133.54	27.37
2015-16	290.75	1654.71	114.96	32.51
2014-15	254.87	1293.09	73.40	39.23
2013-14	226.02	1243.09	53.15	42.83
2012-13	194.53	1093.24	41.71	16.92

Source: *Annual Audit Report of PACCS*

The above table shows that economic status of responded paccs in khatav taluka. In the year of 2016-17 capital increased up to 11.54% this increase reason is Increase number of membership through the sanctioning loan to the farmer every society take some percentage of amount while sanctioning loan to the farmer. Capital amount is every year increasing trend from 2012-13 to 2016.17. Amount of loans issued to farmers is decreased in the year of 2016-17 compared to the last year. But in the year of 2015-16 loans issued amount is high compared to last three year and the year of 2016-17. It seems the in the year of 2016-17 loans sanctioned amount decreased 17.20%. it is said that the farmers not taken loan from society due to some reasons. Or may be society not disbursed loan to farmers due to natural or recovery problem. Reserve amount shows that always increasing trend in every financial year if society is in profit every society must be transfer 25% amount out of profit to reserve it is compulsory in cooperative act. So this amount show increasing trend every year. From the above information defects that profit & loss of every society is not constant it means some time it may be reduced or some time it may be increased.

Table No. 2: Total Number of Membership in PACCS

Sr.No.	Year	Male	Female	Total
1	2016-17	4869	565	5434
2	2015-16	4821	559	5380
3	2014-15	4740	534	5274
4	2013-14	4758	504	5262
5	2012-13	4644	489	5133

Source: *Secondary data*

The above table indicates that status of total number of membership of responded PACCS in Khatav taluka. It seems that every year number of membership increased in the year of 2012-13 shows lowest number and in the year of 2016-17 its highest number. The above information indicates that's membership divided in to two category i.e. male and female it seems that female membership is always lower in every year and every society. It means female members not actively worked in traditional activity. In the year of 2016-17 it indicate that only 10.40% of female members and remaining all male members.

Table No. 3: Total Loan Outstanding from Members (Rs. in Lakhs)

Sr. No.	Year	Short term loan	Long term loan	Total loan outstanding
1	2016-17	873.94	512.06	1444.29
2	2015-16	912.48	356.14	1268.60
3	2014-15	658.35	315.19	973.07
4	2013-14	619.22	308.14	927.37
5	2012-13	972.21	251.78	1224.02

Source: *Annual Audit Report of PACCS*

The above information deficits that total loan outstanding from members from 2012.13 to 2016-17 Loans amount is classified in short term and medium and long term loan. From the above statistics shows that short term loan amount is always high compared to long term loan. In the year of 2012-13 total outstanding loan is 1224.02 then its reduced up to next two year and from 2015-16 its shows that increased in next year.

Table No. 4: Perception of Secretary towards Salary

Sr. No.	Response	Number of Respondent	Percentage
1	Fully satisfied	01	10
2	Satisfied	04	40
3	Unsatisfied	05	50
4	Fully unsatisfied	-	
	Total	10	

Source: *Primary data*

The above table drafted from primary data collected through questionnaire from society's secretary there are 10 respondent of society from Khatav taluka total 10 society are taken for study. Table shows that secretary perception about salary only 10% employee expresses fully satisfaction about salary near about 50% secretary said that he was fully unsatisfied about salary and only 40 % said that he will be satisfied about salary.

Table No. 5: Perception about working condition & facility provided to society employee

Sr. No.	Response	Number of Respondent	Percentage
1	Fully satisfied	-	-
2	Satisfied	05	50
3	Unsatisfied	03	30
4	Fully unsatisfied	02	20
	Total	**10**	

Source: *Primary data*

The above table shows the perception of society employee about working condition and facility provided to him. The statistics indicate that 50% employee satisfied about working condition and facility provided by him from society. 20% employee said that he was fully unsatisfied about his working conditions and facility required for work. 30% respondent is unsatisfied about working and facility provided by him.

Table No. 6: Workers Opinion about Awareness of Social Audit

Sr. No.	Response	Number of Respondent	Percentage
1	Yes	**03**	**30**
2	No	**07**	**70**
	Total	**10**	

Source: *Primary data*

Above table shows that workers awareness about social audit While conducting interview of employee of society it seen that only 30% employee is aware about social audit system. Majority workers 70% do not aware about social audit.

Table No. 7: Members perception about fulfillment of Real Needs

Sr. No.	Response	Number of Respondent	Percentage
1	Fully satisfied	06	12
2	Satisfied	24	48
3	Unsatisfied	11	22
4	Fully unsatisfied	09	18
	Total	**50**	

Source*: Primary data*

The above information displayed perception of members about fulfillment of real needs. Real needs are essentially part of agricultural development if farmer of member do not fulfilled such need he will not develop. The above responses shows that only 48% of members are satisfied about his real needs and 18% members are fully unsatisfied about fulfillment of needs and 22% respondent opinion that he will totally unsatisfied about fulfillment of real needs.

Table No.8: Members awareness about various schemes offered by Government

Sr. No.	Response	Number of Respondent	Percentage
1	Yes	18	36
2	No	32	64
	Total	**50**	

Source: *Primary data*

Table indicates that awareness of members about schemes offered by government. The researchers ask question of each society's five members about awareness of scheme total respondent Numbers is 50. Generally through District central cooperative bank under the intermediaries of PACCS there are near about 100 agricultural schemes for members through society near about 60 schemes are provided to the farmer or members for his farm development. The above response shows that 64% members do not know about schemes provided or offered by government. Only 36% respondent knows the schemes.

Table No. 9: Members perception on Availability of services from the society

Sr. No.	Response	Number of Respondent	Percentage
1	Fully satisfied	12	24
2	Satisfied	21	42
3	Unsatisfied	13	26
4	Fully unsatisfied	03	6
5	Neutral	01	2
	Total	**50**	

Source: *Primary data*

The above information seems that member's perception about availability of services from society. 42% respondent is satisfied about services provided by society and 24% members fully satisfied. 2% respondent does not response about this question. 26% is unsatisfied about services and a fully unsatisfied member is 6%.

Table No. 10: Members opinion on current government policy towards farmer

Sr. No.	Response	Number of Respondent	Percentage
1	Fully satisfied	03	6
2	Satisfied	07	14
3	Unsatisfied	02	4
4	Fully unsatisfied	31	62
5	Neutral	07	14
	Total	**50**	

Source: *Primary data*

Above data shows that opinion of members about government roll towards farmer. It seems that62% respondent fully unsatisfied about government policy and only 14% respondent satisfied about government policy only 6% members fully satisfied about govt. policy 14 % members not response any answer i.e. .neutral.

Table No. 11: Opinion about participation of Decision Making

Sr. No.	Response	Secretary	Board of Director	Member
1	Fully satisfied	-	02	10
2	Satisfied	07	06	25
3	Unsatisfied	-	-	03
4	Fully unsatisfied	02	02	07
5	Neutral	01	-	05
	Total	**10**	10	50

Source: *Primary data*

Decision-making is the most important work in every organization so in the PACCS it is also most important the above table shows that opinion about participation of decision making work for different respondents like society secretary, Board of directors & five members of each society. As per secretary opinion 70% are give positive response about decision making work. Only 1% result is neutral. As per Board of director's opinion near about 80% respondent give positive opinion. But the opinions about members are different from secretary and member of BOD 15% respondent give negative opinion about participation of membership and 35% respondent give positive response about decision making participation.

Findings & Conclusion:

It is concluded that the farmer's not paid loan installment regularly he expect from government relief from loan its impact may be on the society economic performance. It seems that while the researchers collect information from each society that's time some members of the society are always debate about the loan relief from government its impact on each society's recovery work.

It is concluded that male membership is always high compared to female membership. Membership increased due to increase disbursement or sanctioning loans to farmers. It seems that membership is two types one is permanent membership and another is temporarily.

It is concluded that farmers take loans for his farming activity in short period he does not take loan amount for long period it may be due to small land or may be long term crop may be not useful them or he is not capable for long term activity in the farm.

It concluded that near about 34% member's response is negative and remaining response is positive about availability of services from the society.

It is concluded that near about 40% members perception about fulfillment of real needs is negative remaining members may be give his opinion in the pressure of society or board of directors.

It is concluded that society's employees expect that his salary paid through government not through society. Salary amount is very low compared to work and risk. Some time salary amount is depend on society's profit or loss.

It concluded that 50% report of respondent is positive and 50% is negative about working condition and facility provided by society to employee. It is to be said that while observing in data collection from society the researcher observe that some society really no any working facility instrument like furniture, computer seating facility etc. and basic need facility is not provided in societies office and its premises it seems that some society have no own building he worked in Grampanchayat office premises society paid some amount of rent for them.

Only 48% of members are satisfied about his real needs and 18% members are fully unsatisfied about fulfillment of needs and 22% respondent opinion that he will totally unsatisfied about fulfillment of real needs.

It is concluded that members is not aware about various schemes offered by government. The society must take initiatives for awareness of various schemes.

It concluded that the current government policy is not favorable for farmers so he takes negative opinion towards government policy.

Member's participation of decision making is positive. But in actual the researchers seen that no more members are participated in decision making in the time of societies meeting, the researcher has attended sample two general meeting of society. It may be said that the members response give some pressure.

Suggestions:

It is suggested that PACCS should be motivate to members for participation of training. Provide more loans to SC & ST category member's disbursement of loan to this category is very poor. It is suggested that PACCS should be provide information about various loans schemes to the members, majority of responded members don't know about various schemes. Society must be concentrate on real needs of members and avail the goods required for them. Society should give chance to member for participate of decision-makingwork.

Abstract

Kirana shop is one of the easiest ways to generate self-employment as it requires limited investment in land, capital and human resource. Kirana shops are unique business models in India especially in rural areas which are offering personal services and quality products as per demand of customers. now a day, they are suffering for their existence. Researcher has found that the Kirana shops are competing with local bazaars which are to be started by big traders and wholesalers in the sample study area. Competition is the major factor for existence of Kirana shops. Recovery of dues from customers is another challenging problem of the existence of Kiranashops.

Keywords: *Kirana, self-employment, malls*

1. Introduction:

The private village shops are the backbone of rural retail marketing. Private retail shops are ideal agencies for village distribution. There are around 2 million sales outlets at the retail level in rural India. One retail shop is serving around 600 families in the rural retail marketing. The retailer to consumer ratio has been very low with many such shops often located close to people residence, near to home and at the corner of the street, thus making location and convenience a major factor for their popularity. Kirana shop is one of the easiest ways to generate self-employment as it requires limited investment in land, capital and human resource. Kirana shops are unique business models in India especially in rural areas which are offering personal services and quality products as per demand of customers. A kirana shop normally a range from 25 to 400 square feet with a various range of products which are daily requirement of customers. A significant historical reason underlying the perceived increasing importance of retailing is that its contribution to the economy is much more visible in the modern era than it was in the past. Now, retailing is up-coming as one of the major non-farming occupations in India. The total area of Sangli district is 8,572 sq. Mt. and there are 10 talukas and 734 towns in Sangli district and registered kirana shops are 5,741.

But now a day, they are suffering for their existence. Researcher has found that the Kirana shops are competing with local bazaars which are to be started by big traders and wholesalers in the sample study area. Competition is the major factor for existence of Kirana shops. Recovery of dues from customers is another challenging problem of the existence of Kirana shops. The consumer behavior is changing because of new technology, fashions, life styles etc. However, changing consumer behavior is affecting rural based Kirana shops.

2. Objectives:

1) To know socio-economic background of the Kirana shopkeepers in the study area.
2) To understands the various problems faced by the kirana shopkeepers in Sangli district.

3. Research Methodology:

3.1:Primary data:

The researchers have collected required information and data from Kirana Shopkeepers in Sangli district. The primary data is collected through questionnaire, discussion, interviews, observation and necessary fieldwork.

3.2: Secondary data:

The researchers have collected necessary information from books, M. Phil and Ph.D. research works, magazines, internet, different websites, Daily newspapers, articles and government publications etc.

4. Sampling:

The sample selection of kirana shops have been selected on the basis of *'Stratified Sampling Method'*. While selecting villages, factors considered are the geographical location of taluka, such as East, West, North, South and Middle, and one village from each direction has selected. Female kirana shopkeepers (98) are also selected randomly for getting information. Numbers of kirana shops are ten talukas are unequal. Therefore, researcher has used *'Proportionate Sampling Method'* for selecting taluka-wise kirana shops.

5. Data analysis and interpretation

Table No. 5.1: Age of Kirana Shopkeepers

Sr. No.	Age (Years)	Frequency	Percentage
1	21-30	041	10
2	31-40	135	34
3	41-50	078	20
4	More than 51	**146**	**36**
5	Total	400	100

Source: *Field Work*

Table No.5.1 shows age wise distribution of Kirana Shopkeepers in the Sangli district. 36% kirana shopkeepers have found in the category of more than 51 years. Only 10% shopkeepers have 21-30 years old. It has interpreted that mostly elder persons are engaged in kirana shops in the sample area. The senior persons, whose age is more than 51 years, they are running their kirana shops since long period. Only 10% kirana shopkeepers have younger, whose age has 21-30 years old. It means the young generation is not interested to start or run kirana business. They are interested in service or job to others sectors and in cities in the study area.

Table No. 5.2: Education of Kirana Shopkeepers

Sr. No.	Education	Frequency	Percentage
1	Less than 10th (SSC)	**153**	**38**
2	10th (SSC)	121	30
3	12th (HSC)	055	14
4	Graduation	057	14
5	Post Graduation	014	04
6	Total	400	100

Source: Field Work

The given table No. 5.2 has shown that distribution of kirana shopkeepers according to their education. 38% kirana shopkeepers have educated less than 10th class. Only 4% shopkeepers are post graduate. It is interpreted that majority 68% {38+30} of the kirana shopkeepers are taken education upto 10th standard. Only 14% and 4% kirana shopkeepers are completed their graduation and post graduation respectively. It has found that uneducated or less educated people are eager to start kirana business in rural area. Out of which, majority of shopkeepers have told that they have searched a good job in local village or in cities. But they did not get a job and then they have preferred to start kirana business. It means they have not interested to start kirana business by heartily.

Table No. 5.3: Location of the Shop

Sr. No.	Location	Frequency	Percentage
1	Central Chowk	**169**	**42**
2	In the Main Market	055	14
3	Near S. T. Stand	023	06
4	Nearby the Main Road	057	14
5	Suburb/ Sub-rural area	096	24
6	Total	400	100

42% kirana shops are located at central Chowk; Only 6% kirana shops are located near Bus Stand. By the visit and observation, it is found that the crowded area or corner of the street is an ideal location of the kirana shop. The majority of the banks, credit co-operative societies, gram panchayat, post office etc. are situated in central Chowk. So the central Chowk is the prime location for any business in rural villages. When people go to another town or village, they wait for bus at S. T. stand. These are the ideal location for kirana shops. People buy something while they are going to another town or village.

Table No. 5.4: Sufficiency of the available space

Sr. No.	Sufficient space	Frequency	Percentage
1	Yes	027	07
2	No	**337**	**84**
3	Insufficient in season/peak period	036	09
4	Total	400	100

Source: *Field Work*

Table No. 5.4 shows that the available space of kirana shop is sufficient or not. 84% kirana shopkeepers told that the available space is insufficient. 9% sample respondents have expressed that the available space is insufficient in a season or peak period. The space of kirana shop makes affect on customers and also profit margin of the kirana shopkeepers. The adequate space should be available for standing the customers and also arranging the kirana goods nicely and neatly. Researcher has observed that the kirana shops which are located at the central chowk or in the market have insufficient avail space at the time of weekly village bazaar because at that time the frequency of the customers is more. This is one of the reasons for changing consumer behaviour towards traditional kirana shop to modern bazaar.

Table No. 5.5: Sufficiency of capital

Sr. No.	Sufficiency of capital	Frequency	Percentage
1	Yes	080	20
2	No	**231**	**58**
3	Insufficient sometimes	089	22
4	Total	400	100

Source: *Field Work*

Table No. 5.4 indicate that the required capital is sufficient or not for running the kirana business. 58% kirana shopkeepers said that the available capital is insufficient. Only 20% kirana shopkeepers told that the available capital is sufficient.

It is observed that the 58% kirana shopkeepers are faced the capital problem at regular time. The numbers of varieties of goods are to be kept for running kirana business. Therefore, the capital is blocked in the goods. Researcher has observed that majority of kirana shopkeepers in the sample area are shut down or closed their kirana shops due to insufficient capital. On the other hand, kirana shops are not competing with local bazaars because of inadequate capital. Local bazaars are kept more varieties of goods in the sample area due to huge capital and they very well decorated and keeping cleanliness in their bazaar. Due to this of the rural based Kirana Shops requires more variable capital to purchase and store kirana goods.

Table No. 5.6: Problem of Transportation

Sr. No.	Problem of Transportation	Frequency	Percentage
1	Yes	**283**	**71**
2	No	061	15
3	Sometime	056	14
4	Total	400	100

Source: *Field Work*

Table No. 5.6 shows problems of transportation while transporting the kirana goods. 71% kirana shopkeepers have favoured for suffering problem while transporting the goods. Moreover, 14% respondents are neutral. They neither favour nor against the problem of transportation.

Kirana shopkeepers keep very little stock of kirana goods because of lack of capital and sufficient space. So, they need kirana goods at specific time and/ or regular intervals. There are some limitations for transportation of kirana goods. There are high risks to transport goods in remote villages in rural areas because of poor road facilities in the rural areas.

Table No. 5.6: Problems of Kirana Shop

Sr. No.	Problems	Frequency N= 400*	Percentage
1	Competition with Kirana shop	**373**	**28**
2	Competition with Bazaars	307	23
3	Problems of recovery of debts	241	18
4	Lack of capital	132	10
5	Awareness of customers	066	05
6	Very few margin of profit	134	10
7	Changing psychology of customers	067	05
8	Problems of Govt. rules	014	01
9	Total	1334**	100

Source: *Primary Data (** Indicates actual frequency (1334)** Indicates respondents has given multiple answers, so frequency is greater than actual (1334))

Table No. 5.6 shows that the problems faced by kirana shops. 28% kirana shopkeepers have narrated that competition with kirana shops and 23% kirana shopkeepers have told that competition with bazaars.

It is interpreted that the kirana shopkeepers have largely faced the problem of competition with other kirana shops as well as bazaars. The numbers of unregistered kirana shops are opened in the sample area. Kirana shopkeepers have given credit for attracting the customers. There is an adverse effect on recovery of debts. If the previous kirana shopkeepers have persistently demanded their dues, customers have used to prefer another kirana shop for purchasing kirana goods in the sample area. As a result debts are not recovered in proper timing. It is narrated kirana shops have faced number of problems such as competition from each others & bazaars, debts, shortage of capital, low margin of profit, dynamic psychology of customers, changing rules and regulations etc.

6. Conclusion:

Kirana shopkeepers are also facing number of problems like purchase, warehousing, finance, transport, damage of goods, recovery of credit, and competition with other kirana shops as well as bazaars. The kirana shopkeepers in the sample area are less educated and 40% customers are graduates. Kirana shopkeepers are purchasing goods in short period of credit from the wholesalers. On the other hand kirana shopkeepers are selling goods in long period of credit to the customers. Therefore the financial problem is arising. The purchasing strategy of kirana shopkeepers is not a proper manner. They are purchasing goods at convenient time according to availability of capital and time. Customers on the other hand, are purchasing goods regularly. Sometimes, kirana shopkeepers are given credit to customers because they know the customers. Wholesalers are not giving credit though they know the kirana shopkeepers. Kirana shopkeepers are providing various facilities and plans to attract the customers.

E- BANKING AND INFORMATION TECHNOLOGY IN BANKS

Dr. Mohite Bhagwan Hanamant
Assistant Professor, Commerce Department, P.V.P. Mahavidyalaya Kavathe Mahankal Dist: Sangli (M.S.)
Email:*bhagwanhmohite@gmail.com*

Abstract

The 20th century witnessed many changes to the international trade, banking and Finance on account of new revolution in the information and communication technology. Banks across nations have been moving to the E-Commerce and E-Banking environment. On account of these changes banks are able to provide more flexible banking options for their clients, by offering many innovative products and services through the ATMs Credit and Debit Cards, Internet banking, core banking solutions including quicker and faster services like convenient banking, anywhere banking, 24x7 virtual banking are offered, coupled with quick remittance of funds transfers, on other hand banks are also exposed to the cyber crimes, on more usage of computers and IT enabled services. Further in view of cross border transactions, if proper control is not exercised banks can be used as channels for money laundering as well. The papers examine the recent trends and issues in electronic banking and Facilitator.

Keywords: *Information Technology, Challenges, Reserve bank of India, Regulator*

Introduction:

Electronic banking is a generic term encompassing internet banking, telephone banking mobile banking etc. In other words `it is a process of delivery of banking services and products through electronic channels such as telephone, Internet and cell phone etc. The concept and scope of E-banking is still evolving. Several initiatives taken by the government of India as well as the Reserve Bank of India have facilitated the development of E-banking in India. As a regulator and supervisor, the RBI has made considerable progress in consolidating the existing payment and settlement systems, ;and in upgrading technology with a view to establishing an efficient, integrated and secure system functioning in a real time environment which has further helped the development of E-banking in India. The government of India enacted the IT Act, 2000 with effect from October 17 2000, which provides legal recognition to electronic transactions and other means of electronic commerce. IT revolution has paved the way for banks to provide to implement different systems to handle funds management in banks.

Historical perspective of E-banking E-banking is the wave of future

It provides enormous benefits to consumers in terms of ease and cost of transactions, either through internet and other electronic delivery channels. The evolution of e-banking industry can be traced early 1970s. Banks began to look e-banking as a means to replace some of their traditional branch functions for two reasons. Firstly, branches were very expensive to set up and maintain due to the large overheads associated with them. Secondly E-banking products and services like ATMs and electronic fund transfer were a source of differentiation for banks that utilized them. Being a fierce competitive industry, the ability of banks to differentiate them on the basis of price is limited. E-banking development would lead to two classes of surviving banks, which are very large banks and small niche ones. Through the E-banking smaller could compete by offering portals to the services offered by larger banks. With this development, banks could use E-banking to focus on customer needs in order to gain the strongest competitive advantage.

The transformation from traditional, bricks-and-mortar banking to E-banking has been momentous. Not since the advent of the automatic teller machine has the retail banking industry witnessed such significant and extensive change formally, E- banking comprises various formats or technologies including telephone (both landline and cell phones) banking, direct bill payment (electronic fund transfer) and PC or internet banking. Chou and Chou identified five basic services associated with online banking, namely view account balances and transaction histories, paying bills, transferring funds between accounts, requesting credit card advances and ordering cheques.

E-banking and RBI:

RBI has been gearing up to upgrade itself as a regulator and supervisor of the technologically dominated financial system. In 1998, it availed the technical assistance by project of Department for International Development, UK forupgrading its supervisory system and adaptation of its supervisory functions to the computerized environment. It issued guidelines on risks and control in computer an telecommunication system in February 1998 to all the banks advising them toevaluate the risk inherent in the systems and put in place adequate control mechanisms to address these risks, which can be broadly put under three heads namely IT environment risks, IT operations risks and product risks. The existing regulatory framework over banks has also being extended to internet banking. These guidelines cover various issues that would fall within the framework of technology, security standards, legal and regulatory issues. Virtual banks which have no offices and functions only on line are not permitted to offer E-banking services in India and that only banks licensed under banking regulation act and having a physical presence in India are allowed to offer such services. Further, banks are required to report to the RBI every breach or failure of security systems and procedures of internet banking, while RBI as its discretion may decide to commission special audit inspection of such banks. As per recent guidelines banks no longer need prior of the Reserve Bank of India for offering the internet banking services.

E-banking challenges and concerns E-banking

It is based on technology that by its very nature is designed to expand the virtual geographic reach of banks and customers without necessarily requiring a similar physical expansion. Such market expansion can extend beyond national borders. This significantly increases cross-border co- operation challenges for banks supervisors due to

- The potential ease and speed with which banks located anywhere in the world can conduct activities with customers over interconnected electronic networksinto countries where a bank is not licensed or supervised.
- The potential ability of a bank or non-bank to use the internet to cross borders and to seamlessly link banking activities that have typically been subject to supervision with non-banking activities that might be unsupervised by any financial market authority.
- The practical difficulties faced by national authorities wishing to monitor or control local access to E-banking sites originating in other jurisdiction without the co-operation of home country authorities.

Banking organizations have been delivering services to the consumers and business remotely for years. Electronic fund transfers including small payments and corporate cash management systems as well as publicly accessible machines for currency withdrawal and retail account management are global fixtures. However, delivering financial services over public networks such as the Internet is bringing about a fundamental shift in the financial services industry.

The changes created and some of the technical characteristics of Internet technology raise new concerns for both bankers and supervisors. Banks offers E-banking services to defend or expand market share or as a cost saving strategy to reduce paper work and personnel. The internet also provides banks with substantial opportunity to extend customer reach beyond existing boundaries. However the nature of the open network and the evolution electronic commerce exposes banks to significant competition from both banking and non banking firms. In addition, electronic delivery channels operate in an uncertain legal and regulatory environment that defers byjurisdiction.

All these factors present new challenges for financial institutions in managing security, integrity and availability of services provided while remaining sufficiently profitable.

Emerging trends and issues impact on bank risk profiles.

- A significant increase in the competition in the electronic financial services industry as both banking and non-banking firms rapidly introduces new financial products and services.

- Rapid technological improvements in tally communication and computer hardware and software enabling greater speed in transaction processing.
- Bank management and staff often lack expertise in technology and E-banking risk issues.
- Greater reliance on out sourcing to third party service providers, and a proliferation of new alliances and joint ventures with non-financial firms.
- Increase potential for fraud, due to absence of standard business practices for customer verification and authentication on open networks like the internet.
- Legal and regulatory ambiguity and uncertainty with respect to the applications and jurisdictions and jurisdiction of current loss and regulations toevolve E-banking activities.
- Questions regarding to the effectiveness and efficiency of online disclosures. Lengthy or complicated online disclosures may cause customers to simply click through or even quiet a website, moreover extensive disclosure reduces the speed at which websites and pages can be downloaded.

Banks and supervisors generally agree that supervisory principles that apply to traditional banking are applicable to E-banking. However, the combination of rapid changes in technology and the degree of bank dependence on technology vendors and service providers modify and sometimes magnify traditional risk. Hence there is a need for additional supervisory guidance in selected areas to enhance the overall risk management framework for E-banking activities. This development in E-banking to date suggest

- The desire to benefit from the advantages of e-commerce in financial services has become wide spread. The financial services industry is increasingly focused on providing technology based financial solutions directly to customers to help build and retain customer bases.
- Speed to market has become a critical factor for success in E-banking to reduce time, to market; banking institutions are allying with non banking firms to provide total financial services solutions.
- The current trends in the formation of strategic alliances and technology outsourcing will grow.

Conclusions

These developments present challenges for both banks and bank supervisors. Bank management needs to re-evaluate the robustness of traditional management practices in light of the new risk post by E-banking activities. Also banks supervisors need to take a balance approach to the introduction of new regulations and supervisory policy on E-banking, so as to ensure safe and sound operation of banks while at the same time not stifling innovation and the competitiveness of the banks related to non-banks.

A CASE STUDY ON TOMATO PRODUCT

Prof. Jayashri Banasode
Associate Professor in Commerce, Yashwantrao Chavan Mahavidyalaya, Pachwad. Tal Wai. Dist. Satara

Introduction:

Govt. of Maharashtra has facing burning issue of 'Farmers Suicide.' At present farmers try to cultivate cash crops to improve their financial condition. Unfortunately, market price is not recovered cost of production of an agricultural product. Farmers become frustrated and ratio of farmer's suicide may be increase. So researcher tries to focus on the present condition of with the example of tomato production and he assumed that this condition may be occurs in each and every agricultural product. Tomato is as a cash crop. It is a short duration crop. The profit can be earned immediately so the tomato cultivation being commercial activity undertaken by farmers.

Objective:

1. To focus on farmer's recent condition
2. To suggest remedial measure to develop the farmers condition

Methodology:

Researcher applied interview technique. Researcher interviewed the tomatoes farmer (Shri. Ramesh Shinde. and Shri. Chandrakant Wagh. At/Post Anawadi, Tal. Wai Dist. Satara

Statement showing of Cost of Tomato Production (2018-19)

Contents	Particulars	Cost Per Acre (Rs.)
Seeds and Small Plants	Nobel seeds 6000 Plants x Rs.1.50 Per plant	9,000
Farmyard Manure	10 tones of cow-dung	24,000
Fertilizers , Insecticide and Fungicide	Chemicals, and insecticides, (25000 +11000)	36,000
Human Labour Exp.	Cutting and Packaging	20,000
Bullock Labour	Pulty, Rotter, Bedding	8,000
Irrigation/ Drip maintenance	Material Rs.60000 / 20crops in 10 years = 3000 + Rs.3000 Maintenance	6,000
Staking Sticks / Stump stand	Material 6000 / 3 Per three plants = 2000 plants x Rs. 24Per plant = Rs. 48000 /10 Years x 2 crops = Rs. 2400 +Rs. 35000 one time Binding Exp.	37,400
Steel Wires	70 kg. x Rs. 80 = 5600	5,600
Miscellaneous Cost:		5,000
Loan Interest	Loan available Rs.25000- 30000 x 7% (3 months)	725
Transporting	Total Product 25000 kg. / 25 kg. Per crate =1000xRs. 75	75,000
	Total cost	**2,26,725**

Problems of the farmers:

1. Loan available is not sufficient for tomatoes cultivation.
2. Guarantee rates are not declared by the Govt. for each and every agricultural product.
3. Transport expenditure is not affordable.
4. Wholesale marketing places are not convenient.
5. Lack of expert guidance about cultivation and Marketing

Suggestions:

1. Above table shows the tomatoes per acre cost of production. This table shows that the loan available to the farmers is lower than the cost of production. Tomato is a short term crop so, Govt. sanctioned loan about Rs. 25000 to Rs.30000. Farmers borrowed remaining amount from money lenders and this loan is very expensive due to high rate of interest. So Govt. should be provide sufficient loan to the farmers with appropriate subsidies.

2. Farmers get the market rate of tomatoes are as follows:

Market Rate of Tomatoes (2018-19)

Months	Rs.(Per. Kg)
Aug to Nov	5-6
From Nov to Jan,	4-5
End June-Aug	50-60

Farmers get market price of tomatoes within Aug. to Nov. and Nov. to first half of June. are Rs 4.00to Rs.6.00. and he get high rate of the tomatoes for only two months i.e. second half of June to end of the Aug. i.e. Rs. 50 to Rs. 60. This rate is not recover the cost of production.

Farmers work for this crop for 5 months in farm. 7th pay commission had declared that every worker have to get per month salary Rs. 18000. According to this declaration farmers also have to get (Rs. 18000x 5 months) Rs. 90000. But the respondent farmers told that they earn about Rs. 15000/- through internal crops. Remaining Rs. 75000 he expects from tomatoes product.

Govt. should declare the guarantee price for each and every agricultural product. About tomato the cost of tomatoes per Kg. is Rs.9.06. and average per acre production of tomatoes are 25000 kg. Researcher expected the rate Rs. 12.06 which covers profit Rs. 3.00 per Kg. It means total profit will be Rs. 75000/- .

Farmers have to manage the market for tomato at Poona or Bombay. The travelling expenses are too high. i.e.(25000 kg. / 25 kg. Per crate =1000 crate x Rs.75 Per crate=Rs. 75000). If farmer can reduce these expenses the cost of production will be automatically reduced. Government should be provided the marketing facilities for those farmers at taluka places and tries to provide concessional transport facilities to the farmers.

Agricultural officers should be provided proper guidance in proper time to the farmers regarding fertilizers, cultivation, and insecticides.

Awareness about Crop Insurance scheme should be developed among the farmers.

Conclusion: Market price is not recovered Cost of production of agricultural product.

So farmers become frustrated and ratio of farmers suicide may be increased.

SCENARIO OF MOBILE COMMERCE (M-COMMERCE) IN INDIA

Dr. Shobha Arun Podmal

Asst. Professor (Dept. of Commerce & Management) ,Night College of Arts & Commerce, Ichalkaranji

Abstract

M-Commerce is in fact a subcategory of e-commerce, and the substantial difference actually is what kind of devices are used for the shopping. M-Commerce does not only include the transactions carried out on mobile phones, but on all kinds of smart devices, from smart phones through phablets to tablets, even laptops are mentioned here in some cases, since those are also portable devices. As smart devices are famous for their mobility, this implies that M-Commerce can be realized not only in front of desktop computers – typically at home or at the workplace, but it can happen practically anywhere, where there is some kind of internet access available.

Mobile commerce is growing at the rate of 130% annually. If you don't have a mobile friendly site or an application for mobile users then it will be difficult for you to grow your e-commerce business. To stay in competition and ahead of all offer mobile accessible services such as real time notification, click to call, push notification on and product information. M-Commerce is a blanket term used for the buying and selling of goods and services from mobile devices like smart phones and tablets. The dot com bubble resulted in the emergence of e-commerce. With increase of mobile usage across all segments has helped the businesses to broaden their customerbase.

Key Words: *Subcategory, Mobility, Accumulation, Competition, Accessible, Emergence etc.*

1. INRODUCTION

Mobile Commerce refers to wireless electronic commerce used for conducting commerce or business through a handy device like cellular phone or Personal Digital Assistant (PDA). It is also said that it is the next generation wireless E-commerce that needs no wire and plug-in devices. Mobile commerce is usually called as 'M-commerce' in which user can do any sort of transaction including buying and selling of goods, asking any services, transferring ownership or rights, transacting and transferring money by accessing wireless internet service on the mobile handset itself. The next generation of commerce would most probably be mobile commerce or M-commerce. Presuming its wide potential reach, all major mobile handset manufacturing companies are making 2WAP (Wireless Application Protocol) enabled smart phones and providing the maximum wireless internet and web facilities covering personal, official and commerce requirement to pave the forway M-commerce that would later be very fruitful for them-commerce has several major advantages over its fixed counterparts because of its specific inbuilt characteristics such as ubiquity, personalization, flexibility and distribution. Mobile commerce promises exceptional business market potential, greater efficiency and higher fruitfulness. Thus it is not surprising that mobile commerce is emerging much faster than its fixed counterpart. M-commerce is more personalized than E-commerce and thus needs a gentle approach to appraise M-commerce applications.

2. OBJECTIVES OF THE STUDY

1. To study the Concept M-Commerce.
2. To study the M-Commerce Trends.
3. To study the Importance of M-Commerce.
4. To study the Challenges for M-Commerce.

3. METHODOLOGY OF THE STUDY

The present study has been descriptive; the data for this study were obtained from secondary sources. The secondary data has been collected from various references which already existed in published form; part of the paper is based on literature review the method comprising of collecting all the available papers relating to the theme and selecting relevant papers/books for the review purpose. Selection of the paper is done on the basis of their relevance and contribution to the body of knowledge. The author has made an attempt to do primary reading of the selected papers which will constitute the core of this review study.

4. CONCEPT OF M-COMMERCE

M-commerce (stands for mobile commerce) is the buying and selling of ***goods and services*** through ***wireless handheld devices*** such as cellular telephone and personal digital assistants (PDAs). In other words, it's a complete online shopping experience, but with all the convenience of being on a cell phone or tablet. Known as next-generation e-commerce, m-commerce enables users to access the Internet without needing to find a place to plug in. The emerging technology behind M-commerce, which is based on the Wireless Application Protocol (WAP), has made far greater strides in Europe, where mobile devices equipped with Web-ready micro-browsers are much more common than in the United States.

5. M-COMMERCE TRENDS

Today, the number of B2B and B2C buyers who research and buy products via mobile and tablet devices is rapidly increasing and becoming the norm. Here are three global mobile commerce trends which are expected in 2015:

I. Mobile app revolution

"Apps are increasingly becoming experiences that live across multiple endpoints from wearable's to phones, tablets, and web applications." As this trend proceeds in 2015, offerings that can seamlessly transfer between these states as customers move from one device to the next will have a huge advantage. Many of today's small businesses are eager to build their own branded mobile apps. Thank to mobile app's outstanding features which are different from responsive website and mobile site, now retailers can drive customer engagement and sales.

II. The Smartphone Credit Card

Mobile payments will move toward an international level of functionality. Just as the magnetic strip revolutionized payment by plastic credit card, NFC and other fast-evolving technologies will facilitate the move to payment using mobile technologies in 2015.

NFC chips inside most new smart phones transmit customer payment and banking data when scanned on a reader. Unlike a credit card, smart phones can include interactive payment processing and other financial services which PayPal president, David Marcus, calls Money. NFC chips could be placed inside wearable smart technology — also coming of age in 2015. However, tapping a device may not be significantly more convenient than swiping a card.

III. Mobile marketing will become more personal

Mobile marketing will move from broadcasting for a large mobile user audience to a targeted approach of interested mobile users. Big data will drive it both online and offline, while targeted marketing will have huge benefits for local businesses. Traditional mobile marketing made it difficult for businesses to reach their desired ROI, but things will change with targeted mobile marketing as they are able to cut through all the background noise. Overall, they will attract new and repeat customers to their stores.

6. IMPORTANCE OF M-COMMERCE

In the current commerce industry, M-Commerce has been entered in finance, services, retails, tele-communication and information technology services. In these sectors, it is widely accepted thanks to the following advantages of M-Commerce:

I. Convenience

With just a few clicks on mobile devices, customers can already do shopping, banking, download media files and more than that. M-commerce also benefits retailers by many of their outstanding features compared with responsive website and mobile site.

II. Flexible Accessibility

User can be accessible via mobile devices and at the same time be accessible online too through logging on to various mobile messengers and other networking platforms. On the other hand, the user may also choose not to be accessible by shutting down his mobile device, which at times can be a good thing.

III. Easy Connectivity

As long as the network signal is available, mobile devices can connect and do commerce transactions not only mobile to mobile but also mobile to other devices. No need for modem or WI-FI connectivity set up.

IV. Personalization

Each mobile device is usually dedicated to a specific user so that it is personal. Users can do whatever they want with their handheld devices: modify the wallpaper, change view settings or modify contact information as you send emails or e-payments.

V. Time Efficient

Doing M-Commerce transactions do not require the users to plug anything like personal computer or wait for the laptop to load.

VI. Boosting retail activity

In the context of economic difficulties, e-commerce solution with smart phones and software applications plays an important role in retail market, creating close relationship between consumers, retailers and brand merchandise through features, to get the success in both earning high profit and providing great mobile shopping experience.

As a result, Investments in mobile platforms for B2C transactions are defined as, “strategic investment direction in the future, as indicated in the proportion of investment in mobile platforms accounted for 68% of the investing in research and new technology platforms.”

VII. Convenience of electronic payment services on mobile

19% of people surveyed knew about the payment services on mobile, 10% expressed interest to learn and to use mobile payment services. By applying necessary plugins, payment can be transferred easier and more secure than ever. Due to the fast development, this type of commerce also supports almost all popular payment method for customers to pay bills electronically, purchase prepaid cards as mobile phone cards to solve transactions complex.

VIII. Sales of digital content on mobile devices

Besides retail, digital content is a rich resource that firms can use with mobile commerce. By strengthening the convenience function of mobile devices, sellers can sell the content and buyers can use anytime they want. Users pay directly for each digital content or registered users to use the service online digital content.

7. CHALLENGES FOR M-COMMERCE

I. Evolution of Devices

Hardware manufacturers are constantly coming out with faster & better smart phones. The new versions of the different OS are also getting smarter by the day. Store owners need to keep up with the pace of this evolution to makes the best out of these hardware and software updates. This ensures their apps don’t fall behind in the race.

II. Fragmentation of Device

Mobile hardware industry is highly fragmented especially when we talk of Android powered devices. The challenge lies in developing apps that offer great experience to entry-end smart phone users and yet don’t deny high-end phone users the experience derived from the best features available on this phone. Getting the balance right is the biggest challenge.

III. Payment Solutions

At its nascent stage, most M-Commerce solutions would offer only a handful of payment options to their customers. But with the proliferation of mobile wallets it has become a big challenge to ensure customers keep enjoying a wide range of payment options. Without this, it is practically impossible to bring down cart abandonments.

IV. Simplifying Buying Experience

M-Commerce is crowded and there are dozens of similar stores that are selling the same products. With discounts drying up and prices stabilizing between stores, the key to success lies in simplifying buying experience. With your competitors pulling out every trick from their hat you need to constantly think of out-of-the-box solutions to stay ahead of the competition.

8. CONCLUSION

M-commerce has the potential to provide huge satisfaction to end-users, generate business opportunities, and provide quick access. There are a number of technologies that enable mobile commerce such as infrared, SMS, interactive voice response, mobile scan and contactless chips. These technologies are transforming the mobile phone into a replacement for petty cash, and debit and credit cards; here the payments are charged either through the mobile phone billor to the bank account.

WHEAT ECONOMY IN INDIA

Dr. Mahendra Bhaginath Bagul
Chintamanrao College of Commerce, Sangli

Introduction

Wheat (Triticum species) is one of the most important food crops in the world. It was first grown in the Karacadag Mountains of southeastern Turkey. This crop belongs to grass variety. It is highly nutritious and useful grain. China, India, United States, Russia, France, Canada, Australia, Germany, Pakistan and Turkey are the main wheat producing countries in the world. It is a staple food of millions, grown as a primary food product and for other uses as well. It has been cultivated for a history more than 10,000 years (Wikipedia 2017).

Wheat is grown mainly in winter and in spring season in all over the world. Winter wheat is grown in cold countries like Europe, U.S.A., Australia, Russian Federation etc., while spring wheat is grown in Asia and the part of U.S.A. Spring wheat matures in 120-130 days, while winter wheat takes 240-300 days for maturity. Due to this reason productivity of winter wheat is higher in comparison with spring wheat. Considering the quality, wheat has been divided into two categories (1) soft wheat, (2) hard wheat. *Triticum aestivum* (bread wheat) is known as soft wheat and *Triticum durum* is known as hard wheat.

India is one of the second largest wheat producing and consuming country in the world. After the Green Revolution in the 1970's and 1980's, the production of wheat has shown a huge increase. India produces about 75 million tonns of wheat each year. It is about 12 per cent of world's production, and is the second largest producer but not exporting at second rank in the world. World's wheat consumption has been rising consistently with the population growth.

Keywords: Production, Productivity, area under cultivation, Countries etc.

Significance of the Study:

The micro study of agricultural commodities is important. Wheat is used for human food. India is the second largest wheat producing country. But its export is very negligible. The present study makes useful contribution to the performance of India's agricultural production, productivity and area under cultivation during the post liberalization regime comparing with pre- liberalization period.

Objective of the Study:

- To study India's wheat economy in the world with help of following areas:
- To study wheat production in India and major wheat producing countries in the world.
- To study the productivity of wheat in India and major wheat producing countries of the world.
- To study the area under cultivation of wheat in India and major wheat producing countries of the world.

Data Base and Methodology:

The study is based on secondary source of data. The secondary sources of data was collected from various journals, WTO reports, Ministry of Agriculture, Govt. of India, Ministry of Finance GOI and Newsletter, FAO reports etc.

Methodological Approach of the Study:

Time series data has been used for the entire period from 1971 to 2017. The purpose was to compare area under cultivation, production and productivity of wheat during pre and post- liberalization period. The sub-periods has been also made for short-term comparison. Wherever it is necessary, longer time series data also used.

Statistical Tools of Data Analysis:

The data collected from the secondary sources, has examined and analyzed by researcher for performance of agricultural production, productivity and area under cultivation. Statistical tools like Percentage share, Compound Annual Growth Rate etc have been used.

Limitation of the Study:

Major problem that arises in the study was break in time series data between pre-liberalization and the post-liberalization period. For comparison of area under cultivation, production and productivity performance in pre and the post- liberalization period, researcher considered twenty years period for before liberalization and twenty seven years period for the post- liberalization.

Production, Area under Cultivation and Productivity in major wheat producing Countries:

This section includes production, area under cultivation and productivity shares of major wheat producing countries of the world and calculated growth rate for finding out growth trend in production, area and productivity during pre and post 1991 period.

Table-1 % Share of production in Major Wheat Producing Countries in the World

	Pre-1991 Period			Post 1991 Period

Production in major wheat producing countries:

Percentage share of production in major wheat producing countries in the world during pre and post- 1991 period. A brief analysis of wheat export in major wheat exporting countries in term of their production, productivity and area under cultivation is extended. Wheat is cultivated in around 124 countries in the world (FAO). Table-1 shows share of different countries in production of wheat in the world. India, China and USA produces near about 38.74 per cent share of world wheat production. India's share in the world production is stagnating at around 10 to 12 per cent. USA produces around 11 per cent of world production. India stood third rank in wheat production with its share of 8.08 per cent in the world during pre liberalization period. China stood first in wheat production with its share of 14.34 per cent and USA stood third with their share of 13.05 per cent in the world during pre liberalization period. India stood third with 11.89 per cent in wheat production post 1991 (1991-17) period. Wheat production of Germany, Canada and Australia was 2.67, 4.79 and 3.01 per cent during pre 1991 period

China stood first in wheat production with 17.46 and USA at third position with 9.39 per cent share after 1991. India ranks second in wheat production with 11.20 and 11.81 and 12.76 per cent during 1991-00 and 2001-10 respectively (Table-1). India has largest wheat production after China. India's share second stood around 12 per cent in the world wheat production. Russian Federation data shows there not produce wheat during 1991 period but after 1991 wheat production shows increasing trend continuously. Wheat production of Germany, Canada, Australia and Pakistan was 3.45, 4.24, 3.29 and 3.27 per cent during post 1991 period.

Graph-1 shows production of major wheat producing countries in the World.

Area under cultivation of Wheat in major wheat producing countries:

The percentage share of area under cultivation in major wheat producing countries of the world during pre and post-1991 period.

Table-2 shows percentage share of area under cultivation in the major wheat producing countries in the world. India's share in the world wheat cultivated area was around 11 to 12 per cent. USA's wheat cultivated area was around 11 per cent before 1991. India stood at sixth rank in wheat cultivated area with its share of 9.52 per cent. Canada stood first with 17.56 per cent share. Australia stood at third rank with 16.42 per cent during 1991 period.

Graph-2 Table-2 % Share of Area under Cultivation in Major Wheat Producing Countries in the World

	Pre-1991 Period			Post 1991 Period			
	Phase-I 1971-80	Phase-II 1981-90	Total 1971-90	Phase-III 1991-00	Phase-IV 2001-10	Phase-VI 2011-17	Total 1991-17
Australia	15.33	14.42	16.42	19.12	7.23	6.85	16.27

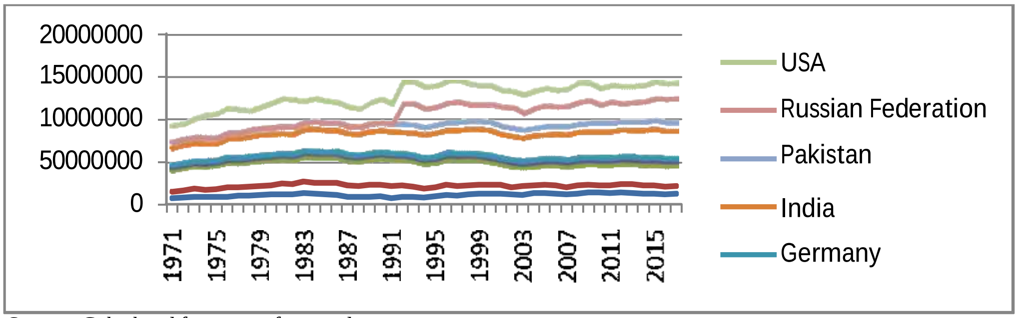
After liberalization (1991-17) India stood at sixth position with 8.01 per cent share in wheat cultivation (See Table-2). Australia stood at first position with 16.27 and China at third position with 12.55 per cent share. In India area under cultivation of wheat shows variations during pre and post-1991 period. Graph-2 shows area under cultivation of major wheat producing countries in the World.

Area under Cultivation in Major Wheat Producing Countries in the World (Hectare)



***Source**: Calculated from www.fao.org data.*

Productivity of wheat in major wheat producing countries in the world during pre and post 1991 periods. Table-3 shows major wheat producing country's average productivity per kg per ha in the world. France stood at first rank with 51106 kg per ha of yield during pre liberalization period. Germany stood at second rank with 50795 kg per ha, USA at third with 22874 kg per ha and India stood at sixth position with 16464 kg per ha of productivity.

After 1991 the ranks of France, China, USA and India remained same, but the average productivity of wheat had increased sharply. India is the largest producer of wheat in the world but their productivity was comparatively low. Graph-3 productivity of major wheat producing countries in the world (Kg per hectare).

Source: *Calculated from www.fao.org data.*

Conclusion:

Wheat is one of the most important food crops in the world. It is highly nutritious and useful grain. China, India, United States, Russia, France, Canada, Australia, Germany, Pakistan and Turkey are the main wheat producing countries in the world. It is a staple food of millions, grown as a primary food product and for other uses as well.

Mainly three species of *Triticum aestivum, durum and dicoccum* are cultivated in India. India is one of the second largest wheat producing and consuming country in the world. After the Green Revolution in the 1970's and 1980's, the production of wheat has shown a huge increase. India produces about 75 million tonns of wheat each year. It is about 12 per cent of world's production, and is the second largest producer but not exporting at second rank in the world. World's wheat consumption has been rising consistently with the population growth.

India's share in the world production is stagnating at around 10 to 12 per cent. India third stood rank in wheat production with its share of 8.08 per cent in the world during pre liberalization period. India has largest wheat production after China. India's share second stood around 12 per cent in the world wheat production.

India's share in the world wheat cultivated area is around 11 to 12 per cent. After liberalization India stood Sixth position with 8.01 per cent share in wheat cultivation. In India wheat area under cultivation shows variations during Pre and post-liberalization period.

France stood first rank with 51106 kg per ha of yield during pre liberalization period Germany stood second rank with 50795 kg per ha, USA at third rank with 22874 kg per ha and India stood at sixth position with 16464 kg per ha of yield during pre-1991 and post 1991 period. The ranks of India, France, China and USA remained same, only average productivity of wheat in kg per had increased sharply. India is the largest producer of wheat in the world but their productivity was comparatively low.

India wheat production, productivity and area under cultivation shows decline growth rate during post liberalization period. This is not good sign for Indian wheat economy. USA and Canada shows increasing growth rate of productivity during post 1991 period. Growth rate Wheat productivity in Germany, China, France and Australia shows decline during post 1991 period.

MICRO, SMALL AND MEDIUM ENTERPRISES IN INDIA:PROBLEMS AND SOLUTIONS

Dr. Arjun K Jambagi
Assistant Professor, Department of Economics, SRFGC College Belagavi

Abstract

Small scale sector occupies an important position in the industrial structure of our country . The Micro Small andMedium Enterprises are providing the uniform development to the society and can be a strong mean to utilize the natural resources of the India.The Micro SmallandMedium Enterprises are very helpful to remove the regional imbalances if it is establish in the underdeveloped areas. The Micro Small Medium Enterprises are providing more employment per unit.Presently, Indian MSME'S are facing the various problems at different levels. The government is not providing any types of satisfactory training or skill development schemes. There should be low cost credit to the MSME'S.This paper deals with MSME'S in India :problems and solution

Keywords: *Economic Development, MSMEs, Importance, Problems and Solutions*

INTRODUCTION

Small scale sector occupies an important position in the industrial structure of our country . In a country like India, wherein on one hand there is the acute problem of unemployment and on the other hand scarcity of capital, it is only the small scale sector which is best suited under these condition. Indian economy is characterised by huge size of population, availability of wide variety of abundant natural resources, ever growing size of market and shortage of capital. Development of agricultural sector is important but more emphasis should be placed on the development of industrial sector as it is only this sector which can help in solving numerous problem confronting our economy.

The role of small scale industries is one of the important features of the planned economic development of India. In India this sector has been assigned with the significant role in the industrialization and economic development of the country, as an effective tool in sub serving the national objective of growth with justice. Its crucial role has been increasingly recognised as a solution for the country's problems of scarce capital, wide spread un employment regional imbalance of industrial development, inequitable distribution of National income etc. The problem of unawareness towards technological advancement can removed after running effective training and skill development programs. The MSME owners are not innovative and their entrepreneurial skills are very low.

Over the year small scale sector has acquired greater importance in Indian economy. In terms of employment generation this sector is next only to agriculture and accounts for about 35 percent of the total exports of the countery. In terms of value added it contributes to about 40 percent of the manufacturing sector and 80 percent of industrial production is from this sector.

Objectives of the study:

- To study the importance of MSMEs in India.
- To Know the problems of MSMEs.
- To find out the solutions and suitable conclusion.

Today small and medium enterprises account for nearly 35 percent of the gross value of output in manufacturing sector and 43 percent of the total exports. This sector is one of the most success stories of the modern India. Currently MSMEs account for 95% of total industrial units and 46 % of the industrial production. MSMEs are the biggest employment providers in the country having almost 6 corers of the population depend on them for their livelihood. The survival of MSME is of vital importance to the people.

Definitions of Micro, Small & Medium Enterprises: In accordance with the provision of Micro, Small & Medium Enterprises

Development (MSMED) Act, 2006 the Micro, Small and Medium Enterprises (MSME) are classified in two Classes:

1. Manufacturing Enterprises the enterprises engaged in the manufacture or production of goods pertaining to any industry specified in the first schedule to the industries (Development and regulation) Act, 1951) or employing plant and machinery in the process of value addition to the final product having a distinct name or character or use. The Manufacturing Enterprise are defined in terms of investment in Plant & Machinery.

2. Service Enterprises:-The enterprises engaged in providing or rendering of services and are defined in terms of investment in equipment..

IMPORTANCE OF MSME SECTOR IN INDIA

The development of the micro, small and medium enterprises (SME) sector is on the priority of Government Agenda. As per the Results-Framework Document (RFD) for Ministry of Micro, Small and Medium Enterprises (2012-2013), the Mission of the government is to – "Promote growth and development of globally competitive Micro, small and Medium Enterprises, including Khadi, Village and Coir industries, in cooperation with concerned Ministries / Departments, State Governments and other stakeholders by providing support to existing enterprises and encouraging creation of new enterprises. To endeavor to achieve a cumulative growth of 40%-50% in the number of registered enterprises by the 5 end of 12th Plan and enhance this sector's contribution to GDP from the present 8% to 10% by the end of 12th Plan.

The role of micro, small and medium enterprises (MSMEs) in the economic and social development of the country is well established. As per the Report of the Working Group on Micro, Small and Medium Enterprises (MSMEs) Growth for 12th Five Year Plan (2012-2017), the sector accounts 45% of the manufacturing output and 40% of total exports of the country. The sector provides employment to about 69 million persons through 26 million enterprises throughout the country. Over 6000 products ranging from traditional to high-tech items are being manufactured by the MSMEs in the country. The labour to capital ratio in MSMEs and the overall growth in the sector is much higher than in the large industries. The geographic distribution of the MSMEs is also more even. Thus, MSMEs are important for the national objectives of growth with equity and inclusion.

Over the years, the small scale sector in India has progressed from the production of simple consumer goods to the manufacture of many sophisticated and precision products like electronics control systems, micro wave components, electro medical equipments, etc. The process of economic liberalization and market reforms has further exposed these enterprises to increasing levels of domestic and global competition

The MSME sector in India is highly heterogeneous in terms of the size of the enterprises, variety of products and services produced and the levels of technology employed. While one end of the MSME spectrum contains highly innovative and high growth enterprises, more than 94% of MSMEs are unregistered, with a large number established in the informal or unorganized sector. The sector has a high growth potential and performs a critical role in the manufacturing and value chains. Micro, small and medium enterprises (MSME) sector is characterized by low investment requirement, operational flexibility and location wise mobility. As per the quick estimates of 4th All-India Census of MSMEs, the number of enterprises is estimated to be about 26 million and these provide employment to an estimated 60 million persons. Of the 26 million MSMEs, only 1.5 million are in the registered segment while the remaining 24.5 million (94%) are in the unregistered segment.

The State-wise distribution of MSMEs show that more than 55% of these enterprises are in 6

States, namely, Uttar Pradesh, Maharashtra, Tamil Nadu, West Bengal, Andhra Pradesh and Karnataka. Further, about 7% of MSMEs are 6 owned by women and more than 94% of the MSMEs are proprietorships or partnerships.

The importance and contribution of the SME sector to the economic growth and prosperity is well established. Towards this, Government' policy initiative like enactment of the Micro Small and Medium Enterprises Development (MSMED) Act, 2006, pruning of reserved SSI list, advising Financial Institutions to increase their flow of credit to the SME sector, are all initiatives towards boosting entrepreneurship, investment and growth. Reservation of items for exclusive manufacture in MSME sector statutorily provided for in the Industries (Development and Regulation) Act, 1951, has been one of the important policy measures for promoting this sector.The Office of Development Commissioner (Micro, Small and Medium Enterprises) functions as the nodal Development Agency under the Ministry of 7 Micro, Small and Medium Enterprises(MSME). It is the apex body to advise, coordinate and formulate policies and programmes for the development and promotion of the MSME Sector. The office also maintains liaison with Central Ministries and other Central/State Government agencies/organisations financial institutions.

PROBLEMS OF MSME`S IN INDIA

Presently, the Indian MSME`S are facing different typesof problems. Most of the problems are controllable while rests are uncontrollable. Based on data analysis and studyof the related literature the MSME`S problems can explains follows:

1. Unavailability of raw material and other inputs- For MSME's required raw material skilled work force and other inputs, which are not available in the market. Due to unavailability of these essentials, it is very difficult to produce the products at affordable prices.
2. Lack of credit from banks-The MSME`S are presently facing the problems of credit from the banks. The banks are not providing the adequate amount of loan to the MSME`S. The loan providing grocess of the banks is very long and formalistic. The owners of the MSME`S has to produce different types of documents to prove their worthiness. The banks are providing on an average 50% total capital employed in fixed assets. The cost of credit is also high
3. Lack of advanced technology-
The owners of MSME`S are not aware of advanced technologies of production. Their methodology of production is outdated. The owners are using older method in the field of fabricated metal and textile
4. Poor infrastructure Though, MSME`S are developing so rapidly but their infrastructure is very poor. With poor infrastructure, their production capacity is very low while production cost is very high.
5. Lack of training and skill development program-The training and development programs in respect of MSME`S development concern is very low .So, skilled manpower is not being available to MSME`S. The owners are aware of the innovative methods of production. The skill developmental schemes conducted by the government are not sufficient
6. Lack of distribution of marketing channels- The MSME`S are not adopting the innovative channels of marketing. Their advertisement and sales promotion are comparatively weaker than the multinational companies are. The ineffective advertisement and poor marketing channels leads to a very poor selling
7. Complex labour laws and red-tape-All the laws related to the all aspects of manufacturing and service concern are very complex and compliance with these laws are practically difficult .The various decisions of factory' are depend upon the factory commissioner and inspector, so there are so many chances of red tape in the operation of MSME'S.

SUGGESTIONS FOR IMPROVEMENT

According to our study and the annual reports of MSME'S, we strongly recommend the following suggestions for the growth and development of the MSMEs in India:

1.Determination of Technological Needs: There should be detailed survey to assess the technical and financial needs of the MSME. So that, the proper arrangement could be make to fulfill the needs of the MSME'S.

2. Sufficient availability of the credit- Our banking system does not provide sufficient amount of credit to fulfill their requirement of establishment of MSME and as well as not for the operational activities. Therefore, there must be availability of credit according to the requirement at cheaper rate.

3. Mutual Supply of Technologies: A number of appropriate technologies for the MSME sector have developed in various sectors. While each MSME has its areas of strengths and weaknesses, therefore, it would be mutually valuable if already developed technologies made available to each other. A comprehensive list of all sorts of technologies should be prepared and made available accordingly to the MSMEs requiring it.

4. Training and development, awareness programs: There must be conduction of training and development programs by the MSME ministry. The currently running programs are not so effective and sufficient. One of the important reasons for slow intake in the utilization of schemes is the lack of knowledge about schemes and their likely benefits. The current knowledge dissemination system is limited in its outreach. There is a need to develop a
better communication strategy and use of new age media tools.

5. Proper research and development: There should proper research and development in respect of innovative method of production and service rendering. The innovative products will provide the cheaper products and the MSME'S will be able to cope up with the situation.

CONCLUSION:

The policies of interest are state outlays and subsidies targeted towards this sector. More specifically, we have discussed about Employment opportunities, Infrastructure Development, Testing laboratories, Foreign direct investment policy, De-reservation, Competitive technology, Export promotion within the MSME sector. The factors like export promotion, reservation policy, tooling& technology, manpower training, technology and managerial skills gave enormous opportunities for growth and better performance in the economy. It is concluded that MSMEs in the Indian Economy have shown tremendous growth and excellent performance with the contribution of policy framework and efficient steps which had been taken by the Government time to time for the growth and development of the MSMEs.

EMERGING TRENDS AND ADVANCED SWOT ANALYSIS OF E-COMMERCE

Mr. Satyanarayan R. Rathi

Assistant Professor,Department of Commerce, K.K.M. College, Manwat, Dist- Parbhani

Abstract:

E-commerce is the buying and selling of goods or the transmitting of funds or data and providing services, over an electronic network, primarily the Internet. This paper introduces about new up-and-coming trends in e-commerce which can enhance economic growth, increase business opportunities, competitiveness, better and profitable access to markets in India. Another methodology concerning Internet promoting in Ecommerce; indicating how sponsors require this advancement to be effective. E-Commerce is developing as another method for helping business endeavors to contend in the market and consequently adding to monetary achievement. In this examination paper we will talk about Advanced SWOT Analysis of E commerce in Indian situated which will involve qualities, shortcomings, openings and dangers looked by e commerce in current situations in India. India is a rising economy and how web based business had assumed a fundamental job in the development of the organizations and generally speaking monetary advancement.

Keywords: *E-commerce, Emerging Trends, India, Internet Marketing, SWOT.*

Introduction

Commerce may be defined as the transaction between the business enterprises. Business, on the other hand, is defined as 'a commercial enterprise as going concern'. In doing the business certainly one has to have contact with other .Previously For doing business one has to travel through a long distance and carry money in this pocket all the time ready which always be a risk for the carrier. It took a long time to mature even a single transaction for example if a manufacturer want to put up for sale his produce need to sell it to whole seller first this is also with the help of middle man then the whole seller will sell the same product the different retails and the consumer will buy the product this chain will add some more middle man if the distance between producer and consumer is more. This procedure is very tedious and furthermore include some edge in expense at each phase which at last increment the cost of the item and will put and additional weight on the pocket of the client or purchaser. To attach the above procedure and to diminish the include an incentive in the expense of item or to decrease the weight on the pocket of purchaser maker just need to utilize one wonder word that is "e". here e represents electronic any place you prefix this word the speed will mechanically increments with many overlap then the traditional strategies received and then again the expense of supply or the cost of item will diminish many overlay as contrast with previously.

For most recent couple of years numerous business who encounters the Placing "e" before any procedure or capacity of their business appeared to be the enchantment proposal for endless story of accomplishment and quick returns for ventures. Web, for instance is getting to be a standout amongst the most prevalent medium in transmitting different information. Clients can locate any sort of data inside a shorter time contrasted and ordinary strategy that expends additional time. Here again we expect a circumstance where for booking any ticketing for all sort of movement, charge installment, lodging appointments and so on one have to remain in a long line to complete his work for himself however at this point this should be possible at home and inside couple of minutes as it were.

Internet business is otherwise called snap business where one uses all the innovation of snap task to complete a business. Snap business as sounds simple isn't just incorporate snap activity it likewise incorporate each one of those advancements with allow the snap functional on web which incorporate, domin address, server, Web Site, HTML, Electronic Data Interchange

,XML, Protocols and so forth. It is a productive method to direct business which goes past the basic block business. Snap business can result in quick exchanges, wide market inclusion alongside the heap of advantages, for example, speed, comfort, financially savvy, opportuneness, high overall revenues, moment client relations, no loss of clients and some more. A worry can do all that it can to maintain its business ably and gainfully.

Objectives

1. To take overview of the emerging trends in e-commerce.
2. To study the importance of e-commerce through its SWOT analysis in present global competitive surroundings.

Research Methodology

The paper is descriptive in nature so the data required for the paper is secondary data. Secondary data were collected by reviewing methodically various published and unpublished papers, journals, books, articles, reports, magazines etc.

Emerging E-Commerce Trends

Businesses need to be able to merge globalized product contributions, with a localized E-commerce experience - through local language, payment options, and marketing offerings.

Getting Global while staying local.

Businesses need to be able to combine globalized product offerings, with a localized E-commerce understanding through local language, payment options, and marketing offerings.

Mobile POS and showcase using iPad/Android

The objective is to empower every single store associate to execute, checkout and take installments without setting off to the tills. Apple began this pattern and most retailers do see huge favorable position in this methodology as one can get to the whole item go, as well as drive helped discussions. With iOS 6 and Android 4.2 Jellybean, the highlights one can empower in the client helped application are unending, beginning from fundamental devices, for example, utilizing the camera for scanner tag examining to completing a virtual makeover for clients in store.

Facebook

Facebook has more than 850M+ endorsers, and number develops by 20% or all the more consistently in rising nations. Organizations will take increasingly more preferred standpoint from the different arrangement of information about users " every day action utilizing Facebook Connect, such as offering advancements on items which they most remarked on or recognizing what their companions generally like and prescribing a similar when they visit the store.

Push notifications

Present reactive nature of "pull browsing" is changing very quickly to "push browsing", where by marketers are reaching out to Customers with more relevancy than before to pull them to buying things.

Less significance to conversion ratio over customer engagements

At present conversion ratio (visitors/orders) is of paramount importance. Customer engagement and making sure people have an emotional attachment with the product is key. This means attracting Customers to the website with no intention of buying on site, ultimately driving more visitors on the site rather than conversion ratio improvements. This eventually creates brand affinity and has in turn positive impact on conversion and average order value (AOV) in other channels.

Modification

Modified recommendations or targeted content is the key medium to surface any content. There are two distinct sets of Customers; one who expects the retailer to make use of cross domain data and others who wary of their data being shared between sites.

Multi-channel

Customers will expect a seamless shopping experience. A product added in a basket at home is expected to be found in the basket when you go to the store or if you call up the call center. This will drive investment by IT directors in commerce packages, CRM systems and more importantly integrating commerce system with POS.

Advanced Swot Analysis of E-Commerce

SWOT analysis is about concentrating on various aspects of e-commerce emerged in Indian originated website Flipkart i.e., focusing on strength, weaknesses opportunities and threats for the Flipkart to the targeted markets.

Strengths

Online business can be managed all around as no particular limit is required. It empowers every one of the organizations to grow them to worldwide dimension. It spares time and conveying in light of the fact that there is no compelling reason to go anyplace physically. It very well may be utilized anyplace whenever as there is no time imperatives. It encourages Customers to pass judgment on cost and item successfully and proficiently. Internet business lessens strategic issue and puts a private venture on a standard with mammoths. Interpersonal interaction locales, web based adverting systems can be mediums to buzz about online store. Snappy criticism and remark shapes are primary highlights to interrelate with clients. Target showcase fragment is critical component of web based business. It is truly adaptable and whenever can be altered. Enhances data sharing among traders and clients. Things can be robotized in an all around executed online store. In the event that download office is accessible, circulation cost can be cut off. Item can be organized in the rack inside moment's .with online store it is very simple.

Weaknesses

Security matter confounds clients particularly about the honesty of the installment procedure. Counterfeit sites are accessible on net which guarantees improved administration and secure managing. This site can differ web based business as well as convey awful name to web based business. Individual and budgetary subtleties accommodated exchanging intention are abused by programmers their own undue web. Scarcely online organizations offer limits and dealing can't be conceivable. The undertaking of conveyance is generally re-appropriated; who does not think about the planning of the merchant. They give their administrations according to their very own comfort. At some point the conveyance time may reach out to days or weeks which can't sit tight for. Items whose decision is just rely upon its physical state of the item with need individual touch before determination are not reasonable for web based business. As online items can't be contacted; wear; or sit on the item. Predetermined number of item can be accessible. Physical items can be accessible yet need in individual administrations which are elusive. Delivery cost increments in the event that we arrange on the web. Restricted exposure openings are accessible in light of the fact that in online business one can't go for mass promoting.

Opportunities

Ecommerce is quick and viable even money related exchanges can be produced using any piece of the world. Individuals of tomorrow will feel increasingly loose to purchase items through web as it were. Day by day Number of web clients is expanding. Individuals confront progressively agreeable to shop on the web. Web based business can be worked anyplace whenever with no intrusion. Alongside every single tick of the mouse business is in activity for 24*7 hours.. E business has wide extension and more extensive vision to develop. Online client administrations is an upper hand for the organization.

Threats

Competition is expanding step by step huge organizations have just entered in this field like Amazon, Snapdeal, Indiaplaza, Homeshop18 and so on. They are making individuals routine at the expense of their organizations. Change in patterns, design and prevailing fashion can truly trouble E-Commerce one next to the other change in law and directions can likewise influence it.

Clients now a days are dependably in a pursuit of creative items. Development can be either in item, place, advancement and even cost. There is questions that data can be abused lead to spam email or personality misrepresentation. In web based business there is no immediate collaboration of client and the merchant. That is the reason bartering does not exist. Individuals like to purchase physically contrasted with on the web. People utilizing out of line intends to work web based business can harm the certainty and confidence of average citizens. Nature of misrepresentation and hazard is diverse in light of the fact that when a client depends on inconspicuous set up, he trusts and makes exchanges. In such a way he is prepared to confront chance.

Conclusion

The Internet network is a marketing channel use by advertisers, marketers, and society to find the right mixture of marketing mix to best suit customer's needs. It is important for a company of this era to have access to the Internet to be more successful. Internet marketing does not only target Customers, but also Internet advertisements client marketers from companies. This is so because companies prefer to hire specialist in creating a Web site. E-mail is as famous as direct marketing in supporting e-commerce activities. Most clients feel that this new media is a success in relation to conventional marketing advertising. But Internet should be used with other media for a more efficient marketing tool. Web showcasing will turn out to be considerably increasingly noteworthy in the prospect. As more organizations will approach the Internet, they will begin working together once again the Internet. Security won't be an issue any longer since programming organizations, banks and charge card establishments are working connected at the hip to enhance Internet security. Organizations like Flipkart need to ensure themselves in three regions: information trustworthiness, secrecy of information and realness by introducing firewalls or switches. The showcasing blend assumes a vital job in IM in internet business; choosing what kind of publicizing best suit clients through the Web. This is the new period of advancement; where everybody will associate on the Web and through this Flipkart will upgrade its yield and gives upper hand. Information Technology (IT) has boosted ecommerce universal. Now it's easier to enter to a new market and one can evaluate his/her product and companies' performance. It reduces business overhead and enhances business management. A developing country like India can be more rationalized and mechanized if it utilizes e-commerce effectively and efficiently.

A STUDY OF FOOD WASTAGE IN HOTELS AND DHABAS

Dr. Shivaji R. Pawar

Associate Prof. and Head, Department of Commerce, Arts and Commerce College ,Kasegaon,

Abstract

Now a days Hotel industry is witnessing the tremendous growth in India. According to a report of WTTC "Travel and Tourism Economic Impact 2017 India" India is contributing 6.9 % to the world GDP. As a result, a number of international players in hotel industry have started their venture in the country. Though there are number of opportunities hotel industry is facing a several problems. The wastage of food on mass level is one of the important challenges before hotel industry.

Keywords: *Dhaba, Thali, Buffer, Food-Waste*

Introduction:

Globally, one-third of the food produced is wasted, costing the world economy about $750 billion (more than Rs 47 lakh crore), The food wastage problem is not new for India. According to Food Corporation of India ,during 2009 to 2013 the food grain wastage is 79 million tonnes. India produces about 260 million tonnes of food grain every year including wheat97.11, rice111.01, pulses 23.95 and cereals45.42, Maize – 27.14, Gram – 11.10 million tonnes. India is a significant contributor on account of both pre and post harvest waste in cereals, pulses, fruits and vegetables. According to the United Nations Development Programme, up to 40% of the food produced in India is wasted which is costing Rs. 58000 Crore. Weddings, canteens, hotels, social and family functions, households spew out so much food. India wastes uneaten food worth Rs.137 crore daily.

About 57,676 tons of foodgrain stored in Food Corporation of India (FCI) godowns have got damaged and become useless for human consumption in the past five years owing to pest attack, leakage in godowns, exposure to rain and floods, procurement of poor quality stock etc. Some amount of foodgrain also gets wasted during transportation in trains and trucks.

Now a days Hotel industry is witnessing the tremendous growth in India. According to a report of WTTC "Travel and Tourism Economic Impact 2017 India" India is contributing 6.9 % to the world GDP. As a result, a number of international players in hotel industry have started their venture in the country. Though there are number of opportunities hotel industry is facing a several problems. The wastage of food on mass level is one of the important challenges before hotel industry.

Research Methodology:

The title of research article is " A study of Food Wastage in Hotels and Dhabas" This article is depend upon primary and secondary data. The objective of research is to understand various reasons of food waste in hotel industry in study area.

Primary Data:

Researcher has collected the primary data through Hotels and Dhabas situated in the Islampur city. For this purpose researcher has used the various tools such as Questionnaire, Observation, Survey, Interview etc.

Secondary Data :

The secondary data is collected with the help of books, journals, magazines, Newspapers and internet.

Sample Size:

There are 47 hotels and dhabas are situated in Islampur city. Researcher has selected 42 hotels and dhabas for the purpose of study by using solvin's statistical formula.

n= N/1+N(e)2

n = 47/ 1 + 47 (0.05)2

= 42

Result and discussion:

Mass Production of food waste from hotel industry is such a big challenge. In India every year near about 58 Thousand Tonne food is going into waste. On the other hand according to Global Hunger Index India ranks 63 in hunger country. The present study is an attempt to show that the major reasons of wastage and how to overcome. Wastage of food is a serious issue which needs the attention of public as well government authorities.

Table No. 1 : System of meal provide to customers

Meal system	No. of Hotels		Yes %
	Yes	No	
Thali system	34	8	80
Plate system	10	12	71
UnlimitedThali	20	22	47
Buffet system	6	36	14
Special for children	00	42	0
Special for Women	04	38	9

***Source**: Primary data*

From the above table it is clear that, 80% of hotels and dhabas provided meal by Thali system followed by plate system (71%), where as 47% hotels and dhabas provided Unlimited Thali followed by Buffet system (14%). However, only 9% hotels are provided separate special thali for women and no one can provide such Thali to children for reducing the food waste.

Table No.2 : Reasons of Food Waste

Sr.No.	Particular	No. of Respondents					
		No. of Hotels			No. of Consumers		
		Yes	No	%	Yes	No	%
1	Limited Thali (Menu up to 4)	4	38	9	20	40	4
2	Semi limited Thali(Menu up to 8)	22	20	52	180	240	43
3	Full Thali (Menu more than 8)	36	6	85	350	80	80
4	Unlimited Thali	32	10	76	300	120	71
5	Buffet	20	22	47	200	220	47
6	No Special for children	26	16	61	240	180	57
7	No Special for Women	30	12	71	320	100	76

***Source**: Primary data*

From the above table it is clear that 85% proprietor's and 80% customers opined that , Full Thali having more than 8 menus causes highest wastage of food, followed by Unlimited Thali system. The 71% proprietor's and 76% customers opined that due to non availability of special separate Thali for women significant food is going into waste followed by non availability of special separate Thali for children. On the other hand 9% proprietor's and 4% customers% customers opined that Thali having limited menu causes less wastage of food.

Findings and Suggestions:

The above study found that,

- The ratio of food wastage among women is high 61% which is next to children i.e. 71%
- If the items of food are limited in the Thali, the ratio of wastage is low i.e. according to consumers and hotel proprietors there is only 4% and 9% respectively food waste if items in the Thali is below 4.
- The study shows that if items are more than 8 then according to hotel proprietor and consumer the percentage of wastage is 85% and 80% respectively.
- 76% proprietor's and 71% customers opined that unlimited Thali system is one of the important reasons of food waste.
- No separate special Thali provided to Children and women which cause to wastage of food. It shows 61% and 71%

respectively according to proprietors and 57% and 76% respectively according to customers.

Suggestions:

- The items provided into Thali should be less than 4
- Separate Thali should be provide to women's as well as children's which helps to reduce wastage
- To provide training to employees regarding food service.
- To create awareness among customers, waiters as well as hotel proprietors regarding food waste
- Display the flex containing importance, reasons and remedies of food waste.
- Provide discount to customers who didn't waste food in the Thali

Conclusion:

From the above study researcher has concluded that there are so many factors affecting on wastage of food in the hotels and dhabas of which the system of food provided to consumers is the most important factor. Hence it is necessary to make attention on such factor to avoid food wastage. It is also necessary to create awareness among customers, proprietors as well as waiters about importance of food, necessity of food, various reasons of wastages and precaution for avoiding wastage of food. It is time to make attention by all stakeholders to avoid wastage of food and make India stronger.

A STUDY OF GROWTH OF INDIAN MUTUAL FUNDS INDUSTRY

Mr. G. Kanuka Raju
Research Scholar, Yogi Vemana University, Kadapa
Dr. G. Haranath
Assistant Professor, Yogi Vemana University, Kadapa

Abstract

The Growth of Indian mutual funds Industry and its performance is tremendous and development in all parameters like the quantity of mutual fund companies, the total of schemes, fund mobilized, Asset Under Management etc., The present research paper aims at the growth and performance of mutual funds in India based on Asset Under Management by using Compound Annual Growth Rate (CAGR). For this purpose the data was collected different web sites like AMFI, SEBI., etc., during the period from 1965 to 2018.

Keywords: *Growth, Assets Under Management (AUM), Compound Annual Growth Rate (CAGR).*

Introduction

Mutual fund is a collective (accumulated) fund of those investors who are looking for Systematic Investment Plan (SIP), after that the fund is invested in stocks, bonds, shares, short term money market instruments and other securities. The first mutual fund in the US namely, Massachusetts investors' Trusts, was set up in 1924. In India, the mutual fund industry started was 1963 with the inception of UTI. The growth of Mutual Fund industry in India with the entry of public sector, private sector and foreign enterprise and various Asset Management Companies offered wide variety of schemes to various investors.

Review of Literature

A study conducted by Santhi N.S. and Gurunathan K. (2013) "The growth of Mutual Funds and Regulatory Challenges" found that the mutual fund industry has grown tremendously over past few years, Regulators are set up on any potential impact of mutual fund products on financial stability and market volatility. The growth of mutual funds has been accompanied by innovative products and servicing methods. Regulators will have to do balancing act by carefully managing risks and not imposing unnecessary regulation.

Smith10 (1978) examines the mutual fund growth with regard to fund performance. He observes positive relationships after adjusting for risk by using Jensen alpha. In his study, he formulates two hypotheses and tests them. The first hypothesis is "mutual funds that improve their performance in a given period, experience a growth rate in assets under its management during the next period that is no different from that of mutual funds that does not improve their performance". However, Smith correctly recognizes that the growth of a mutual fund's assets may be result of both new inflow of money into the fund and finally, successful investment performance.

In a research study by Lakshmi N (2010) entitled "performance of the Indian Mutual Fund industry a study with special reference to growth schemes" found that Mutual Fund serve those individuals who do not have the newline technical investment expertise. During the period from 1997-2006 the Mutual Funds industry mobilized the funds had grown by 57 percent and Asset Under Management by 14 percent.The researcher selected seven newline schemes and analyzed the performance and found that all the sample schemes outperformed the newline market in terms of absolute returns without adequate returns to over total newline risk. The performance measures of risk adjusted showed that the selected schemes underperformed the newline. The study found that Investors and Mutual fund Managers agreed that newline investing in Mutual funds were less risky. The main criteria of choosing mutual fund organization is the Goodwill of newline. The research found that the investors were moderately newline satisfied with the performance & services offered by the mutual fund industry.

Objectives of the present research

The objective of the present research is to analyse the growth and performance of Indian Mutual funds by using Compound Annual Growth Rate (CAGR).

Research Methodology

The present research based on secondary data. The data was collected different sources like articles, books, newspapers, AMFI reports and web sites. The period of study is 1965 to 2018. The tool used for data analysis is Compound Annual Growth Rate (CAGR). The CAGR refers to the annual growth of an investment over a specific time duration. It is assumed that the value of investment is compounded over the duration. CAGR takes time value of money into account.

Data Analysis

Table 1: Growth of Assets Under Management (AUM) 1965-2018

Year	AUM	% Increase or Decrease
1965	24.67	
1966	25.94	5.15
1967	33.86	30.53
1968	48.7	43.83
1969	65.4	34.29
1970	88.18	34.83
1971	105.14	19.23
1972	119.26	13.43
1973	141.96	19.03
1974	172.09	21.22
1975	169.95	-1.24
1976	184.54	8.58
1977	214.41	16.19
1978	288.18	34.41
1979	402.43	39.65
1980	467.04	16.05
1981	523.22	12.03
1982	679.24	29.82

2016	1232824	13.86
2017	1754619	42.33
2018	2136036	21.74
	CAGR	**24.43%**

Source: *amfiindia.com*

Findings

The table 1 shows the growth of Mutual Fund industry in India has tremendous growth in Assets Under Management since its inception. The Mutual Fund industry has achieved a Compound Annual Growth Rate in 2018 of (24.43%) in Assets Under Management. In the year 1965 Mutual Fund Industry started with a little amount i.e.,24.67 crores, and subsequently it increased in the year 1985- 2209.61 (75.18) of Assets Under Managementwhereas in the year 1999the AUM is 75332(9.20). But in the year 2001 the up and downs started in AUM 90587 (-19.84). In 2003 the AUM is -79464 (-21.01), by comparing with 2003 to 2009, the 2009 AUM is decreased 417300 (-17.39), 2010- 613979 (47.13) and 2015 (31.21) in the year 2015. In the year 2016 the AUM is 1232824 (13.86), 2017- 1754619 (42.33). The up and downs trends also occurred in the percentage form of Asset under Management in a few years because of the fall in the market. Finally, it attained an impressive growth in the year 2018 at 2136036 (21.74).The CAGR during the period from 1965 to 2018 is 24.43%.

Conclusion

The mutual fund industry is growing on all considerations like quantity of mutual fund companies, various numbers of schemes, funds mobilization, Assets Under Management etc.,The Assets Under Management (AUM) is 25.94 crores and 184.54 in 1966 and 1976 respectively. It shows mutual fund industry is one of the avenues of investors than the banks and other non-banking financial institutions. Finally, I conclude that the Compound Annual Growth Rate (CAGR) during the period from 1965 to 2018 is 24.43%.

PARADIGM SHIFT IN COMMERCE EDUCATION AND CAREER

Dr. S.O.Halasagi
Associate Professor of Commerce, SMAT's Shivanand College, Kagwad

Abstract

India is enjoying the demographic dividend, which places it in a unique position of advantages by enabling the country to support the employable deficit of a large number of developed countries. Indian Education System is considered as one of the fastest growing systems in the world. It is now catering to the needs of over 250 million students and about 70 million students in the higher education level.

The recent estimates have put that India has the potential to support about eighty percent of global workforce requirement by 2020. The years henceforth will have good news for the commerce graduates as they would get better offers. Many surveys have reported sustained job growth for them. This speaks of opportunity as well as challenge. The fresh graduates will be in limelight. Most of the recruiting companies opine that business area (75%) is one which is most in demand as compared to other areas like computer science (59%), communication (52%), engineering (45%), arts (44%), science and mathematics (35%), social science (34%), education (32%), health science (28%), and agriculture and nature (22%). This paper attempts to highlight the career in business and management, options after graduation in commerce and advanced techniques to prepare them meet the changing scenario in commerce education.

Keywords: *Higher education- Career in commerce- Options to commerce graduates- Techniques.*

I) INTRODUCTION:

The Indian education system is directly influenced by the globalization process. With its multi-dimensional impact, the business world has naturally been expecting the employable youth to know better the various functions, challenges, prospects, opportunities etc. the businesses enjoy in the current competitive global economy. Their expectations of the skilled, techno-friendly and sharp minded man power necessitate the higher education to streamline the efforts in that direction. The commerce education is no exception to it. The adoption of technology based teaching techniques has become the order of the day.

II) SHIFT IN TEACHING BUSINESS EDUCATION

In the light of technological advancements, the teaching in commerce discipline has undergone metamorphosis. There is a shift from teacher centric to learner centric and learner friendly techniques. The following multi-dimensional changes are visible in this direction-

i) Organizing and Participation in Fests: In these days, most of the commerce colleges are encouraging their students to organize the commerce fests involving them in various events testing their talent, exhibiting leadership ability and coordinating capacity. Besides, the students are also deputed to take part in such fests organized by other colleges which help them to develop the competitive spirit and developing winning strategies. These will provide them to have exposure to various situations and build their individual personality.

ii) Deputing Students for Seminars and Conferences: In the same way, the students are guided and motivated to prepare and present papers at various seminars and conferences organized specifically for them by various institutes on their academic as well as general topics. This will boost their confidence and help develop skills and requisite real situation abilities.

iii) Engaging in Project Works: One more activity facilitating practical learning is to engage them in preparation of project works requiring visit of business organizations, collection of data, interaction with officials, surveying and presenting a report. This will infuse the research quality and help inculcate critical bent of thinking.

iv) Adopting Internet and Wi-Fi Facilities:
This has come as a boon for commerce teachers

and students. In every day teaching, the references are made to stock market, commodity market and money market dealings and operators. In order to bring practicality in these aspects, a professor can at once bring before the eyes of students the BSE and NSE transactions. This avoids simply the dry teaching with imagination of unseen market situation. Now, the top rated management institutes provide Wi-Fi connectivity to their students which acts as an attraction to seek admissions in their institutes. Why cannot this be accepted in commerce colleges also? The internet has reduced the world to a village. The world's knowledge is at their finger tips.

v) Animation Devices: Computer Aided Design (CAD) is one more new tool that can be adopted in commerce teaching. Though used more in the field of engineering, it can be suitably modified and adopted in commerce field also. For example, the designs of conducting meetings of CEOs, company secretaries, general body of shareholders of top level companies can be developed. The Centre for Development of Advanced Computing has to take initiation in this direction so that the learning is made practical oriented and effective.

vi) Video Conferencing: Another facility to make students feel live in the classrooms is to link the experts and facilitate direct interaction with them. In most of the reputed management institutes such direct link is provided to students to talk freely with them and get their doubts clarified. In the absence of this facility, it is almost impossible to meet such personalities personally and discuss the subjects.

vii) Virtual Classrooms: These have enabled the youth to get higher qualifications studying from their home only. This has avoided the physical presence in the colleges but to learn from home at their leisure time and materialize the dreams of getting higher qualifications.

viii) Smart Classes: A common objection against commerce students is that they learn theoretically everything of cheques, demand draft, share certificates, demat holdings, credit and debit cards, passports, visa, bills of exchange etc. Though easy accessibility is possible, they are devoid of such things in the classrooms. These are within the reach of all the teachers everywhere. The smart classes help to show these on the screen and avoid detailed narration, saves time, make learning effective etc. This technique exposes students to the real world by presenting before them all commercial of papers, negotiable instruments, agreements, deeds, formats of financial statements etc.

ix) Development of Software: In order to make students understand the accounting procedures and process easily, the Tally package, tax computation ready-reckoner, organizational charts, and manuals etc. can be developed as a model.

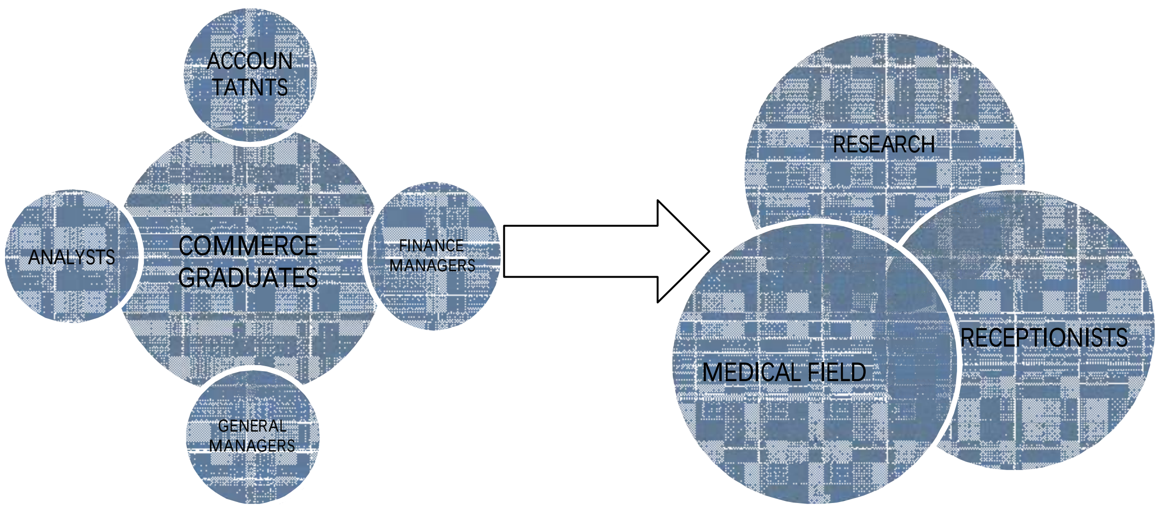
x) Effective Teaching with PPT Presentation: The chalk and talk method is a good old method and has been replaced by the use of PPT in class presentation. This brings visual effect to oral communication by teachers. This avoids distraction of students' attention to things in and around the classroom. It simultaneously teaches them to inculcate the idea of preparing PPTs as well as grasping things easily.

xi) Biometrics technology: The ministry of higher education in Karnataka is coming up with a new idea of introducing biometric technology for making students' attendance regular. In this system, every student is given a card which is to be swiped at the time entering the college and also recording his/her presence with thumb impression. It is so arranged that an SMS shall go to their parents on the days they remain absent for the class. This in particular develops a corporate culture among the commerce students and develops discipline.

III) CAREER IN COMMERCE AND ADMINISTRATION

The years after 2019 will be good for graduates as they would get better offers. Many surveys have reported sustained job growth. The fresh graduates will be in limelight. Most of the recruiting companies opine that business area (75%) is one which is most in demand as compared to other disciplines.

Business area needs most of the fresh graduates. The following are the careers in Business and Administration. The B.Com or B.B.A graduates with added higher course in MBA or M.Com. can have their career as –



i) Accountants - Nowadays, governments (central and state) are passing many regulations, rules and laws which make the big business concerns to adopt and maintain accounts systematically. The submission of financial statements is mandatory. These need B.Com and/or M.Com. Graduates. The certified Public Accountants (CP As) are demanded more.

ii) Finance Managers -The success of a business depends upon sound financial management. The finance decisions are made on scientific lines with improved techniques. Now, finance manager is given a top position in organization. This will also have good demand.

iii) General Managers -The overall smooth running of business needs the persons who have sound knowledge of whole management. They have to formulate the policies, plans and exercise control over all activities. This is another area requiring more of commerce graduates, possibly with MBA qualification.

iv) Analysts -There is a need for regular analysis of markets, finance, HR etc, in every company. The timely effective strategies need to be developed by experts and qualified graduates. Many opportunities are coming up in this area also.

v) Research - Now a day, research in every field is a prerequisite. Market research is one of such areas which is carried out to know consumer behaviour, market trend, modifications in product etc. This area also needs the commerce and management graduates.

vi) Medical Field -In hospital management, the charts, schedules, appointment, billing, filing etc are various tasks need to be carried by Medical Secretaries. This is growing at a faster rate and will continue in future too. These are also to be handled by commerce graduates.

vii) Receptionists - In corporate, the first point of contact with outsiders is the receptionist. They have to attend phone calls, appointment schedules, receiving patients etc. In other words, customer services are gaining more importance. The graduates are found to be suitable for these jobs.

IV) OPTIONS GALORE AFTER GRADUATION

The youngsters who are in the process of B.Com, degree course or have just completed their graduation in commerce have the widest area for shaping their career. Here is a short list of jobs, professions or higher courses available for commerce graduates.

1. Master of Commerce (M.Com): After B.Com, it is the two year course available with variety of specialization in costing, banking, accountancy, finance, company secretary, taxation etc. This can be acquired either through regular mode or distance mode Universities approved by UGC.

2. Master of Business Administration (M.B.A.) : This is also two year course offered by many management institutes with specialization in finance, marketing, HR etc.

3. Lecturer or Assistant Professor: After completing M.Com one can take up B.Ed. course. It helps to join as lecturer in Junior colleges (P .U.). In case, one wishes to joint degree college as Assistant Professor, there is need for acquiring Ph. D. or SLET or NET . (Doctor of Philosophy, State Level Eligibility Test, National Eligibility Test)

4. CA/CS/CWA: After B.Com, one can think of taking up Chartered Accountant course (ICAI - Institute of Chartered Accountants of India), Chartered Secretary (ICSI – Institute of Company Secretaries of India) or Cost and Works Accountant course (ICW AI - Institute of Cost and Works accountant of India). These three courses help to get jobs in corporate sector or practice independent profession.

5. Competitive Examinations: After graduation, there are good and vast opportunities in various fields of government (Public sector), semi-government and Private sector. These organizations conduct competitive examinations to fill-up their vacancies. They are state Public Service Commissions, UPSC, SSC, Banking, Insurance, Finance Companies, Development Banks, Navy, Army, Air Force, Railways etc.

6. Legal Profession: After B.Com, one can complete law course in any of the recognized law colleges. After law degree, one can join either as a law advisor, legal consultant, magistrate or practice as an advocate. Experience and skill judge the success in this profession.

7. Certified Management Accountant (CMA): American Institute of Certified Public Accountants (AICPA) is the world's largest accounting body. This qualification is similar Indian C.A. qualification. The CP A covers GAAP (Generally Accepted Accounting Principles) IFRS (International Financial Reporting Standards) GAAS (Generally Accepted Accounting Standards) and also U.S. Taxation and business laws.

8. Chartered Certified Accountants: The CCA qualification is issued by ACCA (Association of Chartered Certified Accountants). This is another world's leading and fastest growing international accountancy body.

9. HR Areas: After B.Com, there is Masters in Human Resources Management course. Many career opportunities here are administrative, service manager, labour relations, HR specialists, training and development managers etc.

10. Business Accounting and Taxation (BAT): This is another course designed by EduPristine to equip B.Com. graduates with practical understanding of accounting, taxation, reporting and all the necessary skills.

11. Tax Consultants: At college level, students learn taxation subjects like Income tax, GST etc. After graduation, one can join any tax consulting firm and get some experience to start independent profession as Tax Consultant.

12. KPO/BPO Jobs: Now a day, most of the KPOs (Knowledge Process Outsourcing) BPO (Business Process Outsourcing) and RPOs (Recruitment Process Outsourcing) organizations hire commerce graduates.

13. Stock Brokers: With B.Com.degree, one more short term course in stock trading can be acquired to become a stock broker. The knowledge of Economics, Mathematics and Finance will be more helpful.

14. EXIM Jobs: All the companies engaged in export and import need assistants at various levels. Here, commerce graduates may join directly at lower cadre or at higher level after getting specialization in EXIM area.

15. Insurance Consultants: Insurance sector offers wide scope for working as Insurance Advisor or Consultant, commonly known as Insurance Agents.

16. Finance and Investment Consultants: The commerce graduates can work as finance and investment consultants. Here you can guide people to channelize their savings in high return yielding investments, retirement planning, MF and SIP investments, health plans etc.

17. Market Researchers: There are opportunities to offer services to marketing firms as market researcher as the commerce graduates possess necessary knowledge about marketing and advertisement.

18. Event Managers: Now, event management is gaining popularity. It is another career in outsourcing type of services. One can be successful event manager with Masters Degree in Event Management.

19. Hotel Management: Hotel Industry is fastest growing area in the era of globalization. Corporate in hotel industry need specialized (finance, accounting etc) persons to handle their various tasks.

20. General Administration: All medium and large scale organizations need graduates in office to manage variety of administrative tasks. Now, commerce graduates possess practical computer knowledge and it has really opened up wider choices.

21. Travel - Tourism Sector: In these days, tourism is growing as an Industry. In this sector also, one can engage as Travel agents or Travel managers. The graduates with adequate knowledge of marketing, accounting, costing etc. will have many opportunities. It is not out place here to mention that the above list is not complete. There may arise still more career opportunities for the commerce graduates if they develop interest and apply their skills in emerging sectors.

22. Entrepreneur: In addition to the above, a young graduate can dream of starting own industry with short apprentice or entrepreneurship development programme. They can enjoy t he charms of being the boss of one's own business unit. This would be commendable choice for commerce graduates as they can have self employment and jobs to many others as well.

V) CONCLUSION:

In the light of the above details, one can conclude that there is a paradigm shift in the commerce education and opportunities available to the commerce graduates both in form of beginning a career and taking up higher courses to make stronger career in the form of profession.

INSURANCE AWARENESS IN RURAL AREA

Dr. Pravin S. Jadhav

Assistant Professor, KIT's Institute of Management Education and Research, Gokul Shirgaon, Kolhapur (Maharashtra)

Dr. Mrs. Ranjana P. Shinde

Assistant Professor, KIT's Institute of Management Education and Research, Gokul Shirgaon, Kolhapur (Maharashtra)

Abstract

The insurance industry of India consists of 57 insurance companies of which 24 are in life insurance business and 33 are non-life insurers. Among the life insurers, Life Insurance Corporation (LIC) is the sole public sector company. Apart from that, among the non-life insurers there are six public sector insurers. In addition to these, there is sole national re-insurer, namely, General Insurance Corporation of India (GIC Re). Other stakeholders in Indian Insurance market include agents (individual and corporate), brokers, surveyors and third party administrators servicing health insurance claims. The future looks promising for the life insurance industry with several changes in regulatory framework which will lead to further change in the way the industry conducts its business and engages with its customers. The overall insurance industry is expected to reach US$ 280 billion by 2020. Life insurance industry in the country is expected grow by 12-15 per cent annually for the next three to five years. Demographic factors such as growing middle class, young insurable population and growing awareness of the need for protection and retirement planning will support the growth of Indian life insurance.

Keywords: *Insurance, Life, General, Risk Factor etc.*

Introduction:

Insurance is a means of protection from financial loss. It is a form of risk management, primarily used to hedge against the risk of a contingent or uncertain loss. An entity which provides insurance is known as an insurer, insurance company, insurance carrier or underwriter. A person or entity who buys insurance is known as an insured or as a policyholder. The insurance transaction involves the insured assuming a guaranteed and known relatively small loss in the form of payment to the insurer in exchange for the insurer's promise to compensate the insured in the event of a covered loss. The loss may or may not be financial, but it must be reducible to financial terms, and usually involves something in which the insured has an insurable interest established by ownership, possession, or pre-existing relationship.

The insured receives a contract, called the insurance policy, which details the conditions and circumstances under which the insurer will compensate the insured. The amount of money charged by the insurer from the insured for the coverage set forth in the insurance policy is called the premium. If the insured experiences a loss which is potentially covered by the insurance policy, the insured submits a claim to the insurer for processing by a claims adjuster. The insurer may hedge its own risk by taking out reinsurance, whereby another insurance company agrees to carry some of the risk, especially if the primary insurer deems the risk too large for it to carry.

Innovation and Revolution of Insurance

Methods for transferring or distributing risk were practiced by Chinese and Babylonian traders as long ago as the 3rd and 2nd millennia BC, respectively. Chinese merchants travelling treacherous river rapids would redistribute their wares across many vessels to limit the loss due to any single vessel's capsizing. The Babylonians developed a system which was recorded in the famous Code of Hammurabi, c. 1750 BC, and practiced by early Mediterranean sailing merchants. If a merchant received a loan to fund his shipment, he would pay the lender an additional sum in exchange for the lender's guarantee to cancel the loan should the shipment be stolen, or lost at sea.

Circa 800 BC, the inhabitants of Rhodes created the 'general average'. This allowed groups of merchants to pay to insure their goods being shipped together. The collected premiums would be used to reimburse any merchant whose goods were jettisoned during transport, whether due to storm or sinkage. Separate insurance contracts (i.e., insurance policies not bundled with loans or other kinds of contracts) were invented in Genoa in the 14th century, as were insurance pools backed by pledges of landed estates. The first known insurance contract dates from Genoa in 1347, and in the next century maritime insurance developed widely and premiums were intuitively varied with risks. These new insurance contracts allowed insurance to be separated from investment, a separation of roles that first proved useful in marine insurance.

Recent Trends in Insurance

Insurance became far more sophisticated in Enlightenment era Europe, and specialized varieties developed. Property insurance as we know it today can be traced to the Great Fire of London, which in 1666 devoured more than 13,000 houses. The devastating effects of the fire converted the development of insurance "from a matter of convenience into one of urgency, a change of opinion reflected in Sir Christopher Wren's inclusion of a site for 'the Insurance Office' in his new plan for London in 1667." A number of attempted fire insurance schemes came to nothing, but in 1681, economist Nicholas Barbon and eleven associates established the first fire insurance company, the "Insurance Office for Houses," at the back of the Royal Exchange to insure brick and frame homes. Initially, 5,000 homes were insured by his Insurance Office.

At the same time, the first insurance schemes for the underwriting of business ventures became available. By the end of the seventeenth century, London's growing importance as a center for trade was increasing demand for marine insurance. In the late 1680s, Edward Lloyd opened a coffee house, which became the meeting place for parties in the shipping industry wishing to insure cargoes and ships, and those willing to underwrite such ventures. These informal beginnings led to the establishment of the insurance market Lloyd's of London and several related shipping and insurance businesses. The first life insurance policies were taken out in the early 18th century. The first company to offer life insurance was the Amicable Society for a Perpetual Assurance Office, founded in London in 1706 by William Talbot and Sir Thomas Allen. Edward Rowe Mores established the Society for Equitable Assurances on Lives and Survivorship in 1762. It was the world's first mutual insurer and it pioneered age based premiums based on mortality rate laying "the framework for scientific insurance practice and development" and "the basis of modern life assurance upon which all life assurance schemes were subsequently based."

In the late 19th century, "accident insurance" began to become available. The first company to offer accident insurance was the Railway Passengers Assurance Company, formed in 1848 in England to insure against the rising number of fatalities on the nascent railway system. By the late 19th century governments began to initiate national insurance programs against sickness and old age. Germany built on a tradition of welfare programs in Prussia and Saxony that began as early as in the 1840s. In the 1880s Chancellor Otto von Bismarck introduced old age pensions, accident insurance and medical care that formed the basis for Germany's welfare state. In Britain more extensive legislation was introduced by the Liberal government in the 1911 National Insurance Act. This gave the British working classes the first contributory system of insurance against illness and unemployment. This system was greatly expanded after the Second

World War under the influence of the Beveridge Report, to form the first modern welfare state.

Methods of Insurance

According to the study books of The Chartered Insurance Institute, there are variant methods of insurance as follows:

Co-insurance – risks shared between insurers

Dual insurance – having two or more policies with overlapping coverage of a risk (both the individual policies would not pay separately – under a concept named contribution, they would contribute together to make up the policyholder's losses. However, in case of contingency insurances such as life insurance, dual payment is allowed)

Self-insurance – situations where risk is not transferred to insurance companies and solely retained by the entities or individuals themselves

Reinsurance – situations when the insurer passes some part of or all risks to another Insurer, called the reinsurer

Need of Insurance in India

Buying life insurance is one of the most important financial decisions, but believe it or not, only 10 per cent of Indians are insured. But why is it so important? Well, regardless of how much you earn, no one knows what the future holds. Lots of people die a prematurely every year from illness or accident and, if you happen to be the sole breadwinner in the family and you were to pass away, it could have devastating consequences for your loved ones-their ability to pay household expenses, debts and maintain their standard of living. The least you can do, therefore, is to secure your family's financial future by buying a life insurance policy. Besides, do not overlook benefits of a life insurance during your lifetime, especially if you are young. We list 10 compelling reasons for buying a life insurance policy.

1. Looking after your loved ones even after you're gone
2. Dealing with debt.
3. Helps achieve Long-Term goals.
4. Life Insurance supplements your retirement goals.
5. Buying Insurance is cheaper when you're younger.
6. Your business is also taken care of.
7. Tax-saving purposes.
8. A tool for forced savings.
9. You may not be qualified for it later.
10. Peace of mind.

Types of Insurance

Any risk that can be quantified can potentially be insured. Specific kinds of risk that may give rise to claims are known as perils. An insurance policy will set out in detail which perils are covered by the policy and which is not. Below are non-exhaustive lists of the many different types of insurance that exist. A single policy that may cover risks in one or more of the categories set out below. For example, vehicle insurance would typically cover both the property risk (theft or damage to the vehicle) and the liability risk (legal claims arising from an accident). A home insurancepolicy in the United States typically includes coverage for damage to the home and the owner's belongings, certain legal claims against the owner, and even a small amount of coverage for medical expenses of guests who are injured on the owner's property.

Business insurance can take a number of different forms, such as the various kinds of professional liability insurance, also called professional indemnity (PI), which are discussed below under that name; and the business owner's policy (BOP), which packages into one policy many of the kinds of coverage that a business owner needs, in a way analogous to how homeowners' insurance packages the coverages that a homeowner needs.

1. Life Insurance
    a. Whole Life Plan
    b. Term Plan
    c. ULIP
2. General Insurance
    a. Health Insurance

b. Motor Insurance
c. Home Insurance
d. Travel Insurance
e. Crop Insurance

3. Other Insurance

The Objectives of the Study-

i) To study the awareness about Insurance service

ii) To study the objectives behind purchasing Insurance

Research Methodology-

The present study comprises descriptive cum analytical approach, so to understand the awareness and concept of Insurance service in rural India, the study carried out survey of the people in rural area. The survey was carried out during January 2018 to July 2018.

The survey was related with the various types of Insurances. These elements are covering the basic Insurance services needed to the people. The status of the above elements tells us about the development of the area. The data was collected from the various villages from the Kolhapur district. Only 10 villages from the district selected for the research. The researcher collected data from 20 respondents from each village. The total number of respondents is 200.

Limitations of the study-

The study is having various limitations. The time considered for research is from January to july which is of seven months so the research study is having time limitations. The study has been conducted in 10 villages of Kolhapur district so the study is having limitations of area. The researcher studied with the help of 200 respondents. So the study is having limitations regarding data collection. The researcher used convenient sampling method for this research.

Data Analysis and Interpretation:-

Awareness about the various Insurance services

No. of Respondents	Yes	No
200	168	32
Percentage	84	16

The above table shows that most of the people are aware about the Insurance facility provided by various Insurance companies. Around 83.5 percent of the people says that they are aware about the Insurance service whereas 13.5 percent of the people aren't aware about the Insurance service

Awareness about the various types of Insurance services

No. of Respondents	Yes	No
200	182	18
Percentage	91	9

Out of these 168 respondents only 92 percent of the respondents are aware about the various types of Insurances whereas only 18 respondents means 9 percent of the respondents aren't aware about the types of Insurance services

Insurance is good for death risk factor

No. of Respondents	Yes	No
200	186	14
Percentage	93	7

Around 93 percent of the respondents says that Insurance is good for risk factor whereas 7 percent of the respondents says that it is not for death risk factor

Your opinion about service of the Insurance Company

No. of Respondents	Best	Good	Poor
200	122	54	24
Percentage	61	27	12

Around 61 percent of the respondents are getting best services from Insurance companies. 27 percent of the respondents says that the service of Insurance Company is good and 12 percent of the respondents are having bad feedback regarding Insurance service

Will you recommend the insurance services to the other people?

No. of Respondents	Yes	No
200	192	8
Percentage	96	4

For creating awareness regarding Insurance service the mouth publicity and feedback is essential. The existing clients are helpful for promotion of Insurance service. Around 96 percent of the respondents are giving positive response for promotion of the Insurance service. Around 8 percent respondents are not satisfied with the Insurance services so they aren't interested in promotional activity.

Conclusions

The Insurance industry is growing industry in our nation. People are getting much more awareness about the Insurance services. The Insurance companies are also giving more attention towards the customer awareness and customer satisfaction. The people are also becoming curious about the Insurance services. The Insurance Industry is having bright future in our nation. These Insurance companies need to focus on client requirement. The market share of the Insurance companies is depends upon the performance of company.

Insurance playing good roll in our human bei ng. Previously insurance was not so popular. But day by day insurance tenacity is become growing in human mind. Human thing that insurance is not help for economy of life it also help secure & safe of life. There for Indian government has been able to cover only 20% of insurance. But the develop country like USA & UK they covered 95%

THE REVIEW OF LOGISTICS OPERATIONAL MANAGEMENT

Doshi Sachin Suhas
Assistant Professor of Commerce, Mudhoji College, Phaltan

Abstract:

The Common meaning conveyed by all the above terms is that they deal with the management of the flow of good or ,materials from the point of origin to the point of consumption, and in some cases even to the point of disposal.Logistics is an activity of managing the TOTAL Flow of materials form the beginning [i.e from the flow of raw materials to production and flow of the finished products to the consumer]. It includes supply [inward Movement of material from sources] as well as distribution [outward movement of products from manufacturers to consumer] It excludes other matters connected with distribution, such as marketing strategies ,Customer preference surveys, advertisements etc.

Keywords-*, Industrial, Logistics, Channel Management, Physical Distribution, Quick Response System, Logistical Management, Supply Chain Management, Material Management, Supply Management.*

INTRODUCTION:-

Logistics would be of little importance if it were possible to produce all goods and services at the point of consumption ,or if people could live near the source of raw materials and production .The basic objective of a goods Logistics system can now be defined as "*To Get The Right Goods Or Services To The Right Place At The Right Time In The Right Condition At The Right Cost*". The objective is realised by the Logistics function through the many activities Encompassed under its umbrella This that logistics is depend upon natural ,human, financial and information Resources for inputs. Suppliers provide raw materials which logistics Manages in the form of raw materials, in process inventory and finished goods management action provide the framework for logistics activities through the Process of planning ,implementation and control. The outputs of the Logistics System are competitive advantage, time and place utility ,efficient movement to the customer and providing a logistics service mix such that logistics becomes apropprietary asset of the organization .these inputs are made possible by the efficient and effective performance of the logistics activities.

DEFINITION

Logistics management can be defined as the process of planning Implementing and controlling the "efficient and effective flow and storage of Goods and services and related information from point of origin to point of Consumption for the purpose of conforming to customer requirements logistics is not confined to manufacturing operations alone ,It is relevant to all enterprises Including Government ,institution such as hospital and schools , and service organizations such as retailers ,bank and financial service organization.

OBJECTIVES OF LOGISTICS MANAGEMENT

1) To study the problems regarding logistics management.
2) To study of types of problems.
3) To find out remedies to solve these problems
4) Create a conducive rural business environment for emergence, sustenance and growth of the enterprises in general and specific Micro, Small & Medium Enterprises
5) Support by action research and consulting for prospective and existing Business to strategic planning and managing growth.
6) To make available the right quantity of right quality products at the right place and time in right condition

FUNCTIONS of LOGISTICS

1) Products are ordered, billed/invoiced, handled, packaged, packed, wrapped, bundled, sorted, crated, and braced.
2) Products are assembled and stored, warehoused, loaded, unloaded, shelved, displayed and crossdocked.
3) Products are shipped by air, railways, waterways, pipelines, and containers.

4)Products are exported, imported, documented marked and consolidated.
5)Products are traced, tracked, recycled and disposed.
6) Logistics customers service standards are set(time, availability, errors etc)

COMPOENTS OF LOGISTICS MANAGEMENT

Logistics Plays a key role in the economy .first ,logistics is one of the major Expenditures for business ,thereby affecting and being affected by other Economic activities. By improving the efficiency of logistics operations, Logistics makes an important contribution to the economy as whole. Second, Logistics supports the movement and flow of many economic transactions ;it is an. Important activity in facilitating the sale of virtually all goods and services. If goods do not arrive on the proper place , or in the proper conditions no sale can be Made. If the goods do not arrive on time , customer cannot buy them. Thus , all economic activity throughout the supply chain will suffer. In recent years, effective logistics management has been recognized as a key opportunity to improve both the profitability and competitive performance Of firms.

Problems facing in Logistics Management

1) Return goods handling
2) Salvage and scrap disposal
3) Traffic and transportation
4) Warehousing and storage.

Return Goods Handing: Returns may take place because of a problem with the performance of the item or simply because the customer has changed his or her mind. Return goods handling is complex because it involves moving small quantities of goods back from the customer rather than to the customer as the firm is accustomed. Many logistics systems have a difficult time handling this type of movement. Costs tend to be very high. The cost of moving a product backward through the channel from the customer to the producer may be as much as nine times as high as moving the same product from the producer to the customer. Therefore, this significant cost and service area is beginning to receive more attention.

Reverse Logistics : logistics is also involved in renewal and disposal of waste materials left over from the production distribution or packaging processes. These could be temporary storage, followed by transportation to the disposal, reuse, reprocessing, or recycling location. As the concern for recycling and reusable packaging grows, this issue will increase in importance. This is of particulars concern in countries which have very strict regulations. Regarding removal of packaging material and even obsolete product due in part to limited land fill space.

Traffic and transportation: Transportation adds place utility to a product. A key logistics activity to actually provide for the movement of materials and goods from point of consumption. Transportation involves selection of the mode- air, rail, water, truck, pipeline, the routing of the shipment, assuring of compliance with regulations in the region of the country where shipment is occurring and selection of the carrier. It is frequently the largest single cost among logistics activities.

Warehousing and storage: warehousing supports time and place utility by allowing an item to be produced and held for later consumption. It can be held near the location where it will be needed, transported later. Warehousing and storage activities relate to warehouse layout, design, ownership automation, training of employees, and related issues.

KEY LOGISTICS ACTIVITIES

Listed below in alphabetical order are the key activities which can be considered part of the logistics process and required to facilitate the flow of the product from point of origin to point of consumption.

a) Customer service
b) Demand forecasting
c) Distribution communications
d) Inventory control

e) Material handling
f) Order processing
g) Part and service support
h) Plant and warehouse site selection
i) Procurement
j) Packaging

Among the above ,traffic and transportation Inventory control and order Processing may be considered as primary activities and all others as secondary Activities . these activities that either contribute to the total cost of the logistics Operation or are essential to the effective co-ordination and completion are considered primary activities.

Customer service= Is the output of the logistics system and may be defined As the Consistent provision of time and place utility. In other words products don't Have value until they are in the hands of the customer at the time and place required. Good customer service supports customer satisfaction, which is the output of the Entire marketing process.

Demand Forecasting/ planning : Forecasting is a complex issue with Many interactions among functions and forecast variables. Marketing forecasts Demand based on promotions, pricing, competitions etc. manufacturing forecasts Production requirements based on marketing's sales demand forecast and Current inventory levels . logistics usually becomes involved in forecasts in Terms of how much should be order from its suppliers [through purchasing]And how much to finished product should be transported or held in each market That the organization serves. Logistics may even plan production in some Organization . Logistics , therefore needs to be linked to marketing and Manufacturing forecasting and planning.

Inventory management : Inventory levels are linked to customer service Levels and inventory management involves trading off the level of inventory held to achieve high customer service levels with the cost of holding inventory .such Costs include capital tied up in inventory, variable storage coast and coast of Obsolescence. Inventory adds time value to the product. Inventory management Is getting much more attention from organization with high coast associated with items such as high-tech merchandise, automobiles and seasonal items that become obsolete rapidly .

logistics communication : logistics interfaces with a wide array of function and organization in its communication process. Communications are becoming increasingly automated, complex and rapid. Communication must occur between The organization and suppliers and customers The major functions within the organization, such as logistics, engineering, Accounting , marketing, and production. The various logistics activities listed previously. The various aspects of each logistics activity, such as coordinating Warehousing of material, work –in-process and finished goods. Various members of the supply chain ,such as intermediaries and secondary customers of suppliers who may not be directly linked to the firm. Communications is key to the efficient functioning of any system , whether It be the distribution system of an organization or the wider supply chain. Excellent communications within a system can be a key source of competitive Advantage.

Materials handling : is abroad area encompasses virtually all aspects of all movements of raw materials, work in process, or finished goods within a Plant or wear house. Because an organization incurs costs without adding value Each time an item moves or is handled, a primary objective of materials Management is to eliminate handling wherever possible, this will include Minimizing, travel distance, bottlenecks, inventory levels, and loss due to wasted Mishandling, pilferage and damage. By carefully analyzing material flows, Materials management can save the organization significant amount of money.

Order processing: Intial the system that an organization has for getting Orders from customer, checking on the status of order and communicating to Customers about them, and actually filing the order and making it available to The customer. Part of the order processing includes checking from inventory Status, customer credit, invoicing, and accounts receivable.

Packaging : Is valuable both as a form of advertising/marketing and for Protection and storage from a logistics perspective . packaging can convey Important information to inform the consumer. Aesthetically pleasing packaging Also can attract the customer attention .logistically, packaging provides Protection during storage and transport .this is especially important for long Distances over multiple transportation modes such as international shipping Packaging can ease movement and storage by being properly designed for the Warehouse configuration and materials handling equipment.

Parts and service support: logistics is also responsible for providing After-sale service support. This is in addition to supporting production throughThe movement of materials, work in process, and finished goods. This mayInclude delivery of repair part to dealers, stocking adequate spares, picking upDefective or malfunctioning products from customer , and responding quickly to demands, for repairs.

Plant and warehouse site selection: Determining the location of company's plants and warehouse is a strategic decision that affects not only the costs of transporting raw materials inbound and finished goods out bound, but also customer service levels and speed of response, availability and wage rates of qualified employees , governmental rules, cooperation etc.

Procurement: The procurement function plays a more important role in an organization with the increase in outsourcing of goods and service. Most industries spend 40-60 percent of their revenofues on materials and services from sources outside their organizations. Procurement can be defined as the purchase of material and services from outside organizations.

Conclusion

The total cost concept is the key to effectively managing logistics process, The goal of the organization should be to reduce the total cost of logistics activities, rather than focusing on each activity in isolation, reducing costs in one area, such as transportation may drive up inventory carrying costs as more inventory is required to cover longer transit times, or to balance against uncertainly in transit times.

EMPOWERMENT OF WOMEN THROUGH SELF-HELP GROUP : INDICATORSAND IMPACT

Mr. M.B.Shikalgar
Assistant Professor, Department of Commerce, Dahiwadi College, Dist. Satara

Abstract

After independence, gamuts of laws have been passed and some have been altered so as to award the same share to *women in property as well as to eradicate some of the injustices meted out to women. By and large undoubtedly more than six decades of hard work since Independence by the government and spell of fights and struggle under the immense pressure of women lib activists in the country have indeed brought certain changes in social, psychological and economic and political spheres of life. Consequently it becomes an imperative need to look into problems and issues and their implications upon underprivileged women thereby to explore appropriate strategies and approaches uplifting women in all spheres of life in India.of life in India.*

Keywords: *Women Empowerment, Self-Help Groups*

INTRODUCTION:

As per 2011 census India has a population 1.21 billion out of which female population is 586.5 million. The Constitution of India guarantees equality, liberty and dignity to the women of India. The Fundamental Rights, The Directive principles of State Policy and Fundamental Duties etc virtually give surety equal status to women and provide special protection. After independence, gamuts of laws have been passed and some have been altered so as to award the same share to women in property as well as to eradicate some of the injustices meted out to women. By and large undoubtedly more than six decades of hard work since Independence by the government and spell of fights and struggle under the immense pressure of women lib activists in the country have indeed brought certain changes in social, psychological and economic and political spheres of life. Consequently, it becomes an imperative need to look into problems and issues and their implications upon underprivileged women thereby to explore appropriate strategies and approaches uplifting women in all spheres of life in India**.** In India, the emergence of liberalization and globalization in early 1990s aggravated the problem of women workers in the unorganized sectors from bad to worse as most of the women who were engaged in various self-employment activities have lost their livelihood. Despite the tremendous contribution of women to the agricultural sector, their work is considered just an extension of household domain and remains non-monetized. In 1992 Government introduced Micro Finance facilities through Self Help Group (SHG) Launched by NABARD. With the small beginning as Pilot Programme launched by NABARD by linking 255 SHGs with banks in 1992. However in 2009-10 the programme has reached to linking of 69.5 lakh saving-linked SHGs and 48.5 lakh credit-linked SHGs and thus about 9.7 crore households are covered under the programme. Out of this woman saving-linked SHGs is 5310436 and credit linked women SHGs is 3897797 and loan distributed to these groups is Rs. 23030.36 crore which is 82.1% of total loan outstanding up to the year ended on 31.03.2010.(NABARD Report)

Objectives of study:

The principal objectives of the study as under:

1. To study the concepts of Women empowerment, Micro finance.
2. To study the how the Micro finances can be prove women become empower.

Methodology:

The above objectives clears that the research paper is conceptually in nature. To examine above objectives the data can be collected through reading subject related reference books, various national and International issues, Journals on Micro finance, articles in leading news papers and publications, discussion with experts in this field and study of various reports, articles and information on web sites.

Women empowerment: Empowerment is a process of awareness and capacity building leading to greater participation, to greater decision making power and control and transformative action. Empowerment of women signifies harnessing women power by conscientising their tremendous potential and encouraging them to work towards attaining a dignified and satisfying way of life through confidence and competence as person with self-respect, rights and responsibilities. Empowerment as a concept was introduced at the International Women's Conference at Nairobi in 1985. The conference defined empowerment as "A redistribution of social power and control of resources in favour of women. Empowerment is a multi-faceted process which encompasses many aspects i.e. enhancing awareness, increasing access to resources of economic, social and political etc." In recent years women empowerment has become a subject of great concern for the nations all over the world especially in poor and developing countries. The impact of globalization is seen eventually on position of women in some form or other in most of the developing countries with the variation of degree. The United Nations has also strived hard in an incredible way to draw the due attention of the World Community on this issue in the past years. One loan officer at Sinapi Aba Trust in Ghana defined empowerment as "enabling each person to reach his or her God-given potential." Some clients have used the terms self-reliance and self-respect to define it. According to UNIFEM, "gaining the ability to generate choices and exercise bargaining power," "developing a sense of self-worth, a belief in one's ability to secure desired changes, and the right to control one's life" are important elements of women's empowerment.

Micro finance:

Nobel Prize winner Bangladesh's Economist **Mohammed Yunus** gives worldwide gossip to word micro finance. They say that "before the seventy the word Micro finance does not exist but now it has a buzz word among the development practitioners". Various authorities give variant meaning of micro finance. Some important definitions of micro finance as under.

Micro finance has been defined in the micro finance summit 1997 is "Programmes extend small loans to very poor people for self employment projects that generate income, allowing them to care for themselves and their families.

According to Otero (1999) Micro Finance means "the provisions of financial services to low income poor and very poor self employed people. In the words of Lodgewood (1999) "An attempt to improve access to small deposits and small loans for the poor households neglected by the banks". One another definition of Micro finance is "provision of thrift, credit and other financial services and products of very small amounts to the poor in rural, semi-urban areas for enabling them to raise their income levels and improve living of standards"

Yet another comprehensive definition of Micro finance is created by Robinson and Marguerite is "Micro Finance refers to small scale financial services for both credits and deposits that are provided to people who farm or fish or herd, operate small or micro enterprises where goods are produced, recycled, repaired or traded, provide services, work for wages or commissions, gain income from renting out small amounts of land, vehicles, draft animals or machinery and tools and to other individuals and local groups in developing countries, in both rural and urban areas".

The above definitions clarifies that micro finance is an instrument in the hands of financial institutions, Govt. society to uplift the poor specially women from financially adverse situation. But the Nobel Prize winner

Mohammed Yunus the pioneer of operating the concept of micro finance in Bangladesh in seventieth decade used word 'Grameen Credit'. He says that "Whenever I use the world 'Micro finance' I actually have in mind Grameen type of micro finance or Grameen Credit." Mhd. Yunus has given some features to clear the concept of micro finance.

These features are as under.

- It promotes credit as a human right
- It mission is to help the poor families to help themselves to overcome poverty
- It is not based on any collateral or legally enforceable contracts, but it is based on 'Trust'
- It is offered for creating self employment for income generating activities and housing for poor's
- It was initiated as a challenge to the conventional banking which rejected the poor's by classifying them to be "not credit worthy"
- It provides service at the door step of the poor based on the principal that the people should not to go the bank, but bank should go to the people.
- In order to obtain loans a borrower must be join a group of borrowers.
- Loans can be received in continuous sequence, new loan available to borrower if her previous loan is repaid
- All loans can be repaid in installments (Weekly, Monthly)
- It comes with both obligatory and voluntary savings programmes for borrower
- These loans can be provided through nonprofit organization or through institutions owned by borrowers
- Efforts are to make to keep interest at level which is close to a level commensurate with sustainability of the programme rather than bringing attractive return for the investors.
- There is no legal instrument between the lender and the borrower.

The above explanation can give clear meanings of micro finance.

Indian Scenario: We know that from 1992 in India Government introduced Micro Finance facilities through Self Help Group (SHG) through NABARD, launched a pilot phase of Self Help Groups with Bank linkages. The following table shows the position of SHG and its loan distribution.

Table – 1 Growth of SHG in India and its loan distribution

Year	Total No. of SHG	Total Loan distributed (Rs. In Crore)
1992-1993	255	0.29
1993-1994	620	0.65
1994-1995	2122	2..44
1995-1996	4757	6.06
1996-1997	8598	11.84
1997-1998	14317	23.76
1998-1999	32995	57.07
1999-2000	114775	192.98
2000-2001	263825	480.87
2001-2002	461478	1026.34
2002-2003	717360	2048.67
2003-2004	1079091	3904.20
2004-2005	1618456	6898.46
2005-2006	2238565	11397.55
2006-2007	2924973	18040.74
2007-2008	3625941	16999.91
2008-2009	4224338	22679.84
2009-2010	4851356	28038.28

Source: *NABARD website*

Above table shows the progress of No. Of SHGs and its loan distribution. When the movement was started (1992) only 255 SHG linked with Bank which loan distributed of Rs. 0.29 crores only but at the end of year 2009-10 No of SHGs are 4851356 [19025 times increase from 1992 to 2009-10] and loan distribution is 28038.28 crores [96683 times increase from 1992 to 2009-10]

Table: 2 – Position of Women SHGs(Rs incrore)

Particulars	Year	Total SHGs		Exclusive Women SHGs		% age of women SHGs to total SHGs	
		No	Amount	No	Amount	No	Amount
Saving linked SHGs	31.03.2009	6121147	5545.62	4863921	4434.03	79.5	80.0
	31.03.2010	6953250	6198.71	5310436	4498.66	76.4	72.6
Loans disbursed	2008-09	1609586	12253.51	1374579	10527.38	85.4	85.9
	2009-10	1586822	14453.30	1294476	12429.37	81.6	86.0
Loans Outstanding	31.03.2009	4224338	22679.84	3277355	18583.54	77.6	81.9
	31.03.2010	4851356	28038.28	3897797	23030.36	80.3	82.1

It may be seen that of the total number of saving linked and credit linked SHGs, exclusive Women SHGs with banks were 76.4 per cent and per cent, respectively. Further, the Percentage of loans outstanding of exclusive women SHGs to loans outstanding of total SHGs which was 81.9 per cent as on 31 March 2009 has increased to 82.1 per cent as on 31 March 2010.

How can Micro finance prove to women Empowerment?

Psychological Empowerment: The participation of women in SHGs enables them to acquire an inimitable psychological benefit to rise up psychologically powerful which is an essence for women empowerment in any socio-cultural and economic environment and situations. As a member of SHG women have getting psychological benefits including self awareness, high self esteem, self confidence and courage, understanding about own rights, privileges, roles and responsibilities, power of self determination , Positive attitude , Risk taking ability , Power to face challenges of daily life, gaining knowledge and new ideas and skills, great relief from mental stress and anxiety, General Knowledge, New ideas and communication skills, leading a happy and satisfied life and so on.

Social Empowerment: The women who participate in SHGs garner a lot of social benefits including awareness about society and existing social problems, good recognition and image in the family and community, role in family decision making on important matters, plan and promote better education for their children. Able to take care of health for children and aged. Participation in public and political life, chance to serve the community including fighting for the basic amenities and welfare needs of village community such as safe drinking water, street light, public sanitation etc, chance to help weaker section like aged and differently able. Able to resist social evils like dowry, violence against women, gender discrimination and other social injustice in the family as well community, sense of responsibility for collective action and solidarity etc.

Economic Empowerment : The members of SHGs are really privileged to enjoy many economic benefits including savings, liberation from debt trap, economic independence , economic skills for income generation, able to contribute towards prosperity of the family, able to contribute for education of children , able to meet the healthcare needs, accumulate economic assets including house, land, jewels other valuable things, economically strong to meet unexpected financial challenges and able to save reasonable amount for safety and security and so on.

Vision 2020

Taking into consideration vision 2020 the following suggestions and recommendations have been made in the interest of welfare women of India in general.

Coverage of Women SHGs

The details of total number of women SHGs saving linked, credit linked and loans outstanding for the last two years are given in table 2:

- The Concerted efforts should be made to form SHGs for women as much as possible in rural and tribal villages and slums to uplift womenfolk particularly in very backward states and Union territories by government agencies, Educational Institutions, NGOs and other service organizations of civil societies.
- Government both state and Central should work hand- in -hand to promote the concept of SHG without political biasness and selfish motives taking into account the welfare of the womenfolk in general by incorporating as an important strategy for women empowerment in the national policy and allocating more grant in the budget and developing effective implementing machinery.
- NGOs, Educational Institutions and Social Service organizations etc engaged in the works of promotion and development of SHGs should be encouraged at all levels with sufficient financial grants and appreciation and awards.
- Conducive atmosphere and harmonious network should be established among Government Agencies, Banks, NGOs, Other service organizations for effective functioning of SHGs to avoid overlapping and duplications.
- Banks and other financial institutions should work with open-mind and service motives to promote SHG among women particularly downtrodden communities like scheduled caste and scheduled tribes, marginalized groups in order bring them into main stream of development and growth of India.
- SHGs should be strictly encouraged to undertake economic activities/income generating activities for sustainable income to the group.
- SHG can be encouraged to form cooperative societies to promote Village, Cottage and Other industries for which raw materials and resources available abundantly in and around rural and tribal areas.
- SHG may be encouraged to involve in manufacturing products such as electronic and electrical goods, readymade garments, handicrafts to fetch market in Third –World countries, European countries, and USA and Latin American countries
- In order to promote SHGs for women empowerment Mass media such New papers, TV, radio etc can play a significant role by creating awareness in the public and also among women about the merits of SHGs by publishing success stories of SHGs ,case studies, achievement of NGOs and Government efforts etc.

Conclusion:

The outcome of the study clearly indicates that, being members of SHGs have benefitted considerably in terms of psychological, social and economic development. Women participation in SHG have obviously created tremendous impact upon the life pattern and style of poor women especially in rural areas and empowered them at various level not only as individual also as member of family, member of community and society as whole. It can be concluded that the SHG strategy is undoubtedly a convivial experiment for women empowerment in India as it opens up flood gates of opportunities to enhance capacities and capabilities in their development and growth in total perspective. It is evident from the study undertaken by the researcher that women particularly in rural, tribal and slum areas can be empowered psychologically, socially and economically with the concerted application of SHG as an effective strategy and doable approach. It is also understood from the study that Indian women have adequate potential sparks which can be well fanned into flames with necessary guidance and training through SHGs thereby bringing them to live in par with men in all spheres of human life in our society. Therefore as a group-oriented model, SHGs in

India can be evolved as mechanism or movement for women's development to bring in individual and collective empowerment through improvement in both 'condition' and 'position' of women in India or else where the plight of women is miserable and pitiable.

WASTE MANAGEMENT: A NEED OF THE DAY

Dr. Shreya Vinay Patil

Assistant Prof. & HoD, Commerce & Management, Balwant College, Vita

Abstract

During the ancient days, human beings used to discard their household waste such as trash, other worthless or defective items simply by digging a hole and burying them. This method was useful in those days because the population was relatively small, their needs were limited and they used to produce the waste on a small scale. Now the situation has changed due to tremendous increase in human population and industrial development. Consequently, managing the waste has become a very challenging task for the human kind Waste management or waste disposal includes the activities and actions required to manage waste from its initiation to its final disposal. The present paper attempts to study the concept of waste management, various methods of waste disposal, benefits of waste management with the concluding remarks.

Keywords*: Waste, Management*

Introduction:

Waste management is the process of treating solid wastes and offers variety of solutions for recycling items that don't belong to trash. It is about how garbage can be used as a valuable resource. Waste management is something that each and every household and business owner in the world needs. Waste management disposes of the products and substances that you have use in a safe and efficient manner. This includes the collection, transport, treatment and disposal of waste, together with monitoring and regulation of the waste management process. Waste can be solid, liquid, or gaseous and each type has different methods of disposal and management. Waste management deals with all types of waste, including industrial, biological and household. In some cases waste can pose a threat to human health. Waste is produced by human activity, for example the extraction and processing of raw materials. Waste management is projected to reduce undesirable effects of waste on human health, the environment or aesthetics.

Research Methodology: The present study is based on secondary data collected from books, journals, periodicals, newspaper cuttings and internet website & primary observations of the researcher.

Objectives of the study

1. To study the concept of waste management and various methods of waste disposal.
2. To throw the light on waste hierarchy
3. To explain the benefits of the waste management with some concluding remarks.

History of waste management

Throughout most of history, the amount of waste generated by humans was insignificant due to low population density and low societal levels of the exploitation of natural resources. Common waste produced during pre-modern times was mainly ashes and human biodegradable waste, and these were released back into the ground locally, with minimum environmental impact. Tools made out of wood or metal were generally reused or passed down through the generations.

However, some civilizations do seem to have been more profligate in their waste output than others. In particular, the Maya of Central America had a fixed monthly ritual, in which the people of the village would gather together and burn their rubbish in large dumps.

Various Methods of Waste Disposal

1. Landfills

Throwing daily waste or garbage in the landfills is the most popularly used method of waste disposal used today. This process of waste disposal focuses attention on burying the waste in the land. Landfills are commonly found in developing countries. There is a process used that eliminates the odors and dangers of waste before it is placed into the ground. While it is true this is the most popular form of waste disposal, it is certainly far from the only procedure and one that may also bring with it an assortment of space.

2. Incineration or burning

Incineration or combustion is a type disposal method in which municipal solid wastes are burned at high temperatures so as to convert them into residue and gaseous products. The biggest advantage of this type of method is that it can reduce the volume of solid waste to 20 to 30 percent of the original volume, decreases the space they take up and reduce the stress on landfills.

3. Recovery and Recycling

Resource recovery is the process of taking useful discarded items for a specific next use. These discarded items are then processed to extract or recover materials and resources or convert them to energy in the form of useable heat, electricity or fuel. Recycling is the process of converting waste products into new products to prevent energy usage and consumption of fresh raw materials. Recycling is the third component of Reduce, Reuse and Recycle waste hierarchy. The idea behind recycling is to reduce energy usage, reduce volume of landfills, reduce air and water pollution, reduce greenhouse gas emissions and preserve natural resources for future use.

4. Plasma gasification

Plasma gasification is another form of waste management. Plasma is a primarily an electrically charged or a highly ionized gas. Lighting is one type of plasma which produces temperatures that exceed 12,600 °F . With this method of waste disposal, a vessel uses characteristic plasma torches operating at +10,000 °F which is creating a gasification zone till 3,000 °F for the conversion of solid or liquid wastes into a syngas.

5. Composting

Composting is an easy and natural bio-degradation process that takes organic wastes i.e. remains of plants and garden and kitchen waste and turns into nutrient rich food for your plants. Composting, normally used for organic farming, occurs by allowing organic materials to sit in one place for months until microbes decompose it. Composting is one of the best method of waste disposal as it can turn unsafe organic products into safe compost. On the other side, it is slow process and takes lot of space.

and turns it to

6. Waste to Energy (Recover Energy)

Waste to energy(WtE) process involves converting of non-recyclable waste items into useable heat, electricity, or fuel through a variety of processes. This type of source of energy is a renewable energy source as non-recyclable waste can be used over and over again to create energy. It can also help to reduce carbon emissions by offsetting the need for energy from fossil sources. Waste-to-Energy, also widely recognized by its acronym WtE is the generation of energy in the form of heat or electricity from waste.

7. Avoidance/Waste Minimization

The most easier method of waste management is to reduce creation of waste materials thereby reducing the amount of waste going to landfills. Waste reduction can be done through recycling old materials like jar, bags, repairing broken items instead of buying new one, avoiding use of disposable products like plastic bags, reusing second hand items, and buying items that uses less designing.

Waste hierarchy

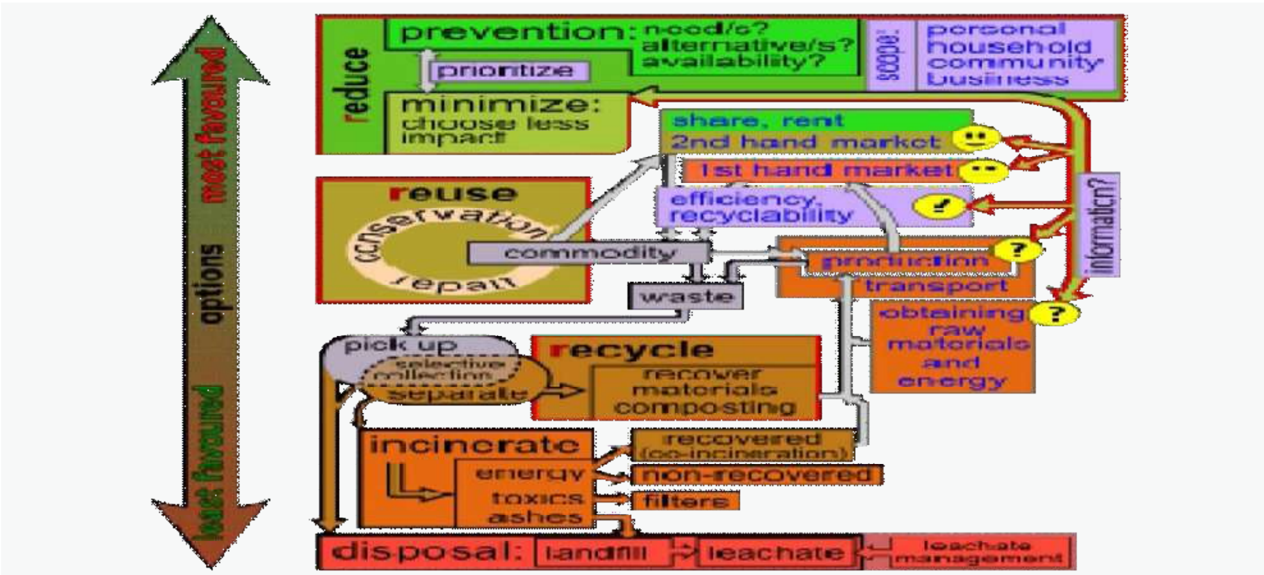

Diagram of the waste hierarchy

The waste hierarchy refers to the "3 Rs" reduce, reuse and recycle, which classifies waste management strategies according to their desirability in terms of waste minimisation. The waste hierarchy is the cornerstone of most waste minimization strategies. The aim of the waste hierarchy is to extract the maximum practical benefits from products and to generate the minimum amount of end waste; see: resource recovery The waste hierarchy is represented as a pyramid because the basic premise is that policies should promote measures to prevent the generation of waste. The next step or preferred action is to seek alternative uses for the waste that has been generated i.e. by re-use. The next is recycling which includes composting. Following this step is material recovery and waste-to-energy. The final action is disposal, in landfills or through incineration without energy recovery. This last step is the final resort for waste which has not been prevented, diverted or recover.

Benefits of waste management:

1. **Social** – By reducing adverse impacts on health by proper waste management practises, the resulting consequences are more appealing civic communities. Better social advantages can lead to new sources of employment and potentially lifting communities out of poverty especially in some of the developing poorer countries and cities.
2. **Environmental** – Reducing or eliminating adverse impacts on the environment through reducing, reusing and recycling, and minimizing resource extraction can result in improved air and water quality and help in the reduction of greenhouse gas emissions.
3. **Inter-generational Equity** – Following effective waste management practises can provide subsequent generations a more robust economy, a fairer and more inclusive society and a cleaner environment.

Conclusion:

Waste can be a valuable resource if addressed correctly, through policy and practice. With rational and consistent waste management practices there is an opportunity to get so many Economic – Improving economic efficiency through the means of resource use, treatment and disposal and creating markets for recycles can lead to efficient practices in the production and consumption of products and materials resulting in valuable materials being recovered for reuse and the potential for new jobs and new business opportunities.

There are various types of waste which are very hazardous and cannot be disposed off without special technique. So the research is required to find out various techniques for waste management. As you can see there are plenty of important things that you should know about waste management and disposal in order to ensure that you are safe, as well as that you are keeping the environment safe.

E- BANKING AND INFORMATION TECHNOLOGY IN BANKS

Dr Mohite Bhagwan Hanamant

Asst. Prof., Commerce Department, P.V.P. Mahavidyalaya, Kavathe Mahankal, Dist: Sangli (M/S)

Abstract

The 20th century witnessed many changes to the international trade, banking and Finance on account of new revolution in the information and communication technology. Banks across nations have been moving to the E-Commerce and E-Banking environment. On account of these changes banks are able to provide more flexible banking options for their clients, by offering many innovative products and services through the ATMs Credit and Debit Cards, Internet banking, core banking solutions including quicker and faster services like convenient banking, anywhere banking, 24x7 virtual banking are offered, coupled with quick remittance of funds transfers, on other hand banks are also exposed to the cyber crimes, on more usage of computers and IT enabled services. Further in view of cross border transactions, if proper control is not exercised banks can be used as channels for money laundering as well. The papers examine the recent trends and issues in electronic banking and Facilitator.

Keywords: *Information Technology, Challenges, Reserve bank of India, Regulator*

Introduction:

Electronic banking is a generic term encompassing internet banking, telephone banking mobile banking etc. In other words `it is a process of delivery of banking services and products through electronic channels such as telephone, Internet and cell phone etc. The concept and scope of E-banking is still evolving. Several initiatives taken by the government of India as well as the Reserve Bank of India have facilitated the development of E-banking in India. As a regulator and supervisor, the RBI has made considerable progress in consolidating the existing payment and settlement systems, ;and in upgrading technology with a view to establishing an efficient, integrated and secure system functioning in a real time environment which has further helped the development of E-banking in India. The government of India enacted the IT Act, 2000 with effect from October 17 2000, which provides legal recognition to electronic transactions and other means of electronic commerce. IT revolution has paved the way for banks to provide to implement different systems to handle funds management in banks.

Historical perspective of E-banking E-banking is the wave of future.

It provides enormous benefits to consumers in terms of ease and cost of transactions, either through internet and other electronic delivery channels. The evolution of e-banking industry can be traced early 1970s. Banks began to look e-banking as a means to replace some of their traditional branch functions for two reasons. Firstly, branches were very expensive to set up and maintain due to the large overheads associated with them. Secondly E-banking products and services like ATMs and electronic fund transfer were a source of differentiation for banks that utilized them. Being a fierce competitive industry, the ability of banks to differentiate them on the basis of price is limited. E-banking development would lead to two classes of surviving banks, which are very large banks and small niche ones. Through the E-banking smaller could compete by offering portals to the services offered by larger banks. With this development, banks could use E-banking to focus on customer needs in order to gain the strongest competitive advantage.

The transformation from traditional, bricks-and-mortar banking to E-banking has been momentous. Not since the advent of the automatic teller machine has the retail banking industry witnessed such significant and extensive change formally, E- banking comprises various formats or technologies including telephone (both landline and cell phones) banking, direct bill payment (electronic fund transfer) and PC or internet banking. Chou and Chou identified five basic services associated with online banking, namely view account balances and transaction histories, paying bills, transferring funds between accounts, requesting credit card advances and ordering cheques.

E-banking and RBI: RBI has been gearing up to upgrade itself as a regulator and supervisor of the technologically dominated financial system. In 1998, it availed the technical assistance by project of Department for International Development, UK forupgrading its supervisory system and adaptation of its supervisory functions to the computerized environment. It issued guidelines on risks and control in computer an telecommunication system in February 1998 to all the banks advising them toevaluate the risk inherent in the systems and put in place adequate control mechanisms to address these risks, which can be broadly put under three heads namely IT environment risks, IT operations risks and product risks. The existing regulatory framework over banks has also being extended to internet banking. These guidelines cover various issues that would fall within the framework of technology, security standards, legal and regulatory issues. Virtual banks which have no offices and functions only on line are not permitted to offer E-banking services in India and that only banks licensed under banking regulation act and having a physical presence in India are allowed to offer such services. Further, banks are required to report to the RBI every breach or failure of security systems and procedures of internet banking, while RBI as its discretion may decide to commission special audit inspection of such banks. As per recent guidelines banks no longer need prior of the Reserve Bank of India for offering the internet banking services.

E-banking challenges and concerns E-banking

It is based on technology that by its very nature is designed to expand the virtual geographic reach of banks and customers without necessarily requiring a similar physical expansion. Such market expansion can extend beyond national borders. This significantly increases cross-border co- operation challenges for banks supervisors due to

- The potential ease and speed with which banks located anywhere in the world can conduct activities with customers over interconnected electronic networks into countries where a bank is not licensed or supervised.
- The potential ability of a bank or non-bank to use the internet to cross borders and to seamlessly link banking activities that have typically been subject to supervision with non-banking activities that might be unsupervised by any financial market authority.
- The practical difficulties faced by national authorities wishing to monitor or control local access to E-banking sites originating in other jurisdiction without the co-operation of home country authorities.

Banking organizations have been delivering services to the consumers and business remotely for years. Electronic fund transfers including small payments and corporate cash management systems as well as publicly accessible machines for currency withdrawal and retail account management are global fixtures. However, delivering financial services over public networks such as the Internet is bringing about a fundamental shift in the financial services industry. The changes created and some of the technical characteristics of Internet technology raise new concerns for both bankers and supervisors. Banks offers E-banking services to defend or expand market share or as a cost saving strategy to reduce paper work and personnel. The internet also provides banks with substantial opportunity to extend customer reach beyond existing boundaries. However the nature of the open network and the evolution electronic commerce exposes banks to significant competition from both banking and non banking firms. In addition, electronic delivery channels operate in an uncertain legal and regulatory environment that defers by jurisdiction. All these factors present new challenges for financial institutions in managing security, integrity and availability of services provided while remaining sufficiently profitable.

Emerging trends and issues impact on bank risk profiles.

- A significant increase in the competition in the electronic financial services industry as both banking and non-banking firms rapidly introduces new financial products and services.
- Rapid technological improvements in tally communication and computer hardware and software enabling greater speed in transaction processing.
- Bank management and staff often lack expertise in technology and E-banking risk issues.
- Greater reliance on out sourcing to third party service providers, and a proliferation of new alliances and joint ventures with non-financial firms.
- Increase potential for fraud, due to absence of standard business practices for customer verification and authentication on open networks like the internet.
- Legal and regulatory ambiguity and uncertainty with respect to the applications and jurisdictions and jurisdiction of current loss and regulations toevolve E-banking activities.
- Questions regarding to the effectiveness and efficiency of online disclosures. Lengthy or complicated online disclosures may cause customers to simply click through or even quiet a website, moreover extensive disclosure reduces the speed at which websites and pages can be downloaded.

Banks and supervisors generally agree that supervisory principles that apply to traditional banking are applicable to E-banking. However, the combination of rapid changes in technology and the degree of bank dependence on technology vendors and service providers modify and sometimes magnify traditional risk. Hence there is a need for additional supervisory guidance in selected areas to enhance the overall risk management framework for E-banking activities. This development in E-banking to date suggest

- The desire to benefit from the advantages of e-commerce in financial services has become wide spread. The financial services industry is increasingly focused on providing technology based financial solutions directly to customers to help build and retain customer bases.
- Speed to market has become a critical factor for success in E-banking to reduce time, to market; banking institutions are allying with non banking firms to provide total financial services solutions.
- The current trends in the formation of strategic alliances and technology outsourcing will grow.

Conclusions

These developments present challenges for both banks and bank supervisors. Bank management needs to re-evaluate the robustness of traditional management practices in light of the new risk post by E-banking activities. Also banks supervisors need to take a balance approach to the introduction of new regulations and supervisory policy on E-banking, so as to ensure safe and sound operation of banks while at the same time not stifling innovation and the competitiveness of the banks related to non-banks

FINANCIAL INCLUSION OF HANDICRAFTSMEN IN DISTRICT SRINAGAR – A CASE STUDY COVERING DASTKAR FINANCE SCHEME

Shahla Ayoub

Govt. Degree College, Pampore

shahla.ayoub05@gmail.com

Abstract

The Indian Economy was in a crisis in 1991. Then later nineties witnessed the Indian economy achieving GDP growth rates above 7 to 8 per. By the beginning of the new millennium, concerns were raised about the 'inclusiveness' of the growth process. The focus shifted to financial inclusion which means providing access to basic financial services at affordable prices, a pre-requisite for ushering in inclusive growth. In the state of Jammu and Kashmir, the Handicrafts Sector has remained the core economic activity of the sizeable portion of its population. However inspite of being the principal component for keeping these activities alive, the artisans and craftsmen have by these traditional activities. For them, reliable access to short-term credit and small amounts of credit is more valuable. In this direction the Govt. of J&K has framed a credit plan through The J and K Bank. It has been empowering people and demonstrating that people with lesser means can be reached profitably. JK Bank Dastkar Finance Scheme is an effort in the same direction.The focus of the present paper is to study the awareness about the scheme among the target group and to analyse the role and impact of the scheme over their economicwelfare.

Keywords: *Financial Inclusion, Dastkar Finance Scheme, Economic Welfare, Workmanship*

Introduction

The Indian Economy was in a crisis in 1991. Foreign exchange reserves dipped to an all time low of $1.1 billion by June 1991, inflation peaked at 16.7 per cent in August 1991 and GDP growth dropped sharply to 1.2 per cent.(Economic Survey,1992-93) In order to overcome this crisis, substantial reforms were undertaken which resulted in a shift in the development paradigm of the country. The New Economic Policy (NEP), launched during this time had two broad elements (i) Stabilisation and (ii) Structural Adjustment Policy (SAP). While the stabilisation policies were short / medium term designed to deal with inflation and balance of payments deficits, the SAP aimed to enhance the economy's productivity in the long run and set it on a higher growth path.

The later nineties witnessed the Indian economy achieving GDP growth rates above 7 to 8 per cent prompting many to believe that the period of 'Hindu rate of growth' had been left behind. However, by the beginning of the new millennium, concerns were raised about the 'inclusiveness' of the growth process. Growth is inclusive when it allows all the members of the society to participate in and contribute to the growth process on an equal basis regardless of their individual circumstances. The focus shifted to financial inclusion which means providing access to basic financial services at affordable prices, a pre-requisite for ushering in inclusive growth.(Rangarajan Committee,2008) Recognizing this, the Eleventh Five Year Plan has explicitly stated 'inclusive growth' as its objective. Growth needs to be sufficiently inclusive if its benefits have to be shared among all or else the growth process itself shall be jeopardized and derailed.

Despite making significant improvements in all the areas relating to financial viability, profitability and competitiveness, there are concerns that banks have not been able to include vast segment of the population, especially the underprivileged sections of the society, into the fold of basic banking services (Thorat, 2007a). The important challenge facing the banking sector is to extend financial services to all sections of society. Like others, the poor need a range of financial services that are convenient, flexible, and affordable and not just loans. At this juncture the introduction on "financial inclusion" comes from the recognition that this can serve the interests of both society and the banking system. As a complementary to this, micro-finance can work as a powerful tool to fight poverty became the effective approach of financial inclusion.

In the state of Jammu and Kashmir, the Handicrafts Sector has remained the core economic activity of the sizeable portion of its population. The traditional artisans / craftsmen have for ages formed the basic component lending life to this economic activity. However inspite of being the principal component for keeping these activities alive, the artisans and craftsmen have remained at the mercy of middlemen and have received only a trickle of the wealth produced by these traditional activities. For them, reliable access to short-term credit and small amounts of credit is more valuable. In this direction the Govt. of J&K has framed a credit plan 'Credit plan for Handicrafts Department' for traditional handicrafts sector. The various schemes provided under the credit plan have been approved for implementation by the branches of JK Bank.

JK Bank, by providing microfinance has been empowering people and demonstrating that people with lesser means can be reached profitably. It has been in the process of enhancing the capacity of individuals or groups to make choices and to transform those choices into desired action and outcomes. JK Bank Dastkar Finance Scheme is an effort in the same direction. The main objective of the scheme is to provide adequate and timely credit for comprehensive requirements of Artisans & Craftsmen, etc. The scheme grants loans to the artisans associated with the trade in the nature of a Term Loan or Working Capital Term Loan (WCTL). All artisans and craftsmen and other people associated with the trade of carpet weaving, shawl embroidery and kani shawl weaving falling in the age group of 18 to 60 years, are eligible to apply for the loan under the scheme. (jkbank.in)The rationale of the present study would be to analyse the status of financial inclusion among the households involved in Handicrafts in urban Kashmir.

Literature Review:

(RBI, 2005) Khan Committee suggested that microfinance is expected to be substantially beneficial to both the demand and supply sides of credit. The rural customers shall benefit by increased access to composite financial services in a relatively hassle free manner, inclusion of those in remote and resource scarce regions / areas into formal system, significant reduction in borrower level transaction costs in view of doorstep / near doorstep availability of services and better understanding of their needs by emphatic functionaries of outreach entities engaged by banks. The banks shall benefit by a substantially increased client base. The increased outreach will also help banks to include a large number of excluded farmers and others in unorganized sector into the banking fold. Better identification of clients and the possible diversification of activities shall spread risks. **(World Bank, 2005)** World Bank describes financial exclusion as a phenomenon where access to key areas such as transaction banking, savings, credit and insurance. Though all services including credit, savings and insurance offered by the bank and other financial institutions are amalgamated under the same roof, more weightage is often appropriated to the credit segement of the definition.

(UN, 2006) The United Nations define financially included as the financial sector that provides 'access' to credit for all 'bankable' people and firms, to insurance for all insurable people and firms and to savings and payments services for everyone. Inclusive finance does not require that everyone who is eligible use each of the services, but they should be able to choose to use them if desired.

(Thorat, 2007) The financially excluded sections in India largely comprise marginal farmers, landless labourers, oral lessees, self employed and unorganized sector enterprises, urban slum dwellers, migrants, ethnic minorities and socially excluded groups, senior citizens and women. While the North East, Eastern and Central regions contain most of the financially excluded population, there are pockets of large excluded population in all parts of the country. .

(EC, 2008) A study on financial services provision and prevention of financial exclusion carried out in Europe under the auspicious of European Commission discussed on whether to assess financial exclusion at individual, family/household level. If the assessment is made at the individual level, people appear to be financially excluded even though their partners may make extensive use of financial services. In most countries there is a legal age limit below which credit facility cannot be granted. As a consequence many studies look at adults aged 18 or over, although others cover from the age of 16 or 15. On the other hand by assessing access at the family level, a clearer idea of the population with no ready access is available, even through a partner, but underestimates the proportion of people at risk of being financially excluded if they experienced the break-up of their family.

(RBI, 2009) Safe easy and affordable credit and other financial services to the poor and vulnerable groups, disadvantaged areas and lagging sectors is recognized as a precondition for accelerating growth and reducing income disparities and poverty. Access to well functioning financial system by creating equal opportunities, enables economically and socially excluded people to integrate better into the economy and actively contribute to development and protects themselves against economic shocks.

(Subbarao, 2009) Financial inclusion is important because it is considered as an important condition for sustaining growth. Such access is especially powerful for the poor as it provides them opportunity to build savings, make investments and avail credit. Access to financial services also helps the poor to insure themselves against income shocks and equips them to meet emergencies such as illness, death in the family, or loss of employment. It helps them to get away from the clutches of usurious money lenders.

(Subbarao, 2009) The reasons for financial exclusion are many. This is prompted by a confluence of multiple barriers including constraints to access, physical and social infrastructure, understanding and knowledge, newer technology, support and confidence among others. These barriers seem to be not constructed deliberately but have been the result of structure of financial service providers and socio – economic milieu of those being excluded.

(Audil Rashid Khaki, Prof. Mohi-ud-Din Sangmi, 2012) Bankers throughout the Country have been thriving to achieve the allocated targets towards Financial Inclusion and so have been the bankers' of the State of Jammu & Kashmir. Financial Inclusion Programme was taken on pilot basis for 100% Inclusion initially in the district Pulwama (later bifurcated into 2 districts of Pulwama and Shopian) in 2005. Subsequently, 100% Inclusion of the remaining 20 districts in the state has been assigned to the banks in 2008. Banking Community of the State has been working in line with the various strategies pursued elsewhere in the country.

(Katherine Miles, Ernst and Young, 2012) Retail and investment banks accept deposits from clients, and channel those deposits into lending activities, either directly or through capital markets. They are generally subject to minimum capital requirements which are based on an international set of capital standards, known as the Basel Accords. Within India, there are a number of categories of banks: Public sector- these are listed in the stock exchanges NSE and BSE but the government of India holds majority stake in these banks; private sector banks; and foreign banks. These different types of banks are interested in responsible finance in their lending decision-making.

Objectives

1 To study the awareness about The Dastkar Finance Scheme among the target group.

2. To analyse the role and impact of the scheme over their economic welfare.

Sampling technique

The study area will comprise representative wards of the district Srinagar, selected by multistage sampling. In the first stage, the district will be divided into different strata based on geographic division. In the second stage random samples will be selected from the wards having a greater proportion of households occupied in handicrafts. The sample number will be enlarged till they aggregate to adequate.

Methodology

The study is primarily based on primary data collected by the researcher through administration of well structured questionnaire to the sampled households in district Srinagar. The responses were later recorded and later processed with SPSS. As far as secondary data are concerned the major data sources are in terms of research papers, working papers and policy documents.

Data and Analysis

1 To study the awareness about The Dastkar Finance Scheme among the target group.

Financial inclusion is characterized primarily as either general access to loans or access to savings accounts. Very few risk management and vulnerability reducing products are available to small holder producers. Financial inclusion cannot be restricted merely to opening savings accounts and/or providing credit for consumption/ consumer spending but should also encompass delivering financial products tailor made to cope with the fluctuating earning pattern of the poor. (Arunachalam R.S, 2008).

Craftsmen	No.	Percentage
Total	120	100
Aware craftsmen	108	90
Ignorant craftsmen	12	10

Source: Field Survey

As reported by the tabulated data, it was found by the researcher that 90% of the sampled craftsmen were aware of the Dastkar Finance Scheme while 10% of them were ignorant. It was further discovered that all of the aware craftsmen had been enrolled and thus benefitted.

2. To analyse the role and impact of the scheme over their economic welfare

Financial Inclusion may be interpreted as the ability of every individual to access basic financial services, which include savings, loans and insurance in a manner that is reasonably convenient and flexible in terms of access and design and reliable in the sense that savings are safe and that insurance claim will be paid with certainty. (Mor and Ananth, 2007).

Change in Economic Welfare	No. of craftsmen	Percentage
Total	90	100
Increased	48	53.3
Decreased	30	33.3
Remained Unchanged	12	13.3

***Source:** Field Survey*

As per the data gathered from the field, it was discovered that the beneficiaries of the scheme responded variably towards the question of the effect of the Dastkar Finance Scheme over their economic welfare. While 53.3% of the beneficiaries responded that the scheme increased their economic welfare, 33.3% of them responded that it decreased their economic welfare and only 13.3% of the beneficiaries said that it had no effect over their economic welfare.

Conclusion and Suggestions:

There has been a very positive coverage of the craftsmen of Srinagar under the scheme. Had there been few more efforts in the direction of giving the knowhow about the scheme, the coverage would have been even better. Those who were covered by the scheme used the funds in different ways. Some of them, who increased their workmanship, only could have it to increase their economic welfare. Those who used the funds of other purposes like marrying off their daughters and in making houses either found their welfare decreasing or marginally not changing it. There should be an increase in the number of schemes like Dastkar Finance Scheme so that more of craftsmen get financially included. Moreover they need to be assembled and given education about the relevance of such financial inclusions.

THE EMERGING TRENDS OF E-LEARNING IN HIGHER EDUCATION SYSTEM IN INDIA

Prin. Dr. S.K.Patil

B.P. Sulakhe Commerce College, Barshi, Dist: Solapur – 413 411(M/S)

Abstract

E-learning is used by learners and educators in homes, schools, higher education, business and others. In the early days, e-learning received a bad impression, as many people thought bringing computers into the classroom would remove that human element that some learners need, but as time has progressed technology has developed, and now we embrace smart phones and tablets in the classroom and office, as well as using a wealth of interactive designs that makes e-learning not only engaging for the users, but valuable as a lesson delivery medium. The use of e-learning is seen at all levels of educational system.

Keywords: *E-learning, ICT, Virtual & Augmented Reality, Microlearning*

Introduction

E-learning is a part of new dynamics that characterises the educational system. It has become an important part of the society, comprising an extensive array of digitalization approaches, components and delivery methods. The use of information and communication technologies (ICT) for educational purpose has increased, & the spread of network technologies has caused e-learning practices to evolve significantly. Education through internet, network is E-Learning. It is the network based transfer of skills & knowledge. E-learning refers to use of electronic applications and processes to learn. The e-learning applications and processes are the web-based learning, computer-based learning, virtual classrooms and digital collaboration. The contents are delivered through the internet, local intranet/extranet, audio or video tape, satellite TV & CD-ROM,VR and AR, Intelligent Assistants/Chat bots, Gamification And Game-Based Learning,Adaptive Or Personalized Learning Customized To Specific Learning Needs, Micro learning, Content Curation, Interactive Video-Based Learning, Interactive Video-Based Learning, Social Learning, Workforce Enablement . E-learning is used by learners and educators in homes, schools, higher education, business and others. In the early days, e-learning received a bad impression, as many people thought bringing computers into the classroom would remove that human element that some learners need, but as time has progressed technology has developed, and now we embrace smart phones and tablets in the classroom and office, as well as using a wealth of interactive designs that makes e-learning not only engaging for the users, but valuable as a lesson delivery medium. The use of e-learning is seen at all levels of educational system.Online learning has been touted as a way to address some of the challenges higher education institutions face and extol as a tactic for staying competitive. Various external and internal forces have brought about the expansion and growth of online learning in higher education. External forces such as decreased state funding, tuition increases, technology costs and depressed economies have led to internal pressures to reduce costs and increase revenue in many higher education institutions. Combined, these stressors are influencing and changing the way faculty teach and students learn in higher education. Academic leaders expect that online education will compensate for a decrease in traditional course offerings by saving costs and improving the effectiveness of learning. However, in many universities, implementation and initiation of online education is still in experimental stages, such as combining the new ideas and advanced educational technologies of online education with existing methods. Therefore, identifying current trends of online learning is significant.

Emerging Trends of Elearning in Higher Education :

1. VR andAR :

Virtual and Augmented Reality are currently the hottest modes of implementing training. Virtual Reality has been there for quite some time now. However, with Augmented Reality and Mixed Reality added to the mix, we have exciting new possibilities in the immersive learning space. Traditionally VR and AR are used more for gaming and movie experiences.

Their application in learning is picking up now. VR will continue to be used for teaching skills for handling high-risk tasks and performing complex procedures. AR will be used to trigger just-in-time learning. A typical scenario of AR would be a learner wanting to learn more about a device or tool, technology, or a place. Using a QR code, the learner can scan the object and get more information about it.

With prices of wearable glasses and headsets reducing, VR and AR will become more affordable for organizations willing to experiment with them. We will see more traction as 2018 unfolds. Organizations will invest and explore more of these technologies in 2018 and beyond.

2. Intelligent Assistants/Chatbots :

The popularity of Siri on iPhone indicates that people are now looking to explore intelligent voice assistants. It is too early to say how intelligent voice assistants or Machine Learning-enabled chatbots will be programmed, given that Artificial Intelligence itself is taking its baby steps in the world of computing. Having said that, I feel that organizations will look to develop prototype chatbots for specific topics, like information security or data protection, compliance and so on, and implement them as an intelligent search app. These smart apps will help learners to learn as they go and augment learning in the "moment of need". My take is that it will become popular as and when we see the results of the first implementation. This will be another key trend to watch out for in 2018 and beyond.

3. Gamification And Game-Based Learning :

Gamification will continue to be an important trend in 2018. It is well established now that game-based learning and gamification have a greater impact in imparting critical role- based information. Organizations will continue to invest in serious games, as well as gamifying their custom courses, to retain learner interest and coax them to take learning seriously by having fun. As paradoxical as it may sound, gaming increases the "seriousness" in learners, as they fully "immerse" themselves in the process of gaming. Traditional compliance courses, information security, procedural training, product training, sales training, and many more can be easily gamified and made interesting enough for the learners to "invest" their time and energy in an activity that they traditionally don't enjoy. Gamification will enhance the training implementation further during 2018.

4. Adaptive Or Personalized Learning Customized To Specific Learning Needs :

Adaptive or personalized learning is all about customizing existing modules available in libraries to specific groups. The biggest benefit for organizations is that they don't provide all modules for all learners. Instead, they provide focused training and increase their ROI. Now, how can this be achieved? Pre-tests can be used to gauge the current understanding of the audience. Based on the performance of learners, the modules are provided to them. Areas, where a learner has scored low, are addressed / remediated.

Learners are provided with specific modules, series of questions, and materials to improve upon those areas. This is going to be an important trend in relooking at the custom space. Companies really don't have to invest more. It will be a one-time effort where pre-tests, libraries of modules, and assessments are created. Individual learners get only what they require, which is like social media feeds. The existing LMSs can be used to implement these. Thus, adaptive learning will be an important trend to implement and further experiment with during 2018.

5. Microlearning :

Microlearning has already become a strong trend, as organizations look to reap benefits of this new way of delivering targeted, objective-specific, no-nonsense learning bytes. Specific benefits include quick deployment, quick learning through regular refreshers, increased productivity, and easy tracking. Microlearning has been understood as short videos or clips, but my experience shows that it can be a learning nugget, interactive video, short game, quiz, or even an interactive infographic. Microlearning works well when organizations create modules that have specific learning objectives. It is not about chunking complex procedures or teaching problem-solving skills. Microlearning works best when it is just in time and addresses a specific question that the learner may have about their job. Microlearning units can be taken on any device. However, with increased smartphone usage, the demand for microlearning will only increase. I feel microlearning will make its impact felt in 2018 and beyond.

6. Content Curation :

Content curation is another trend that is finding traction. In the year 2018, more organizations will invest in content curation, as its potential in creating an alternative and reliable source of providing standard learning remains strong. There are open-source tools that can help in curating information and providing learners with just-in-time information. Content libraries can be augmented and curated to give the right experience to learners. Organizations will focus more on custom eLearning and mobile learning solutions, and use content curation for standard regulatory content.

7. Interactive Video-Based Learning :

The popularity of video-based tutorials on YouTube and other online video services continue to grow. Organizations are leveraging on the popularity of videos to impart learning by having their own videos shot, adding interactivities/questions to them, and then posting the videos on internal sites. Interactive videos can have branching scenarios, too. The upside of this method is that employees will be more engaged and invested in the learning process. With organization branding added to the mix, a strong repository or library is being created with strong content. In a nutshell, it’s a win-win situation for all. Interactive video will continue to be a strong trend during 2018, too.

8. Social Learning :

When learning is distributed or when sharing happens amongst peers, education improves. Forums, chat boxes, note sharing help people share ideas in a collaborative environment. Organizations will be willing to experiment with social learning platforms that are strictly built for a collaborative workspace. Social learning is not the same as social media sharing, though people tend to consider them the same thing. Tools like Facebook or Twitter are not for professional environments. Professional environments require more robust tools that aid in learning and not for sharing personal information. With popular LMSs providing social learning features, it is becoming feasible for organizations to experiment with social learning. Social learning implementation will continue to grow during 2018.

9. Workforce Enablement :

As organizations are looking to move beyond automation and improve the productivity of their employees, there will be a continued focus on workforce enablement. Research supports the fact that learners tend to retain only 10 percent of what they learned after 4 weeks of attending a training or eLearning program. It is thus important to constantly motivate employees through regular learning interventions, chat sessions, learning forums, and so on. Organizations will look beyond standard learning nuggets and look for more tools that can enhance learner productivity. Workforce enablement through targeted interventions will be a strong trend in 2018.

A STUDY OF ECONOMIC INCLUSION THROUGH SMALL TRADERS

Dr. R. S. Salunkhe
Head, Department of Commerce, Arts, Commerce & Science College, Palus
Miss. Shewta Nazare
Assistant Professor, Arts, Commerce & Science College, Palus

Abstract

Economic inclusion means an effort is made to get more benefits from increased national income. Financial Inclusion means "the process of ensuring right to use to financial services and timely and sufficient credit where needed by weak groups such as weaker sections and low income groups at an affordable cost" Social inclusion is the procedure of improving the terms on which individuals and groups take part in society improving the ability, opportunity, and dignity of those disadvantaged on the basis of their identity. Even more, there are lots of groups and individuals are not developed for examples traders in weekly bazaars, small entrepreneurs, farms workers, landless peoples etc. Government is taking a lot of initiatives towards these peoples but they are not reaching to the last person. The paper is an attempt to highlights how these individuals and unorganized peoples will come into the economic flow. Creation of capital is possible through small saving of sellers.

Keywords: *inclusion, income, affordable, society, economic*

Introduction:

Economic inclusion is a term used to explain a variety of public and private efforts inevitable at bringing underserved consumers into the financial mainstream. Families who are lack of access to the financial mainstream may decide on to rely on Alternative Financial Services (AFS) providers, such as non-bank verify cashers, payday lenders or trade in shops many of which may need consumer protections and can be costly for those under pressure to make ends meet. Access to an account at a federally-insured organization provides households with the opportunity to conduct basic financial dealings, save for urgent and long-term security needs, and construct credit history and access credit on fair and affordable provisions. Participation in the banking structure also protects households from stealing and reduces their weakness to discriminatory or greedy lending practices. In addition, households that utilize non-bank financial services providers do not receive the full variety of consumer protections available through the banking system. Although these benefits, many people, predominantly low-to-moderate income households, do not access mainstream financial activities, such as bank accounts and low-cost loans. Other households have admittance to a bank account but however, rely on non-bank financial services providers. In the U.S., there are a number of partnerships and initiatives paying attention not only on expanding the availability of secure, affordable financial products and services, but also on enlightening consumers about ways to become fully integrated into the banking structure.

Objectives of the study:

i) To study of economic inclusion of small traders

ii) To organize the small traders through the economic flow

iii) To provide banking facilities up to small traders

Methodology:

The study is based on primary data. The primary data is collected through the questionnaire. The study area is Palus Taluka. Random sample method is used for sample selection there is 1748 population of small traders of Vada Pav and vegetables, with help of Taro Yamane Formula sample size is calculated the sample size is 325.

Data Analysis and Interpretation

Table No 1 Present position of small traders in Palus Taluka

Particulars	Male	Female	Total
Small traders of tea and vadapav	105	13	118
Vegetables traders in weekly bazaars	1256	374	1748

Source: *field survey*

The Table show that the present positions of small traders of vada pav and vegetable traders of weekly bazaars in Palus Taluka. There are 36 villages in Palus Taluka. Total vada pav and tea sellers is 118 out which 105 sellers are male and 13 sellers are female and in vegetable sellers in weekly bazaars 1256 sellers are male and 374 sellers are female. In 15 villages out of 36 weekly bazaars are held. It is found that sellers of vegetables are more than vada pav and tea. But vada pav and tea sellers are located in one place and they are doing their small business in that particular place daily. Sellers of vegetables are not located in the same place; their place of sale is changed according to village. Maximum five days in a week they are doing their small business.

Table No: 2 Classification according to business income

Income per day in	Total sellers	Sample sellers	Having bank account	Not bank account opened	Having bank account but not used
Upto 500	402	74	23	51	17
501 to 1000	646	120	78	42	38
1001to 1500	454	87	69	18	24
1501 & more	244	45	43	2	3
Total	**1746**	**326**	**213**	**113**	**82**

Source: *field survey*

The Table shows that classification of traders according to business income in Palus Taluka. In the class of daily income up to Rs 500, total sellers are 402 out of which 74 samples included. Out of these samples (74) 23 sellers having an account in banks and 51 sellers have not opened an account yet but out of 23 sellers which have an account in banks 17 are not operated regularly. In the class of 501 to 1000, 120 samples are falls in 646 total traders out of which 78 sellers having an account in the bank but only 38 sellers are not operating an account regularly and 42 sellers are not opened an account in any bank. In the class of 1001 to 1500, total traders are 454, out those 87 are selected samples out of which 69 sellers having an account and 18 sellers are not opened their an account but out of 69 accountholders only 24 are not operating accounts. In the class of 1501 and above, 244 traders are included out of which 45 samples are selected. 43 sellers are having their account and only 3 sellers are not operating regularly, only two sellers are not opened their account in any bank. It is found that the majority of low-income class sellers is not open their bank account and also not operating their bank account regularly. It is seen that 65% of sellers have bank account out of which 25% are not operating their bank accounts regularly. 35% sellers have not opened a bank account.

If these vada pav sellers and vegetable sellers will make small credit society, then they can save the small amount daily. The large amount will be collected through their savings; the projected collecting amount is showed in the following table

Statistical tools	Total sellers	Sample sellers	Having bank account	Not bank account opened	Having bank account but not used
Mean	904	905	1059	621	829
S. D.	488	482	462	392	394
C.V.	53.98	53.25	43.63	63.10	47.52
Mode	780	785	898	425	300
Skewness	0.25	0.24	0.59	-0.50	0.74

The mean of business income of total seller is 904. The mode of collected data is 780. It indicates that maximum the business income of total seller having approximately 780. C. V. has 53.58. Skewness has 00.25 which shows the data has positively skewed. It means the business income of total seller per day is low. The mean of business income of sample seller is .905. The mode of collected data is 785. It indicates that maximum the business income of sample seller having approximately 785. C. V. has 53.25 years. Skewness has 00.24 which shows the data has extent positively skewed. It means the business income of total seller per day is low. The mean of business income of seller having bank account is 1059. The mode of collected data is 898. It indicates that maximum the business income of sample seller having bank account approximately 898. C. V. has 43.63. Skewness has 00.34, which shows the data has extent positively skewed. It means the business income of seller having bank account is bit medium. The mean of business income of seller having not bank account opened is 621. The mode of collected data is 425. It indicates that maximum the business income of seller having not bank account opened approximately 425. C. V. has 63.10. Skewness has -0.50 which shows the data has negatively skewed. It means the business income of seller having not bank account opened is very low. The mean of business income of seller having bank account but not used is 829. The mode of collected data is 300. It indicates that maximum the business income of total seller having approximately 300. C. V. has 47.52. Skewness has 00.74, which shows the data has extent positively skewed. It means the business income of seller having bank account but not used is medium.

Table No: 3 Projection of saving of small traders

Sellers	Per day saving	Monthly saving	Yearly saving
1748	100	1 74 800	20 97 600

Personal saving of per seller

Per day amount collected	Per month amount collected	Per year amount collected	Amount with 6% interest
100	3000	36000	38160 (2160)

According to the projection of saving of sellers, there are 1748 sellers and if they save 100 per day then Rs. 1, 74, 800 will be collected per month and yearly saving will be Rs.20 97 600. Personal saving will be Rs. 3000 per month and per year saving will be Rs.36000 at the rate 6% interest amount will be Rs.38160.

Projection of capital creation

Total amount collected (year) Rs. 20, 97,600
80% amount used for loan Rs. 16 78 080
Rate of Interest 10%yearly Repayment
Monthly through Pigmi Lien/ co-lateral No

Benefits of loan distribution

1. Secure regarding repayment
2. No botheration about repayment for sellers
3. No additional efforts are taken for a loan given and receiving
4. No NPA
5. Easily capital creation
6. Benefits of economic inclusion to all elements of society

Benefits of establishing credit society

1. Economic inclusion for all sellers
2. Employment generation
3. Useful for organizing small sellers
4. Price equity
5. Credit creation
6. Increase in small business
7. Economic network among society
8. Increase standard of living
9. The Habit of saving money
10. Inspiring to cooperation
11. Increase in a credit societies

Conclusion:

Creation of capital for small traders is very important. It is possible through economic inclusion of small sellers. They should create their own credit society for this purpose and also make habit of saving money daily. Participation of women sellers is the most essential. Small sellers can take help of local authorities. Organization of sellers is most necessary and for that, someone must take initiative for collecting sellers on this platform. There is a need for spreading this movement in every Taluka. Then the economic inclusion is possible to reach throughout the whole country.

SIGNIFICANCE AND LIMITATIONS OF E-COMMERCE IN TODAY BUSINESS WORLD

Prof. Pawar. S. P.

Shrimant Babasaheb Deshmukh Mahavidyalaya, Atpadi, Dist- Sangli

Abstract

MYSPACE, Facebook, and hundreds of other niche-oriented Social networking sites are emblematic of the new E-Commerce. These sites and others such as YouTube, Photobucket and secondlife are defeating a new and vibrate model of e-commerce. Electronic Commerce commonly known as E-Commerce refers to a wide collection of online business activities for products and services. It also pertent to "any form of business transactionin which the parties interact electronically rather than by physical exchange or direct physical contact." E-Commerce further refers to the paperless exchange of business information using electronic data interchange, electronic mail, electronic bulletin boards, electronic fund transfer, World Wide Web and other network-based technologies.

This paper discusses the meaning of E-commerce and Types of E-commerce in today's business. This paper also discusses the limitation of E-commerce finally this highlights significance of E-Commerce in today's business world and we attempt to suggest the measures to overcome these limitations.

Keywords- *E-commerce, Network, Limitations, Significance.*

1. Introduction-

E-commerce is basically doing business online, in its most obvious form it is selling products online to the consumers. Electronic commerce draws on technologies such as Internet marketing, Electronic funds transfer, Mobile commerce, Electronic data interchange, supply chain management, Electronic Banking, online transaction processing, Inventory management system and automated data collection systems. Besides that, modern technology used in the E-commerce is World Wide Web (WWW), E-mail, Bar codes etc.

E-commerce also known as electronic commerce or internet commerce refers to the buying and selling of goods and services using the internet and transfer of money and data to execute these transactions.

Definition-

"E-commerce is the use of electronic communications and digital information processing technology in business transactions to create, transform and redefine relationship for value creation between or among organisations, between organisations and individuals."

2. Types ofE-commerce:-

There are a variety of different types of e-commerce and many different ways to characterize these types. Electronic Commerce encompasses all online market places that connect buyers and sellers. The internet is used to process all electronic transactions. Now there are actually many types of E-business. It all depends on who the final consumer is some of the types of e-commerce are as follows.

- **B-2-B-**Business-to-Business (B-2-B) E-commerce in which business focus on selling to other businesses. It is the largest form of E-commerce. In short, business-to-business is the selling between the companies, wholesale rather than retail. This technology includes EDI, EFI, Electronic mail for purchasing goods and services, buying information and consulting services, submitting requests for proposals and receiving proposals.
- **B-2-C-**The most commonly discussed typeof E-commerce is business to consumers (B-2-C) commerce. In business to consumer E-commerce, business sell directly consumers. If may be defined as any business selling its products or services to consumers over the Internet for the own use. In this technology includes online banking, travel services, online

auctions, real estate, health services, insurance and other services.

- **C-2-C-** This is consumer-to-consumer E-commerce. Here a consumer sells products, goods and services to other consumers using the internet or the Web technologies. C-2-C type of transactions generally occurs for second-hand products only.
- **C-2-B-** Consumer to Business (C-2-B) E-commerce involves individual selling to business. It is the reverse model of the B-2-C. In this business model, individual customers offer to sell products or services to the companies who are prepared to purchase them. For example, Software developer can sell their software to company.
- **P-2-P-** Peer to Peer (P-2-P) E-commerce technology employs a network to put individuals in direct contact with each other. P-2-P technology enables Internet users to share files and computer resources directly without having to go through a central web server.
- **M-Commerce-** M-commerce is also called as mobile commerce. It is the use of wireless handheld devices, such as cell phones and laptops, to conduct commercial transactions online. It involves the transaction of online business, E-bill payment and information delivery.
- **C-2-G-** Consumer to Government (C-2-G) E-commerce an individual consumer interacts with the government. For example, Consumer can pay GST or Income Tax, House Tax online.

3. Significance of E-commerce-

The E-commerce is the demand of time, customers, business and nations, now it will compulsion in few years to use. E-commerce has become an integrate part of business in the modern world. It is generally associated with buying or selling a product by using the internet as the platform. With the help of E-commerce web design, you get an opportunity to have your products and services available to consumers 24 hours. An online store is available all day; every day meaning your customers can visit your store at all times, no matter what their schedule might be.

The important of E-commerce are as follows:-

1. Convenience and Easiness:- The best advantage of E-commerce marketing is convenience. E-commerce enables customers to shop or do other transactions 24 hours a day, all year round, from atmost any location. A person can buy products from anywhere in the world at any time.

2. Wide variety of products:-Large variety of goods accessible easily, without spending time and money by physical visits and searching in various shops such as traditional commerce. That is why E-commerce is important it bring in more variety by expanding the boundaries of traditional Commerce.

3. Global Access- E-commerce system is accessible by any one across the World Wide Web. E-commerce web site helps the business to reach out to a world- wide customers in very low cost. Any business having just an Internet connection can access E-commerce system.

4. Economy- As compare to physical shop, the cost of setting up an E-commerce website is very low. There is no investment infrastructure or insurance in E-commerce business. More over, it is easier to get a license and permit for an E-commerce marketing sites. Billing customer and inventory management are usually automated. This reduces the cost.

5. Stay open 24 hours:- One of the most important benefits that E-commerce merchants can enjoy is store working timing at 24 hours in a day, 7 days a week and 365 days in a years. They never take a break, close down for the day or take public holidays.

6. Offer huge information:- The important benefit of E-commerce to customers is they can available huge information. Which is not provided in physical stores. But E-commerce websites offer additional information to their customers without any hassle. Which helps to customers for selecting products from wide variety.

7. Expand market:-In the case of physical stores, the geographical area is limited. More ever, small business stores cannot compete in the larger world of business but with an E-commerce website. You can sell your products and services across the world. The entire world is your playground, where you can sell your complete range of products without any geographical limits.

8. Decreased cost of inventory management:- In E-commerce business, the suppliers can decrease the cost of managing their inventory of goods that they can automate the inventory management using web-base management system. Which leads to decrease in cost of inventory management.

9. Reduction in processing cost:-One of the most positive thing in respect of E-Commerce is that you can decrease the costs of your business. The cost of marketing and advertising, personal cost and travelling cost can be reduced due to the E-commerce, which helps to business for increasing the profit.

10. Comprise warranty information:-When customer think about buying of anything by online. He generally checks its authenticity and warranty. In E-commerce marketing information of warranty & guarantee period of product is available which helps to customer for buying the products. The physical stores do not always provide warranty & guarantee of products.

11. Availability of services:- E-commerce provides various services to customer such as financial services, legal services, medical advice etc. from appropriate portals. Which helps to customers saving in times and money.

12. Delivery of product:- In E-commerce there must be a proper and on-time delivery of the products in order to maintain the long relationship with their clients and make the happy at all times.

13. Faster transfer of funds:-E-commerce helps to easy and faster transfer of money through the internet banking, without wastages of time. Net banking, Mobile banking, Facility of NEFT & RTGS helps to faster transfer of funds.

4. Limitations of E-commerce:-

E-commerce has become one of the most popular mediums of transactions in the recent years. Which provide the number of benefits to both buyer and sellers. However, E-commerce has some limitations, which has restricted the number of people to use this. These limitations are as below.

1. Security:-One of the significant limitation of E-commerce is security. When making an online purchase. You are require to provide at least your credit card information and mailing address. In some cases, E-commerce websites can harvest other information about your online behaviour and preferences. Which leads to credit card fraud or worse, identify theft.

2. Fear:-In spite of popularity, people fear to operate in a paperless and faceless electronic world. There is doubt in the mind of people when it, comes to online shopping. This is because they cannot physically examine the product due to that number of people prefer shopping from physical stores.

3. High labour cost:-For applying the E-commerce system, in the business requires highly skilled and knowledgeable workforce. Business organisations have incur a lot of expenses to retain a talented pool of employees.

4. Low Awareness:- One the important drawback of E-commerce is that the number peoples are still not aware of the internet either due to the lack of knowledge or trust. Many of people do not use the internet for financial transaction.

5. Delivery time- The delivery of the products takes times. In physical stores, you get the products as soon as you buy it. But it doesn’t happens in online business. This lag of time often discourages customers.

6. Product suitability:-In E-commerce system a customer have not possible to physical examination of product. Whether it is suitable or not. In many cases, the original product may not match with the picture or specification in the E-commerce site. Which leads to discouraging effect on customers.

7. Technical limitations:- For establishing E-commerce system in business requires advance technology platforms for better performance. Some limitations such as lack of proper domain, network and software issue. Which adversely affecting on the performance of E-commercesite.

8. Lack of personal touch:-In E-commerce business lacks the personal touch, one cannot touch or feel the product so it is difficult for the consumers to check the quality of a product. But in traditional models buyers can contact with the sales person. He can personally check product so number of people prefer to traditional method of buying.

9. High start-up cost:-For applying the E-commerce system in business require more advance technology of internet connections, hardware & software. It requires lot of money at primary stage, which is not affordable to small organisations.

10. Some products are difficult to purchase online:-It is true that some of the products are not possible purchase online like food, gold, spectacles and other which you required very customerzed one. Costly product such as jewellery are not possible to be available on the internet.

5. Conclusion: -

There are many limitations in respect of E-commerce. It is true that every aspect has to two side one is advantages & another is disadvantages for the growing aspect of E-commerce. We are require to overcome these limitations. We are customers &internet users are responsible to keep our E-commerce healthy and safe.So that the E-commerce can become more reliable in future.

EDUCATION IN COMMERCE - BUSINESS WORLD SYNERGY FOR MUTUAL DEVELOPMENT

Dr. Nandkumar Laxman Kadam
Associate Professor, Jaysingpur College, Jaysingpur, Dist-Kolhapur 416101, State- Maharashtra
E-mail: nkadam17@yahoo.co.in
Mrs. Snehal Shital Chougule
Research Scholar, Shivaji University, Kolhapur

Abstract

We are producing unemployable graduates and post graduates. Problem of unemployment is not the problem of unemployment but it is the problem of unemployable graduates and post graduates. In other words, our products do not match the requirements of job market. At one end educated personnel are not getting the job and on the other end business world are complaining that no personnel are available of the required skill & knowledge. Jobs are available, personnel are also available but, both are not fulfilling requirements of each other.

Keywords: *Commerce Education, Business World*

Introduction

What Commerce students can do after completing their education? They have two avenues – either they will be self employed or will get job in government sector or private sector. Let us examine both the avenues. Self employment require knowledge of chosen business, market research, finance, availability of other resources, right temperament to fight the competition, ability to bear the loss, ability to sustain in waiting period, so on and so forth. It means this avenue is not so easy. Present policy of the government is to reduce the existing staff and hence, it has banned fresh recruitment. Naturally, it is very difficult to secure job in government sector for a newcomer. It means first part of the second avenue is also not open for Commerce students. The only avenue remains available to most of the students is to join private sector.

Does the education in commerce prepare students well qualified with essential technical & practical knowledge and skills which will help them to accept the challenges of ever changing job market? Answer to this question is certainly 'No'. We are producing unemployable graduates and post graduates. Problem of unemployment is not the problem of unemployment but it is the problem of unemployable graduates and post graduates. In other words, our products do not match the requirements of job market. At one end educated personnel are not getting the job and on the other end business world are complaining that no personnel are available of the required skill & knowledge. Jobs are available, personnel are also available but, both are not fulfilling requirements of each other.

Basic objectives of Commerce education are to study working of business / industrial world, their problems, needs, policies etc. and providing steady flow of trained managerial & clerical manpower meeting ever growing needs of the business world. At present what is the position of Commerce education? They are being taught how to drive a car in a class room and expecting immediately after completing their education they should drive in the city at rush hours very nicely. We have no car, no spare parts even no models of them. Those who are teaching haven't seen car. They have also bookish knowledge of driving car and just they are passing the information to the students. The result is obvious and we all know it.

Objectives

1. To find what business world can do for the upliftment of education in Commerce

3. To know how education in Commerce benefits to the business world.

4. To study ways and means of development of education in Commerce

Why Cooperation?

- No close & deep interaction with business world. Students could not acquaint themselves with modern business environment.
- No provision of providing knowledge of competitive examinations held by banks & other financial institutions, insurance companies etc.
- Only class room teaching. Lack of practical in the laboratory, field work, illustrations, role playing, brain storming, business mannerism, industrial visits, observations, practical training, updating the information of the business world and so on.

What Business World can do for Education in Commerce?

1. Practical training by way of site tours, field visits and live demonstrations.
2. Supply of data & information for the course projects and assignments.
3. Accommodating and funding research projects.
4. Work placement – for vacation, part time or full time.
5. Encourage and develop entrepreneurship by providing opportunity, infrastructure and funds.
6. Information and advise for developing curricula.
7. Guidance for career and personality development.
8. Information about changing technology, future challenges and opportunities through seminars and workshops.
9. Provide officers and knowledge persons as part time or visiting faculty.
11. Sponsor various functions and programmes.
12. Provide equipments and instruments for the teaching laboratories.
13. Permission to use the laboratory developed by the business organization.
14. Provide specimen copies of various documents, papers, charts, diagrams etc. used in the business for the commerce laboratory of the academic institution.
15. Guidance about obtaining license and initial procedure.
16. Can provide a platform to learn and develop application skills among the students.
17. Can help to design curricula according to the present and future needs.
18. Can sponsor particular education expenses.
19. Can adopt poor intelligent students for their further education.
20. Can share success & failure stories and experiences.
21. Finance particular projects of interest.

What Commerce Education can do for Commerce?

1. Provide trained manpower.
2. Provide basic knowledge and knowledge of research and studies.
3. Undertake and exercise research and provide research results or outcomes which will be solution of the business problems.
4. Can work as ‘outsource’ of simple work requiring low skill & risk.
5. Create future employees and officers.
6. A way of advertising- Help to create goodwill and reputation and thus corporate image.
7. Academics can provide technical solution of the business problems.
8. Help to satisfy ‘social responsibility’ of the business.
9. Help to undertake government funded projects.
10. Provide customers to the products and services of the business.
11. Help to reduce cost of training.
12. Provide open and fresh minds with innovative ideas and enthusiasm which industry needs.

13. Can work as a media of marketing – young fresh faces attracts more attention of the public.
14. Provide teaching staff to provide theoretical and basic knowledge.
15. Can provide libraries (journals, periodicals & reference books) and laboratories.
16. Can provide infrastructure such as hall, ground etc. for trade fairs, exhibitions etc.
17. Academicians can give consultancy in the areas of their expert to the business.
18. Can take out market survey.
19. Can undertake minor and major research projects pertaining to particular business problems.
20. Provide evening study courses for the employees of business who wants to study.
21. Provide specially designed vocational short term courses for particular business employees.
22. Can undertake study of sick industries or business houses to identify their problems and suggest specific solutions.

Both the lists are not exhaustive. They can be extended further.

What is to be done for development of Commerce Education?

- The authority responsible for updating the curricula should undertake continuous search of recent developments in the business world and should have research on it. What are the needs of the industry, what type of personnel they require, what are the expectations of the industry from the products of the Commerce education and how these expectations can be fulfilled etc. From this information they should interpret future demand of job market and make upgradation accordingly.
- Before drafting the revised syllabi Board of Studies in various subjects under Commerce faculty should make general appeal to the teachers and students and call their views, opinions, expectations and suggestions. Scan their responses and welcome those which are really good and practicable in the revised draft. In short, don’t impose the draft from the top, let it be shared by bottom also.
- The new syllabi should be communicated to respective teachers and students before launching the syllabi so that they can prepare themselves for new changes.
- Modify curricula as and when it requires.
- University must introduce industry / business linked projects as a compulsory part of the curriculum such as projects relating to marketing, accounting, finance, personnel etc. Study of regional industries and businesses be made compulsory. Their performance, problems and prospects be studied.
- Every college must maintain and develop Commerce Laboratory. Commercial documents & papers, pro-forma of books of accounts & other records etc. be kept ready for students to complete laboratory practical.
- Government should encourage collaborative agreement between university and industries such as banks, insurance companies, financial institutions etc.
- Research studies should be undertaken on the issues which are directly concerned with specific industry / business. The benefiting industry / business should also contribute for the same.
- Provision of training for a particular industry or business unit should be made in such a way that the businesses which are in need of specifically trained manpower will communicate their expectations to the particular college or university. Such specific training will be provided to interested students. After completing the training the students will be absorbed by the respective industrial / business unit. Cost of this training will be born by the particular unit as well as the students who are going to be benefited.
- It is the joint responsibility hence, business world should provide live case studies, share

experience, guide students, provide required information, allow permission for 'on the job' training etc.. It should support by all possible ways including financial support.

- Career Counseling and Placement Cell should be established in each & every college and its functions be examined time to time. This cell will establish relationship with the business world.

Conclusion

It is the need of the hour to welcome recent developments of the business world in our syllabus, implement radical changes in the teaching techniques and eliminate ever widening gap between university and industry. It is the time when we have to give new image to Commerce education. University authorities and industry doyens both must peep in to the future to make Commerce education beneficial to the end users.

Ways are there. Just we have to follow. In the words of Jhon Goeth

'Knowledge is not enough; we must apply.

Willing is not enough; we must do'.

EMPIRICAL EVALUATION OF PRICING OF SECURITIES
(A study of under pricing and over pricing of NIFTY stocks)

H. Mahaboob Basha
Assistant Professor, Government First Grade College, Harapanahalli (T) Ballari, Dist: Karnataka

Abstract

CAPM model is a model for pricing of securities in a capital market. It describes the relationship between expected return & risk of a security based on the beta value of security. A study on under pricing and over pricing of shares & securities using Capital Asset Pricing Model is very useful for investors while making investment decisions in the stock market. The scope of the study is restricted to only 50 companies of nifty stocks and collected one year data ranging from January 2017 to December 2017. The study is mainly to know which stock is overpriced and which stock is under priced. This study has been done to evaluate under pricing and over pricing of s e c u r i t i e s . It uses CAPM model in which expected return is compared with actual return to know the actual performance.

Keywords: *CAPM Returns, Actual Returns, Under pricing, Over pricing, NIFTY.*

Introduction

In this present scenario, public investing in stock market has been increasing day by day. The investor who wants to invest in stock market needs proper understanding of price and risk-return of securities because it will help small and medium investors to make investment decision in the stock market. CAPM model is a model for pricing of securities in a capital market. It describes the relationship between expected return & risk of a security based on beta value of security. A study on under pricing and over pricing of shares & securities using Capital Asset Pricing Model is very useful for investors while making investment decision in the stock market. It will motivate them to have small savings and invest in capital market. This will increase number of participants in the stock market in turn it will help in economic development of the country.

The CAPM is a model for pricing an individual security or portfolio. For individual securities, we can use of the security risk market line (SML) and its relation to expected return and systematic risk (beta) to enable how the market must price individual securities in relation to their security risk class. CAPM model gives clear cut option to investors that which security to buy and which security to sell in the market. This model is very easy and best to know about security market. Once the expected return is calculated using CAPM model, compare the expected return with actual return then the result may be overpriced or underpriced. Stock is said to be overpriced when actual return is less than expected return then it is overpriced the decision will be sell the stock. Stock is said to be underpriced when actual return is more than expected return then it is underpriced the decision will be buy the stock.

Objectives of the study

- To find out the under pricing and overpricing of nifty 50 stocks
- To evaluate the performance of nifty 50 stocks in terms of price, risk and return of a security
- To measure the systematic risk of a security by using beta as a measure of risk.
- To evaluate the performance of nifty 50 stocks by using CAPM model

Research Methodology

Type of Research used	Analytical design
Sampling universe	Companies listed on NSE Nifty 50
Sample size	43 companies. Non-availability of data on remaining 07 Companies
Sampling Technique	Non random sampling ,Convenient Sampling
Sample Period	01-01-2017 to 31-12-2017
Sample Scope	Nifty 50 companies
Statistical Tools	CAPM approach

Table: The following shows the comparison of CAPM and Actual Returns of various months

FINDINGS & SUGGESTIONS

1. It is found from the results of CAPM, t h e f o l l o w i n g c o m p a n i e s Adaniport, Bajaj auto ltd, Bharti Airtel ltd, Ambuja Cements Ltd, Bharti Infratel ltd, HDFC Bank ltd, Gail India ltd, Hindustan Unilever Ltd, ITC ltd, ICICI Bank, IndusInd Bank Ltd, L&T Ltd, LUPIN, M&M Ltd, Maruti Suzuki Ltd, NTPC Ltd, ONGC Ltd, Power Grid Corp, RIL, SBI, TATA Steel, Tech Mahindra, Ultra Tech, Wipro, YES Bank, Zee Ltd stocks are all underpriced & they are found to be near to fair value, so there is no opportunity to make returns and here the investors could the buy the stocks.

2. It is found from the results of CAPM for Asian paints, Aurobindo Pharma, and Axis Bank stocks are underpriced in 3 months and overpriced in other 3 months and vice versa & they are found to be near to fair value but in only Jan month investor can buy the stock.

3. It is found from the results of CAPM, the following companies Bosch ltd, Cipla Ltd, Coal India Ltd, Dr. Reddy's Labs, Eicher Motors Ltd, HCL Ltd, Hero Motors Ltd, Dr. Reddy's Laboratories ltd, TCS Ltd, and Tata Motors stocks are all overpriced & there is ample opportunity to make returns. So here Investor can make a choice of selling.

4. It is found from the results of CAPM results for Hindalco Industries Ltd, Infosys Ltd, and Kotak Mahindra Bank, stocks are highly volatile so one can sell or buy the stock due to inability to predict the market.

5. It is found from the results of CAPM, Sun Pharmaceutical Industries Ltd and HDFC Ltd stocks are stable, they can predict the market and investor can buy or sell the stocks easily

AN ANALYTICAL STUDY OF BUDGETARY PRACTICES IN THE COLLEGES AFFILIATED TO SHIVAJI UNIVERITY, KOLHAPUR

Dr. Rajeshkumar P. Chetiwal

Head, Dept. of Commerce, Arts and Commerce College, Satara

Abstract

Education is very important factor for bringing social, cultural, political and economic development for the nation. Over the years colleges have grown in their numbers, size and complexities. A budget is an important tool for financial planning and control. The management can evaluate performance of every level of the organization through budget. The difference can be shown between planned performance & actual performance through budgets. It is, therefore important to study as to what extent the budgetary practices in colleges have kept pace with contemporary changes in the field of financial management. Thus researcher, after coming across problem of the college finance and realizing the significance of budgeting to improve the situation, taken up this study

Keywords*: Budget, Budgetary Control System, Higher Education*

Introduction:

Budget is a short term finance planning tool of management and it is used to focus attention on company's finance and overall operations of an institute. Budget highlights potential problems and advantages early, allowing management to take steps to avoid these problems or use the advantages wisely a budget is a tool that helps managers in both their planning and control. Budget can be used as a benchmark of a control system that allows managers to compare actual performance with desired performance. Hence, the budget widely uses as a managerial technique tool in an organization.

One of the major aspects of budgeting is to exercise control over the funds. It has to be ensured that the funds are efficiently utilized. Budgetary control involved deciding about the physical and financial targets, assigning responsibilities and measuring the result at the end so as to ensure that the forecasted goal or objectives are achieved.The financial authorities of an educational institution have the twin objectives of liquidity and accountability. Liquidity is important to ensure that the institution is able to meet its obligation in time. It does not mean that the institution should retain all its sources in liquid accounts like saving bank account. The concept of accountability is unique to public institutions which call for transparency.

Literature Review:

Dutta, M. (2002) observed that the field of management control is rich and varied. India stands third, having the largest technically trained manpower in the world. But theoretical technical knowledge is only half the story, the other half being its practical applications. With the liberalization of the Indian economy and globalization, there is now a cutthroat competition from various corners of the world. As a result, there is now a race to secure a place for survival. In such a scenario, Management Control skills are the cry of the day.

Chougule, P.N. (2008) he stated that TQM is a philosophy of continuous improvement which can provide any educational institution with a set of practical tools for meeting and exceeding present and future customer needs, wants and expectations. Further TQM is a vision, which the educational institution can achieve only through long term planning by drawing up and implementing annual quality plans, which would gradually lead towards the fulfilment of vision. In his study he makes comparisons as to implementation of TQM principles in the colleges/ higher educational institutions in the rural and urban areas of Southern Maharashtra and in the professional and non-professional colleges in Southern Maharashtra.

Husain, I. (2006) opined that budget, which is consider by the traditional managers and education authorities on merely routine exercise of the college, has to be made more effective. It has to be used by the educational authorities as an effective tool of financial planning and control. Budget may also be used as a device to establish a relationship between the planning financial and the academic performance of the colleges.

Research Methodology:

This Study has undertaken with an objectives, to review the existing budgetary practices in the colleges, to examine the usefulness of budgetary practices in the colleges of Shivaji University Jurisdiction, to analyze the problems of implementing budgetary control system in the colleges and to suggest the improvements in proper implementation of budgetary control mechanism in the colleges.

Majority of information was collected from the primary sources. Investigator prepared a questionnaire covering all the relevant and important dimensions of budgeting in the colleges and data schedule administered these tools on the principals and accountants of colleges in Shivaji University jurisdiction. In order to elicit the information from the principals and accountants the questionnaire contains items probing factual information as well as their opinions about the budgeting and budgetary control in the colleges.

The researcher has prepared district wise list of all aided colleges in Shivaji University Jurisdiction from which the sample was drawn. The following table shows aided colleges in Shivaji University jurisdiction

Sr. No.	Type of Colleges	Kolhapur	Sangli	Satara	Total
1	Conventional Colleges	28	13	20	**61**
2	Conventional and Professional Colleges	23	23	14	**60**
3	Colleges of Education	02	02	01	**05**
4	Law Colleges	02	02	03	**07**
5	Engineering and Technology Colleges	--	01	01	**02**
6	Pharmacy Colleges	--	--	01	**01**
	Total	**55**	**41**	**40**	**136**

Source*- Compiled by Researcher*

Sample size:-

For the selection of colleges from districts under Shivaji University jurisdiction, researcher has used stratified sampling method. Each district has been considered one strata i.e. Kolhapur, Sangli and Satara. After that types of colleges has been considered as a sub-strata from each district i.e. Conventional Colleges, Conventional and Professional Colleges, Colleges of Education, Law Colleges, Engineering and Technology Colleges and Pharmacy Colleges. Precision is depend upon the sample size of the stratum and it depends upon variability in each stratum. In stratified random sampling the allocation of sample size for different strata is done according to total no. of units in each stratum and variability within each stratum.

The researcher has taken 40 percent of colleges from each sub-strata of each district for the research purpose. Then researcher has used convenience sampling method for the selection of the colleges. The following table shows the sample size:-

Sample size of colleges

Sr. No.	Type of Colleges	Kolhapur	Sangli	Satara	Total
1	Conventional Colleges	12	06	08	**26**
2	Conventional and Professional Colleges	09	09	06	**24**
3	College s of Education	--	01	01	**02**
4	Law Colleges	01	--	01	**02**
	Total	**22**	**16**	**16**	**54**

Source*- Compiled by Researcher*

Thus a reasonable sample of 20 percent of the aided colleges was considered for the present study, which comes near about 54 colleges. The sample size is comprise of a representative sample of thirty (54) colleges in total with a sample selection of Thirteen (26) Conventional Colleges, Thirteen (24) Conventional and Professional Colleges, Two (02) Colleges of Education, and Two (02) Law Colleges. Engineering and Technology Colleges and Pharmacy Colleges could not take as a sample because 40% of them from each strata were less than the 0.5.

Findings:-

1. The accounting system of colleges have been examined and it is found that 78 Percent of the colleges prepare their accounts with cash basis accounting system and only 22 Percent of the colleges prepare their accounts with hybrid/mixed accounting basis.
2. Preparation of budget by the colleges has been assessed and it is found that 92 Percent of the colleges prepare budget every year and 08 Percent of the colleges do not prepare budget for their financial activities. In 50 Percent of Law Colleges and 08 Percent of Conventional Colleges budget is not prepared.
3. Budget system of colleges has been examined and it is found that 92 Percent of the colleges follow flexible budget system and 08 Percent of the colleges do not have any kind of budget system. In 50 Percent of Law Colleges and 08 Percent of Conventional Colleges do not have any type of budget system.
4. Availability of budget or finance committee is examined and it is found that budget committee is available in 92 Percent of the colleges. Budget committee is not available in 50 Percent of Law Colleges and 08 Percent of Conventional Colleges.
5. It is found that only 34 percent of the colleges invite estimates from the heads of departments or chairman of the activity. In 66 percent of the colleges estimates do not invite from the heads of departments or chairman of the activity.
6. It is found that budget is not prepared for every academic activity in all type of colleges affiliated to Shivaji University.
7. It is found that training facilities do not provide to the staff regarding budgeting and budgetary control by the all type of colleges.
8. It is seen that students do not incorporate in budgeting process by the all type of colleges.
9. Time period for budget is also examined and it is found that 92 Percent of the colleges mentioned that their budget covers one year time period and 08 percent of the colleges do not prepare budget.
10. Frequency of revision of budget is examined and it is found that 35 Percent of the colleges review their budget in six months, 25 Percent of the colleges review their budget in one year, 15 Percent of the colleges review their budget in three months and the revision is not done in 25 Percent of the colleges.
11. Availability of budget related documents have been examined and it is found that 60 percent of the colleges have budget schedule, 85 percent of the colleges have

budget guidelines and budget manual is not available in all type of the colleges.

12. Objectives of preparation of budget have been assessed and it is found that the main objective of preparation of budget in 75 percent of the colleges is device for effective planning and control, 65 percent of the colleges said statutory compulsion, 40 percent of the colleges said planning tool and only 24 percent of the colleges said routine exercise is the objective of preparation of budget.
13. Nature of budgetary process in the colleges has examined and it is found that in 72 percent of the colleges budget is required to be approved by competent authority, in 74 percent of the colleges budget is submitted by the stipulated date and in 22 percent of the colleges delays are caused in receiving sanction.
14. For budgeting purpose heads of departments are consulted by 45 percent of the colleges.
15. Types of budget prepared by the colleges have been examined and it is found that 75 percent of the colleges prepare maintenance budget, 100 percent of the colleges prepare salary budget and 64 percent of the colleges prepare development budget.
16. It is found that cash budget does not prepare in the all type of colleges affiliated to Shivaji University.
17. Methods of budgeting used in the colleges have been examined and it is found that 94 percent of the colleges are using incremental budgeting method for preparation of budget and 07 percent of the colleges do not prepare budget.
18. Investment policy of the colleges for excess money has been assessed and it is found that all type of colleges prefers to invest/deposit in bank only for their excess money.
19. It is seen that Cash Flow Statement does not prepare by the all type of colleges.
20. Publication of financial statements in college annual report has been examined and it is found that all type of colleges do not publish their financial statements i.e. Receipt and Payment Statement, Budget and Balance Sheet in their annual reports.

Conclusion:

Budget is the control tool. The time and expense should not be given much weightage while preparing the budget. It is a requisite in non-profit making institutions. Proper time given and expenses incurred should not be consider as in vain in budget processing. The benefits of budget are very large in terms of control as against the consumption of time and expenses incurred on it. If the colleges prepare the budget with due importance they will realize the usefulness of budgetary control to achieve the Mission and Goals of the institution. Unless and until the adequate funds are allocate to the departments through budget the departments cannot work independently and mutually. The proper allocation of funds is only possible when the educational and financial activities are linked with the objectives of education and they should be regularly monitored.

Suggestions:

1. Budget should be linked to mission and goals of the colleges.
2. The budget should be prepared with consideration of past budgets, actual expenses and requirements in future. These require the proper documentation of budgeting process.
3. There should be some standard of variance to be fixed. The control can be achieved through identification of variance. After the comparison of budget and actual figures the variance should be discussed by budget holder with the management. The reasons should be find out for the variance and proper action should be taken in future.
4. The budget should be prepared with consideration of past budgets, actual expenses and requirements in future. These

require the proper documentation of budgeting process.

5. The usefulness of the budget as a control tool cannot be judged if supplementary budget is not prepared when it is necessary.

CONSUMER BEHAVIOR TOWARDS DIGITAL PRINTING SERVICES IN KOLHAPUR DISTRICT

Dr. Sulakshana V. Chavan
V.P. Institute Of Management Studies And Research, Sangli, Maharashtra
svchavanvp@gmail.com

ABSTRACT

The digital print media business in India is gaining importance day by day. The future of digital print media is bright, particularly in metropolitan cities unlike in semi urban areas, where most of the consumers are focusing on digital media. Digital print media business has become one of constant updating monitoring and distilling information. Digital print media are changing the concept and process of content gathering and dissemination in Kolhapur district. As digital print media is an area of experimentations, it is working hard to capture semi urban areas particularly in Kolhapur district. The emerging digital print market is becoming challenging due to the constant changing behavior of consumers. It is essential for digital printers to carefully analyze behavior of consumers and understand the consumers living outside the digital printing industry.

Keywords: *Consumer buying behavior, Digital Printing, Print media, Consumer preferences*

1. Introduction

Digital printing industry is at infancy in India at large with exception at metropolis. The consumers of Digital Printing Industry can be grossly bifurcated in Individual Consumers and Institutional Consumers but this segmentation is not precise. There exists an opportunity to crystallize various precise segments which would aid the marketer in targeting and positioning in Digital Print Industry. Marketing of printing services involves preparation of flyers, brochures, business cards and so on. These are considered as one of the important tools that must be used for marketing with the aim of getting more consumers and thereby increasing the business. There are different types of printing involving offset printing which is more commonly prepared by the people mainly due to the amount of perfection that can be obtained by this means.

Development of faster digital printing, in the process, and now digital printing system transformed into a fact by definition, and gradually by including numerous consumers, end-user acceptance, the conversion process, with the basic international consistent, but the printing industry perspective to find the domestic market with international markets are different in foreign countries. Successful digital printing business with traditional print background is the tradition of Indian enterprises, digital printing applications; they have become an effective complement to traditional printing methods to help business expansion, extended to develop new business, according to largest number of buyers in order to make more profit.

Consumer expectations have risen -- to the point that consumers expect more relevant, personalized services in their relationship with organizations. As technology life cycles shorten and the pace of innovation explodes, increasing numbers of consumers will expect the quality of service to be continuously upgraded; they will also expect personalization and access to more information.

2. Need of study

Despite assurance of quality that print media is booming, many consumers are making demand for the credit facility rather than paying the debts, the consumer make move to other service providers which becomes hard to capture the consumers in digital market as various alternatives are available for them. The emerging digital print market is challenge to consumer like photographers considering that they have to give the free sample to them before the actual work for such consumers making mistake is the risk where quality should not be given to short term financial returns. The cycle of changes is too rapid hence quality with optimum cost needs to be an essential part of digital print services to avoid the risk of losses. The article aimed at studying consumer behavior towards digital printing services in Kolhapur district.

The principle reason of this study is that of formulating the problem for greater unique investigation or of developing effective hypothesis from an optionally available factor of view. The foremost emphasis in one of this research is on the discovery of ideas and insights. as such the research design appropriate for such studies ought to be bendy enough to offer opportunity for thinking about exceptional elements of a problem under study which fact might also necessitate changes in the research design for such research are pointed out

3. Research Methodology

For this study sample units are Printers (Digital Photo lab /Digital printers), Pre-printers (DTP ad agencies), Post-printers (intermediaries) and End Users i.e. Consumers. In Kolhapur distinct, as per digital printing industry is concerned sample are 100 printers, 70 pre-printers, and 250 post printers are identified. The end users are infinite for this research. In Kolhapur district 12 talukas are considered namely Shahuwadi, Panhala ,Hatkanagle, Shirol Gaganbawda , Karveer, Radhanagari , Kagal , Bhudargad, Gadhinglaj , Ajra and Chandgad. First researcher has selected quota sampling.

Primary Data is used as source for data collection. The researcher used the structured questionnaire for collection of data, from consumers using digital printing services and digital printing service providers and digital photographers. First questionnaire is prepared in English language but during pilot study it is found that most of the respondents are unwillingly to respond only because of language problem. Therefore the questionnaire is transferred in local Marathi language. In consultation with service providers some questions are modified and some questions are added.

4. Data Analysis and Interpretation

The data is entered in Ms-Excel with data validation check, and is further validated with the help of SPSS. Data is classified and presented in tables. Data Analysis is done by using % age, measures of central tendency and measures of dispersion.

Ranks for attributes as per preference while taking service:

Sometimes when customers are in confusion while buying printing services, they prefer to give ranking to each and every attribute as per their own willingness. This kind of ranking help them to take correct decision for buying any digital printing services like quality, price, credit, services, other value added facility, after sales services ,quality of goods, company goodwill, location and other features advertisement etc. The following table shows frequency and % age for Ranks for attributes as per preference while taking service:

TableNo.4.1: Ranks for attributes as per preference while taking service:

SR. NO	ATTRIBUTE	RANK

The above table shows the most important and most customer preferred amenities available with "digital printing press" and its customer rating. 94% people say the printing quality is very good and availability of quality is option is very good. Then 80% people say quantity isoptions also good. After that quality of goods ranked 4th with 44% rating. This is a good sign that people aware about quality of goods. Then the credit facility, behavior of frontline people comes next by 32% rating. Then behavior of marketing people (20%) and after sales services (14%) is on average level. After these amenities the communication facility (4%) and pre-print services (8%) are on lower level. There is no single customer who can say that back office people are good.

Table 4.2: Rank is given as 1 is highest and 10 is lowest.

Krushall Wallis test is used to test null hypothesis that k independent random samples come from identical universe.

We use the test with

$$H = \frac{12}{n(n+1)}\sum\frac{Ri^2}{nj} - 3n(n+1)$$

$$= \frac{12}{40(40+1)}\left[\frac{(74.5)^2}{8} + \frac{(79)^2}{8} \quad \frac{(90.5)^2}{8} \quad \frac{(91.5)^2}{8} + \frac{(159)^2}{8}\right] + \quad + \quad -3(40+1)$$

$$= \frac{12}{1440} - \left[493.78+780.125+1023.78+1044.53+3140.12 \quad -3(41)\right]$$

=347.5

Table no 4.5: Table of testing of Hypothesis

Null Hypothesis	Test Used	Calculated value	Level of Significance	Degree of freedom	P value	Decision
Customer preferences for attributes in digital printing are alike.	Krushall Wallis test	347.5	0.05	0.05	41.28	Reject the Hypothesis

Calculating this all H = 347.5 while as five samples have 8 items each, the sampling distribution has follow chi square with 28 degree of freedom which has value 41.28 at 5 % level of significance, so researcher reject the hypothesis and conclude that Customer preferences for attributes in digital printing are not alike.

5. Conclusion

Maximum respondent are agree with statement of Quality, performance and amp; innovation are important factors for consumer satisfaction. From marketing orientation maximum respondents disagreed with statement of Selling and amp; promotion activities should be aggressive. From marketing orientation maximum respondents agreed with statement of Customer retention is more important than customer attraction. Most of the respondents are agreed with statement of latest marketing concept and amp; strategies are very important in business expansion. From marketing orientation most of the respondents are neutral for the statement and amp; give no option for the statement of Marketing is useful for profit sector. From marketing orientation most of the respondents are neutral for the statement of there is relation between marketing in business and welfare of society. The marketer should focus on the demand pattern. Because the income pattern is dual (generated from agriculture operations and service) The demand pattern is as per customer convenience and seasonal also.. The demand for digital prints will peak during the elections and various occasions like celebration of Ganesh festival ,Diwali, Dasra, etc. this is the time at which these consumer have substantial case in flow. The marketer must be identifying the factors which influence to the consumers decisions before and while the buying of digital prints. The analysis of such factors and also factors helps to marketers during the preparation of strategy. Though there are various variables and attributes influences the buying decisions, the social sense of digital printing revolution can also be used to create social awareness regarding different social issues

A COMPARATIVE ANALYSIS OF QUALITATIVE ASPECTS OF CSR PRACTICES IN INDIA PRE AND POST IMPLEMENTATION OF COMPANIES ACT 2013

Dr. Shivaji Borhade

Head, Department of Commerce & Management, Bharati Vidyapeeth's Dr. Patangrao Kadam College, Sangli (Maharashtra)

Prabodhini Borhade-Wakhare

Research Scholar, Bharati Vidyapeeth University, Pune (India)

Abstract

India is the first country in the world that has made mandatory CSR. According to law, eligible companies in India must have to spend at least 2% of their average net profit and disclose the qualitative as well as quantitative aspects of CSR activities in the reports which was voluntary before implementation of the Companies Act 2013. This study aims to compare the disclosure of qualitative aspects of CSR practices in India prior to and after implementation of the Companies Act. This study is descriptive in nature. The findings in the study are: there is a great change in the disclosures of qualitative aspects of CSR practices in companies after the Companies Act 2013. However, some companies do not take adequate efforts to disclose the information in the prescribed format.

Keywords: *Corporate Social Responsibility, Qualitative Aspects, Companies Act, Annual Report,*

Introduction

Corporate Social Responsibility (CSR) has come into view as an essential research area more than a decade when CSR activities are communicated in the form of a report. It helps in improving business performance. The governments, regulatory authorities and stock exchanges have been developed CSR reporting guidelines and principles. Therefore, in last few years, there is an improved discussion about the need to match the structure of such reports globally. Over the last decade there is a drastic increase in the practice of CSR disclosure around the world. In the countries like France, Singapore, Vietnam, Malaysia, Denmark, Sweden, Indonesia have made mandatory to their listed companies and state owned companies for reporting on CSR in annual reports. On the other hand, in the UK, the USA, Australia, China, Germany and Thailand, the companies have to report CSR activities voluntarily in their annual reports. India became first country in the world to have a statutory compliance requirement on CSR spending. In India, all CSR activities of the eligible companies are governed by Section 135 of the Companies Act 2013 which came into effect w. e. f. 1st April 2014.According to Section 135 of the Act, a company having net profit of Rs. 5 crore or more; net worth of Rs. 500 crore or more or turnover of Rs.1000crore or more has to spend at last 2% of average net profit of the last three years. There are number of activities listed out under CSR that include education, healthcare, rural development , environment, women empowerment, eradication of extreme hunger and poverty, contribution to PM relief fund and other funds, child mortality and employment based vocational skills and others. Companies are allowed to undertake CSR activities either through own foundations/trusts or NGO. This Act is important as investment made in education, health, infrastructure helps in enhancing the capabilities of young generation.

CSR in the present day context refers to the overall positive impact on the community, culture, society and environment. The basic principle of CSR is that both public policy as well as companies should be held responsible to tackle social issues. At present, numerous companies are reporting their CSR activities in annual reports and in official websites. In this present scenario, CSR can make a valuable contribution in India's development. It can supplement the government's efforts in economic development. In this regard, the Ministry of Corporate Affairs, Government of India revamped the Companies Act 1956 with the new Companies Act 2013. This new Act also introduced a new section on mandatory CSR for both public and private companies operating in India with eligible criteria. The CSR activities should not be undertaken in the normal course of business and must be with respect to any of the activities mentioned in Schedule VII of the Act. The Act has introduced various new provisions which changed the look of companies in India. There is an increasing trend in CSR expenditure and disclosure among companies in India. The Act has made mandatory to disclose both the qualitative and quantitative aspects of CSR practices. Therefore, an attempt has been made to compare the qualitative aspects of CSR practices in India.

Objectives

The study is proposed with the following objectives.

1. To take a review of trend of CSR practices before and after implementation of the Companies Act 2013.
2. To analyse the qualitative aspects of CSR practices of companies before and after implementation of the Companies Act 2013.

Hypothesis

H_0**:** There is no significant difference in voluntary disclosure (Before Act) and mandatory disclosure (After Act) of qualitative aspects of CSR practices.

H_1**:** There is significant difference in voluntary disclosure (Before Act) and mandatory disclosure (After Act) of qualitative aspects of CSR practices.

Research Methodology

This study is an exploratory and descriptive research. A random sampling technique was employed for the identification of the sample that consisted of only public limited companies registered with RoC in Pune. Pune is one of the industrially well developed districts in Maharashtra. A variety of industries have been established in Pune district. Taking into consideration variety of industries different sectors are covered under the study. Therefore, overall 20 companies were randomly selected for the same purpose. For the study, both primary as well as secondary sources were used to collect the data. Primary data were collected with the help of questionnaire. Due care was taken to make the questions simple and clear to understand the respondents. Secondary data were collected from the different books, journals, government reports, , annual reports and websites.

Review of Literature

Ourvashi Bissoon (2018) studied the level of CSR reporting of multinational groups in hospitality sector in Mauritius and found that the largest part of the CSR information relates to particular categories and the disclosures were public relations bias. Sai P. V. S. (2017) found that there was a growth in CSR spending by Indian companies. Which are spending on donations, renovating village schools, mid-day meals, etc. Najul Laskar and Santi Maji (2016) revealed that there is an increasing CSR disclosure score. A. S. Babu (2016) studied the CSR initiatives taken by a coal company for infrastructure and health facilities in rural areas. The study found that CSR activities have impacted health of rural communities. However, the company has to take efforts to generate awareness regarding the facilities provided. Leung Cheng Han (2014) argued that there is a poor quality of disclosure of CSR data in gambling industry in Macao. According to

Susith Jude Fernando (2013) CSR practices related to environment in Sri Lanka were disappointing as compared to socially-related practices. Kansal Monika (2012) investigated the determinants of CSR disclosure considering the size, profitability, risk and other organizational characteristics which was very low in India. A study conducted by M. Hossain, K. Islam and J. Andrew (2006) found that very few companies in Bangladesh make available social and environmental information in qualitative nature voluntarily.

All the above studies related to CSR are based on the data available prior to implementation of new Companies Act 2013. There was no any study on comparison of CSR activities before implementation and after implementation of Companies Act 2013. Hence, the present study is based on the comparison of qualitative aspects of CSR activities prior to and after Companies Act 2013.

Findings

Before implementing the Companies Act, number of companies were spending and donating money for environmental conservation and social development. However, SEBI mandated top 100 companies listed on stock exchanges in 2012-13 to incorporate BRR as a part of their annual report. The Companies Act 2013 made mandatory to disclose qualitative as well as quantitative details in annual reports of the company. As per the Act, every company has to disclose the following qualitative aspects of CSR practices in annual reports.

Table 1: Mandatory Qualitative Aspects of CSR to be Disclosed in Reports

Sr.	**Qualitative Aspect**	**Sr.**	**Qualitative Aspect**
1	Formation of CSR Policy	11	Annual Report on CSR
2	Monitoring Framework in CSR Policy	12	Details of CSR Spending in Prescribed Format
3	Reference to the CSR Policy in Directors' Report	13	Schedule VII Focus Areas
4	Web Link of CSR Policy	14	Details regarding CSR areas of Intervention
5	Disclosure of CSR Vision, Mission, Philosophy	15	Details of the Monitoring Framework
6	CSR Committee	16	Mode of Implementation in CSR Policy
7	Constitution of Board Level CSR Committee	17	Reasons for Unspent Amount
8	Composition of CSR Committee	18	Details of Unspent Amount
9	Independent Director in CSR Committee	19	Disclosure on Reason for Unspent Amount on CSR
10	Information of Composition of CSR Committee	20	Responsibility Statement

Source: *Compiled from survey reports of private agencies*

All these qualitative aspects are mandatory to disclose in the reports. Therefore, all these aspects of CSR practices are considered for the study.

Table 2: Opinions of Respondents regarding Disclosure of Mandatory Qualitative Aspects of CSR Before and After the Act

Sr.	**Qualitative Aspect**	**Before Companies Act 2013 (Voluntary Disclosure)**				**After Companies Act 2013 (Mandatory Disclosure)**			
		Mean	SD	Kurt	Skw	Mean	SD	Kurt	Skw

Source: *Author's Calculation based on Field Survey*

It is found from the above table that mean score of all the qualitative aspects before Companies Act 2013 was in the range of 1.1 and 1.85 which is less than 3. It indicates that all the respondents had represented disagreed/unimportant attitude. It is also clear from the table that mean score of all the qualitative aspects after Companies Act 2013 was from 3.85 to 4.80 greater than 3. It means almost all the respondents were strongly agreed that there is a great change in disclosure of qualitative aspects.

Skewness of aspect No. 4, 5, 7, 8, 9, 12, 13, 15, 17, 18 and 20 before Companies Act 2013 have positive values which indicate that data are skewed right means right tail is long relative to the left tail. While aspect No. 1, 2, 6, 10, 11 and 16 have negative values that indicate data are skewed left means left tail is long relative to the right tail. Skewness of item No. 7 after Companies Act 2013 is 0.257 indicates that the data are fairly symmetrical. All other values are either negative or zero. Aspect No. 2, 4, 10 and 14 have zero skewness it means data are perfectly symmetrical. The aspect No. 1, 3, 5, 6, 8, 9, 11, 12, 13 and 15 to 20 have negative value of skewness. It indicates data are skewed left means left tail is long relative to the right tail.

All the qualitative aspects before Companies Act 2013 except No. 2 and 5 have negative kurtosis score means it has less in the tails than the normal distribution.

The values of SD before Companies Act 2013 were in the range between 0.308 and 0.671 which indicate that the individual responses, on average, were away from the mean to that concerned figure. A low SD indicates that most of the responses were very close to mean value. Similarly, the values of SD after Companies Act 2013 were in the range between 0.410 and 0.745 which indicate that the individual responses, on average, were away from the mean to that concerned figure

Therefore, it is concluded form the above discussion that respondents were strongly agreed that there is a drastic change in the disclosure of qualitative aspects of CSR practices in annual reports of the companies before and after the Companies Act 2013.

Testing of Hypothesis

a) Statistical Test: Wilcoxon Signed Rank Test

Respondents were asked about voluntary disclosure and mandatory disclosure of qualitative aspects of CSR practices using five point Likert scales (5-Strongly Agree, 4- Agree, 3- Neutral, 2-Disagree, 1-Strongly Disagree).

Independent Variable: Before and After Situation of the Companies Act 2013

Dependent Variable: Voluntary disclosure and mandatory disclosure of qualitative aspects of CSR practices by using five point Likert scales.

Change in voluntary disclosure and mandatory disclosure of qualitative aspects of CSR practices before and after the Companies Act 2013			
W-value	0	*Z-value*	-3.823
Mean Difference	-3.21	*Mean (W)*	95
Sum of Positive Ranks	0	*Standard Deviation (W)*	24.85
Sum of Negative Ranks	190	*Sample Size*	19

Test Statistics

	Change in mandatory disclosure and voluntary disclosure of qualitative aspects of CSR practices before and after the Companies Act 2013
Z	-3.823
Asymp. Sig. (2-tailed)	0.00014

The *W*-value is 0. The distribution is approximately normal. Therefore, the Z-value should be used. The Z-value is -3.823. The *p*-value is 0.0001 The result is significant at $p \leq 0.05$.

The W value is 0. The critical value of W for N=19 at $p \leq 0.05$ is 46. Therefore, the result is significant at $p \leq 0.05$.

b) Statistical Test: Mann-Whitney *U* Test

Respondents were asked about mandatory disclosure and voluntary disclosure of qualitative aspects of CSR practices using five point Likert scales (5-Strongly Agree, 4- Agree, 3- Neutral, 2-Disagree, 1-Strongly Disagree).

Level of significance $\alpha = 0.05$

Particulars	**Before**	**After**	**Combined**
Sum of Ranks	190	551	741
Mean of Ranks	10	29	19.5
Expected Sum of Ranks	370.5	370.5	
Expected Mean of Ranks	19.5	19.5	
U-value	361	0	
Expected U-value	180.5	180.5	
SD			34.2527

Test Statistics

	Mandatory disclosure and voluntary disclosure of qualitative aspects of CSR practices before and after the Companies Act 2013
U-value	0
Z- Score	-5.25505
Asymp. Sig. (2-tailed)	.00001

The *U*-value is 0. The critical value of *U* at p <05 is 113. Therefore, the result is significant at p <.05.

The Z-score is -5.25505. The p-value is < .00001. The result is significant at $p < .05$.

c) Statistical Test: Friedman Test

Level of significance $\alpha = 0.05$

$X^2_r = (12/nk(k+1)*(\sum R^2)-3n(k+1)$

$X^2_r = 0.105*1805-171$

$X^2_r = 19$

The X^2_r statistic is 19 (1, N=19)

The p-value is < .00001.

The result is significant at $p < .05$.

The statistical evaluation of all the three tests reveals the fact that the p-value according to Wilcoxon Signed Rank Test is 0, p-value as per Mann-Whitney *U* Test is .00001 while Friedman Test has calculated p-value as .00001. All these p-values are less than the level of significance (α=0.05) thus, the null hypothesis is rejected. Hence, it is concluded that there is significant difference in voluntary disclosure and mandatory disclosure of qualitative aspects of CSR practices before and after implementing New Companies Act 2013.

Conclusion

From the above discussions, it is likely to conclude that the Companies Act 2013 has made mandatory to every eligible company to spend at least 2% average net profit for the last three years on CSR activities. It is also made mandatory to disclose all qualitative aspects mentioned above in the annual reports of the company every year which was voluntary before implementation of the Companies Act 2013. The study revealed the fact that almost all companies have accepted that there is an extreme transformation in the disclosure of qualitative aspects of CSR practices in reports after the Companies Act 2013. However, some of the companies do not disclose the required details in the format prescribed by the Act. However, the Act has pushed the companies to put the information in the report and website of the company which is a good indication of the disclosures.

AGRO TOURISM- A NEW WAY OF TOURISM

Miss. Borate Jyotsna P.
Head, Dept. of Commerce, Mudhoji College, Phaltan
E-mail- *jyotsna.borate7@gmail.com*

Abstract

Indian agriculture is passing through difficult times due to two consecutive droughts situations in several parts of the country, thereby resulting into wide spread distress among farmers. The rural areas in these parts are facing food and livelihood crisis, more specifically the shortage of fodder and drinking water. Since agriculture is the main occupation of the people in India there is a need to think of allied income generation strategies with agriculture, one of which is agri-tourism. Agro-tourism is an innovative agricultural activity related to tourism and agriculture both. Agri Tourism is to experience the real rural life, taste the local genuine food and get familiar with the various farming tasks. Even government is taking initiative to provide income generation sources to rural people. Tourism is growing sector in India and changing life style of urban people making them to go for relaxed rural areas and enjoy a peaceful and near to nature life. This paper attempts to study the concept of agro tourism, problems and prospects of agro tourism.

Key words – *Agri- tourism, Rural development, employment generation.*

Introduction:

Agriculture is the main sector of Indian Economy. Around 65 percent of the population is directly or indirectly dependent of agriculture. Agro tourism will give the additional income generating source for the rural people. It gives an opportunity to experience the real enchanting and authentic contact with real life. Promotion of Agri tourism needs conceptual convergence with rural tourism, health tourism and adventure tourism. Globally tourism is widely recognized as a vital industry, particularly in the developing world. Worldwide tourism is ranked second highest in terms of income generation, next to the oil industry. In most parts of the world, tourism is promoted today primarily for earning of foreign exchange. Tourism is a labour intensive industry. The provision of tourist's services generates employment opportunities. It is highly labour oriented industry. It increases the employment level by creating new employment in the sector and by stimulating the creation of others, such as construction, transport etc. It indirectly increases productivity by other sectors, particularly of the agriculture sector as it draws manpower resulting from hidden employment or seasonal under employment. Tourism is widely considered to be a high user of labour and its impact on job creation can be considered in areas with limited potential for other economic activities.

Objectives

1. To understand the importance of Agro tourism
2. To understand the problems of agro tourism.
3. To study the prospects of agro tourism in India.

Research Methodology

The present paper is based on majorly secondary data derived from various literature sources, which includes various research papers, news articles, and websites.

Concept of Agri Tourism

Agri tourism can be defined as a range of activities, services and amenities provided by farmers and rural people to attract tourist to their area in order to generate extra income for their business. It can also be defined as travel, which combines agricultural or rural settings with products of agricultural operations all within a tourism experience. The product can be 'experience itself'.

It includes ranch resorts, leisure fishing, country lodging, country restaurants, makers' local handicrafts, home industries etc. The agro-tourism concept was formally launched on 1st May 2004. The concept of Agro-tourism consists involvement of private sector, the farmers / Agri-tourism service providers based on public private partnership. Agri-tourism service providers act as both hosts and guides to the visiting tourist. Agro-tourism centers have clean, hygienic environment with modern facilities for comfort of visitors. Agri tourism is to experience the real rural life, taste the local genuine food and get familiar with the various farming tasks.

Scope of Agri Tourism in India

India has diverse culture and geography which provide ample and unlimited scope for the growth of this business. India has diverse agro-climatic conditions, diverse crops, people, culture, deserts, mountains, coastal systems and islands which provide scope for promotion of all seasons, multi-location tourism products. Around 75% of the population is directly or indirectly dependent on agriculture and almost 26% of India's GDP comes from agriculture. Additional income generating activities would certainly increase contribution of agriculture in the national GDP. Tourism is a good instrument of employment generation, poverty aviliation and sustainable human development. Today the urban people's world is restricted in the closed door flats, offices, clubs, television, video games, spicy fast food, computer, and internet and so on. They can see nature only on television or screen of the computers. Moreover, some people living in the cities do not have relatives in villages and they never visit or stay in villages. These peoples want enjoy rural life but there is problem of such type of facilities. Agri tourism is leisurely activities in the rural areas that help a person understand and appreciate the land and the people who live on it. In recent years, travel has become much more than just ticking through the mandatory list of local museums and sites. Travelers want to slow down when they discover a new destination. They want to meet locals in their natural environments and become more involved with the land they are visiting. Hence, it is opportunity to the farmers for development of the agro-tourism centers and serves them and creates additional income sources. Agro tourism is one such form of tourism which has recently emerged in Maharashtra. It is a field with potential to develop. Certainly as a newly developing field it has its own share of challenges and management issues to face. The issues like guest host relationship, sustainability, economic feasibility are important for any new tourism development at a destination. It is more so in the case of agro tourism as it has a direct impact on the host culture and rural community as a whole. However following factors are increasing the scope for Agro tourism

1. Desire for escape from the monoculture of city living.
2. Increasing Interest in Outdoor Recreation, Eco-Tourism and Special Interest Tourism.
3. Rural locations are ideal for relaxation and rejuvenation.
4. Increased Interest in alternative and off-beat attractions.
5. Curiosity for rural India and its culture, customs and heritages.
6. A move towards Short-Break Holidays.

Contents in Agro Tourism

Following things are included in agro tourism

1. **Agriculture:-** Agriculture activities on farm is a major attraction for tourists. Natural beauty in rainy season, winter season and summer are totally different. Tourist can be attracted towards this by showing the beauty of farm in each season. There is a need of proper guide to show the beauty of the farms.
2. **Interest in natural environment -** Busy urban population is leaning towards nature. Because, natural environment is always away from busy life. Birds, animals, crops, mountains, water bodies, villages provide totally different atmosphere to urban population in which they can forget their busy

urban life. They want to know what real rural life is. Agricultural environment around farmers and the entire production process could create curiosity among urban taught. Places of agricultural importance like highest crop yielding farm, highest animal yielding farm, processing units, farms where innovations tried add attraction to the tourists. Agricultural products like farm gate fresh market, processed foods, organic food could lure the urban tourists.

3. **Rural recreation** - Villages can provide variety of recreation to urbanites through festivals and handicrafts. Villagers (farmers) lifestyle, dress, languages, culture / traditions which always add value to the entertainment. As result of this agri – atmosphere in the villages, there is scope to develop Agri – Tourism products like agri-shopping, culinary tourism, pick and own your tree / plot, bed and breakfast, pick and pay, bullock cart riding, camel riding, boating, fishing, herbal walk, rural games and health (ayurvedic) tourism.
4. **Skilled Labour** - There is need of skilled person who will make the atmosphere friendlier and without any formality where tourists feel the pure nature and beauty of rural atmosphere. They don't want professionalism but they want the informal way of life. The persons who can understand the needs of tourist are the most important need of agro tourism. Training staff or family members for reception and hospitality is needed. Understanding about the customers wants and their expectations and serve is most important.

Challenges of Agro Tourism

1. **Transport:-** To reach to rural area there is a need of proper of infrastructure facilities like transport and proper roads. Government should play important role in creating these facilities namely roads, transport and telecommunication to rural areas especially where Agri tourism units are established on priority basis. These efforts could be effective with private participation in partnership mode.
2. **Accommodation**:- Safe and clean accommodation is must in Agri-tourism. Urban and Foreign tourists look for these minimum facilities. Proper drinking water, sufficient electricity, good telecommunication, safety and security, etc. are the few basic needs of a tourist while he or she is visiting any place individually or in a group.
3. **Communication Skills**:- The difference in languages and lack of basic education are the two basic obstacles for the Agri tourism. Much of the success of agro tourism depends on the ability to give warm welcome to the guest, to understand the clients' demand and to provide right services at right time.
4. **Lack of Financial Support:-** Most of the agri tourism marketers come from the poor family background and not every time they are financially supported by the local banks or local Government bodies through loan facilities. Therefore, though these marketers have unique business ideas, most of the time because of insufficient fund, inadequate technical knowledge and skill they fail to startup businesses as per their desire.
5. **Lack of Trained Human Resource:-** The success of agri tourism depends on the quality of hospitality service from welcome to see off the tourist as we all know the first impression is the last impression. But in rural areas, lack of trained human resource is a common issue that affects directly the tourism and hospitality industry badly. Moreover, the trained people from urban areas normally are not interested in going to rural areas to work due to lack of basic infrastructure facilities.

6. Conclusion

Agri-tourism is a supportive system to the agricultural activities in India. It is an innovative practice which can be utilized by the famer and farm owners to harvest this opportunity, through a diversified approach. There are so many problems like unavailability of skilled labour, ignorance of famers due to lack of knowledge, lack of training opportunities to learn about agri tourism and absence of policies and infrastructure support that can support agri tourism projects etc. But it is an important instrument for sustainable human resource development. Poverty alleviation, employment creation, environmental regeneration, basic infrastructure development of remote areas, advancement and empowerment of host community especially women and other disadvantaged groups in the country are a few of many positive impacts of agri Tourism. This will also help rural area in development of basic infrastructure.

Abstract

The internet has the potential to transform the entire economics and structure of banking and personal finance – so much so that traditional banking may soon become unviable from the standpoints of cost , time and convenience .And these changes says R.G.Bhatnagar , come not so much from the customers as from the banks themselves .It is hoped that with the advances in technology ,the regulators would be able to ensure the safety of the internet for financial transactions the growth of e-mail which is almost instantaneous with no limitation of timing or location and enables one to stay globally connected ,is also making a qualitative difference to retail banking .It is estimated that the data traffic via the internet would soon outstrip voice traffic.

A large number of service providers offer 'anywhere, anytime, e-mail banks' offering service via e-mail will have a head start over their competitors .Advance in telecommunication are also having an influence on the ways banking would be conducted in future a new system to make conference calls more flexible and cost effectively have been developed by a British telecommunications company .The system called 'Meeting Point Financial' allows banking and financial institutions to set up a conference call with branches anywhere in the world in a matter of minutes ,without the expense or inconvenience of booking through an external bureau .These developments are sure to revolutionize interbank communication ,flow of timely information and policy guidelines from the top and flow of feedback from the grassroots .

Introduction

The internet has the potential to transform the entire economics and structure of banking and personal finance – so much so that traditional banking may soon become unviable from the standpoints of cost , time and convenience and these changes says R.G.Bhatnagar , come not so much from the customers as from the banks themselves .It is hoped that with the advances in technology ,the regulators would be able to ensure the safety of the internet for financial transactions the growth of e-mail which is almost instantaneous with no limitation of timing or location and enables one to stay globally connected ,is also making a qualitative difference to retail banking .It is estimated that the data traffic via the internet would soon outstrip voice traffic. A large number of service providers offer 'anywhere, anytime, e-mail banks' offering service via e-mail will have a head start over their competitors .Advance in telecommunication are also having an influence on the ways banking would be conducted in future a new system to make conference calls more flexible and cost effectively have been developed by a British telecommunications company .The system called 'Meeting Point Financial' allows banking and financial institutions to set up a conference call with branches anywhere in the world in a matter of minutes ,without the expense or inconvenience of booking through an external bureau .These developments are sure to revolutionize interbank communication ,flow of timely information and policy guidelines from the top and flow of feedback from the grassroots

About Internet

The origins of internet can well be traced back to the late sixties to the well known ARPnet Project. Even though the basic concept has not been new, in Indian context, internet has come in to limelight only in the last few years. In India, People from different walks of life are now using Internet. In the last two years, there has been a tremendous increase in the interest about Internet in India. The population of Internet subscribers in India is known to be increasing exponentially. The number of internet subscribers in India was estimated to be at 280,000 in May 1999 and there estimated that place in number of Internet subscribers in India to reach around 1.5 million by the end of the year 2000 .On a global level, it is estimated that the number of Internet users across the world would reach 300 million by the year 2001 .Internet,in the nutshell , is a network of computer networks .It connects millions of people across the world through a large number of computer sites .The computer sites that are connected through Internet form an international net that has no geographical boundaries. This international computer network connects a large number of computer sites in education, government, research institutes as well as the banking sectors .Today, Internet is acknowledged to be the information superhighway that influences the lives of millions of the people across the world. The origin of Internet can be traced back to 1969 when the Department of Defence of the United States of America started a project entitled ARPAnet. National Science Foundation's network was one of the early networks that connected different computers. This had five super computer centers. Today, this network is commonly known as Internet. Internet now cuts across geographical and political boundaries. Today billions of business transactions are taking place through Internet.

Top US Universities are collaborating to create inetrnet2 with an intention to develop networking and advance applications for the purpose of research and learning. A more recent trend in Internet access has been the introduction of Wireless Application Protocol (WAP) for the mobile phones to be connected to Internet. The (WAP)is an interface that converts the Hypertext Markup language (HTML) into WAP that a mobile phone can understand. This is the latest in the cutting edge technology that has been very recently introduced in India. ICICI Bank has been the first Indian Bank that has launched mobile banking and m-commerce service using WAP for the first time in the country. According to network solutions, the global leaders in the domain registrations, in their latest dot com index released in May 2000, India appears to be among the top ten Non-US countries in the world having the maximum number of dot com companies. (The Economic Times 3rd May 2000) The countries appearing in the list include UK, Korea, Canada, France, Germany, Japan, China, Spain and Italy and of course the tenth is India.

Internet and World Wide Web (WWW)

In common usage, the terms Internet and World Wide Web (WWW) are used synonymously. Actually, there is difference between the two terms. Internet is a network of computers that enables interconnectivity between different computers and carries the data across the network. World Wide Web is a sub-set of the internet that makes use of HTTP protocol to provide an interlinked collection of documents. In order to clarify the difference between internet and the World Wide Web, we can say that internet can exist without the World Wide Web but the World Wide Web cannot exist without the internet.

anking

The impact of e-commerce is expected to have very significant impact on banking and financial services ,industry ,especially inAsian region .The e-commerce is expected to have a significant impact on the competition in this sector of the economy. It is expected that the net based services will have a major influence on the market share of players in the banking and financial services sector .A number of private banks in India are in the process of making in-roads in e-Banking. ICICI Bank is known to be the first Indian bank to offer Internet Banking in India . ICICI bank has over 10,000 registered Internet accounts. Other private banks like HDFC Bank ,Global Trust Bank ,Times Bank, etc. are some of the private sector banks that are introducing e-Banking solutions .Times Bank has already launched “India link” – a funds remittance service to facilitate money remittances from Bahrain to India. This facility of India link uses special software that has been developed by Times Bank and Works in association with World Exchange Centre of Bahrain. It allows remittances from Bahrain to India by drastically cutting down the processing time. Global Trust Bank is another bank that offers internet banking service. This service includesto depository accounts. HDFC Bank is already offering its customers access through the Internet. Indusind Bank has announced the plans to increase their focus on retail business through Internet and telebanking services. Citybank has e-commerce service that allows customers to make payments for their purchases on the Internet directly from their bank account. Citybank “Suvidha” is associated with service providers as Rediff , Fabmart , Satyam , LG Soft , etc. ICICI’s “I-Payments” - the internet payment Gateway is designed to handle cash transactions of the customers over the net. A number of private banks are in the process of offering “world-class” products and services – not only in banking but also in a range of applications in commerce and finance.

Internet Banking Service

Internet banking services provided by banks in India context can be grouped in two categories. The first category can be named as “Information Access” where in the customer through the Internet can get access to information pertaining to specific operational area. The second category can be named as “Transaction enabled ”that allows customers through Internet the access or ability to initiate and close banking transactions .

The e-Banking facility available in Indian context in the late 99 was confined more to information access and very controlled transaction enabled activities. A customer can register with the bank website to view the account balance, interest accrued, pay bills, transfer money from the bank account to create a deposit , order a demand draft , request for a cheque book , etc. One of the reasons for confined transactional facilities was the absence of cyber laws. The e-Banking facilities available in India are expected to receive favorable push now that the Information technology Bill has passed through the LokhSabha. Contracts that have been signed through usage use of e-mail will also get legal recognition. With the legal provision to use digital signature, the sellers and the bankers will be in a position to verify the identity as well as the credibility of the buyer.

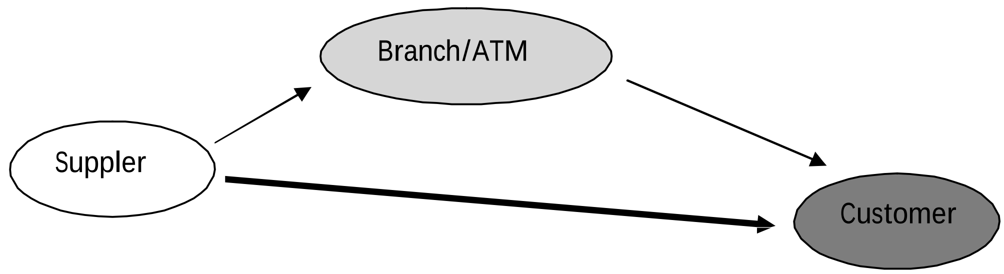
In India context at the beginning of 2000, Reserve Bank of India was yet to permit interbank funds transfer through the Internet. The primary reason for this was the absence of appropriate legislation. Once this is allowed, cash management can become smooth allowing inter bank transactions. When interbank transactions and transactions of corporate involving large sums are concerned , data security attains paramount importance .Encryption methods , fire walls , digital certificates , disaster recovery sites , automatic sign – offs are sum of the tools of the trade that are required infrastructure is also a matter of concern , compounded by the high rate of obsolescence in information technology . In addition to the onetime costs in hardware, software and telecommunication, there are recurring cost , estimated to be somewhere between 10 % to 15 % of the initial investment per year which also need to be addressed . In India, private banks have shown the initiative of embracing the new technology to offer better products and services to the customers. The nationalized banks appear to be slow in catching up e-Banking initiative.

anking Software

A number of software solutions are already available in India, which provide suitable functionality to address the requirements of

Indian banks. e-Banking is considered to have five basic components. They are:-

1) Networking (Internet , Intranet and Extranet)
2) Electronics Data Interchange (EDI)
3) Electronic Fund Transfer
4) Electronic Mail
5) Smart Card



Online banking allows the customer to check their balance or pay a bill at any time of the day or night . The services offered by online banks typically include

1. Online balances and statements giving up-to-the-minute information .The statement can be used to check that any specific debit or credit has gone through ;
2. Credit transfers so that bills can be paid online .Included , is the facility to set up a transaction now for the bill to be paid at the later date ;
3. Maintenance of standing orders and direct debits.

Smile System

The bank has over recent year developed new banking facilities including an Internet advance system. The system, It is claimed , is in advance of that used by any other bank . Smiles banking service includes:

1. A full range of accounts: current , savings , loans and credit cards;
2. Online money transfer to and from any account that provide for electronic funds transfer ;
3. Flexible paying arrangements ;
4. Online payment of bills with the system maintaining a list of accounts to which bills are paid;
5. Online maintenance of standing orders and direct debits;
6. Use of ATM machines in the Links network for cash withdrawals;
7. Conventional cheques;
8. A guarantee of reimbursement should there be a failure in the system or a branch of security;

Conclusion

Banking is a complex product with important security, tax and legal implications an online bank has to be a bit more serious than an online book shops. Banking has over the years been at the forefront of the use of computer technology. All banks are heavily computerized with a terminal at every counter in the branch.

MOVING TO IFRS--FIRST MOVER'S ADVANTAGE

Prin. Dr. V.A. Patil
DRK College of Commerce, Kolhapur

Abstract

IFRS is a set of established accounting standards that is rapidly gaining worldwide acceptance Standards are promulgated by the London-based International Accounting Standards Board (IASB) - IASB includes representatives from major countries including the U.S.IFRS aims at providing a global framework for public companies on how to prepare and present their financial statements. IFRS provides general guidance for the preparation of financial statements, rather than setting rules for industry-specific reporting.

Keywords: *Financial Reporting, IASB*

Introduction

The main objective of IFRS is to have a uniform set-up of accounting language which should be need by all countries of the world and giving for the development of a global capital market. International Financial Reporting Standards (IFRS) are developed by International Accounting Standards Board (IASB), are Standards, Interpretations and the Framework for the Preparation and Presentation of Financial Statements. IASB is a private sector organization based in London which began its operations in 2001. Many of the standards forming part of IFRS are known by the older name of International Accounting Standards (IAS). IAS were issued between 1973 and 2001 by the board of the International Accounting Standards Committee (IASC), the predecessor body of IASB. In April 2001 the IASB adopted all IAS and continued their development, calling the new standards IFRS.

The term IFRS has both a narrow and a broad meaning. Narrowly, IFRS's refers to the new numbered series of pronouncements that the IASB is issuing, as distinct from the IAS's series issued by its predecessor. More broadly, IFRS's refers to the entire body of IASB pronouncements, including standards and interpretations approved by the IASB and IAS's and SIC (Standing Interpretations Committee) interpretations approved by the predecessor IASC.

The framework states that the objective of financial statements is to provide information about the financial position, performance and changes in the financial position of an entity that is useful to a wide range of users in making economic decisions, and to provide the current financial status of the entity to its shareholders and public in general. IFRS is a set of established accounting standards that is rapidly gaining worldwide acceptance Standards are promulgated by the London-based International Accounting Standards Board (IASB) - IASB includes representatives from major countries including the U.S.IFRS aims at providing a global framework for public companies on how to prepare and present their financial statements. IFRS provides general guidance for the preparation of financial statements, rather than setting rules for industry-specific reporting.

Structure of IFRS

IFRS is a set of established accounting standards that is rapidly gaining worldwide acceptance Standards are promulgated by the London-based International Accounting Standards Board (IASB). IASB includes representatives from major countries, including U.S.

IFRS are a "principle based" set of standards in that they establish broad rules as well as dictating specific treatments. IFRS comprise of

- IFRS – standards issued after 2001.
- IAS—standards issued before 2001

- Interpretations originated from the International Financial Reporting Interpretations Committee (IFRIC) – issued after 2001
- Standing Interpretation Committee (SIC)— issued before 2001.

Presently IFRS comprises of mainly 8 IFRS's and 29 IAS's. 17 IFRIC and 11 SIC interpretations.

Following IFRS have been issued

S. N.	Title	Originally issued	Effective
IFRS 1	First time Adoption of IFRS	2003	01/01/2004
IFRS 2	Share-based payments	2004	01/01/2005
IFRS 3	Business combinations	2004	01/04/2004
IFRS 4	Insurance Contracts	2004	01/01/2005
IFRS 5	Non-Current Assets Held for Sale and Discontinued Operations	2004	01/01/2005
IFRS 6	Exploration for Evaluation of Mineral Resources	2004	01/01/2006
IFRS 7	Financial Instruments: Disclosure	2005	01/01/2007
IFRS 8	Operation Segments	2006	01/01/2009
IFRS 9	Financial Instruments	2009	01/01/2015
IFRS 10	Consolidated Financial Statements	2011	01/01/2013
IFRS 11	Joint Agreements	2011	01/01/2013
IFRS 12	Disclosure of Interests in Other Entities	2011	01/01/2013
IFRS 13	Fair value Measurement	2011	01/01/2013

The Timeline

On 1st April 2001, the new IASB took over from the IASC the responsibility for setting International Accounting Standards. Since then the IASB has continued to develop standards calling the new standards IFRS. In 2002, the IASB and the US Financial Accounting Standards Board (FASB) agreed to work towards reducing differences between IFRS and US GAAP. In February 2006 FASB and IASB issued a Memorandum of Understanding including a program of topics on which the two bodies will seek to achieve convergence by 2008. In August 2008, the SEC announced a timetable (RELEASE NOS. 33-8982; 34-58960; File No. S7-27-08) that would allow a limited group of companies, whose industry uses IFRS as the basis of financial reporting more than any other set of standards, to report under IFRS as soon as 2010 and require it of all large accelerated companies by 2014. In January, 2009, the SEC announced that a mandatory two year dual-reporting period would begin for most companies in 2012, with IFRS only required by 2014. Proposed start date for accelerated filers to use IFRS is 2015 and for non-accelerated filers is 2016.

Globalisation, IFRS and India

IFRS are used in many parts of the world. More than 100 countries around the world currently require or permit IFRS reporting. Argentina, Brazil, Canada and India have announced mandated use. By 2015, it is expected that, all major countries will have adopted IFRS to some extent. China and Japan will be substantially converged to IFRS and U.S. public companies will begin to be required to use IFRS. A number of multinational companies are establishing their business in various countries with emerging economies and vice versa. The entities in emerging economies are increasingly accessing the global markets to fulfill their capital needs by getting their securities listed on the stock exchanges outside their country. Global markets would work better once we have a single set of high quality global accounting standards. The IFRS are an outcome of certain outrages. They are a principle based framework and not rule based. IFRSs have been proposed by the IASB on topics for which there was no clear cut IAS.

The paradigm shift in the economic environment in India during last few years has led to increasing attention being devoted to accounting standards as a means towards ensuring potent and transparent financial reporting by any corporate. The ICAI, as the accounting standard – setting body in the country has always made efforts to formulate high quality Accounting Standards. Since 2001 the IASB was expected to create a set of principles, guidelines, financial reporting standards that may be used globally throughout the world's capital markets. The Accounting Standards issued by the ICAI depart from the corresponding IFRS in order to ensure consistency with the legal, regulatory and economic environments of India. Based on the recommendation of IFRC Task force, the council of ICAI, at 2691 meeting, decided to adopt a '4big bang' approach and fully converge with the IFRS issued by IASB from accounting periods commencing on or after 1st April,2011.

Challenges of Switching to IFRS

Switching to IFRS is a strategic move for all companies adopting IFRS since it requires an effective management of stakeholder expectations, including ample budgeting and managing investor relations. This accounting exercise requires monetary sponsorship and strong support from senior management in terms of resource sourcing and commitment for the enterprise wide accounting revamp. Companies must unlearn many of their current finance knowledge and relearn new IFRS standards when adopting IFRS. They need a finance function that knows to expect an increased use of judgment in IFRS reporting. Companies will likely have to hire finance consultants and auditors who have the requisite IFRS reporting knowledge and experience, presumable within the same industry group. As the convergence process involves concerted efforts of legal and regulatory authorities concerned, recommendations to various authorities have to be considered and closed by the respective regulators. As there is a big challenge of changes required in Companies Act, 1956, SEBI guidelines, IRDA rules and regulations and in Banking Regulation Act 1949. It is unlikely that all regulatory authorities will accept the primacy of IFRS. There are bound to be certain exceptions and limitations and in those areas, there will be a legal override.

In order to be effective, convergence of ACs will require several down streams developments like guidance, consultative services, surveillance approach. In India no such adjustments are on the move.

Moving to IFRS – First Mover's Advantage

The eventual adoption of IFRS by all countries appears inevitable. Early adoption of IFRS will give an opportunity to shape it. If we are one of the last to join the bandwagon, we will not have any real opportunity to influence and shape the setting of international accounting standards. Since this window of opportunity will pass fairly soon, we need the Indian industry, government, and the accounting profession to move quickly towards adopting IFRS. Our road-map for the adoption process has not been quite comprehensive and effective in action. No doubts, the programe have been launched and software's released by the apex professional body but as the leading trainers in accounting have expressed their strong doubts on their sufficiency or success. There is still a long way to go. It would be in the interest of India, if all the regulatory authorities concerned can work in conjunction with the ICAI, SEBI and Ministry of finance to bring about the required changes to support the implementation of IFRS in India- in its true spirit. A joint strategy and movement of all these including academic agencies was badly required which is absent there.

Steps To IFRS Frozen On The Horizon—Indian Context

India was unable to achieve its standard goal of converging with the IFRS from April1, 2011, despite the efforts by various stakeholders over the last four years. Even though IFRS-converged accounting standards (Ind AS) were issued in February 2011, the final implementation date is yet to be notified. Though the stated reason for postponement was taxation, several other regulatory issued need t be addressed before implementation. These include issues relating to amendments to the Companies Act, impact on calculation of distributable reserves, determination of the approach to be followed by regulated entities such as banks, insurance and power distribution companies, besides the approach for quarterly reporting by listed companies. One of the implications of the delay in the implementation date may be around the financial reporting requirements for Indian companies that have listed global depository receipts on regulated European stock exchanges. These companies were provided a transition relief from furnishing IFRs financial statements based on the understanding that India would fully converge with IFRS from 2011. It is likely that these stock exchanges may carefully assess the current status of convergence in India to determine whether and exemption should be given beyond 2011. A withdrawal of this exemption would require affected Indian companies to prepare two sets of financial statements.

Indian Corporate is not yet ready to meet the Apri1, 2013 deadline for the adoption of the Indian version of IFRS. There are several parts of the International Standards that Indian Inc is not willing to accept. Some companies are already providing financial information prepared in accordance with accounting principles generally accepted in the US (US GAAP) and IFRS.There is resistance by a sizable some section of India Inc to adopting the standards. About 70% companies believe that it is illogical and not good for the corporate sector. Many companies are not inclined because many of the provisions are stringent in India. Engineering and consumer goods companies and even those in the financial sector are not inclined to move to the new standards. There is no motivation, no incentive. The Government has not given clear directives to the corporate sector.

Currently, the path of IFRS convergence in India is unclear. Most companies have delayed preparatory efforts till there is further clarity. Indian regulators need to consider the above factors and communicate a firm roadmap and approach for implementation. This firm roadmap can also be used to discuss a renewal of exemption from IFRS for Indian companies with securities listed on regulated European stock exchanges.

Conclusion

IFRS is a set of financial reporting standards issued by International Accounting Standards Board. IFRS is a trade mark of International Accounting Standards Committed Foundations. It refers to IFRS which are applied while preparing financial statements. It has designed as a common global language for business affairs so that company accounts are understandable and comparable across international boundaries. They are a consequence of growing international shareholding and trade and are particularlyimportant for companies that have dealings in several countries, The rules to be followed by accountants to maintain books of accounts which comparable, understandable, reliable and relevant as per the users internal or external. Major changes have taken place recently in financial reporting. There have been various trends (such as the emergence of narrative reporting, including "management commentary") but the most important change is convergence around IFRS. At present, the ASB of ICAI formulates accounting standards based on IFRS, however, these standards remain sensitive to local conditions, including the legal and economic environment. Now a day, it is necessary to adopt IFRS for the gain to each and every country of the world. A quick action plan and roadmap is need of the hour. Still, India's road to IFRS is long & could be rocky.

RURAL WOMEN ENTREPRENEURSHIP – PROBLEMS AND PROSPECTS

Mrs. Asha B. Patil
Associate Professor, Head, Dept. of Commerce,
E-Mail– *ashapatil3546@gmail.com*

Abstract

Rural women play an important role no create employment in rural economy total population in the world. But their representation in the gainful employment is comparatively low. According to International Labour Organization Report, 'Women are 50% of the world population do own less than one present of the world property. All because of an accident of birth" In most countries, average earnings of women are lower than those of men. In several developing countries marriage is the only cores for most women have confined their activities to selected professions such as education, nursing, medicine and office work, very few women enter professions like inducting, engineering trade etc.'

Keywords: *Rural Women, Entrepreneurship*

Introduction :

Entrepreneurship plays very vital role in economic development of the country. Entrepreneurship in the state of dragon of unemployment in the country it given mole importance and the stress and emphasis & now more upon women entrepreneurs on their contribution, participation and parentage & very low. Entre premiership amongst women in India & relatively a recent phenomenon In the words & Pandit Jawabalal Nehru " On order to awakes the people it & Hire women who have to be awakened. Once she is on move the family moves, the village moves and the nation moves"

India is secular country. Most of the people like in rural area the problem of a women entrapment is that she is woman in male derogated country. The participation of women in the economic life of a country is necessary for national development. The growth of women entrepreneurship has become socio-economic significance in a country like India.

1) Entrepreneurship –

The word entrepreneur is derived from the French verb " entreprendre" and its meaning is " to undertake" It was applied to leaders of military expeditions in the early 16th century. Around 1790 A.(Anno Domini- in the year) it was used in the contact of other types of adventures like architects and contractors of public works.

The oxford English Dictionary in 1887 states that entrepreneur Simply is the director or manages of a public musical institution. On who puts up entertainments especially musical performance" A further excision has appeared in it in 1933 and the word entrepreneur had a place in business and would means "one who undertakes an enterprise especially a contractor acting as intermediary between capital and labour" In this way undertaking of an enterprise is regarded as entrepreneurship and one who undertakes it one who co-ordinates capital and labour for the purpose of production is on entrepreneur.

The term entrepreneur is defined in different ways.

i) Cotillion defines " Entrepreneur is the agent who buys means of production of certain price in order or combine them into a product that he is going to sell at prices that are uncertain at the moment at which he commits himself to his costs"

In this definition cantillon emphasized the function of risk taking and uncertainty bearing. The entrepreneur is designated as deals who purchases the means of production for combining them into marketable products.

ii) Joseph A Schumpeter Says

"Entrepreneur as an individual who carries out new combines of means of production by which there accurse disequilibrium"

According to Schumpeter entrepreneur is basically an innovator and innovator is one who introduces new combinations. Innovations may occur in the following form.

1) Introduction of new product which consumers are not yet familiar or of a new quality of a product.
2) The introduction of a new method of production that one not yet tested by experience in the branch of manufacture concerned which need by no means be founded upon a discovery scientifically new and can also exist in a new way of handling a commodity commercially.
3) The opening of new market that is a market into which the particular branch of manufacture of the country in question has not previously entered whether or not thus market has existed before.
4) The conquest of a new source of supply of raw materials or half manufactured goods irrespective of whiffed this source already exists or whether it has first to be created.
5) The carrying out of new organization of any industry like the creation of a monopoly position or the breaking up of a monopoly position.

3) Peter F Ducker observes “Entrepreneurs innovate. Innovation is the specific instrument of entrepreneurship. It is the act that endow resources with a new capacity of create wealth. Innovation indeed creates a resource"

According to Ducker Successful entre pruners whatever their individual motivation be it money, power, curiosity, of the desire for fame and recognition are to create value and to make a contribution. Still successful entrap renews aim high. They are not content simply to improve an alternative what already exists or to modify it they try to create new and defined values and new and different satisfaction to convert a material into a resource or to combine existing resources in a new and more productive configuration. And it is change that always provides opportunity for new and different Products.

Rural Women Entrepreneurship

Introduction:-

Rural women play an important role no create employment in rural economy total population in the world. But their representation in the gainful employment is comparatively low. According to International labeur organization report

" Women are 50% of the world population do own less than one present of the world property. All because of an accident of birth" In most countries, average earnings of women are lower than those of men. In several developing countries marriage is the only cores for most women women have confined their activities to selected professions such as education, nursing, medicine and office work, very few women enter professions like inducting, engineering trade etc.

For countries, women have been eviction of social prejudices and discrimination Even today parents prefers male child to female lakhs of fetus are destroyed after pregnancy tests reveal it s female. Women are generally pursued to be weak, passive dependent and people oriented. On the other hand, men are considered strong aggressive, independent and things counted. Assumptions become reality when society presumes males & females for performance in presumed roles. As a result, men and women enter organization with different skill sets. Women are taught to depend upon other, to limit their ambitions and to avoid exposure and risk such orientations and role prescriptions in habit development of self confidence, innovativeness, achievement motivation and risk taking ability which are essential for and entrepreneurial career. In Hindu Scriptures, women has been described as the embodiment of shakti (Durga)

But in real life she is treated as abla (Weak and dependent) women in traditional Societies are still confined to the four walls of home children, household affairs and family ritual Very new get appertaining to come out of the four walls & enter economic activities. In a male dominated Society, women are not treated as equal pertness,

The concept of women Entrepreneurship:

Women entrepreneurs may be defined as the woman or a group of women who initiate organize and operate a business enterprise. Any woman or group of women which innovates, initiates or adapts an economic activity may be called women entrepreneurship.

As per government of India a woman entrepreneur is defined as an enterprise owned and controlled by women and having a minimum financial interest of 51% of the capital and giving of least 51% of the employment generated in the enterprise to women" women entrepreneurs are opposing the condition of employing move than50% women workers they point out they point out that this condition is discriminatory. Enterprises set up by women should be provided with incentive and support on the basis of their ownership and management character tic and not liked with employment of women.

Women enterprises can make easily undertake three types of industrial enterprises

1) Operate purely as sub-contacted an raw materials provided by customer.
2) Manufacture an item to the long as short them order of another enterprise usually a large scale unit.
3) Manufacture the item for direct sale in market.

Rural women Entrepreneurship:-

The phenomenon of women entrepreneurship is largely confined to metropolitan cities and big towns in India. Most of the women entrepreneurs operate small scale units however , women entrepreneurs are friend in rural areas also A rural women entrepreneurs is a woman or group of women who undertake to organize and run an enterprise in a rural area the supply of rural women entrepreneurs may be classified into the following categories.

1) Women who take to entrepreneurship because of dire economic needs.
2) Women who rake to entrepreneurship because they had the family back-ground or tradition in same skill or trade, hence they would like to have extra money for themselves and their families.
3) Women who take it up because they have certain personality characteristics such as need for achievement, need for power and influence etc.
4) Women who take it up as a leisure time activity and.
5) On official advice and guidance.

Women entrepreneurs face special problems and constraints. These are illiteracy, lack of vital information, fear to take risk, lack of entrepreneurs and training, feeling or insecurity etc. In addition these are structural constraints, in the form of inequality, limited purchasing power, condemnation by local elite, etc. They have also to face competition from the urban entrepreneurs who make more attractive and cheaper products due to modern technology and commercial production.

In order to assist and develop rural women entrepreneurship, women at grass rood level should be involved through hire women's organizations. Such organizations can instrumental in identifying women for income generating activities. The small Industries service institute and voluntary organizations should organize special programmes for prospective women entrepreneurs in villages. Under the Integrated Rural Development Programme (IRDP) Special sub-schemes can be under undertaken for development of women entrepreneurs in rural areas.

There exists a conferral climate countries which stand at the should of induct realization. These counties are placing great stress on the development of small scale and cottage industries. In these countries capital is Scare &

investors are continues, markets are very limited because of low purchasing pourer and the entrepreneurs are inexperienced. These are the round reasons for the promotion of self – employment.

In order to understood the background which produces the best women entrepreneurs and the type of action accentuating their emergence two hypo-theses may examined. First women entrepreneurs are product by the environmental and the direct action and the pant of government and or other agene secondly women entrepreneurs can best be developed out of the women folk with and aptitude for an experience in entrepreneurship. These is ample evidence to show that the government to promote entrepreneurship either by training on by granting beans to women without aptitude have failed miserably while examining the factors that have been active in molding entrepreneurship it is therefore necessary to look into the two aspects of the issue one is personal profile of women entrepreneurs and their economic background and second is the extent of contact at are higher social & government levels through her husband and other close relations , entreat or technical guidance and financial support received revived from government and other agencies.

Women adopt entrepreneurial career due to pull and push factors, In the former case they take it as a challenge and an adventure with an urge to something new and to take up an independent occupation. In the latter category, women establish business enterprises to overcome financial problems of self and family

Growth of women Entrepreneurship :-

In recent years women have made their mark in different walks of life and are competing successfully with men despite the social, psychological and economic barriers. This has been possible due to education, political awakening, urabanisation legal safeguards social reforms etc. some of the women have distinguished hire selves in many uncover tonal field as prime ministers, ambassadors, governors space scientists, pilots, vice-chancellors, administrators and entrepreneurs.

In business the entry of women is relatively new phenomenon. On account of the breakup of the Joint family system and the need for additional income to imagination lining standards in the face of inflation women began to enter the competitive world of business a women may stand her own business due to several reasons she may not be able to work out of her house some women may start their own businesses as tyke are stagnating near the top of male owned firms.

In, India, women entrepreneurs constitute a negligible probation of the total entrepreneurs attitudinal constraints, social traditions and transship system inhibit he emergence of women entrepreneurs. The typical women enterprises are the enters ion of kitchen activities i.e. 3p;s Viz pickles powder (massala) and pepped is the rational cottage industries of basket making etc. In India women have contributed mainly in household industries due to the less tess technical knowhow required and little competition from men in these industries with the spread of education and the growing awakens among women, women entrepreneurs have entered into engineering, electronics, energy and many other industries. Although the number of such ruts is small, women are putting up units to manufacture solar cookers, T.V. capacitors electronic ancillaries and small foundries agencies various government voluntary bodies, like mahila manadls have accelerated the growth of women entrepreneurs in the coronary. Over the years, women have become mane achievement alienated, career minded and economically independent They want to under their sphere of work and enjoy The range of entrepreneurship is playing a pre-dominant role in Indian railways communication air transport, motor transport, shipping transport , coal and pourer production petroleum, defense banking, insurance, icon mineral, heavy machine building plant equipments, fertilizes drug product chemicals etc.

Problems /obstacles of women entrepreneurs:-

The main problems faced by the women entrepreneurs may be.

1) shortage of finance :-

Women entrepreneurs always suffer from inadequate financial recourses & working capital. They are lacking access to external funds due to absence of tangible security and cubit in the market. Women do not generally have puppetry on their names Owing to the lack of confidence in women's obi city, male members in the family do not like to risk their capital in verdures run by women. The complicated procedure of bank lones the inordinate-delay from venturing women entrepreneurs also face the problem of obtaining working capital for financial day-to-day operations of their enterprises. Bank discourage women borrowers believing that they will leave their business & become housewives again women entrepreneurs rely often on personal saving and loans from family friends most of the women enterprises ail due to lack of financing.

2) Inefficient Arrangements for marketing amd Sale :-

For marketing their podcast, women entrepreneurs are after at the mercy of the middlemen who pocket the chunk of profit although the middlemen exploit the women entrepreneurs, the elimination of middlemen is difficult because it involves a lot of running about further, women entrepreneurs find is difficult because is involves a lot of running about. Women entrepreneurs find is difficult to capture the market and make their products popular. This problem is all the mole serious in the case of food production & processing ventures.

3) Shortage of Raw materials :-

Women entrepreneurs find is difficult to procure raw materials and other necessary inputs. The prices of many raw materials are quite high.

4) Stiff Competition:-

Many of the women enterprises have imperfect organizational set up. They have to face severe competition from agenized industries and male entrepreneurs.

5) High cost of Production:-

Another problem which undermines the efficient & restricts the development of women enterprises is the high cost of production government assistance in the from of grants and subsidies to some intent enables them to tide over this difficulty. However, to ensure their ultimate survival, it is necessary to increase efficiency expand productive capacity and thereby reduce the cost.

6) Low Mobility:-

one of the biggest handicaps for women entrepreneurs is mobility or travelling from place to place women on their own find it difficult to get accommodation in smaller towns. A single woman asking for a room is still entrepreneurs have to make a fine balance between business and bone. Their success in this regard also depends upon supporting husband & family with the support and approval of husband her female entrepreneurs cannot succeed. There arises a role conflict in many women entrepreneurs such conflict prevents them room taking prompt decisions in business. Despite modernization, tradition and family responsibilities slow down the movement of women Occupational backgrounds of families and education level of husband have a direct impact on the development of women entrepreneurship. The development of kindergartens, day nurseries and crèches and family planning have to some extent helped women entrepreneurs to carry on business without affecting the social pursing of their husbands.

7 Social Attitudes:-

Despite constitutional equality there is discriminating against capacity. In a tradition bound society, women suffer from male reservations about a women role and equality. In rural areas, women face resistance not only from male but also from elderly females who have accepted inequality. The overbearing presence of elders restrains young girls from venturing out Rural women have the potential but they are not properly trained. It is believed that the skill imparted to a girl is lost when skill imputed to a girl is lost when she gets married therefore, girls continue to be helper in agriculture & handicrafts and do not become independents entrepreneurs. In a male dominated society women do not get equal treatment and male ego puts barriers in her progress.

8) Low ability to bear Risk :-

Women have comparatively a low ability to bear economic and other risks because they have led a protected life. Sometimes they face discrimination in the selection for entrepreneurial development training. Some of them lack entrepreneurial initiative or specialize training. Inferiority complex, late stat etc. are other problem of women entrepreneurs in India.

10) Lack of Education :-

In India literacy among women is very low due to lack of education majority of women are unaware of technological development marketing knowledge, etc. lack of information & experience creates further problems in the setting up & running of business enterprises .

11) Cast & Religion :-

Though India is a secular country in practice so many castes and religion dominate with one another and it hinders women entrepreneurs .

12) Lack of self confidence :-

Women lack of self confidence & risk bearing capacity .They always feel that they may not be successful and hence hesitate to take risks. Their risk bearing capacity is always less.

13) Psychological Factors :-

Women always feel that she is women and less efficient than man and hesitates to take risks. As she has to play a dual role. If she is employed or engaged in work. She has to strive hard to balance her family life with care and hence feels better to be housewife .

14) Lack of Practical Knowledge :-

Through women may be educated and have qualified knowledge. She lacks practical knowledge and hence hesitate to establish her own venture.

15) Problem of Marketing:-

As generally women entrepreneurs will have small scale business they have to strive hard to sell their products in the modern competitive world. Their Marketing knowledge will be less and lack marketing skills as compare to men.

16) Problem of Marketing:-

Women entrepreneurs have to face the problems of middlemen more as they generally depend more on them. Their margin of profit will be more & hence cause for higher selling price which affects consumers attraction towards women products.

17) Lack of Information:-

Women entrepreneurs lack knowledge of availability of raw materials financial facilities and government help and subsidy and so on. They lack knowledge of advance technology also and hence cannot widen their markets.

18) Low Need for Achievement:-

Need your achievement independence and autonomy are the prerequisites for success in entrepreneurship. But women are proud to bask in the glory of their parents , husband, sons ect. Their preconceived notions about their role in life inhibit achievement and independence. In the absence of the required urge to achieve few women succeed as entrepreneurs .

In addition to the above problems inadequate infrastructure shortage of power and technical know how & other economic and social constraints have related the growth of women entrepreneurship in India.

Women entrepreneurship Prospects

The government of India has been assigning in craning importance to the development of women entrepreneurs : New industrial policy 1991 government of India stressed the need for conducting special entrepreneurs development programmers for women with a view to encourage women to enter industry .

The governments brought out number of schemes aimed at generating employment. They were integrated Rural Development programs, Training of rural youth for self employments and developments of women & children in rural areas ,supply of improved tools kits to rural artisans, Jawahar Rozgar Yojana ,Swarna Jayanti Gram Swachatha Rozgar Yojana ,Swarna Jayanti Gram Swachatha Yojana etc These programs in general were aimed at providing supplying employments opportunities ,imparting skills needed for self employments In order to provide opportunity for women entrepreneurs formatting on self help group for rural unemployed women entrepreneurs. The self Help Group not only provides the members with an opportunity to come out economical activities but also discuss and analyze their social economic situation to arrive at the root cause of their problems and strive to find and implements solutions.

Commercial banks in collaborations with district rural developments agency played a key role in advancing loans to the women groups in improving their economic status. Income generation is an integral part of self help group under development of women & children in rural area .scheme and training provides an opportunity to learn from their own family members. A women entrepreneurs can start an enterprises at a small scale. There are number of women entrepreneurs who have been started small entrepreneurs but later expanded them to large scale units a large scale. A large number of employments can be generated only through marketing many people entrepreneurs who would in tern generate employment opportunity ties not only for themselves but also for others.

Conclusion :-

A successful entrepreneurs must be a person with technical competence initiative, good judgment, intelligence, leadership, qualities, self confidence, energy, attitude, creativeness, fairness, honesty, fatefulness and emotional stability.

The Participation of women in the economical life of a country is necessary for national developments . Now active & equal participation of women is indispensable in fighting against social evils. Women have the potential and will establish & manage entrepreneurs of their own . There are greater opportunities for rural women in the area of competition women cannot remain idle inside the house women have the potentials and will established entrepreneurs of their own. Women entrepreneurs have to play an important role in the development of India. A high determination is to be inducted in the mind and thoughts of rural women enabling them to reap the superlative hidden qualities which certainly will lead to their success in life, livelihood status earnings and social recognition. It is unnecessary to wait for a transition time for motivating rural women to take up entrepreneurship.

AN OVERVIEW OF SOCIAL MARKETING

Dr. B. D. Girigosavi
Head, Dept. of Commerce, The New College, Kolhapur, Maharashtra
E-mail- *balwantgiri09@gmail.com*

Abstract

India is the second largest country in the world by its population, where numerous social problems like environment problem, population problem, illiteracy, lack of health services, social-cultural devastation, shortage of drinking water, water pollution, production of harmful products, corruption, deceives which largely harmful to the society, etc. To overcome these problems social marketing can play an important role. Day by day the social problems are growing. The social respect and awareness is going to end. Hence the business policies should be determined in such a way that it will not harmful to the society and should in due consideration of welfare of society. Hence the concept of social marketing has emerged to protect the social interest. In this backdrop, the present paper highlights and furnishes an insight into the concept, the process, and importance of social marketing.

Key words: *Social Marketing, Process, Importance.*

Introduction:

In last two decades there are many changes have been taken place in the field of marketing. The new concepts in this field are emerged such as On line marketing, Green marketing, and Social marketing. Social marketing is one of the important concepts in the of field marketing. So far as concern social marketing is nothing but transforming consumer's behaviour for the advantage of the society. Social marketing is about the social advantage and flow of advantage where profit may not actual exit or profit is just subsidiary benefit.

It is believed that the concept social marketing have started in 1951-52 when G.B. Wiebe has published a research paper in the edition of Public Opinion Quartely. He finds the challenges of selling social goods as a commodity. Furthermore in 1971formally the concept of 'Social Marketing' firstly used by famous marketing experts Philip Kotler and Jerold Ziltman. They published their article on social marketing in journal of marketing. It was "Social Marketing: An Approach to the planned Social Changes" In this research paper they have focused on the need of functions for change the social behavior. For change the social behavior they used the concept that is the "social Change Campaign." It means in order to make good change the organized efforts are to be undertaking for concepts, thoughts, approaches, methods and behavior from one group to another group. In India, especially in Kerala, AIDS controlling programmes are largely using social marketing and social workers are working for it. Most of the social workers are professionally trained for social marketing. In 1988 Craig lefebvre and June Flora put forwarded the concept of social marketing for Public Health. They explained need of change in mentality and behavior of people for social health reform. Thereafter, the social marketing theory and practice has been implemented in US, Canada, Australia, New Zealand, and the UK during the year 2004 to 2006. In our India Kerala state largely applied social marketing especially for AIDS controlling programme. Social activists are working for it. Most of the social activists are professionally trained for social marketing. Today, the awareness among the masses about the bad effects of environmental loss and the significance of environment protection has increased. The government has been strongly implementing the environment protection rules.

Objectives of the Research Paper:

- To understand the concept of social marketing.
- To study the application of social marketing.
- To highlights the process of social marketing.
- To know the importance of social marketing.

Source of Data:

The present paper is entirely based on secondary source of data which includes books, articles and other relevant sources.

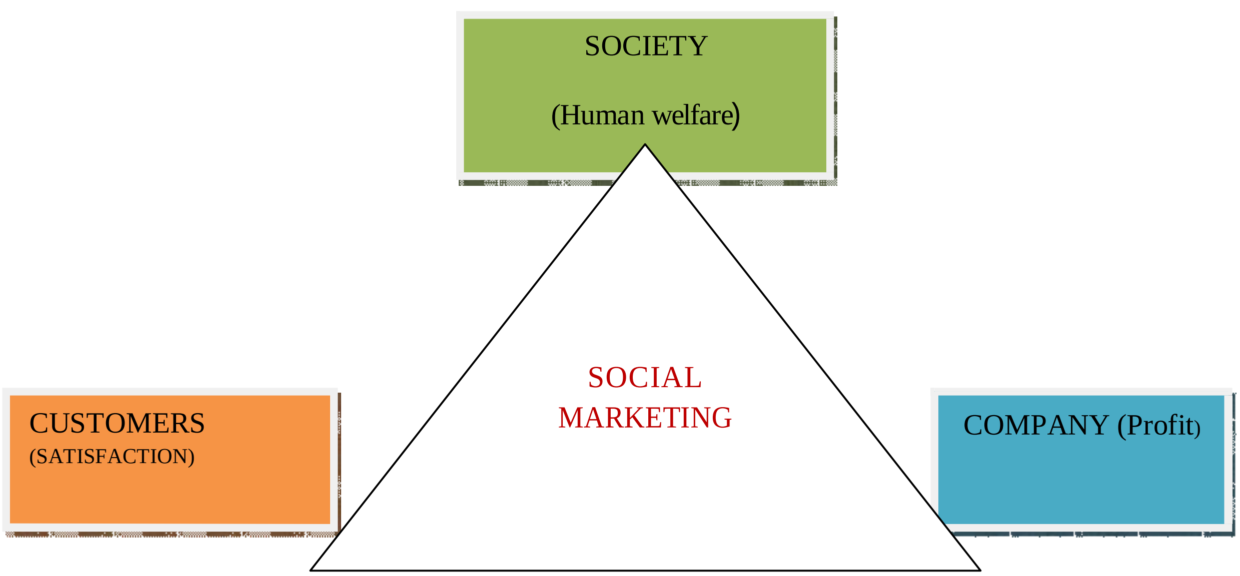
Social Marketing Concept:

Social marketing is about the use of the marketing theory, skills and practices to achieve social change. "Social marketing focuses on application of marketing principles keeping in view the social interest. It is the systematic application of marketing with other concepts and techniques to receive specific behavioral goals for social welfare. In the view of **Philip Kotler** "Social marketing is the design, implementation and control of programmes seeking to increase the acceptability of a social idea or practice in a target group" **W. Smith,** defines as"Social marketing is a process for influencing human behaviour on a large scale, using the marketing principles for the purpose of societal benefit rather than commercial profit."

It is clear from the above definition that social marketing refers to the application of commercial marketing concepts and techniques to the non- commercial ends. For example social marketing may involves campaign against smoking and drunken driving, for the welfare of the society. Thus social marketing is a distinct discipline in the field of marketing.

Social marketing is based on three pillers as Society, Consumer, and Company. Company should make balance among three components in setting their marketing strategies: company profit, the consumer wants, and society's long term interest.

1) **Society (Human welfare):**Company must make sure the products, services, actions, investments, innovations servers the society
2) **Consumers (satisfaction) :** Products and services should be satisfying the consumer's needs
3) **Company(profit) :** Building long-term customer relationship, being socially responsible, and providing satisfactory products are important for profit- making and wealth maximization



From the above diagram, it is clear that the Social Marketing Concept focuses on the human welfare as on the apex of the pyramid before profits and satisfying the wants. It means social marketing concept holds that a company should make good marketing decisions by considering consumer's wants, company's requirements, and society's long-term interests. Social marketing is a different concept which differs from commercial marketing concept in two ways firstly the aim of commercial marketing is to earn profit but in case of social marketing the aim is to serve societies for welfare. The secondly the commercial marketing is carried for marketers benefits while social marketing is undertaken for societal benefits. This is the basic difference between social and commercial marketing. It is therefore social marketing is very important concept of marketing for societies welfare.

.

Marketing principles

1) Product- pollution free, reusable packing, recycling of scarped goods, protecting natural environment, etc.
2) Promotion- advertisement such as save baby girl child, use of seat belt while driving car etc.- exhibitions of solar system for environment protection, –personal selling- counseling of customers such as not use of plastic and thermacoal products
3) Price- little higher price e. g. customers are ready to pay higher price for cloth bags etc.

Applications of Social Marketing:

Especially social marketing is largely applied in health sector. Government departments, Govt. institutions, Social institutions, Religious organizations, Business organizations, Political organizations etc. are engaged in social marketing. The examples of social marketing are;

1Family planning campaign,
2AIDS Awareness programs,
3 pulse polio campaign,
4Toilet campaign, tree plantation, anti-plastic campaign, cancer awareness program,.
5 Anti- Hepatitis-B campaign
6 Anti-pollution campaigns
7 Road Safety campaign
8 Save girl child campaign
9 Anti- drug campaign etc.
10 green Marketing campaign

Process of Social Marketing:

Social marketing helps significantly to solve the social problems and it enriches the life of society. Therefore let us focus on systematic process to be followed by the campaigners for its success. The steps involved in the process are as under.

1 Determination of Social Problem:

Social marketing is conducted for overcoming social problems. Hence first of all determination of specific social problem is the first step. The main aim of social marketing is welfare of society according to it social problem must be determined first. Social marketing relates to behavioral change of society, hence which factors are responsible for social problem are found first then social problem is thoroughly analyzed. For example suppose dengue problem is being increased in specific area of the city then in order to solve this problem Anti Dengue fever campaign is to be conducted in the same area and to find out which factors are responsible for this problem.

2 Market Research of place

It is a second stage of social marketing campaign. Market research of particular place is needed. In social marketing market means society and customers means group of people. Hence in order to get success in social marketing campaign the market and the prospective customers are segmented. And for this purpose the study of people psychology, approach and behaviour is required to be done. In this respect all the concern information need to be collected and analyzed in well manner.

3 Marketing strategy

This is very important step of social marketing. Strategy means policy to overcome the social problem arose. After getting the study of geographical area and human behaviors, accordingly market strategy is undertaken for which changes are required, how that changes can be done, what are the benefits of plan, which are the obstacles in it and how obstacles can be overcome. All these factors are considered for the success of social marketing campaign. This is the strategy for social marketing.

4 Action- plans

After having the marketing strategy action- plans are prepared for execution of strategic plan. Under this step action plan involves which, when and how .the activities are to be conducted. As well as this plan involves new things and new services, personnel training, policies, changes and communication. Time table is also done in order to communicate the prospective customers or the group of people. The budget is also made for expenditure of social marketing campaign.

5 Execution of action plans

Ultimate aim of the social marketing is to overcome social problem for long term interest of the society and to overcome this problem, proper execution of action plan is quite essential. In this step while implementing the action plan advertises and goods are distributed to the proper customers or the group of people. In order to do these works help of proper persons are taken. Development of human resource and training is also carried for proper execution. Implementation of social marketing is conducted by factors of marketing mix as production, price, distribution, and growth. In this way the action plan is executed..

6 Evaluation and feedback

After the execution of action plan the final step of social marketing is evaluation and feedback. Under this step the objective of social marketing is examined. While evaluating it involves comparative study of actual work with planned work , here it is necessary to find out that the actual work is being executed and results are obtained at each stage as per the plan. If results are as per the plan then plan is continued to implement. And in case of deviations, corrective steps are to be taken immediately.

Importance of social marketing

1 Social marketing promotes consumption of socially desirable products

2 it helps to push health consciousness in people and helps them to adopt healthier lifestyle.

3 it is useful to promote green marketing.

4. it is important to eradicate social evils that affect the society and quality of life.

5 social marketing is one of the cheapest ways of marketing

6 the most important advantage of social marketing is that anybody may take advantage of it even from their own home.

Conclusion:

India is ranked second in the world by its population, where social marketing is very essential aspect to make aware the society because there are many social problems like health, education, water pollution, public sanitation, balanced development etc. government takes care to solve the problems and many activities are conducted for social marketing. In some recent year’s social marketing campaigns are organized for example. The slogan of the govt. is “Darwaja band tar Ajar Band” and also by showing different documentary films, cinema like toilet, Padman for social healthiness, social marketing campaigns are conducted. Under the Pani foundation (NGO) social marketing is conducted for conservation of water. Especially in health sector social marketing programs are largely conducted. Govt. departments, non-govt. organizations, social institutions, religious organizations, business organizations, political organizations etc. are actively working in the field of social marketing. Thus in order to remove social problems thoroughly social marketing theory and practices are needed to apply largely.

NEW TRENDS IN TOURISM MARKETING: NEED OF REORIENTATION OF TOURISM POLICY CONSIDERATIONS IN INDIA

Smt. Sampada S. Lavekar
Assistant Professor, Department of Commerce, Rajarshi Chhatrapati Shahu College, Kolhapur
Email- *lavekarsampada@gmail.com*

Abstract

Today, tourism industry is recognized as world's largest industry. Its continuous growth, accompanied with ongoing sets to produce highly intense levels of competition in various sectors. The services and facilities, which tourism industry offers today need to be geared sharply to the need of tourists rather than that of tour operators or managers. Therefore a closer integration of tourism marketing and production factors becomes not just a desirable objective, but a powerful imperative.

Keywords: *Tourism, Marketing,*

1) Introduction:

Marketing is an integrated approach to the whole conduct of profitable business in overall corporate culture, focused on customer satisfaction. Tourism marketing is no different. The most important thing is that, if practiced correctly, it forces an organization to recognize and respond to the preferences of the customer in a way, which builds consistent loyalty and thereby, leads toward greater profitability. Today, tourism industry is recognized as world's largest industry. Its continuous growth, accompanied with ongoing sets to produce highly intense levels of competition in various sectors. The services and facilities, which tourism industry offers today need to be geared sharply to the need of tourists rather than that of tour operators or managers. Therefore a closer integration of tourism marketing and production factors becomes not just a desirable objective, but a powerful imperative.

Tourism in and from India is not only at an all time high but is growing factor than in any other region. The Indian tourism industry performed quite well in last couple of years. In order to continue this growth and meet the expectations, it is essential for the Govt. of India to invest in infrastructure such as transport and accommodations.

2) Significance of the study:

a) This study will give some details about present and future prospects of tourist activities and can raise new professions for the people.

b) This study will helps to take up the problems of mass or unplanned tourism and shall look into the possible regional as well as national policies for adopting measures to tackle them.

3) Objectives of the Study:

a) To assess the existing position of the growth of India's tourism.

b) To explain that tourism playing its role as a service industry for the development of nation.

c) To analyses the impact of growth of tourism on employment and manceting of domestic products.

d) To focus on the subject of economic significance of tourism, its economic cycles and benefits.

e) To justify the dominant role of tourism for the holistic development of country.

4) Data Collection:-

The research design will be descriptive in nature. The method of data collection is mainly based on secondary data. However an efforts are made to collect primary data by taking information from competent persons off and on. This data based on the recurring concept in the existing literature.

5) Scope of the Study

This study represents a comprehensive summary of the need of reorientation of Indian tourism in 21st Century. The present study will examine the formulation of policy and structure plan of tourism for the optimum utilization of recourses. The paper concludes with some recommendations for how Indian tourism can faster to develop economy.

6) Hypothesis:

a) Systematic marketing will reward those who are willing to make the necessary efforts to study, evaluate and innovate.

b) Tourism industry sincerely plays a valuable role in communicating and achieving economical position of nation.

7) Conceptual Framework:

Profile Of Tourism in India

Tourism involves travelling relating to natural areas with the specific object of studding admiring and enjoying the scenery and its wild area with culture and historical aspects. A visit with a motto to know these areas is nothing but tourism. Marketing of tourism services include mainly the services sold to domestic and foreign tourist.

In India itself the estimated foreign exchange receipt of India from tourism increased from US $ 11.39 billion in 2009 to US $ 14.19 billion in 2010. From 2010 India crossed the 5.58 million arrivals mark of foreign tourist and 650 million domestic tourists.

All these figures give you an idea of the growing market as well as the role being played by tourism in the economics of the nations. India has still more potential to attract foreign tourist as well as encourage domestic tourism. But this can be converted into a reality through vigorous marketing of the tourism products and services. Now the tourism market is maturing and the competition is already increasing.

Formulating Tourism Development Policy:

Tourism development policy consists various aspects. Policy is determined based on development of region and country. Policy evolves the survey and analysis of present tourism development pattern and infrastructure, tourism attractions, socio-economic and environmental faculty. The Govt. has to play the lead role in deciding tourism policy. The policy should provide a framework within which the private sector and other work within which the private sector and other special interested groups can effectively function.

Some of the basic issues that need to be addressed in policy formulation are asfollows:-

A) Economic reasons of increasing income providing employment, earning foreign exchange, increasing govt. revenues etc.

B) Social reasons for encouraging cross-cultural exchange and introducing international tourism and educating persons about their own country.

C) The basic policy consideration is to attract the domestic and international tourist by opting quality tourism. The general policy level of tourism also needs to be set forth in policy.

D) Another consideration is whether tourism policy should be based on “Market-led” developing form or “Product-Led” developing form is most important.

E) The growth rate of tourism is often a policy consideration; it may be desirable for several reasons -

1) Social reasons of allowing tourism are that residents adjust it and learn to participate in it.

2) For development of infrastructure in tourist areas.

3) Manpower planning reasons to train persons to work effectively.

F) The Govt. and private sector can play the respective role in developing and managing tourism.

G) Achieving environmental protection, cultural conservation and sustainable development are all important policy considerations.

Formulating the structure plan:

Preparing the structure plan is based on following consideration -

- Development of objectives and policies.
- Type and location of existing accommodation and other tourist facility needs.
- Overall environment, land use, tenure, resource social and economical analysis.

Selecting Development Sites:

In tourism development carefully selection of development sites includes following -

- Location at or near tourist attraction like beach, lake, marine area or historic site.
- Local climatic conditions must be investigated.
- Availability of adequate water supply, electric power, sewage and telecommunications.
- Positive attitude of residents to developing tourism and availability of labor supply to work.

8) Indian Tourism Policy:

The tourism development finance corporation published the national action plan for tourism with objectives:-

- Socio – Economic development of areas.
- Increasing employment opportunities.
- Developing domestic and international tourism.
- Preserving nation heritage and environment
- Diversification of tourism product.
- Increase India's share in world tourism.

9) Need for Reorientation: -

The central objective of tourism policy to achieve balanced and competitive tourism development with job creation, overcome regional backwardness, conservation of nature and heritage etc.

For achieving rapid growth five keys have been identified:-

- Socio – Demographic factors of demand.
- Technology development and changes.
- Current trends in consumer behavior.
- Strategy of sustainable development.
- Improvement of human resources.

We have no empowered subjectivity to determine the magnitude of tourism flows and we accept the representative image of India that is promoted abroad. Tourism policy in India, Which is conceived and pushed from the top is always justified and legitimized by the yardstick of customer satisfaction.

We want a policy that does not reduce us to a 'Field' for which our Govt. has become the 'Native Informant' making value and cultural statements that are neither authentic nor representative for cultured. We want a policy that assets our subjectivity in the context of unequal trade so that we do not subside the mass tourist and become victims of the travel trade.

Therefore, the tourism policy must be re-defined by people needs, their movements and people's organizations, in co-operations with similar bodies and counterparts elsewhere.

GST FOR EDUCATION SECTOR AND SERVICES: KEY CONCERNS

Dr. U.R. Shinde
Head, Dept. of Commerce, Sadashivrao Mandlik Mahavidyalaya, Murgud Tal:.Kagal
Email-*shindeudaykumar@gmail.com*

Abstract

The education system in the country indirectly decides how the economy of that country will flourish. Because, it promotes understanding, vision, creativity and productivity of the people which helps in economic development of the country. The education and training sector in India is one of the key priority areas of the government. It also has been a sensitive issue, as education is seen as more social activity than any business one. Free and compulsory elementary education is right of every child in the country, and it is obligatory to government to provide free and compulsory education. The same is reflected by their desire to levy low or no tax on this sector. Rather to promote education it would be beneficial if educational services are exempted from tax.

Keywords: *Education Sector, Goods & Services Tax*

Introduction-

Education sector in India has been strategic priority of the government. India is a country which has the largest population in the world in the age group of 5-24. This population is normally engaged in education sector. The country has over 250 mn school going students, more than any other country in the world. It also has one of the largest networks of higher education institutes in the world. In, 2017-18 the number of colleges and Universities in India reached to 39050 and 903 respectively. Besides this, 36.64 mn students has been enrolled in higher education in the year 2017-18, which leads to 25.8% GER in higher education in the same year. The education sector in India has witnessed a paradigm shift in recent times. Once upon a time it was operating primarily as philanthropic or a nation building activity. But nowadays it has gradually transformed into a economic activity. The education sector in India is estimated at 9170 crs in the year 2018 and immediately it is expected to cross 10000 crs in the year 2019. Therefore, education sector is playing vital role in Indian economy. The education system in the country indirectly decides how the economy of that country will flourish. Because, it promotes understanding, vision, creativity and productivity of the people which helps in economic development of the country. The education and training sector in India is one of the key priority areas of the government. It also has been a sensitive issue, as education is seen as more social activity than any business one. Free and compulsory elementary education is right of every child in the country, and it is obligatory to government to provide free and compulsory education. The same is reflected by their desire to levy low or no tax on this sector. Rather to promote education it would be beneficial if educational services are exempted from tax. On the other hand, commercialisation of education is also rapidly taking place, and this sector is becoming an organised industry with huge revenues. In this context and in the light of introducing GST on educational services, this article intend to asses and analyses impact of GST on educational services and various provisions made by GST counsel in this regard.

Objectives of the study-

This research paper has following objectives.

1. This research article intends to throw light on the provisions applicable for educational services under GST.
2. To discuss key concerns of Education sector and GST rules.

Research Methodology-

This paper is discussion paper and it is purely based on secondary data. All literature published by GST counsel, CBEC and other internet material referred for it. By discussing various provision under GST rules for education sector services, the researcher has concluded some remarks.

Pre-GST regime and taxability of educational services-

Before discussing provisions regarding educational services under GST regime, it is necessary to see silhouette of tax structure for educational services during pre- GST regime. Under this regime various services provided by an educational institution to its students or faculty or staff were exempt via notification no.ST-25/2012 dated 26/6/12. Later on the exemption in relation to services provided to educational institutes was modified with effect from 1st April, 2014 and scope of the exemptions for services provided to the educational institutes. Through this modification institutes providing preschool education and education up to higher secondary school or equivalent was restricted to some specified services as under

1. Transportation of students, faculty and staff
2. Catering, including any mid-day meals scheme sponsored by the Government;
3. Security services performed in such educational institution
4. Cleaning services performed in such educational institution
5. House-keeping services performed in such educational institution
6. Services relating to admission to, or conduct of examination by, such institution

Any other service provided apart from those mentioned above to educational institution (Institution providing pre-school education and education up to higher secondary school or equivalent) was taxable. Besides, any service provided to an institution other than Institution providing pre-school education and education up to higher secondary school or equivalent was also taxable.

In a nutshell under pre GST regime, services provided by educational institutes to its students or faculty or staff were exempt earlier. Later on it was restricted to some specific services.

Education Institutes under GST-

In fact, Education is not defined in the CGST Act but as per apex court decision i.e. Loka Shikshana Trust V/s CIT, education is process of training and developing knowledge, skills and character of student by normal schooling . However under GST 'Educational institutes' is defined as an institution providing services by way of

- Pre-school education and education up to higher secondary school or equivalent;
- Education as a part of a curriculum for obtaining a qualification recognised by any law for the time being in force;
- Education as a part of an approved vocational education course

As per notification no. 12 CTR dated 28th July 2017, an "approved vocational education course" means, –

a. A course run by an industrial training institute or an industrial training centre affiliated to the National Council for Vocational Training or State Council for Vocational Training offering courses in designated trades notified under the Apprentices Act, 1961 (52 of 1961); or
b. A Modular Employable Skill Course, approved by the National Council of Vocational Training, run by a person registered with the Directorate General of Training, Ministry of Skill Development and Entrepreneurship.

It is also clarified by GST act that

1. Conduct of degree courses by colleges, universities or institutions which lead grant of qualifications recognized by law would be exempted from GST.

2. Training given by private coaching institutes or other unrecognised institution or self styled educational institution would not be exempted as such training does not lead to grant of a recognized
3. Services provided by way of education as a part of a prescribed curriculum for obtaining a qualification recognized by a law of a foreign country are also not exempted because the course / degree not recognized by Indian Law.

Registration of Educational Institutions-

If majority educational services are out of ambit of GST, then the question arises, whether such educational institutes should be registered or not under GST. The act says that

1. Where the educational institution is providing only education as a service then such fees are chargeable at NIL rate and such educational institutions are not required to be registered.
2. Where educational institutions are also providing other supplies or other services, i.e., providing books to students, providing shoes or uniforms etc to students then in such cases such institutions are liable to get themselves registered.

Classification of Educational Services provided by Educational institutes under GST:-

For the purpose of determining tax liability of any educational institute under GST, the services provided by such institute are classified as under.

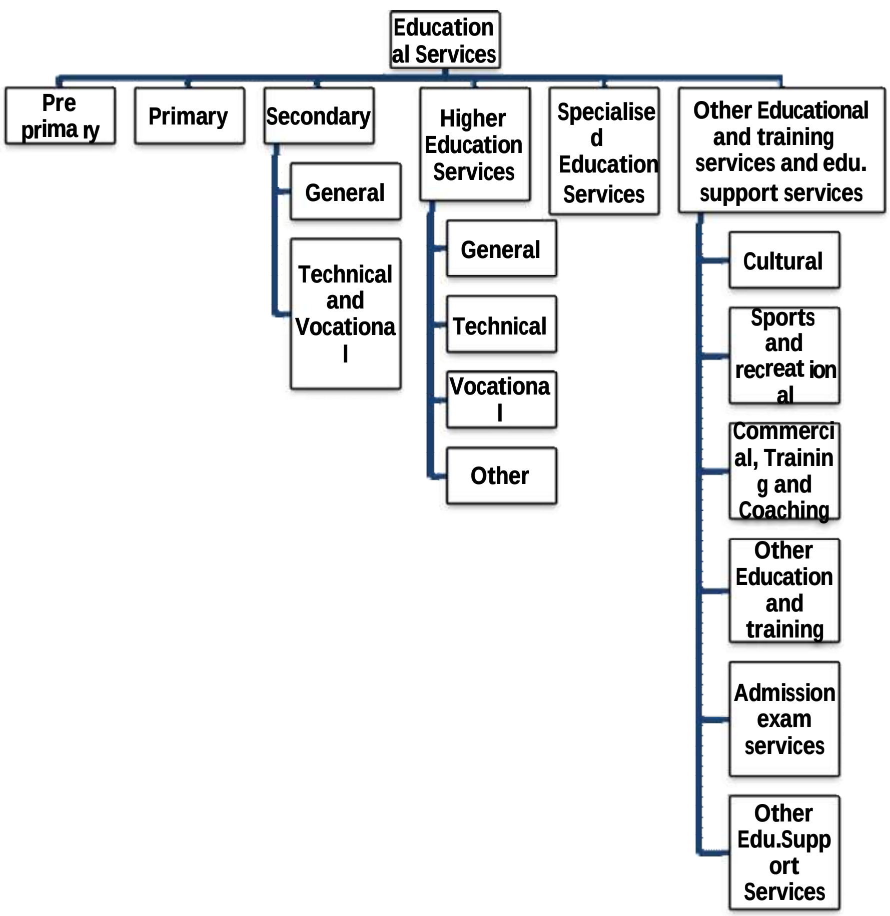

Figure No.1

Rates of GST for Educational Services-

The GST rates for educational sector and its services are made applicable via notification No. 11/2017-Central Tax (Rate) dated 28.06.2017 and No. 12/2017-Central Tax (Rate) dated 28.06.2017. These rates are as under.

Table No.1

Chapter/ Section/Heading	Description of Service	Rate / Notification
9992	Education Services	18% as per serial no 30 of notification no. 11 CTR dated 28th July 2017
9992	Services provided – (a) **by** an educational institution to itsstudents, faculty and staff; (b) **to** an educational institution, by way of, – (i) transportation of students, faculty and staff; (ii) catering, including any mid-day meals scheme sponsored by the Central Government, State Government or Union territory; (iii) security or cleaning or housekeeping services performed in such educational institution; (iv) services relating to admission to, or conduct of examination by, such institution; up to higher secondary: **Provided that** nothing contained in entry (b) shall apply to an educational institution other than an institution providing services by way of pre-school education and education up to higher secondary school or Equivalent	**NIL** as per serial no 66 of notification no. 12 CTR dated 28th July 2017
9992	Services provided by the Indian Institutes of Management, as per the guidelines of the Central Government, to their students, by way of the following educational programmes, **except Executive Development Programme: –** (a) two year full time Post Graduate Programmes in Management for the Post	**NIL** as per serial no 67 of notification no. 12 CTR dated 28th July 2017

	Graduate Diploma in Management, to which admissions are made on the basis of Common Admission Test (CAT) conducted by the Indian Institute of Management; (b) fellow programme in Management; (c) five year integrated programme in Management.	
90 or any Chapter	Technical aids for education, rehabilitation, vocational training and employment of the blind such as Braille typewriters, braille watches, teaching and learning aids, games and other instruments and vocational aids specifically adapted for use of the blind Braille instruments, paper etc.	5% as per serial No. 257 of Schedule I of the Notification No. 1 CTR dated 28th June, 2017
9023	Instruments, apparatus and models, designed for demonstration purposes (for example, in education or exhibitions), unsuitable for other uses	28% as per serial No. 191 of Schedule IV of the Notification No. 1 CTR dated 28th June, 2017

Exemptions granted to Educational institutes-

As per prevailing GST rules following exemptions are available to educational institutes.

1. Income from education is wholly exempt from GST if a charitable trust is running a school, college or education institution for abandoned, orphans, homeless children, physically or mentally abused persons, prisoners or persons over the age of 65 years or above residing in a rural area.
2. Government or local authority or governmental authority carrying on the activity of education is exempted from GST as this is not included in the ambit of supply of services. For Example – Government schools / Municipal schools.
3. Education provided by below are also Exempted Under GST:

a. National skill development corporation set up by the Indian government

b. National skill development corporation approved sector skill councils

c. National skill development corporation approved assessment agencies

d. The national skill development programs approved by NSDC Vocational skill development program approved under national skill certification and monetary reward scheme

e. Any scheme implemented by NSDC with training partners

4. Exemption has also been granted to the services provided by the IIM–

a. 2 year full-time residential PG programs in Management for Post Graduate Diploma in Management, admission in which is granted via CAT

b. Fellowship programs in Management

c. 5 Year Integrated Programs in management studies (but excludes the Executive Development Program).

Education Related services which are exempt-

Following Education Related Services are Exempt Under GST:

1. Curriculum related or course materials,
2. Assessment and examination fees,
3. Student administrative services such as registration, printing of academic transcripts, issuing or replacement of student cards, late fee payments, administration of the library etc
4. Excursion and field trips related to the course of study or part of curriculum requirement, except for food and accommodation supplied on those trips
5. Services provided by educational institutions to students, faculty, and staff as stated earlier

   Therefore, services provided by an educational institution to students, faculty and staff are exempt. The output services of lodging/boarding in hostels provided by such educational institutions which are providing pre-school education and education up to higher secondary school or equivalent or education leading to a qualification recognised by law, are fully exempt from GST. Annual subscription/fees charged as lodging/ boarding charges by such educational institutions from its students for hostel accommodation shall therefore, not attract GST. Input services like canteen, repairs and maintenance etc. provided by private players to educational institutions are subject to GST. As output services are exempted, the Educational institutions may not be able to avail credit of tax paid on the input side. Auxiliary education services entry no 66 of notification no. 12, if provided to educational institutions providing degree or higher education, the same would not be exempt from GST. The supply of placement services provided to educational institutions for securing job placements for the students shall be liable to GST. Educational institutes such as IITs, IIMs charge a fee from prospective employers like corporate houses/ MNCs, who come to the institutes for recruiting candidates through campus interviews in relation to campus recruitments. Such services shall also be liable to GST.

Conclusion

The prevailing GST structure has given exemptions to educational institutes' providing education up higher secondary school or equivalent. Auxiliary services received by such educational institutes for the purpose of education up to higher secondary level are also exempt from GST. But other services related to education, not covered under exemption ambit rather it would be taxed at a standard rate of 18% with full admissibility of input tax credit for such taxable services in cases where the output service is not exempt. In case of private coaching classes previously the government charged 14% tax on all such educations and now it is increased to 18%. The Indian Institutes of Management Act, 2017, gives tax exemptions for courses offered by the IIMs but the ruling said that the executive programmes are not categorically exempted from tax. So it can be assumed that only certain courses from IIM are exempted while others are taxable as per the ruling. Some recent decision Over GST on School indicates that if the school run summer camp or coaching classes for other students apart from the school students or if the school rent the school premise for marriage and other functions it will come under tax ambit. As per a statement made by the Finance Ministry, GST is not leviable on foods and drinks that are supplied by schools (up to higher secondary) directly to their students. However, food items supplied by school canteens and mess are taxable at 5 percent GST rate with no input tax credit. We have seen that education is a nation priority of a country like India. Educational system is essential nation building process. We also know that Right to education is now become basic and fundamental right of every child in the country. While framing GST laws, GST counsel have taken due consideration of this importance of education sector.

HUMAN RESOURCES ACCOUNTING: AN OVERVIEW

Mr. Rahul B. Pawar
Assistant Professor, Dhananjayrao Gadgil College of Commerce, Satara

Abstract:

Human Resource is the most important asset for every business organization. The success or failure of a business organization depends heavily upon the ability, skill, efficiency, performance of its employees. The present study is conducted to study the concept of Human Resource Accounting, its importance to every business organizations, different models of human resource accounting and various challenges faced by business organizations in implementation of Human Resource Accounting. The data required for the study is collected through secondary sources such as books, journals, dissertations, thesis, websites etc. The paper concludes that, though the concept of human resource accounting is important, it is still in the development stage. More steps needs to be taken by the accounting bodies all over the world to develop the world wide accepted guidelines for the effective implementation of human resource accounting.

Keywords: *Human Resource, Human Resource Accounting, Historical Cost, Replacement Cost, Opportunity Cost, Standard Cost*

1. Introduction:

Every business organization requires various resources like men, money, material, machinery and methods. Out of these resources, men are the only human resource, remaining are physical resources. The success of a business depends heavily on the effective utilization of the scarce physical resources by the human resource working in the business. The efficient utilization of scare physical resources depends upon the quality, efficiency, ability, skill and performance of the human resource.

A business organization having sufficient physical resources might fail miserably, if it is not having the right people to manage the day to day affairs of the business. Thus, no one can ignore the importance of human resource. Human resource is one of the most important and valuable asset for every business organization. It might not be as fast and as accurate as a computer, but it is more valuable than a computer. It is because; computer is just a machine without any brain which works on the commands of the user. Therefore, accounting of human resource is very much essential.

Every business organization incurs certain cost for employees on recruitment, selection, training and development. Human Resource Accounting aims to measure this cost incurred by the firm on employees and the value of the employees to the firm.

2. Definitions:

Following are the various definition of Human Resource Accounting given by various experts:

1. Flamholtz and Lace: “The measurement and reporting of the cost and value of people as organizational resources. It involves accounting for investment in people and their replacement costs as well as accounting for the economic values of people to an organization”

2. Davidson: “Human resource accounting in the measurement of the cost and value is a term used to describe a variety of proposals that seek to report and emphasize the importance of human resource knowledgeable, trained and loyal employees in a company’s earning process and total assets”

3. R. L. Woddruff: “Human Resource Accounting is an attempt to identify and report investment made in resources of the organization that are not presently accounted for under conventional accounting practice”

4. American Association of Accountants (AAA): “Human Resource Accounting is a process of identifying and measuring data about human resources and communicating this information to interested parties."

5. Stephen Knauf: "Human Resource Accounting is the measurement and quantification of human organisational inputs such as recruiting, training, experience and commitment"

3. Objectives:

Following are the various objectives of Human Resource Accounting

1. To provide cost and value information to the management for taking proper decisions about acquisition, allocation, development and maintenance of human resource in the business to achieve the desired objectives of the business.
2. To measure the effectiveness of personnel management policies.
3. To help the management to monitor the use of human resource in the business.
4. To see whether human resources are conserved, appreciated or depreciated.
5. To assist the management in the development of effective management practices.
6. To assist the management for efficient and effective development of human resource within an organisation.
7. To provide qualitative and quantitative information of human resource.
8. To measure the cost incurred by the firm on human resource.
9. To evaluate the return on investment on human capital.

4. Importance / Advantages:

HRA is useful to organizations, employees and society as stated below:

1. **Provides useful information**: Human Resource Accounting provides useful information about the cost and value of the human resource working in an organization. It also shows the strengths and weaknesses of human resource. Thus, it provides all necessary information to the management for effective manpower planning and correct decision making.
2. **Formulation of HR Policies:** Human Resource Accounting (HRA) provides all necessary information to the management for making suitable personnel policies relating to acquisition, training, development, promotion, favourable working environment, job satisfaction of employees etc.
3. **Proper placement of human resource:** Human Resource Accounting (HRA) helps the management in placing the right employee on the right post after considering the requirements of the post, qualification, knowledge, skill and experience of the employee. It helps the business to ensure better utilization of human resource.
4. **Increases the Morals of Employees:** Application of Human Resource Accounting ensures the employees that the business actually cares for them and is concerned for their welfare. It increases the morale and satisfaction of the employees. Further, it motivates the employees to work hard to achieve the desired objectives of business.
5. **Attracts best employees**: Human Resource Accounting is not conducted by all the business organizations. It is conducted by some reputed organizations only. Well qualified, experiences, skilled and dedicated employees are willing to join such organizations. It helps the business to get quality human resource.
6. **Return on Investment:** A business organization makes a huge investment in human resource for acquisition, training, development and maintenance. Human Resource Accounting helps the business to evaluate the return on investment in human resource. If the rate of return is low, it helps to identify the reasons for low rate of return on investment.
7. **Improves bargaining power of employees:** Human Resource Accounting provides

information about the expenditure incurred by the firm on employees and contribution of employees for the betterment of the business. This information helps the employees to understand whether they need to improve their performance or whether they are eligible to demand higher salaries.

8. **Designing of Programmes:** Human Resource Accounting helps the business organization to design the need based training and development programmes for its employees. Such programme helps the employees to learn new skills and techniques, which ultimately increases their productivity and performance.
9. **Evaluation of Training Programmes:** Human Resource Accounting evaluates the expenditure incurred by the firm on the further education and training given to employees in terms of benefits obtained by the firm. If the firm is not getting the adequate benefits, they can revise the training programmes to achieve the desired objectives of the business.
10. **Controlling labour turnover:** Labour Turnover is the proportion of a firm's workforce that leaves during the year. High labour turnover indicates dissatisfaction among the employees about the policies of the company. It affects on the reputation of the business. Human Resource Accounting provides the reasons of such labour turnover, absenteeism, stress on employees to the management, so that management can formulate strategies and can take necessary measures to control it.

5. Methods of Valuation of Human Resource:

There are various methods developed all over the world to make valuation of human resource, out of which following are some of them.

1. **Historical Cost Method** – This method is developed by Brummet, Flamholtz and Pyle. This is the only method which is used to calculate both the cost of human resource as well as the value of human resource. Under this method, the cost incurred by a firm on the recruitment, selection, hiring, training and development of employees is capitalised and is written off over the number of years for which employees are expected to remain with the firm. If the employee leaves before expected date, the remaining value of human asset is charged off against the current year's earnings.
2. **Replacement Cost Method** - This method is developed by Rensis Likert and Flamholtz. This method calculates the cost to be incurred for replacing the existing human resource of the business. Under this method, the company calculates the cost to be incurred by the company for recruitment, selection, hiring, training and development of new employees, if it has to replace its existing employees to get equivalent employees with same knowledge, skill, ability, proficiency, experience etc. Such replacement may be positional replacement or personal replacement. But the value of employees determined under this method by various people may differ from each other.
3. **Standard Cost Method** –This approach is suggested by David Watson. Under this approach, the value of the employees is determined on the basis of the standard costs for recruitment, selection, hiring, training and development per grade of employees. These standard costs are determined every year and the valuation of human resource is made accordingly. The value so determined is shown in the Balance Sheet as an asset. However, setting up of a standard cost for each grade of employees is a difficult task.
4. **Opportunity Cost Method** - This approach is suggested by Hekimian and Jones. This method calculated the value of those employees who are scarce and having opportunity cost. The employees with no

any opportunity cost and who can be hired readily are not valued under this method. The value of the human resource is determined on the basis of their alternative use. The value of the human resource is determined on the basis of competitive bidding method. The value of the employees is determined on the basis of, how much salary these employee can earn, if they leaves our company and join any another company. Application of this method might lower the moral and productivity of those employees who are not covered under this method.

6. Challenges in Implementation:

1. There are no specific guidelines to find out the cost and value of human resource working in the business organization. The existing valuation models cannot be implemented as it has various drawbacks.
2. Neither International Accounting Standards (IAS) nor the International Financial Reporting Standards (IFRS) provides any guidelines for the treatment of human resource in the books of accounts.
3. The tax authorities do not treat human resource as an asset of the business.
4. The human resource working in the business cannot be retained in the business for lifetime. We can't determine for how much period they will be associated with our business. Therefore, it is not possible to value the human resource precisely.
5. Unlike other assets, the human resource cannot be owned. Therefore, they cannot be valued properly as their life and usefulness is uncertain.
6. Implementation of human resource accounting might lead to dehumanization of employees. Employees with low value may feel discouraged and it affect on their efficiency and performance.
7. Some of the companies might not be ready to share the information of human resource with outsiders. They might feel that, this sensitive information could be used by their competitors against them. The effectiveness of human resource accounting cannot be ensured unless it is supported by proper Human Resource Auditing.
8. Trade Unions might oppose this system, as this system of valuing human resource might result in payment of salary as per the value of employees.
9. The problem of amortization of the value of human resource over the years arises.

7. Conclusion: Human Resource Accounting is the art of valuing, recording and presenting systematically the real worth of human resource in the books of accounts of the business. This concept is still in the development stage. It is implemented by very few businesses in the developed countries. In India, it is implemented by selected developed businesses. It is because, there are no uniform norms for finding the cost and value of human resource, even the tax authorities all over the world does not recognize the human resource as an asset. Though there are various advantages of doing human resource accounting, there are various challenges in its implementation. So, the accounting bodies of various countries needs to take a step ahead for formulating uniform accounting policies regarding implementation of human resource accounting.

A STUDY ON FACTORS INFLUENCING THE BUYING BEHAVIOR OF MOBILE USERS WITH REFERENCE TO SOLAPUR CITY

Prof. Revannath S. Navale
Assistant Professor, NBN college of Commerce and Science Kusgaon(BK) , Lonavala
Email: *revannavale@gmail.com*

Abstract

The purpose of this study is to find out different influencing factors affecting buying behavior of consumer. The present study is conducted in Solapur city of Maharashtra. In order to achieve the objectives of the study, a sample of 100 consumers were taken by using convenience sampling method. The both primary and secondary data were used for conducting research. It is found from analysis personal factor (Need, status, family) affects on buying behavior follow that the price of mobile phone is the second important factor impacts on buying behavior of consumer. The internet is also most affecting factor of media which impacts on buying behavior of mobile buyers. The present study suggested that the Mobile phone companies should remember the buying behavior pattern and influencing factors while making the marketing strategies for a product.

Key Words: *Buying Behavior, Mobile Users, Price, Brands, Consumer Behavior*

1. INTRODUCTION

Mobile phone has been made a fourth need of people. Mobile phones have taken place in almost every hand as from old grandfather to 10 years grandsons all are using mobile phones. Therefore it is necessity to find the different influencing factors which affects consumer buying behavior. Consumer buying behavior is complex process. The consumers buying behavior are different to people to people. Consumer behavior has been always great interest to marketers. The knowledge of consumer behavior helps to marketers to making marketing strategies. This research paper explains the various influencing factors and its impact on the consumer behavior. The main purpose of this research paper is to find out different influencing factors affecting consumer behavior.

2. REVIEW OF LITERATURE

Mohankumar and U. Disneshkumar in their research paper "A Study on Customer Purchase Behavior towards Mobile phone with special reference To Erode City" studied that consumer behavior is not transferable item from one person to another. The main motive of customer they want buying to become a happy life. The customer would like to see touch and feel the item that they want or buy. The data were collected from 200 questionnaire among mobile phone users in erode city. Further chi-square test was used analyzing data. It was also stated that there is negative correlation between price and different offers of the companies. The study concluded that customer mostly using Nokia mobile phone in erode city.

K. Prabha Kumari (2017) in her article "A Study on Buying Behavior in Selecting Mobile Phones With Reference To Tirupur City" studied that buying behavior of selected mobile phones in Tirupur City. This study explores various factors which impact on selecting a mobile phone among the consumers. This research aims to study buying behavior in selection of mobile phones in selected city. This study helps to know various influencing factors of consumer behavior. The primary data were collected through questionnaire and sample size is 150. The convenience sampling method is used for determining sample of present study. The percentages analysis, weighted average analysis and chi-square test are used for analyzing data. The revealed that majority of respondents are using Samsung phone.

Supriya Behl (2016) in her article she explained "Factors Affecting Consumer Choice of Mobile Phone Brands: An Empirical Study Using Multidimensional Scaling Techniques". The present study is conducted in Punjab and it is consider different brand of mobile phones like Nokia , Micromax, karbon, Sony, etc. This study is exploratory in nature and was conducted to know buying behavior of consumer. The convenient sampling method is used for present research. The results of this study shows that the Nokia and Micromax has attract the consumer. They have unique place in consumers' minds. This study also helps to know consumers perception among different mobile handset brands. This study also shows that the apple and blackberry have competitor to each other. The study concluded that brand management of particular segment gives clear picture of market.

MesySata (2013) has done study on "Factors Affecting Consumer Buying Behavior of Mobile Phone Devices." In this research paper he has explained factors affecting consumer buying behavior of mobile phone devices in Hawassa City. He has used a sample of 246 consumers according to simple random sampling technique. He has used primary data as well as secondary data for the study. The researcher used six important variable analyzing data. Which are Price, Social group, Product features, Brand Name, Durability etc? The main aim of the study is identifying factors behind consumer's decision to purchase mobile phones in Hawassa city. The study concluded that price mobile and features of its important for making purchase of mobile phones.

Dr.Velumani (2014) in his article "Consumer buying behavior towards Nokia mobile in Erode District" studied consumer Behavior towards Nokia mobile Phone Company. The researcher used both primary as well as secondary data for conducting research. The researcher has used descriptive method for research. For collecting information the respondents were chosen by non-probability random sampling method of sample used for research. The present study is limited to only Erode district and also confined to Nokia mobile phone users buying behavior. The main objective of study is to analyze customer preference in Nokia handset. The researcher used percentage analysis, chi-square test, and ANOVA technique for analyzing data. The study concluded that Nokia mobile preferred by consumer in concern area where research is conducted.

3. OBJECTIVES OF THE STUDY

a) To study the Consumer Buying Behavior mobile phone users.
b) To Study different factors impacting on Buying behavior of mobile users in Solapur city
c) To study impact of Media on buying behavior of Mobile users.
d) To Study effect of Mobile phone features on buying behavior of Mobile users.

4. SCOPE THE STUDY

Geographical scope of the study is Solapur city. The functional scope includes customer buying behavior in mobile phone users, buying process and different factors impacting on buying behavior. The analytical scope includes percentages, mean SD etc.

5. HYPOTHESES

H_1:- Internet is a major influence in Buying Behavior of mobile phone users

H_2:- Mobile phone Features Impacts on buying behavior.

6. LIMITATIONS OF THE STUDY

1. This study was carried out only among the mobile users in Solapur city.
2. The sample size was restricted to 100 due to time constraints.

3. The sample was taken on the basis of convenience sampling method; therefore the shortcomings of the sampling may also be present in this study.

7. RESEARCH METHODOLOGY

The primary data were collected through structured questionnaire. Convenience sampling method has been adopted under the non probability sampling technique and about 100 samples have been collected for the study.

Sampling Size: The size of the sample is 100 and the survey was conducted in Solapur city.

Sampling Method: Convenience sampling method was adopted in the research work under non-probability sample method.

Primary Data & Secondary Data: To achieve the objective of the study, the primary data have been collected through questionnaire. The secondary data were collected through books, websites, and research paper etc.

8. DATA ANALYSIS AND INTERPRETATION

Sr. No.	Motivating factors to Purchase a Mobile phone	% No	% Yes	Mean	SD
1	Need of customer	28.68	71.32	0.71	0.45
2	Friends/colleagues	65.18	34.82	0.35	0.67
3	Consumer Status in Society	52.45	47.55	0.48	0.43
4	Image of the Mobile company in Market	58.59	41.41	0.41	0.49
5	Price of mobile Phone	34.20	65.80	0.66	0.47
6	Colors/design	70.86	29.14	0.29	0.71
7	Any other	93.25	6.75	0.07	0.73

Interpretation:

From above the table it is observed that Consumer need, Status in Society, Company Image and Price impacts on Buying Decision when Consumer buys a Mobile phone. Need of customer is the major motivation factor which has greater impact on buying behavior of customer. Preferred Motivation factors of the respondents in the descending order are need of customer with 71.32, price of mobile phone with 65.80 and consumer status in society with 47.55.

Table No.1.2: Factors influences on Buying Decision

Sr. No.	Factors influences your Buying Decision	Low	Neutral	High	Mean	SD
1	Affordable Price	16.72	12.42	70.86	3.76	1.26
2	Sales schemes	23.47	25.31	51.23	3.36	1.18
3	Product Features	26.07	23.31	50.61	3.33	1.20
4	Brand Name	21.17	22.55	56.29	3.49	1.15
5	Social influence	18.71	22.39	58.90	3.58	1.13
6	Warranty	13.96	16.26	69.79	3.80	1.06
7	Accessories	17.33	20.55	62.12	3.61	1.14
8	after delivery services	15.03	16.56	68.40	3.77	1.14
9	Availability of service outlets	11.20	13.04	75.77	3.99	1.11

Interpretation

From the above table it is found that the price of mobile is most influencing factor affecting consumers buying behavior of mobile users. Factors influencing Buying Decision are affordable price, warranty, accessories, after delivery services and availability of service outlets.

Table 1.3: Influence of Media

H_1:- Internet is a major influence in Buying Behavior of mobile phone buyer

Sr. No.	Media influences while buying a mobile phone	Low	Neutral	High	Mean	SD
1	Newspaper	20.86	31.44	47.70	3.37	1.12
2	Television	11.50	24.08	64.42	3.73	1.02
3	Auto expo	21.32	22.09	56.60	3.55	1.25
4	Internet	9.05	17.79	73.16	3.97	1.02
5	Radio	38.04	25.00	36.96	2.91	1.31

Interpretation:

Media influences while buying a mobile phone are Television and internet here amongst five media, Internet is the major media which has greater impact on buying behavior of customer. Its mean is 3.97 and Standard Deviation is 1.02 which shows that **Hypothesis 1 is accepted**.

Table No. 1.4: Mobile Phone Features

H_2:- Mobile phone features Impact on buying behavior.

Sr. No	Mobile Phone Features	Low	Neutral	High	Mean	SD
1)	Name / Brand	8.13	16.56	75.31	4.10	1.06
2)	Logo	17.79	24.85	57.36	3.58	1.14
3)	Design	11.20	20.09	68.71	3.92	1.08

4)	Build quality	10.28	17.79	71.93	3.96	1.07
5)	Battery Life	14.42	24.08	61.50	3.71	1.12
6)	Technology	10.58	15.18	74.23	4.07	1.08
7)	Price	5.83	9.66	84.51	4.35	0.93
8)	Safety	13.50	16.10	70.40	3.94	1.19
9)	Specifications	14.11	15.80	70.09	3.94	1.19
10)	Camera Quality	16.72	18.87	64.42	3.77	1.21

Interpretation

Preferred Mobile phone features of the respondents in the descending order are Price with 84.51%, brand name 75.31%, technology with 74.23%, and build quality with 71.93%, safety with 70%, and design with 68.71%. It shows that mobile phone features influences the buying decision of the mobile users, Hence **Hypothesis 2 is accepted.**

9. FINDINGS:-

1) It is found from analysis personal factor (Need, status, family) affects on buying behavior.
2) The price of mobile phone is the second important factor impacts on buying behavior of consumer.
3) 70% of respondents are saying that price of mobile is vital important in purchasing phone.
4) In media perspective, 73% Respondent says that Internet influences mostly on buying behavior than any other media followed by Television advertising.
5) It is found that the News paper and other media are not much effective media as Internet and Television.
6) Radio has least impact on mobile phone buying decision.
7) Mobile phone feature also plays an important role in buying decision.
8) Mobile phone features of the respondents in the descending order are price with 84.51%, brand name 75.31%, technology with 74.23%, build quality with 71.93%, safety with 70.40, specifications with 70.09, and design with 68.71%.

10. SUGGESTIONS:-

1) Mobile companies should focus on the buying behavior pattern and influencing factors while making the marketing strategies for a product.
2) As Indian customers are price conscious, so pricing strategy will have a greater influence in buying behavior. So mobile Companies should apply pricing strategy carefully.
3) This is the time of internet where it impacts a lot on consumer buying behavior. So mobile companies should use social media to approach the target customers.
4) Mobile companies should create brand awareness among the customer because brand has more impact on buying behavior.

9. Conclusions

The present research reveals that the factors which impacts on buying decision while he purchase or buys a mobile phone. Even mobile phone buyers give more importance to the brand, price, safety and mobile phone features while they buy the phone. Suggestions for further research include in the area of consumer behavior and brand equity of buying different brands of mobile phones.

DIGITAL AND CASHLESS BANKING IN INDIA: THE WAY TO FOREWORD

Dr. Anil Trimbak Gholap
Asst. Professor, Dept. of Economics,Sangameshwar College, Solapur.
Email: *anilgholap26@gmail.com*

Abstract

Digital banking is a major revolution in the field of banking. Digital banking is a general term incorporating internet banking, telephone banking, mobile banking etc. In other words, it is a procedure of banking services and products through electronic networks such as telephone, internet, cell phone etc. Online Banking or Internet Banking or E-banking allows customers of financial transactions on a secured website worked by the institution, which can be a retail bank, virtual bank, credit union or building society. Digital banking facilitates an effective payment and accounting system thereby increasing the quickness of delivery of banking services. While Digital banking has enriched productivity and accessibility, it has also posed numerous challenges to the controllers and supervisors. There are also several opportunities that are open in Digital banking in the Indian Banking segment.

Keywords: *Digital Banking, Digital Payments, Online Banking, Cashless Banking.*

Introduction:

Digital banking is a major revolution in the field of banking. Previously banking was conducted in a very traditional method, there were no such modernizations. Digital banking has emerged as the major focus area in the "Digital Transformation" agenda of banks. Information revolution led to the development of internet, which lead to E-commerce continual by growth of E-banking. With the assistance of technology customer do the banking actions wherever in the world like ATM's Debit cards, mobile banking, internet banking and Banking portals etc. Making Digitalisation of banking does not only mean online banking, internet banking, mobile banking or paperless banking quite it is the use of new technologies to renovate the prevailing banking business model into a new banking business model. A model which will itself generate first-hand customer base, reveal newfinancial services, make sure faster and smooth services to customers with cheap operating cost, zero mistake, ease to handle and apparently, extreme security.

Objectives of Study:

1) To study the various means of digital and cashless banking transactions in India.
2) To study how digital banking have plays important role in an emerging of Indian banking sector
3) To study the challenges faced by Indian banks in the digital service scenario.

Methodology:

This paper is prepared through illustrative research, which is based on secondary data of journals, research articles, newspapers and magazines etc. After taking into account different aspects of the study a descriptive research design is adopted to make the research more accurate.

Various Means of Digital and Cashless Banking:

In India digital banking became popular recently as in early 1990s. The Central Government and Reserve Bank of Indiahave been working together to promote the digital banking in the country. Online Banking or Internet Banking or E-banking allows customers of financial transactions on a secured website worked by the institution, which can be a retail bank, virtual bank, credit union or building society. To access a financial institution " online banking facility, a customer having personal internet access must register with the organization for the service, and set up some password for client authentication.

To access online banking, the client would go to the financial institutes website, and enter the online banking service using the customer number and password Standard services covered under Digital Banking in India, the banks offer the following digital banking services.

- ✓ Automated Teller Machines
- ✓ Credit Cards
- ✓ Debit Cards
- ✓ Smart Cards
- ✓ Electronic Funds Transfer System, NEFT & RTGS
- ✓ Electronic Clearing services (ECS)
- ✓ Electronic Clearing Cards
- ✓ Cheques Truncation Payment System
- ✓ SMS Banking
- ✓ Mobile Banking,
- ✓ Telephone banking
- ✓ Internet Banking
- ✓ E- Wallets

Digital banking is a general term incorporating internet banking, telephone banking, mobile banking etc. In other words, it is a procedure of banking services and products through electronic networks such as telephone, internet, cell phone etc. The concept and scope of Digital banking is still progressing. Digital banking facilitates an effective payment and accounting system thereby increasing the quickness of delivery of banking services. While Digital banking has enriched productivity and accessibility, it has also posed numerous challenges to the controllers and supervisors. There are also several opportunities that are open in Digital banking in the Indian Banking segment.

Benefits of Digital and Cashless Banking:

1. **Convenience in Service:** digital banking is a provision which is accessible to one and all who is a bank account holder. It allows the consumers to simply access the bank's website using their username and passwords; and do the transactions even if the bank is closed.
2. **Flexibility in Service:** digital banking, with its flexible facilities like 24x7 ATMs and mobile banking is flexible to the clients. It allows the clients take out cash using their debit cards, and payment of bills.
3. **Time Saving Service:** This is the ultimate benefit to our generation as we are not able to spend a lot of time for anything. Time management is one of the extreme challenges in our busy lives. Digital Banking allowsto us to carry on banking transactions within minutes, not troubling our routine.
4. **Financial Management:**

Now online banking allows their customers to easily view their account online and they can also view some upcoming transactions so that they can better predict their cash flow and can also sign up for additional services much more easily or by the help of this they can also cancel current services if they think so.

5. **Money Saving:**

In digital banking people can do their work without any paper work so it saves money for banks, and also all transactions can be done without any paper work, that is favourable for banks and customer also.

Major Barriers and Threats of Digital and Cashless Banking:

However, the recent development of totally using the online mode to make all kinds of transactions has some weaknesses which may prove costly in the long run unless secured against from the establishment.

1. **Complex Transactions:**

There are several complex transactions which cannot be fixed out unless there is a face to face dialogue with the manager that is not possible through internet banking. Solving specific issues and complaints needs physical visit to the bank and cannot be succeeded through the internet. Online correspondence is neither clear nor pin pointed to assistance resolve numerous complex service issues. Certain services such as the notarization and bank signature guarantee cannot be accomplished online.

2. Lengthy Starting Process:

Some times because of the internet server problem and data speed issue it may be possible that start up may take time to get login to internet banking.

3. Security Issues:

We all know that digital banking comprehensively encrypted, through the developing technology, but it is very tough to find out the 'hackers' who may access any customer's online banks accounts.

4. Technical Failures:

As some times all technologies go down, like that sometimes websites of online banking also shut down. If this happens when you want to close your local bank or credit card accounts, you will get absolutely tired.

5. Upgradation in Bank Site:

Sometime many banks upgrade their online programmes or services to offer their customer more conveniences and more facilities, but it can be a reason of some problems, if they add some new features so some time people get confuse to access their online banking system and they have to enter their account information again and again. Apart from above issues digital and cashless facing few barriers and difficulties while digital payment.

- Habit to use cash
- Complexity of using Internet
- Fraud and hidden charges
- Absence of human interaction
- Less Smartphone saturation in rural area.
- Poor or low internet speed
- Afraid of privacy and security.

Nowadays most of banks have their own IT department, which not only takes care of deployment and implementation issues but is also into emerging specific and modified application for the bank. Nowadays public and private sectors bank, everyone is expanding its IT division and making massive investment to develop the division as a profit centre by itself. It is not just cost-effective but also beneficial for a bank to have a separate division that takes care of IT in total. In present era of privatization and globalization, the Indian banks are slowly looking at several alternatives to stay ahead in the rat race.

Conclusion:

It can be concluded that digital and cashless banking in India is only at its primitive stage dominated by the Indian private and foreign banks. The use of digital banking is confined to a few consumer segments. The risks associated with digital banking are many, which the banks have to model using classy systems and widespread use of technology. The legal outline as its exits requires an updating to rationalize and handle the issues related with digital banking. The functional model can be used to order perceptual variable concerning consumer behaviour so that value to the consumer can be maximized. The banks can focus on strategic consumer groups to maximize its revenues from digital banking. The experiences of the global economies recommend that banks cannot avoid the digital banking phenomenon, but to gain a competitive advantage, they must structure their business models to suit to Indian conditions.

HUMAN RESOURCE INFORMATION SYSTEMS: AN EFFECTIVE TOOL FOR HUMAN RESOURCE FUNCTIONS

Dr. Ramchandra Vasant Mahadik
Associate Professor, Bharati Vidyapeeth (Deemed to be University), IMED, Pune

Abstract

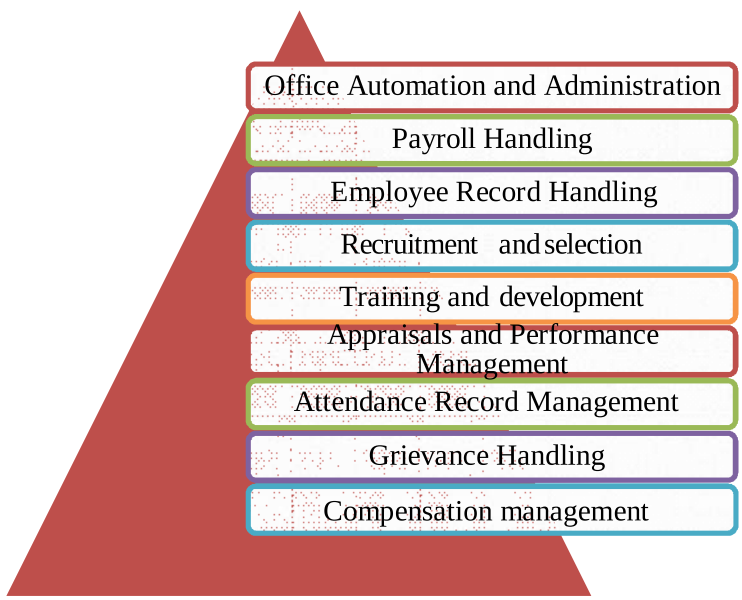
HRIS is an integrated system used to gather, store and analyze information for organization's human resources. It consists of computer applications, hardware and database necessary to collect, store, present, retrieve, present and manipulate data for human resources function. The objective of this paper is to analyze the effectiveness of HRIS for operational functions of HRM in the organization. This research paper is based on secondary data. Researcher has reviewed 17 papers for different type of organization. This paper conclude that HRIS helps to increase the effectiveness of selection process as well as help to find the training needs of employees. HRIS is contributing in employee satisfaction which will motivate the employee to stay in the organization by maintaining transparency in performance rating and promotion decision.

Keywords: *HRIS, Recruitment and selection, Training and development, Performance Management, Compensation Management*

Introduction:

Bill Gates, in his book "Business @ The Speed of Thought" opens readers' minds to a future which is enriched with information. Coining the phrase "digital nervous system", he explicates the power of information which has the capability to create more jobs for workers, more knowledge for customers, and more influence with citizens. Technology revolution has transformed business processes and ways of doing business. Almost all facets of the business function embroil technology for efficiency, speed and error-free performance. Tannenbaum (1990) defines HRIS as, "One which is used to acquire, store, manipulate, analyze, retrieve and distribute information about an organization's human resources." HRIS can be seen to be performing crucial functions. List of some such functions, which most of the HRIS solutions currently in the market, claim to be performing have been presented in the following figure.

FIGURE - HRIS FUNCTIONS



HRIS research has been found to encompass many facets including the technology aspects of employee psychology, work, organization, employee, job, behavioral and role impact. The consistencies between these HRIS contributions are such that regardless of the domain the dimensions of implementation can be joined together. This section evaluates HRIS and its impact on HR functions.

Role of HRIS::

a. HRIS in Planning the Human Resources**:**

According to Dr. Shikha N. Khera & Ms Karishma Gulati the role of HRIS in HR planning is quite evident. The HRIS helps in increasing the pace of the HR process and also can help in strategic functions of HR manager like training and development, succession planning moreover in recruitment and selection for applicant's tracking. This research was based on empirical data of 127 respondents from major IT companies in the market. The information system can easily track the unoccupied and occupied positions in an organization in an efficient way by providing accurate information of incumbents.

b. Importance of HRIS**:**

According to **YaseminBal, SerdarBozkurt & EsinErtemsir** in their survey to assess the effectiveness and use of HRIS in organizations by knowing HRIS perception and HRIS satisfaction questionnaires have been applied to HR employees and found that HRIS helps in the following process:

1. identifying potential employees, maintaining complete records on existing employees
2. creating programs to develop employees' talents' and skills
3. helping senior management to identify the manpower requirements in order to meet the organization's long term business plans and strategic goals
4. helping middle management uses human resources systems to monitor and analyze the recruitment, allocation and compensation of employees
5. helping operational management uses HR systems to track the recruitment and placement of the employees
6. also in workforce planning, staffing, compensation programs, salary forecasts, pay budgets and labour/employee relations

c. Importance of HRIS in a knowledge-based economy**:**

In a cross sectional study carried out by Shammy Shiri to identify the importance and effectiveness of HRIS in a knowledge-based economy. Data was collected from manufacturing, service and IT sectors and have included top management, managers, and executive of HR in the survey. It was found that direct significance verifies completeness of the HR function and also provides HR professionals with opportunities to enhance their contribution to the strategic direction of the firm. Shammy Shiri is of the view that, HRM (human resource management) is especially important in a knowledge-based economy, where ideas and expertise are greatly valued, and a creative and innovative workforce is necessary to meet the challenges of this new economy. It is imperative and complex process to use human capital in efficient and effective way and managing it.

d. Role of HRIS in SHRM

A study by Asafo-Adjei Agyenim Boateng tried to find out if there is any significant difference in the usage of HRIS between Small/Medium (SME) size and large size companies and its role in SHRM. Data collected from 170 companies. The following were the results of the study:

1. HR professionals not only consider HRIS usage as a support for strategic HR tasks but also perceive it as an enabling technology.
2. It indicated that large sized firms are most likely to experience considerable HRIS usage in support of strategic HR tasks.

3. Moreover, there was no significant difference in proportion to the size of a company regarding HRIS usage in support of commitment management and managing trade union relations with organizations.

e. Enhanced Business Competitiveness

Dr. Nisha Aggaral and Mona Kapoor is of the view that, in the present hyper-competitive era there is increased need of information system and technology in HRM process in any of the organization. HR and use of technology can act as a strategic weapon to enhance the business competitiveness

f. The Relationship between HRIS and HRM functionalities:

The study by Bader Yousef Obeidat informs about the relationship between HRIS & HRM functionalities more specifically, it describes the strategic integration, forecasting & planning, HR analysis, communication have no relationship with HR functionalities on the other hand, Performance development, Knowledge management and record keeping for compliance have relationship with HR functionalities.

g. Impact of Use of HRIS in public sector organization:

According to the study carried out by Nicholas Aston Beadles, Christopher M. Lowery and Kim Johns the use of HRIS has not reached to its full potential though it is valuable in helping strategic role. It leads to decreased cost and improved communication and time spent on mundane activities of the organization. It is observed that various functions of HR are being different the way they are handled so, HRIS in its present form not have had much positive impact. Moreover, according to the study, various directors believed that HRIS had potential benefits.

h. Impact of HRIS on Performance of firms:

The study by Md Shahnur Azad Chowdhury, Mohammad Yunus, Faruk Bhuiyan and Mohammad Rokibul Kabir evaluates the impact of HRIS on performance of banks in Bangladesh. . The result of this study summarized below.

1. It is found that HRIS is being used in Banks mainly for Recruitment and selection, Training and Development and Payroll. Syudy shows that 98.28% banks are using HRIS for Recruitment and selection, 82% for payroll.
2. The result of the roles of HRIS in saving time showed a mixed response.
3. HRIS has very important role to play in saving cost for record keeping.

i. Managerial Perceptions of the Impact of HRIS on Organizational Efficiency:

The study by Nikhal Aswanth Kumar and Sanjana Brijbal Parumasur evaluates the impact of HRIS on HR functions like time management, cost management, managerial satisfaction and organizational efficiency in South Africa. The sample size was 101 mangers. The results were inferred using descriptive and inferential statistical analysis.

It was found that

1. Managers have a fairly positive view of the impact of the HRIS on organizational effectiveness with the greatest degree of confidence being placed on the impact of HRIS on time management and on HR functions
2. A well implemented and managed HRIS enables readily available information to be translated into more information sharing, greater knowledge transfer and management
3. The HRIS has the potential to enhance the speed and quality of decision making and the realization of the HR strategy, thereby enhancing organizational effectiveness

j. The Impact of Human Resource Information System (HRIS) on Human Resource Management Effectiveness:

The study by Sulochana, KAB and Sajeewanie**,** identify and examine the impact of HRIS on HRM effectiveness in large scale group of companies in Sri Lankan context. The findings of this study are summarized below.

1. There is a weak positive relationship between the impact of HRIS and HRM effectiveness in the selected group of company.
2. If the utilization of HRIS is increased further, it could be used for achieving more favorable results in enhancing HRM effectiveness in the company.

Objectives:

1 To study the concept of HRIS from spectrum of HR functions.

2 To find out role of HRIS in operational functions of HRM.

Research Methodology:

This research is descriptive type of research. Researcher wants to find out scope of HRIS for operational function like

1 Recruitment and selection

2 Training and development

3 Performance Management

4 Compensation Management

This research paper is based on secondary data. Researcher has reviewed 17 papers for different type of organization talking about

1. HR functions
2. HRIS
3. Effectiveness of HRIS

The summary of theses papers are presented in the next part as discussions.

Discussion-

This chapter is divided in to four parts. These parts are nothing but four major operation functions of human resource management.

1. Recruitment and selection:

Recruitment and selection is major function of HR. It deal with supplying adequate human resources as per the need of the organization. Sometimes organization prefer to use internal source of the Recruitment like promotion and transfer. To use these resources in large organization we will require specific data about eligible employees. HRIS will help to identify suitable candidates from present employee's pool.

It will increase the effectiveness of selection process by following ways.

a. Only skilled and committed performance will go for selection round.
b. Chances of getting right candidate for the post will be increased.
c. Data updation in HRIS will help organization to finalize succession plan.

2. Training and development:

Training and development is an important tool for building organization for tomorrow. Training and development process will be more effective by using data from HRIS. HRIS keeps data of employees in terms of education qualification, skills present, training programs attended and performance of the individuals. This will help in identifying training needs of each employees.

HRIS helps in following ways in the function of designing training programs.

a. Identifying training topics.
b. Selection of trainer.
c. Training evaluation.

3. Performance Management:

Performance Management is nothing but setting the target and evaluating the performance of an employee to give ratings. HRIS helps in finalizing the standards for employee, in another wards, it helps in goal setting.

Through HRIS we can design performance appraisal forms and mail to employees. Employee will send filled forms which will automatically get segregated as per organizational requirement.

HRIS will increase effectiveness of performance management department by following ways.

a. Accurate finalization of performance standards.

b. Measuring the performance of employees.
c. Accuracy in employee performance rating.
d. Maintaining data about Employees performance and ratings.

4. Compensation Management

Getting a good pay from organization is a common dream of employee who are giving their best performance not paying properly will create dissatisfaction among the employees which may lead in decreasing the retention rate. Data in HRIS will help in finalizing salary package for employees which will safeguard interest of organization as well as employee.

Conclusion:

HRIS is a boon for organization for carrying out different HR functions like Recruitment and selection, Training and development, Performance Management and Compensation Management. Data from HRIS helps to reduce the chance of errors in decision making for an organization. Decisions based on HRIS will help organization to bring more effectiveness in HR functions. It will save time and cost of HR department in decision making related to issues like transfer, promotion, Hiring and training etc. These decisions related to employee will have impact on employee moral. Transparency created in decision making will motivate employee to give in their best for the organization. Thus HRIS is contributing in employee satisfaction which will motivate the employee to stay in the organization.

A STUDY OF INNOVATION CHALLENGES AND ITS EXTENT IN INDIAN SMALL AND MEDIUM SCALE MANUFACTURING ENTERPRISES

Dr. Pravin Mane
Assistant Professor, Bharati Vidyapeeth (Deemed to be) University Institute of Management and Entrepreneurship Development Pune, India

Abstract

Small and medium scale enterprises are backbone of Indian economy. India has ranked second in terms of number of small and medium scale enterprises. It is crucial that these firms innovate as there is global competition. Innovation is key factor for facing global competition. Indian Small and Medium scale manufacturing enterprises are facing different challenges in implementing innovation. This study has tried to find out those challenges of innovation and ranked them based on degree of its intensity.

Keywords: *Innovation, Bureaucracy, Execution Constraints, Financial Resources, Knowledge, Company Culture, Satisfaction*

Introduction:

In view of fast changing technologies, growing competition, changing labour market demography and complexities of the market forces, it has become vital for small and medium scale industries to remain constantly innovative. On the other hand these companies tend to continue functioning in the conventional manner. As the SME sector in India, majorly consists of manufacturing industries, the economy depends on the performance and sustainability of these industries. This sector plays a lead role by contributing to the 45% of the manufacturing sector, nearly 40% in Indian exports which leads to the high economic growth. It also provides the huge employment opportunities. Various reports provide the facts that Indian SMEs are employing 40% of its workforce. In the context of global competition, it becomes essential for the SME firms to build competitive advantage to face the competition especially from the firms operating in other Asian countries who are cost effective and those from European nations competing on value and high technology based product.

Though Indian SMEs have moved from manufacture of goods that are basic and simple to goods that are sophisticated, the need for keeping up pace to global developments and improving productivity is highly felt.

Among the various factors which determine the growth and development of nay organization, major and the most important factors is Innovation. SMEs are facing different challenges in implementing the innovation practices which limits the growth of an organization. What are those challenges?

In the manufacturing sector, research and development starts with the invention of new technology for the development of new and better processes and products. After liberalization, the manufacturing sector in Indian economy has witnessed the increase in challenges and opportunities to the firms and business organizations. Being a dynamic, flexible and innovative sector, there has been consistent rise and growth in the investments in this sector. It has also created huge employment opportunities along with the production, understanding of markets, and management development in terms of abilities to manage the business in the unstable environment. Also the operational capability has seen set high standards of performance.

This sector helps to build the conventional and futuristic knowledge and expertise by promoting regional and interpersonal equalization. This sector has great competitive advantage and so the tendency to grow to large scale is high. It is also less capital intensive and more labor intensive sector and as it has gained high competitive standards globally, it reduces the threat of loosening of trade protection policies.

The exposure of Indian SMEs to a competitive landscape both at the domestic and global front enables greater access to markets that are geographically spread and strong collaborative linkages with large scale organizations. This competition, co-operation and interaction between Small and Medium Scale Enterprises and larger firms promotes the collective efficiency and technical up gradation to produce the goods as per the demand and needs of the customer. This liberalized economic atmosphere forces them to produce high quality goods and services, diversified product portfolio, utilization of technology on a continuous basis and efficient management systems. The focus on above factors has been crucial as these were hitherto neglected in the earlier decades. This economic liberalization has provided growth opportunities to urban areas but areas that are remote especially in states that are still facing tall challenges to development and thus are trapped in vicious circles of poverty.

Taking into consideration the strategic role played by Small and Medium Scale Manufacturing Enterprises, it has become vital to address challenges faced by Small and Medium Scale manufacturing Enterprises in innovation.

Challenges to innovation:

i. Bureaucracy: Boston consulting group, United States of America and European studies found policies and procedures that suppresses innovation and creativity in an organization. More policies and procedures strangle the creativity in organization. Developing simplified procedures and policies which will motivate and empower employees for creativity is the major challenge in front of management.

ii. Execution Constraints: Innovation starts with the generation of an idea but the success of it depends upon its execution and commercialization. Execution constraints like organization structures, authority and responsibility system, willingness and attitude of employees etc. restrict the implementation of an idea.

iii. Lack of Financial Resources: Innovation process involves risk and uncertainty of results and developing various prototypes needs lot of investment. Organization focusing on day to day business delivery and financing for the same is major challenge.

iv. Lack of Experience / Knowledge of the Personnel: Generating commercially feasible ideas, implementation of new project and commercialization of innovation requires experienced workforce. Small and medium scale enterprises face challenge of shortage of such competent personnel.

v. Company Culture: Study findings show that major determinant of innovative idea generation is organizational culture. In the supportive organizational culture employees think creatively and take risk of innovative idea generation. Major challenge in front of small and medium scale manufacturing enterprises is developing atmosphere of creative thinking and supportive culture.

vi. Lack of Suitable Infrastructure: Idea development and commercialization requires various types of infrastructure like labs, technology, tools etc. Providing such affordable infrastructure for small and medium scale enterprises is a major challenge.

vii. Satisfaction: Innovative idea comes in a mind of satisfied employees. Creativity, idea generation, execution of innovation practices need satisfaction. Satisfied employees try to overcome challenges of innovation like execution constraints, bureaucracy, infrastructure, financial resources etc.

Research Methodology:

To study the challenges of innovation in SME's intensity, of challenges primary data is collected. Non- Probability Purposive sampling method was considered suitable to the study. Selected enterprises were sent a brief note and questionnaire on innovation challenges.

Analysis:

Purpose of study is to find if there is any difference in the degree of challenges perceived by respondents across different challenging factors presented to them.

Variables & Measurement: respondents were presented with seven innovation related challenges. Each challenge was measured on five point scale 1 being minor challenge and 5 being major challenge of innovation.

Statistical Test: Friedman Chi-square Test

Ho: There is no difference in degree of challenges perceived by respondents across different challenging factors presented to them.

H1: There is significant difference in degree of challenges perceived by respondents across different challenging factors presented to them.

Table: 4.2.8 (a) Test Statistics	
N	60
Chi-Square	12.104
Df	6
Asymp. Sig.	.060

Chi-Square $\chi^2(6)=12.10$ P value=0.06 N=60

Conclusion: Since P value is more than 0.05 but less than 0.1 hence the test is partially significant, the null hypothesis is rejected. Hence it is concluded that there is a significant difference in degree of challenges perceived by respondents across different challenging factors presented to them.

In order to find out where difference lies we referred to ranks table.

Table: 4.2.8(a) Ranks Table of Challenges to Innovation	
Bureaucracy	4.02
Execution Constraints	4.28
Lack of Financial Resources	4.34
Lack of Experience / Knowledge of the Personnel	3.77
Company Culture	3.68
Lack of Suitable Infrastructure	3.58
lack of satisfaction	4.33

From the rank table it can be seen that lack of financial resources has mean rank of 4.34, lack of satisfaction 4.33, execution constraints 4.28, bureaucracy 4.02, lack of experience/knowledge of the personnel 3.77, company culture3.68, and lack of suitable infrastructure 3.58.

Conclusion: Lack of financial resources, lack of satisfaction, execution constraints are the top three challenges to innovation.

Suggestions:

The innovation practices of an organization depend upon several variables. Originations face several challenges cut across domains and functions while adhering to innovation in processes, systems, operations and products.

Significant variables with reference to challenges are:

- Financial resources, which the responses show lack of
- Execution constraints
- Lack of satisfaction

Innovation stems out of budgetary allocation. Upon further investigation it was observed that though funds were available, allocation of funds were hurdles due to other immediate needs. It is suggested that though innovation needs budgetary allocation, proper planning about investments in innovation practices should be given prime importance. The organizations, in scenarios such as low budgetary allocations should not stifle the mindset towards innovation and may work towards making small improvements in processes and activities of the organization.

The top management needs to focus on improving the efficiency in the innovation practices as not all innovations may necessarily result in high impact makeovers. This results in providing a positive motivated environment for employees to make meaningful contributions and inculcate the sense of ownership of the particular domain, process / activity of the business.

Constraints of execution of processes may hamper innovation mindset. Despite providing a supportive working environment, the organizations may not identify its own capabilities due to this constraint. The researcher suggests an internal audit so as to weed out difficulties of execution of innovative ideas that may be integrated into various functions / activities such as input, knowledge management, management of projects, organizational structures, marketing, human resource management etc.

PROGRESS IN RURAL INFRASTRUCTURE

Dr. Sharvari R. Kulkarni

Rajarshi Chhatrapati Shahu College, Kolhapur.

Abstract:

Adequate and accessible rural infrastructure not only enriches the quality of life, but also raises the efficiency in transportation and lowers down the production cost and directly supports agricultural activities and rural livelihood. Economics of rural well-being rests on advancement of infrastructure especially on the socio-economic infrastructure which brings qualitative changes in the life of the people. The concept of infrastructure is quite pervasive which embraces economic, social and institutional infrastructures. This paper focuses on facilities in infrastructure in rural areas. The progress of rural infrastructure is the key to rural development.

Key words: *PMAY-G, PMGSY*

Introduction:

In today's worlds, Gandhiji's words that India's survival depends on the well-being of its villages seem even more pertinent. About seventy percent of India's population live in the countryside. This makes rural India a focal point for issues of national concern. Accordingly, the government is keeping the growth and development of rural India at the centre stage of its policies. This was apparent in the budget 2018-19 in which several measures to boost agricultural production and the rural economy have been announced.

Inclusive growth is the need of the hour and it ensures economic, social and political equality among all the people of a country. Inclusion growth in itself does not have automatic mechanisms to reach the deprived and helpless section of the society, rather it is the result of focused course of actions of the government. The demographic profile and societal essentials of inclusive growth is skewed towards rural development. The present paper is based on rural infrastructure and it is included in Rural Housing and Rural Roads. This paper emphasizes on agricultural credit to contribution create employment in rural area.

Importance of Study:

The concept of infrastructure is quite pervasive which embraces economic, social and institutional infrastructures. Adequate and accessible rural infrastructure not only enriches the quality of life, but also raises the efficiency in transportation and lowers down the production cost and directly supports agricultural activities and rural livelihood. Better infrastructure has positive impact on economic development. The progress of rural infrastructure is the key to rural development. Economics of rural well-being rests on advancement of infrastructure especially on the socio-economic infrastructure which brings qualitative changes in the life of the people. It further amplifies the life of 69 percent of our Indian rural population. Considering the above fact, the present government has given enough importance to rural infrastructure development. This paper focuses on facilities in infrastructure in rural areas.

Objectives of the Study:

The objective of the research paper is as follow:

1) To know the Progress of Pradhan Mantri Awaas Yojana - Gramin
2) To Understand the Progress of Pradhan Mantri Gram Sadak Yojana
3) To Review the Agricultural Credit

Research Methodology:

The present paper is based on mainly Secondary data. The data has been collected through Magazines, Journals Various Books, and Internet etc.

Rural Housing: Pradhan Mantri Awaas Yojana-Gramin (PMAY-G)

PMAY-G was launched by the present government as a flagship rural housing scheme which is much wider in its scope and coverage. It targets to provide a pucca house with in built basic amenities to all the houseless households and households living in kutcha and dilapidated house. The minimum size of the house has been increased to 25 Sq.mt.(from 20 sq.mt.) with a hygienic cooking space. Its motto is to provide "House for All" in the rural areas to 1 crore rural households, within a period of three years 2016-19.Government has a made dedicated effort to make 51 lakhs houses in 2017-18 and also in 2018-19 to achieve the target of 1 crore houses.

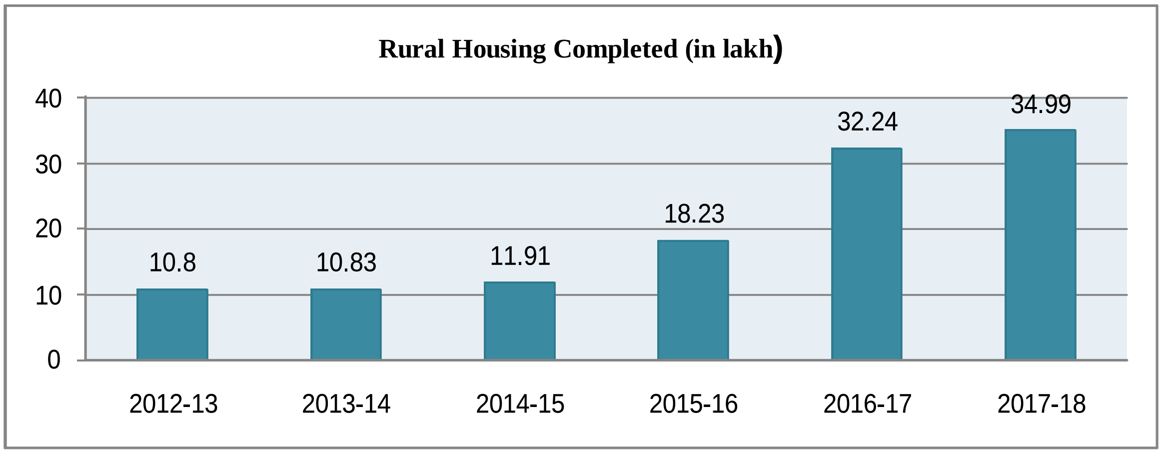

Figure 1

Source: *Kurukshetra July 2018 Page No.24*

Rural Roads: Pradhan Mantri Gram Sadak Yojana (PMGSY)

Roads are primary to any development agenda. Rural roads connectivity has been taken care under the Pradhan Mantri Gram Sadak Yojana for which Rs. 19,000 crores is allocated in the current budget like the previous year. This is high of all time and quite huge in comparison with 2012-13 Rs.8.885 crores and Rs. 9805 crores in 2013-14.This will facilitate village interconnectivity and with urban counterparts as well and hope to foster business and trade among villages and cities and thereby able to contribute to the standards of living of the rural people. Under this scheme habitations need to be connected with agricultural and rural markets, schools, colleges and hospitals to enhance the quality of life in rural areas. Based on the data on completed rural roads under PMGSY, it is found that the prograss is noteworthy and 82% numbers of habitations are well connected. Besides Ministry has approved 18,364 kms for upgradation of roads which is 36.73% of the target under PMGSY-II during 2013-14 to 31 December 2017.

Table No.1: PMGSY-Road Length in kms and Number of Connected Habitations

Fiscal Year	Target Length	Completed Length	Connected Habitations
2010-11	34,090	46,784	8,360
2011-12	30,566	31,615	7,666
2012-13	30,000	27,802	9,413
2013-14	26,950	27,330	9,515
2014-15	21,775	38,057	11,121
2015-16	33,649	35,155	9,953

2016-17	48,812	47,447	11,742
2017-18	51,000	28,844	7,082

Source*: Kurukshetra July 2018 Page No.24*

Agricultural Credit:

Agriculture plays a vital role in India's economy. Nearly 55 per cent of the population is engaged in agriculture and allied activities contributing 17.4 per cent to the country's Gross value added. Contribution of agricultural to rural employment and rural livelihood itself signifies its national importance agricultural development is imperative for rural development which can be achieved through sustained credit support facility. The provision of agricultural credit has increased from Rs. 3, 75,000 crores (2010-11) to Rs. 11, 00,000 crores (2018-19) considering the significance of agricultural in contributing in rural employment, farmers well-being and specially support farmers doubling their income. The growing agricultural credit reflects the endeavour of the present government to uplift the rural economy.

Findings:

Pradhan Mantri Awaas Yojana- Gramin scheme aims to provide 'House to All' in the rural areas to 1 crore rural households, within a period of three years -2016-19. Against the target of 51 lakh houses in 2017-18, a total of

lakh houses have already been completed. The Government is making all out efforts to achieve the target of one crore PMAY (G) houses by 2019. Pradhan Mantri Gram Sadak Yojana (PMGSY) aims to provide all weather road connectivity to unconnected habitations as a poverty reduction strategy. Based on the data on completed rural roads under PMGSY, it is found that the progress of noteworthy and 82% eligible habitations are well connected. The Government's rural focus bodes well for the overall growth of the country's economy. The agricultural centric rural development is the key to transforming rural lives.

Conclusion:

The intent and endeavour of the government its reflected through current budget provisioning to create employment of 321 crore person days, lakh kms of rural roads, 51 lakh of new rural houses. Planning is fine but it needs to be property implemented within the resource constraints to get the desired outcome. Nevertheless, seeing the success story of the present government, we look forward to have more such schemes and positive outcome through effective leadership, good governance, close monitoring clear but accountability and timely execution with apt follow up of the various schemes of rural infrastructure development in India.

INTERNET OF THINGS (IoT)- A BOON TO ORGANIZATIONS AND EMPLOYEES

Dr. Sachin Ayarekar
Assistant Professor, BVDU IMED, Pune
Dr. Pramod Pawar
Associate Professor, BVDU, IMED, Pune

Abstract :

Internet of Things is nothing but more things or objects can be connected to internet than citizens. IOT is becoming rapidly popular in industry. As per projection internet connected things by 2020 will reach up to 20 billion. The objective of this paper is to find out benefits of IOT for personal and professional life of an employee. This paper is based on secondary data. Employees using IOT will found areas of improvement and will work on it with peace of mind because IOT will enable them to control things back at home. It is also helping organization for improving the utilization of resources as well as security.

Keywords: *IoT, Employee Effectiveness, Organizational effectiveness, sustainable development.*

Introduction :

Multiple technologies analytics commodity censers machine learning and embedded systems provided the necessary platform for the birth of Internet of Things. Traditional fields of embedded systems, wireless censor network , automation and other factors contributed for the revolution of Internet of Things. This concept was first coined in 1982 with modified coke wending machine. This appliance became the first internet connected machine at Carnegie Mellon University. This new version wending machine were reporting two important things.

1) It report about available inventory inside the machine.
2) It also reports about status of cold drink. (cold or not).

Mark Weiser (1991) explained about the computer of 21st century. He also talked about UbiComp and PerComp generating the contemporary version of the Internet of Things. Small packets of data to a huge set of nodes can used to control home appliances to factory functioning by integration and automation. Companies like Microsoft proposed different solutions for using IOT in day to day life.

Kary Framling (2002) stressed upon the need of upgraded information system infrastructure. As per this research information system infrastructure will allow the users to use smart and connected objects. Internet of Things is nothing but more things or objects can be connected to internet than citizens. As per report by CISCO system birth year of IOT is between 2008 and 2009.

IOT will help to connect home appliances as well as industrial applications.

1) Gas Gizzers
2) Television
3) Refrizrators
4) Gas Switch
5) Electric Bulb / Tubes
6) Door Lock
7) Machines
8) Tools
9) Data security

IOT is becoming rapidly popular in industry Mark Hung (2017) explained about IOT and its usefulness. With the help of IOT not only things like computers, Smart phones but also Jet Engines, Wending machines, Car can get in to Internet connected things. As per his projection internet connected things by 2020 will reach up to 20 billions. These internet connected things may be divided in to two categories.

1) General purpose device
2) Dedicated function objects

IOT will transform many organization in to digital business which will bring many new business models. This will lead to increase the revenue of the organization by reducing the wastage and increasing the effectiveness of operational functions. It will also improved the efficiency of employees as well as customer engagement. Use of IOT in organization will lead for sustainable development of the organization.

Karan Rose, Scott Eldridge, Lyman Chapin (2015) discussed five main issues repeated to IOT. They are as follows

1) Security
2) Privacy
3) Interoperability
4) Legal
5) Emerging economies and development.

As per these authors the above said five issues will be very crucial while using internet of things by employees, organization and normal citizens.

Marus P. Zillman (2018) has provided the list of Institutions bring research on IOT which will be very useful for the readers, student researchers and organizations.

IOT for employees are very useful. Employees coming to organization and going back again to home on day to day basis is becoming tough day by day because of problems like traffic connection. It is becoming a situation like war to reach workplace in schedule time as well as to reach back home as per family needs. Because of this transit period employees may forget to shut down or close down few home appliances as well as workplace equipments. This is a very mentally disturbing situation for employees which may affect the health of the employees as well as concentration level of the employees. The consequences of these mistakes will be huge form the family as well as organizational point of view.

Objectives:

1) To understand the concept of IOT.
2) To find out benefits of IOT for personal and professional life of an employee

Research Methodology :

This research is descriptive in type by which researchers want to understand the mechanism of IOT as well as its benefits for employees and organization. This paper is based upon secondary data. Researchers have reviewed 15 research papers and 02 Websites to collect the information about

1) IOT (Internet of Things)
2) Advantages for employees because of IOT
3) Advantages to Organization by IOT.

The analytical summery is given in next part of research paper which is done by using method of critical and creative literature review as discussions.

Discussion:

This part of the research paper will through light on benefits of IOT for employees as well as organization.

1) **Improved Efficiency of employees :**
   IOT will help employees to improve their efficiency in the organization by reducing the wastage in terms of utilization of sources and time. To explain this we will take an example of tube lights used at workplace. An employee after completion of the work will leave the work place in hurry and forget to switch off the tube light. Without IOT it is not possible for the employee to switch off the tube from remote place. It is a wastage from the organizational point of view. With the help of IOT employee can switch off tube which will save electricity.

   In case of efficiency operating a machine or equipment by using IOT will give constants alerts about the status of the process which machine or equipments is caring out. This will enable the employee to plan his/ her next course of action which will lead to more productivity.

2) **Improve mental stability of employees:** When employees are leaving their homes to join the work place some times they forget to switch off the gizers, Freeze, Television and gas connections. When they get remember about the fact that they have not switch off gizzer or gas they become inpatient and restless. Instead of concentrating on their job they try to use different sources to shut down the gizzer or gas button. This type of situations will increase the stress level of the employees which will mentally disturb them.

   IOT will enable them to control the home appliances from work place also which will help them to remain calm and cool even though they forget to switch off home appliances.

3) **Contribution in building organization culture :**

   IOT will facilitate employees for avoiding mistakes as well as wastage while working in the organization. This will create ample opportunities for transforming employees to next level in terms of knowledge, skills and competences.

   Reduce in mistakes and wastage will improve the confidence level of the employees and they will become ready to accept the new challenges. This will develop work culture in the organization which are quality conscious.

4) **Contribution in sustainable development**

   Organizations are continuously working on research and development to stay ahead in this competitive world. Many type of secret data is available with crucial employees. IOT put security check of transferring the data to competitors hand. IOT works as silent observer in case of many organizational functions which will help to identify the areas of improvement and guides in conducting the activities / functions effectively. This will contribute in sustainable development of organization.

Conclusion :

IOT is the need of the hour from the point of employees as well as organization. Employees using IOT will found areas of improvement and will work on it with peace of mind because IOT will enable them to control things back at home. IOT is very useful for organization also. It will help organization in case of reducing the wastage, improving the effectiveness, security and sustainable development. IOT is now becoming an integral part of every function which human beings and organizations are caring out.

STUDY OF ROLE OF MOTIVATIONAL STRATEGIES ON PERFORMANCE OF HUMAN RESOURCE EMPLOYEES IN HOSPITALS

Dr. Sonali Prasad Dharmadhikari

Associate Professor, Bharati Vidyapeeth Deemed to be University, Institute of Management and Entrepreneurship Development (IMED), Pune, India

Mastooreh Bampoori

Research Scholar, Bharati Vidyapeeth Deemed to be University, Institute of Management and Entrepreneurship Development (IMED), Pune, India

Abstract

Managers regularly satisfy their projects objectives through assistance by employed workers. Hence, administrators need profoundly proficient and beneficial staff individuals. Likewise, keeping in mind the end goal to do better, representatives require information as well as tools which are needed for the tasks along with an understanding so as to perform the delegated tasks at will. Hence motivation is highly related to action and awareness of consideration of motivation un-wraps the secret to accomplishment of any establishment. However, understanding of motivation should not constrain to theory alone. Managers need to have applicable ways to make conceptual ideals work in order to apply them to practice. This specifically is related to divisions where the latest fiscal disaster put governments in a seriously impaired circumstance. Therefore, administrators must propel their representatives to work at the highest level of efficiency with competence so as to get "more for less". All associations manage proposed activities for accomplishment of the objectives with the best utilization of human resources. With regard to that, careful considerations need to be made in order to motivate people using incentives, bonuses, and leadership roles of the project or organization. The objective is to create motivational procedures and a workplace which would assist people with presenting their outcomes as per desired expectation.. The research is based on Primary data and secondary data. The purpose of this study is to investigate the motivational practices on HR employees based on hospitals.

Key words: *Motivation, Human Resource Employees, Health Care Systems*

1. Introduction

: Background of the Study

To improve the efficiency and effectiveness of employees, organizations adopt HRM consisting of various plans, procedures and arrangements. This entails most things right from appointing and choosing the method influencing the way personnel is looked after. Boxall and Purcell (2011) conceptualized execution as an element of openings for work, (for example, information, capacities, and aptitudes that specialists require for the acknowledgment of their obligations), inspiration (benefits that employees look for their inspiration) and organization of work (how work and organizations are organized that empower representatives perform better). An organization is an entity of people, and the process of recruitment, skill development, promotion and motivation of the workforce is of very high importance for an organization. Modern management theory defines HRM in terms of industrial/employee relations and personnel/staff (Christine & Ronan, 2013).

HRM is also vital for interrelations of the organization and helping individuals integrate so that they can achieve organizational goals. Hence, a personnel manager should plan, organize, direct and control the performance of these operational functions.

Scott et al. (1977)[24]focused on staff doing important management operations while defining HRM. Motivational theory and HRM investigate the factors influencing people. Motivated people consciously work towards something they appreciate and make decisions accordingly. Individuals are all different and hence differ in what they appreciate. An employee can be motivated through financial incentive, job threat and aligning his personal achievements with organizational goals. Since everyone has individualistic talents, one also requires an individual purpose in order to complete distinct organizational tasks. When motivation is investigated, one needs to identify the needs (perceived lack) of an individual. This perceived deprivation can be social, psychological or physiological in nature.

Health sector performance is dependent on motivated and retained health workers (Peters, Chakraborty, & al, 2010)[20], and a motivated employee will probably apply his insight to the genuine health care delivery (Prytherch & al, 2013)[21]. Job motivation can be observed, when an employee is ready to exert a continuous effort for achieving goals of an organization (Mathauer & Imhoff, 2006)[16].

In developing countries, issues like personal safety, motivation, poor working conditions and equipment can hamper the productivity of HR for health (Luoma, 2006)[15]&(Mutale & al, 2013)[18].

: Statement of the Problem

Motivated workers are more productive and hence more profitable employees. When people are not motivated, they start to be less creative and non-productive for an organization. It is becoming vital to employ motivated people. Hence, before understanding employee motivation, one has to investigate what motivates an individual. Motivation can be induced through recognition, popularity, money, success, career development, learning, status, health and balance. For creating a winning organization worker can be motivated to become successful themselves. The ideal way to build a successful company is to motivate your workers to be successful themselves. For developing and enhancing their skills employees can be offered incentives. It is vital for an employee to feel important and to be a valued member of the team. Workers become more productive and motivated if the environment is positive.. It is for this reason that the present study is attempted and undertaken in this area.

: Significance of the Study

Workers are important when it comes to the efficiency of health care delivery systems. So, this has a concurrent outcome to the industries progress. The following research demonstrates insights and aims to provide for a substantial and useful involvement in the health sector since it focuses on the vitality of employee motivation in hospitals. It is of great importance for a health organization to focus on first their own workers considering how they feel and what is required to motivate their moral so that they can be trusted to look after the needs of the patients, in this case patients.

: Objectives of the Study

It is important to see the effect that planning as well as action has on the performance of their workers. If the performance standards that have to do with quality, quantity, price and way of attitude changed or are still the same. So, it is important to conduct performance appraisal that everyone takes place in order to create smooth working conditions for the organization.The objectives of present research are:

- To identity and analyze factors affecting human resource employees' motivation and incentive in hospitals.

2: Review of literature

2.1: Motivation

Motivation gets its meaning at that point of how much an individual is encouraged or stimulated to perform (Rainey, 1993). Dictionaries explain that motivation is in fact the goad to action (Mitchell, 1982)[17], however whereas researchers state that these are series of psychological progressions that lead to arousal, direction and persistence of behaviour of an individual for achieving an objective (Robbins & Judge, 2008). Three motivation pillars have been highlighted in previous definition, i.e. arousal, which is related to the initiative or ambition which kindles behaviour (Greenberg & Baron, 2003).Then "direction", which relates to behavior put forth and if it is parallel with the establishments needs and goals (Robbins &

Judge, 2008). The third– persistence – it is related to sustenance of behavior. However, this aspect that does not have as much importance given as persistence is also describable as the reaffirmation to the processes of initial arousal and direction (Mitchell, 1982)[17].

Moreover, stated in the definition it describes motivation as an individual occurrence. Each person is remarkably one of a kind and has distinctive necessities, desires, values, history, mentalities and objectives. Consequently, an administrator can't accept that what motivates him/her will likewise motivate the other worker. What's more, what propels one worker may not really rouse another. Additionally, motivation relates to assurance, self-decision, determination, expectation, and intention. Motivation is highly influenced by an employee, so he/she effectively picks if place force and exertion and make an active move (Mitchell, 1982).

2.2: Motivation Process

Three motivation components are as follows (Snezana Miljkovic, 2007)[26]:

• What a person is trying to do (Direction of an action)

• How much effort a person is putting (Effort)

• How long a person is putting effort (Persistence)

The motivation influence individuals to go through with a preferred direction keeping in mind the end goal to accomplish wanted outcomes. Motivating oneself alludes to defining of wanted objective and attempting to achieve the goal.

2. The Factorsthat Influence the Motivation of Human Resources

A few of the factors need an explanation whereas others are self-explanatory (Yair Re'em, 2010):

Recognition vs. Feedback –

This acknowledgement manages immaterial motivators, for example, the show of gratefulness as a gesture of congratulations, positive word, or commendations such as trophies, plaques and letters of appreciation. Acknowledgment always has a good implication and it recognizes and greets great conduct or activities, Feedback, however can take care of bad execution and it's more organized in nature than acknowledgment.

Training, Development and Growth –

The trainings can promote motivation as per few motivation hypotheses. Some suggest that giving profession viewpoints is helpful. The reason behind these suggestions might be different; however it is mainly established in an individual's need to development.

Relatedness/Commitment –

The following support belongingness sentiments that cause representatives to embrace activities for the group without individual profit. Van Wart (2008) calls this factor "inspiring".

Participation vs. Responsibility/Autonomy – Participation includes counseling of individuals to business associated issues, permitting new representatives for effective participation of directors' basic leadership process and decision making. To differentiate, responsibility/autonomy alludes to opportunity that administrator's delegate to their subordinates during the time spent doing their undertakings. This is what administrators characterize what is to be done and endow capacity to specialists to think and present their original operations design.

Achievement, Goal-setting and Challenge – Various hypotheses confirm the significance of the feeling of accomplishment along with success can be seen as a motivator, some focus on competitive challenges at work environments along with advantages with objectives. My view is aligned with that of three components are interdependent in a causal association – objective setting fills in as a way for making the job challenging, thus, advances sentiments of accomplishment upon achievement of the assignment. Henceforth, they are out in the same group.

Work Environment vs. Fairness vs. Interpersonal Relationships –

Researchers consider work conditions as worker's whole surrounding in the work environment, social connections, which has to do with the ambiance in the association, e.g. individual kinships; and reasonableness, which referes to the way processes are handled in the work environment, i.e. dealing with individuals and management of authoritative standards of conduct.

3. Intrinsic Motivation for Human Resource Employees to Improve Performance

Amabile (1993)[2] states that; employees can be intrinsically as well as extrinsically spurred. She contends there are employments which are solely extrinsic roused, anyway only intrinsically propelled occupations are rare. Deci (1972) states that workers can be spurred to perform well through the activity itself and can increase extraordinary fulfillment from a decent performance.

The five employment attributes, as proposed by Hackman and Oldham (1976), Brass (1981),Griffin et al. (1981), and so on, are “intrinsic motivators”. They are conceptualized along these lines since, e.g. as per Herzberg's (1959) hypothesis, just intrinsic components can cause an expansion in inspiration (extrinsic elements can't prompt inspiration as indicated by Herzberg; they can basically purpose de-inspiration when nonexistent at the activity). This announcement is likewise made by Deci (1972); as indicated by him there are two imperative parts to inspiring employees intrinsically. The first includes making intriguing assignments. Furthermore, the second one gives employees the opportunity to have something to do with choices concerning them, likewise known by the term self-sufficiency. Amabile (1993) adds to this discussion by belligerence that employees feel competent on the off chance that they get input demonstrating that there is advance in their occupations, or proposes conceivable outcomes for development. Anyway as Deci (1972) and Amabile (1993) contend, the level of the employee's work should coordinate his/her ability and intrinsic inspiration can't persevere through except if the undertaking is energizing somewhat. An energizing assignment originates from aptitude assortment, errand character and undertaking essentialness (Deci, 1972). Thus Deci (1972) alludes to the five occupation qualities a specific employment ought to have with the goal that it gives high intrinsic inspiration prompting better performance.

4. Extrinsic Motivation forHuman Resource Employees to Improve Performance

Amabile (1993) states that occupations exist, that are only extrinsically spurred. In any case, when taking Herzberg's (1959) Two-Factor hypothesis into record, one contends that extrinsic components (or cleanliness factors) can't prompt inspiration or fulfillment, so there is probability that those components are not causing superior performances (Brass, 1981).Hackman and Oldham (1976) contend that a bring up in extrinsic elements won't cause an expansion in performance. In any case, it is likely that there are some extrinsic variables which will (in blend with intrinsic components) prompt higher performances (Ansar et al, 1997). Extrinsic motivators aren't a “consistently intrinsic piece of the work”, as Amabile (1993) portrays. She expresses that they serve to control the performance of the work. Precedents are: guaranteed rewards, acclaims, basic criticism, due dates, observation and particulars on how the function should be finished. A case of an only extrinsic assignment is leading formal performance audits of workers; this is an undertaking which scarcely includes intrinsic inspiration. In Seligman's (2002) hypothesis, "a person that is extrinsically roused can be portrayed as a worker who views his work introduction as an occupation; that sort of employee plays out his activity basically for the money related reward toward the month's end.

Compensation is an altogether investigated outer spark. Since it is an extrinsic factor, it isn't seen as spurring in the working environment (Herzberg, 1959).Ansar, Cantor and Sparks (1997) came about in considerable proof that higher wages straightforwardly affect on occupation performance.

5. Motivational Strategies for Health Care Sector

The inspiration of employees relies upon an assortment of elements; the ones that impact health worker inspiration develop at an individual level, the prompt authoritative level and the natural level (Bennett & Franco, 1999). One can interpret motivational strategies in terms of any of these socio economical levels depending on the case itself.

Pedersen (2013)[19] argues that motivation is related to the tasks that employees perform as well as institutional activities and responsibilities, encouragement, which try to protect the interests, decrease circulation and raise job satisfaction.

Summarizing these factors, which influence motivation of employees and are identified by different scholars These five groups of factors are material, recognition, self-expression, social and security factors (Jurgita Raudeliūnienė & Ieva Meidutė, 2014)[14].

Aligning employees and system objectives is challenging. The goal is to have happy employees that are persuaded to work harder (Hicks & Adams, 2001). Proof for this is constrained, yet monetary and non-money related improvements are commonly strengthening and modify the impression of the health framework making objectives all the more clear and far reaching which makes motivating forces all the more great (Appiah Daniel, 2011).

The existence or rules at a workplace is necessary, but they should also be assisting in increasing employee performance and for having the structure needed for efficient working. The institution should encourage positive behaviour and increase affectivity as well as positivity of employees.

6. Findings

- Motivation additionally decreases stress and increases enjoyment which both leads to a better physical and mental health.
- Furthermore, motivated employees are more loyal and respectful to their organizations and show less insubordination and grievance.
- There is also a link between motivation and increased creativity, innovation, and better responsiveness to customers, thus indirectly contributing to the long-term success of the organization.
- Motivation not only increases performance, but in turn causes a reduction in work accidents, reducing the rates of ethical problems, less employee turnover and reduces the levels of absenteeism.
- There is increase in individual job productivity.
- Enhancement in job satisfaction Employee.
- Lowering of employees’ Psychological problems
- Increase in job involvement of employees.
- Development of employees’ commitment and loyalty.
- Based in the production greater salaries are received by employees.
- Job quantity and quality increases.

7. Conclusion

There is no consensus or common approach among the scholars when it comes to assessing what influences workers motivation and ability. Motivation translates into productivity and is hence of eminent importance for all kind of employees leading to higher morale and loyalty, which will further improve patient care. Therefore, management needs to insure the improvement of motivation among the workforce. Managers can also contribute by giving external rewards (monetary etc.) which helps individuals to be intrinsically motivated as well. This will add to the institutions performance and success.Intrinsic training, transparency and setting goals the employees on the basis of their performance is carried out. Staff recognition is an exceedingly powerful and demonstrated system for enhancing employee commitment. A very much actualized staff appreciation program has the ability to affect numerous parts of business from good, to productivity, commitment and even retention.The focus is given on creating an inspiring work environment. It enhances positive behaviour of employees towards attainment of goals. It also creates energy, ability to concentrate and overall sense of wellbeing.

8. Suggestion and Recommendation for Hospitals

- Match the praise to the effort, so that employees are reinforced to strive above and beyond for the organization
- Write a true card to say thanks
- Give small scale endowments.
- Award exceptional.
- Recognize their other talents
- Recognize the value of helping others
- Support what they want to support
- Building employee recognition programs based on company values to strengthen brand value.
- Recognize the employees for their smallest effort for the organization on the moment.
- Fun activities to celebrate every employee within the company
- Use the element of surprise
- Creative some friendly competition
- Practice clear communication.
- Define responsibilities
- Conflict resolution

NUCLEAR ENERGY PROGRAMME IN INDIA

MR. Sanjay TrimbakGholap
Ph.D. Research Scholar, Department of Civics and Politics, University of Mumbai- 400 098
Email :gholapsanjay@gmail.com

ABSTRACT

India is one of the country who started of Nuclear Energy uses and it was shaped after the Independence. The development of Nuclear energy began with the objectives of peaceful uses of atomic energy in improving the quality of life of the people and to achieve self-sufficiency in the energy needs. Currently, the India's energy resource base status suggests the optimal mix of all the available energy resources to meet its growing demand of electricity which is projected to be about 800GWe by 2032 and 1300GWe by 2050. The achievements of the last half century have been the results of a unexpected blend of forces—the absence of a world war, the spread of democracy to countries around the globe, rising levels of education, rising social aspirations and expectations, rapid technological development, advances in the science and the practice of management, and development of a more efficient and sophisticated economic and financial organisation for global commerce. The need of Energy sources should be increased and stock of coal will be going to lapses and the budget for making charges, transporting, distributing energy will arise.

Keyword: *Nuclear Energy, Nuclear Policy, Nuclear Development.*

Introduction

India is one of the country who started of Nuclear Energy uses and it was shaped after Independence When the Atomic Energy Commission was established in the year 1948 for framing policies in respect of development of atomic energy in India. The Department of Atomic Energy was established in 1954 andDr. Bhabha appointed as Secretary to implement the policies. Sir J.R.D Tata was one of the member in the Atomic Energy Commission and he has played a significant role in shaping the policies related to atomic energy program. The atomic energy programme, which was started in a modest manner initially, has grown as a wide range, multi-dimensional multidisciplinary in Department of Atomic Energy. The main feature of these work wasresearch and development in Nuclear Sciences and Engineering.

Objectives of Study:

1) To take brief review of Nuclear Energy sector development in India.
2) To examine India's Nuclear Energy Policy.
3) To study challenges and opportunities of Nuclear Energy Development in India.

Methodology:

This paper is prepared through illustrative research which is based on secondary data such as journals, research articles, newspapers and magazines etc. available on Nuclear Energy. After taking into account diverse aspects of the study a descriptive research method is adopted to make the research more precise.

Development of Nuclear Energy:

Dr.HomiBhabha was the founder member of the Atomic energy programme, who sketched the road map of nuclear power programme which brought the country in the elite club of nations possessing advanced nuclear technology. That was an appropriate time to look back on the evolution of nuclear power in the country and assess its current status, future opportunities and associated challenges. The commercial nuclear power programme of the first stage is being implemented by Nuclear Power Corporation of India Limited (NPCIL), and the second stage (comprising of Fast Breeder Reactors) by BharatiyaNabhikiyaVidyut Nigam Limited (BHAVINI), both companies owned fully by the Central Government in accordance with the provisions of the act.

The development of Nuclear energy began with the objectives of peaceful uses of atomic energy in improving the quality of life of the people and to achieve self-sufficiency in the energy needs. The commercial Nuclear Power program started in 1969 and it currently shares around 3 percent installed capacity. It is playing a balancing role in energy demand. However, in long term, it is expected to play a significant role in the huge electricity demand of the country. India is not a very energy resource rich country and we have limited sources for energy development. Currently, the India's energy resource base positionrecommends the optimal combination of all the available energy resources to meet its rising demand of electricity which is estimated to be about 800GWe by 2032 and 1300GWe by 2050.

The Indian nuclear programme was considered based on, unique consecutive three-stages and associated technologies essentially to aim at ideal utilization of the indigenous nuclear resource profile of modest Uranium and abundant Thorium resources. This sequential three-stage program is based on a closed fuel cycle, where the spent fuel of one stage is recycled to produce fuel for the next stage.

Developing Numbers of Large Industries:

At the time of independence in the year 1947 and for several years thereafter, the industry's capability was limited to manufacturing and supply of equipment for cement and sugar industry. The Indian industry exposure, manufacturing and supply of tools for high technology necessities was quite limited. Whereas other developed countries at that time had well established industrial infrastructure and ability to creation equipment for defence and aeronautics industry. The nuclear industry development in those countries was a spin-off of the well-established industry. The Indian industry development was started and achieved maturity with the development of nuclear technology. Large efforts have been put by Department of Atomic Energy and Nuclear Power Corporation India Limited to develop the Indian industry to achieve high standards in manufacturing of equipment for nuclear power technology. Currently, the Indian Industry capability in design, engineering and manufacturing of equipment is similar to meet the international standards.

Achievements in Nuclear Power Technology:

Nuclear Power plants have registered high availability factor, safety performance and longest continuous operation and it meets international standards. The Indian nuclear power plants have also performed with international benchmarks. The performance of Indian nuclear power reactors in terms of safety has been excellent, accident free operation with 282 reactors. The releases to the environment have been a small part of the limit prescribed by the Atomic Energy Regulatory Board (AERB).

The effects of climate changes are expected to be extremely harmful to crop losses, sea-level rise, extreme weather events and other natural losses predicted by various models. Nuclear power is environmentally safe and gas releases of nuclear power are comparable to the wind and solar power. Nuclear power, being a solid source of energy demanding lower amounts of fuel in comparison to coal based thermal power station. The transport and infrastructure needed for nuclear fuel is very low. As 10,000 Mw nuclear power capacity needs only about 300-350 tons of fuel per annum, as against 35-50 million tons of coal needed for a coal fired thermal power station of the same capacity. It workingsarounda shipload or 20 trainloads every day. The pressure on rail, port and other infrastructure will be vast when large thermal capacity is added, apart from productions arising out of transporting such large quantities of coal.

Demand of Fuel Energy:

The totaldevelopment in demand for all forms of fuel will reflect the growing in the power sector. Even under the alternative situation, total coal demand will nearly double, and both oil and gas demand will be three times. Increasing domestic creation capacity will require significant investments, while growingdependency on imported forms of energy will increase vulnerability to variations in global energy rates. The rising demand will also place an increased burden on the physical and social environments. An enhanced exploration by the public and private 71 sectors, adoption of best practices and environment-friendly technologies, more efficient use of energy, promotion of private sector investment, and greater efforts to defend the environment will be necessary to handleefficiently with the nation's rising energy needs.

Conclusion:

External factors are in large numbers and complex for us to reliably predict with their impact, We must recall some of the most significant and broad global trends that are likely to apply a powerful influence on India's progress over the coming two decades.

Global population will continue to grow from 7 billion to around 8.5 billion people, fuelling a large increase in global demand for food, goods and services. Life expectancy will also rise significantly, leading to a larger proportion of the aged in all regions. At the similar time a swelling of the working age population will lead to a noteworthygrowth in the international working force.

The achievements of the last half century have been the results of aunexpected blend of forces—the absence of a world war, the spread of democracy to countries around the globe, rising levels of education, rising social aspirations and expectations, rapid technological development, advances in the science and the practice of management, and development of a more efficient and sophisticated economic and financial organisation for global commerce. The need of Energy sources should be increased and stock of coal will be going to lapses and the budget for making charges, transporting, distributing energy will arise. The energy uses of individuals, commercials and industries is increased and they are paying much more than they getting. We need more Nuclear Power projects to complete our energy requirement and we must strengthen Nuclear Power ability from 3 percent to 50 percent in next two decades for better lives.

VILASRAO PATIL UNDALKAR:- A DEVELOPMENTAL ERA OF SOUTH KARAD

Dr. Abhay Patil
Head &Associate Professor in History- Sou, M.R.Jagtap Mahila Mahavidyalaya, Umbraj.
Abhay.patil2011@gmail.com

ABSTRACT

Vilasrao patil a visionary leader who has been elected for 6 times from Karad South Assembly Constituency . The people elected him because of his development work done for Karad assembly especially downtrodden people. While working on various positions he has worked as member of Zilla parishad, satara, director of satara district co –operative Bank, and MLA for 6 times. His development work include Krishna Ghat An idea, Road Development, Women Strenthenization-milk projects ,bachat gat and Health Development through –water schemes and health centers, hospitals, Veterinary facilities, Education Facilities, deforestation, irrigation schemes, cooperative societies , Freedom Fighter Conference, various agricultural schemes. Thus the long list of his development work proves he was not a political leader only but the true leader of people.

Introduction

The contribution in the development of modern Karad and surrounding (South) of Vilasrao patil is very important. He made idol of karad south assembly. He worked for the purpose to develop downtrodden People in the society through different schemes of government.

This is not the ordinary fact to elect six times in assembly election and six time in the state he elected as first in voting. The people here are rebellious manner , the unforgotten Mavalas of "Hindvi Swaraj " of chatrapati , the Maratha,s are the people who live on the bank of Krishna-koyana .

From 1942 " Quit India "movement this Family come to Dada Undalkar. He was the first dovottee and satyagrahi . He was believed in doing action except writing. He was freedom fighter which was Created by satyashodhak samaj in the family of freedom fighter vilasrao patil is borned on July 15, 1938 At undale taluka karad. He started his education at Undale. In tilak Highschool karad, he passed S. S. C.
He has taken degree of B. A. from Rajaram Mahavidyalaya Kolhapur and in 1966 He has taken degree of Law from Shahaji Law college. He practiced as lawyer at satara. He become popular because of service, Good qualities and good behaviours. 1

1) **Political career :-** Because of Undalkar own existence he became active in politics In the period of 1967 to1972 he was the member of Zilla parishad, satara. He had worked as director of satara district co –operative Bank. As well as he was Senate member of Shivaji University Kolhapur since 1967 he is director of satara district Co –operative Bank until today .He is married on 1968. That time he was working as president of satara district Youth congress. Satara district Co- operative Bank,s President Kisan (Abasaheb) Veer,s death in 1979,he become President,and he didn,t take a back

2) **The Election won by vilasrao patil (kaka) :-**

Zilla parishad- 1967 to 1972. Won with majority.

Zilla Bank -1968 to until today.No opposition.

Parliament -1978-79. Lost.

Assembly -1980 Congress party. Won by 23 thousand votes.

1985 to1990.Won by 12 thousand votes.

1990 to 1995. Won by 32 thousand votes.

1995 to1999. Won by 21 thousand votes.

1999 to 2004. Won by 23 thousand votes.

2004 to 2009.Won by 1,lakh votes.(First lead votes in the state.)2

He always felt that his common man should be developed .He becomes pioneer for many scheme for development .Keeping his political character transparent,he sacrificed for the benefit of society. In political career, he had not given importance to prestige, designation.Wherever he stands ,he made effort for the development of society. In this way the new generation should take his idea

3)Development work of Vilasrao patil (kaka):-

He had not taken into consideration governmental rule. At that time he changed developmental Schemes also with the idea of development he depicted the new ideas like the boats for the flood area villages, grant for He had given boats from M.L.A. fund fist in the state.

Krishna Ghat An idea :-

The people who live at the bank of Krishna river they have frequent conctact there is always crowd on the river of gents and ladies . whichever function as religious function worship on the bank of krishna, the crowd for Religious worships .Vilasrao patil (kaka)Has taken into consideration the odds of the people and set an idea of Krishna ghat in every village.3

Road Development :-

Minister vilasrao patil had continued tradition of development. The work of development is uncountable.The example of 1995 to2000, from local development fund 2 crores76 lakhs, for food resistance 1 cores 79lakhs,central road development fund22 cores 85 Lakhs,from Nabard scheme 26 crore 10 lakh and from Economic Budget 35 crore, from subordinate minerals and Hill Development and from other fund 2 crores, he brought 100 cores for Rod Development Because of quadrilateral roads joined to Karad and surroundings, there is an advantage to farmers , workers and businessmen.4

Women Strenthenization :-

Vilasrao Patil had tried for every factors of society .with the help of education women could be strengthened, so he started facilities like health, school , road ,pure water wherever village. Besides milk projects,Bachat Gat had been established by him and he had given inspiration to women´s business. 5

Health Development:-

If water is pure and clear the health of people is healthy. So wherever village there is well , Borewell, tap water scheme,water purification project on the bank of Krishna, hesupplied the pure water. For the people. Tap water scheme for 17 villages of 20 cores, he began it.

He created 1 cottage hospital,7 primary health centres, 21 sub –health centres for the medicinal facilities for these people.6

Veterinary facilities:-

The main occupation of people here are agriculture, Animals keeping, Hen-cock keeping(poltery farm). When vilasrao patil was the minister of verterinary he established veterinary hospitals and laboratories. In his time 1taluka level veterinary hospital, and 11 veterinary hospitals have started. 7

Water schemes for Farm :-

Western part of karad was neglected for the water scheme facilities for farm. Freedom Fighter Dada Undalkar has arranged `Water Conference' Late yashwantrao Chavan, Late Swami Ramanand Bharati, and Kakasahebe Gadgil guided in the Water Conference.

In the decade of 1980 Vilasrao patil has given the speed to the project of water schemes. With the help of Maharashtra Governement , Zilla parished, and panchayat samittee he started projects like dams,Nala banding and big water schemes. In this area 21 small and 2 big water, canals and the dams like Kolhapur Method are still continued. 8

Education Facilities :-

In 1967 Vilasrao patil established `Garmin Vikas Shikshan Sanatha'. He mead development and Education spreading through means of education in 30 years. Belonged to this institution there are 11 Highschools, in the surrounding of Karad, 2 D.ed college, 1 B.ed college,1.Arts & commerce college, 1. English medium school at Undale.Ther are hostels for boys and girls. Arts, sports ,seientific discussion, exhibitions are arranged here. He is conductions the work of Late Yashwantrao Chavan and Late P. D. patil. 9

Jay sahkar(Victory of co-operation) :-

In the surrounding of Karad Late Yashwantrao Chavan, Late Yaswantrao Mohite ,Late P. D. Patil , Late R. D.Patil these Leaders have Planted Plant For this Co-operation. In the second generation Vilasrao patil leaded for this movement. He floured co-operation through satara District cooperation Bank ,Rayat sugar factory, Koyana Nagari Bank,Sahakari Dudh sanstha and the societies in the Villages. In the ledership of Vilasrao patil Koyana Dudh sangh, Buy and sell sangh, Market committee, Koyana Bank ,Rayat sugar, Rayat Bio Sugar, Cloth Market centre , Late shamrao patil Nagari Pata Sanstha etc. Are well organized. He truly flourished the co-operation movement. So there is transformation of farmers and workers.10

Deforestation:-

`Vrukshwalli Amha Soiree Vanchare' as per this line of saint Tukaram. He started the campaign of planting trees. He began the campaign through co-operation, Governmental societies, colleges. In 182 Hectors at 12 places deforestation has been done. In the side of the roads 3 Lakh trees are planted. From these go percent of trees are well cared.11

Agriculture Development :-

Since 1980 Vilasrao patil has functioned the water scheme so agricultural area has been well harvested. so there are crops like sugarcane, Vegetables, fruits in large scale.Through yashwant krushi and Industrial Exhibition ,he started projects like fruit farm ,flower farm ,silk farm. He started projects like Imu palan, hens goats, rabbits, fruit process whith agriculture . so surrounding area is flourished because of this.12

Freedom Fighter Conference:-

Freedom fighting of India has a lot of importance many are died in this fight. The contribution of Dada Undalkar`s family is large There will be inspiration for youths, National integrity should be created in the yauth, vilasrao patil arranged freedom fighter conference since 1975 at Undale on this dias social workers, thought provokers, writers ,scientists, freedom fighter, political leaders, etc. depicted their thoughts In the last 36 years from Aruna Asafali to present president Hon. Pratibhatai patil have depicted their thoughts on this dias.13

Dada Undalkar social Award :-

Establishing` Dada Undalkar smarak committee' vilasrao patil started social Award in the name of Dada Undalkar. The award nature is Rs. 25 thousand, symbol and Royal Litter These awards are given to N. G. Gore, N. G. Mahanor, Dr.Usha Mehta, Govindbhai shrawf, Nirmalatai Deshpande, Dr.Mohan Dharia, G. P. pradhan, Dr. Vasantrao Govarikar, Anna Hajare, Shantaram Garud, P. B. Patil, Prabhakar Kunte, Jistice P. B. Sawant, Dr. Jayant Patil , P. sainath, and Advocate Ujjwal Nikam till today. 14

He has given the importance to service than power .and co-opration . so in the chain of assembly member he stay's in some relevant work always . wherever he sees some illegal picture ,he spoke about it from legislative assembly to his village.The difficulties or questions of common people should solve is his purpose. The development of village and square progress in his vision. His contribution in Karad and surroundings development is very large.

गोषवारा–

भारताच्या 'मादाम मारिया माँटेसरी' शिक्षण क्षेत्रातील 'मानसिक आरोग्य चळवळीच्या प्रवर्तक', शिक्षणतज्ञ, पूर्व प्राथमिक शिक्षणाच्या प्रमुख प्रचारक म्हणून ताराबाई मोडक सुपरिचित आहेत. बालशिक्षण आणि बालमानसशास्त्र या क्षेत्रात त्यांनी केलेल्या कामगिरीचा उल्लेख अनिवार्य ठरतो. 'पूर्व प्राथमिक शिक्षणाची' कल्पना भारतीय जनमानसात रूजविण्याचे काम त्यांनी केले. पूर्व प्राथमिक शाळा व बालवाडी ही शैक्षणिक चळवळ महाराष्ट्रात ताराबाई मोड यांच्या प्रेरणेने व प्रयत्नाने फोफावली. इटलीच्या मादाम मारिया माँटेसरी यांच्या बालशिक्षणाच्या विचाराने व प्रयोगाने प्रेरित होवून ताराबाई मोडक यांनी श्री. गिजुभाई बधेका यांच्याबरोबर विचारविनिमय व प्रयोग करून आदिवासी विभागात 'माँटेसरी पद्धतीत' भारतीय परंपरा–परिस्थिती आणि भौगोलिक वातावरणानुरूप योग्य ते बदल करित हे शिक्षण सर्वसामान्यांच्या मुलांपर्यंत कसे नेता येईल या दृष्टीने प्रयत्न केले. आदिवासी विभागातील कर्जबाजारीपणा, व्यसनाधीनता, निरक्षरता, दारिद्रय व अंधश्रद्धा अशा समस्यांनी ग्रस्त आदिवासी जीवनाला नवजीवन देण्याकरिता 'बोर्डी' व 'कोसबाड' येथे ग्रामशिक्षण, अंगणवाडी, कुरण शाळा व विकासवाडी असे उपक्रम राबवून आदिवासींना शिक्षणाभिमूख बनविले. या आदिवासी विभागातील बालशिक्षण व बालमानसशास्त्र क्षेत्रातील ताराबाई मोडक यांची भूमिका स्पष्ट करणे हा प्रस्तुत शोधनिबंधाचा हेतू आहे.

AN ANALYSIS OF E –COMMERCE IN INDIA AND THEIR PRESENT STATUS AND CHALLENGES

Mr. A.K. Ganbawle

Shri VenkateshMahavidyalay, Ichalkaranji, Email: aganbawle@gmail,com

ABSTRACT

E-*commerce is definitely one of the business options that will have to expand in the future. Ecommerce is madewider in the world for trading. Prediction e-commerce is showing wonderful business growth in our country. It increased by online user, mobile phone users. Indian e-commerce has seen impressive growth in India from the last few years. Rising internet accessibility in India's demography. The sector is scale greater high. Although, India's overall retail opportunity is substantial, the sector is affected with some serious challenges. The present study has been undertaken to describe the present status & future growth of e-commerce in India.*

Keywords: *E-Commerce, Growth, Online retail, increasing internet users*

Introduction:

E-Commerce knows as electronic commerce and it's used for exchange of goods and services via internet. Electronic commerce is using buying and selling products online. It includes the entire online process of developing, marketing, selling, delivering, serving and paying for goods and services. It includes commercial activity that takes place directly between a business, its partners, or its customers through electronic communication and digital information processing technology. E-Commerce is a modern business methodology that addresses the needs of the organizations, merchants and consumers to cut costs while improving the quality of product and services and increasing the speed of service delivery. India has shown tremendous growth in the E-Commerce. It has become an important tool for small and large businesses worldwide. Although the transition from traditional purchasing to online purchasing was very slow initially in Indian market because of less number of internet users due to lack of internet facility and awareness in public. But now the situation has changed and the e-commerce industry is growing rapidly in our country.

Models of E-Commerce:

The different Models of E-Commerce are as follows:

B2B (Business to Business):

Under B2B model one business sells to other business. Companies doing business with each other such as manufacturers selling to distributers, wholesalers selling to retailers are the examples of B2B e-commerce model. Pricing under this model is based on quantity of order and is often negotiable.

B2C (Business to Consumers):

This is the usual from of E-Commerce. In this model business sells products and services directly to consumers over the internet. They display their products or services on their Websites or Apps and the consumers can order the product or service directly on their Websites or Apps. If an individual is buying a pair of shoes by placing an order to Flipkart.com is an example of B2C model.

C2B (Consumer to Business):

Consumer to Business E-Commerce model involves consumers selling products or services to business. In C2B consumers create value and business consume that value. For example, when a consumer writes, reviews or when a consumer gives a useful idea for new product development than consumer is creating value for the business if the business adopts that inputs. In C2B consumers can offer products and services to companies and the company pay the consumers. We can see the C2B model at work in blogs or internet forums in which the author offers a link back to an online business thereby facilitating the purchase of a product, for which the author might receive affiliate revenues from a successful sale.

C2C (Consumers to Consumers):

C2C is a business model that facilitates the transaction of products or services between customers. C2C provide an innovative way to allow customers to interact with each other. C2C involves the electronically facilitated transactions between consumers through some third party. A common example is the online auction, in which a consumer posts an item for sale and other consumer bid to purchase it, the third party generally charge a flat fee or commission. The sites are only intermediaries, just there to match consumers.

Objectives of the Study

1. To analyze the present trends of e-commerce in India.
2. To examine the challenges of E-Commerce in India.

Research Methodology:

Research Methodology is the systematic and theoretical analysis of the e-commerce applied to consumers. The researcher has used only secondary data that has been collected from various articles, journals, books, websites etc. It have been used to study the evaluation, conceptual framework, definition, key players, present trends, future prospectus & barriers of e-commerce. The researcher also used quantitative research that is the systematic empirical investigation of variables phenomena via statistical & mathematical.

Present Scenario of E-Commerce in India:

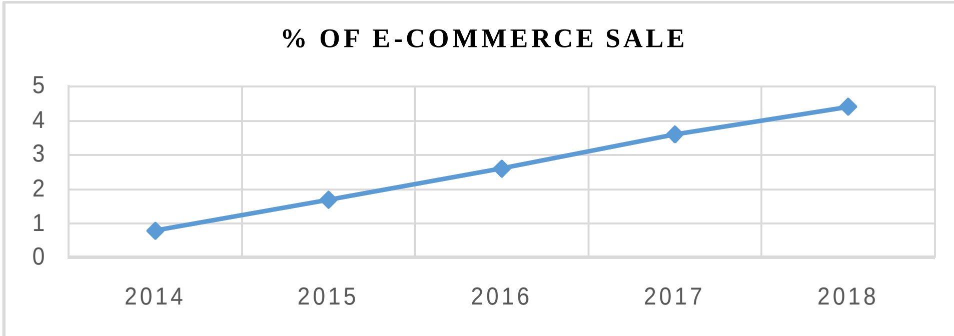
E-Commerce in India is still in a growing stage, but it offer tremendous opportunities for developing countries like India. The e-commerce sector in India started their operations late nineties among business to business users (B2B). Business to Consumers (B2C) e-commerce started in 1996 in the form of matrimonial portals. The cost and the speed of internet was the limiting factor for their growth at that time. The first E-Commerce website in India was rediff.com, which was one of the most trafficked portals for both Indians and non –residents Indians. Last five years have seen a rise in the number of companies enabling e-commerce technologies and the internet in India. Major Indian portal sites have also shifted towards e-commerce instead of depending on advertisement revenues. Today E-Commerce has become an integral part of our society. There are websites providing any number of goods and services. These websites provide almost all categories of goods and services on a single site. These sites target the buyers of every possible product or service. These websites are known as Multi Product E-Commerce Sites. There are also Single Product E-Commerce Sites, which deal in specialised field only. Technology is changing the way of shopping. Out of the total internet users in India, 60% visit e-commerce sites. Favoured demographics and growing internet users' base helped in adding the growth. Growth shown by Indian players like Flipkart, India Times, Snapdeal etc. and huge investors' interest around these companies showed the immense potentials of the market. The Table 1.1 depict the leading e-retailers in 2018 in India.

Table 1.1: Leading E-Retailers in India in 2018

E-Retailer	Sales (in Millions US Dollers)
Amazon.in	567.4
Flipkart.com	553.5
Myntra.com	342.7
Bigbasket.com	192.7
Jabong.com	159.7
Snapdeal.com	144.9
Ebay.in	83.2
Paytmmail.com	46.5
Firstcry.com	40.6
Shopclues.com	39.2

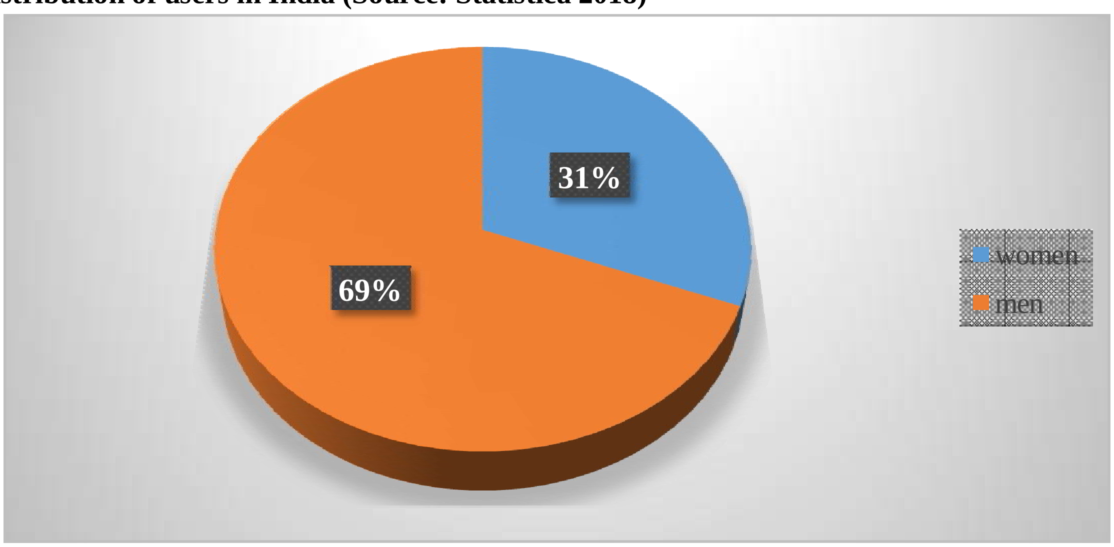
Source: *(Statista, 2018)*

Online retail sales in India from 2014 to 2018 (in billion US dollars

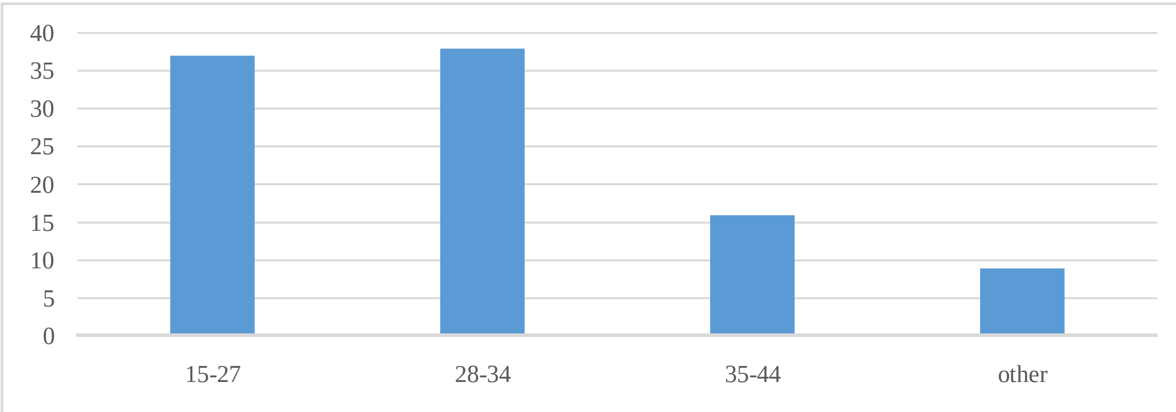


There has been nearly 100% increase in online retail sales from 2014 to 2018 which indicates the figures have grown by leaps and bounds and contributed to the growth of the E-Commerce industry. Several factors like technology and increase in usage of mobile phones and laptops are responsible for the increase in growth.Discussiononline shopping is increasing its share in the total internet usage in India and has increased by a significant margin. Improved data connectivity in both urban and rural parts of India, will further boost this trend. Across the globe the E-commerce industry is a force which continues to grow, which investors cannot afford to ignore. This is especially true in India where there are so many opportunities. For example, just focusing on B2B e-commerce, the market is both large and broad which provides the potential for amazing innovations. Prime Minister Modi's vision for India and the „Make in India" and „Invest India" initiatives have swayed the world's attention on the opportunities provided in the sub-continent. This has been very healthy for the Indian Economy.

Gender distribution of users in India (Source: Statistica 2018)



Age-wise distribution of users in India (Source: Statistica 2018)



Barriers of E-Commerce in India:

Poor Internet Facilities:

Internet is considered the backbone of the e-commerce. But the penetration of internet facilities in India especially in rural area is very less. Speed of Internet is also the major challenge in our country. No doubt we are moving towards 4G internet services but still a lot has to be done.

Feeling Unsecure:

Feeling unsecure by customer is one of the major and continuing challenges for e-commerce in our country. Customers have to be confident about the integrity of the e-dealers and payment process before making anypurchase order online. Risk of hacking and cybercrimes are also there. Privacy has also become a major concern for consumers with identity theft and impersonation. Security challenges are not restricted to consumers only in e-commerce, corporate firms also face security challenge as their vital information, records and reputation is at stake.

Logistic and Supply Chain:

Logistics and supply chain has been the major challenge to the e-commerce companies. Most of the population in India lives in villages. To reach the consumer in the village is a big challenge. The e-commerce companies' needs to invest more on setting up warehouse and signing up more suppliers across the country to ensure customers get order delivered by nearest suppliers.

Cash on Delivery (COD):

Cash on delivery is big problem for e-commerce companies. In the era of digital payments, cash on delivery is still the most favorable mode of payment used by the consumers. This mode is very expensive for e-commerce companies. Sometime courier companies take 30-40 days to return the cash collected from customers to dealers. If the customer return the product than it becomes very expensive for the company as the company pay two way courier charges.

High Competition:

There is a cut throat competition among the player in the e-commerce market. With intense competition, the profitability of the of the companies decreases as they use aggressive pricing strategy and offer huge discounts and commissions.

Tax Structure:

Tax structure is another factor for lesser growth of e-commerce sector in India in comparison to other developed countries like USA and UK. In India there are different types of taxes and these taxes create accounting problems to online business. Some states are even charging separate tax on e-commerce transactions. Government has implemented the GST Act, which is expected to solve this problem to great extent.

Absence of Cyber Laws:

Absence of cyber laws to regulate the online business transactions is another bottleneck to e-commerce in India. The new technology has created huge legal uncertainty in our country. The existing Consumer Protection Act 1986 needs to be amended to update.

CONCLUSION:

E-Commerce has made the shopping easy. The E-Commerce Industry in India is growing rapidly despites many challenge. E-commerce industry is one of the largest growing industries in India at present. The sale of e-commerce industry is expected to grow by almost 4 times by 2021 than the sales of 2015. This unprecedented growth in E-Commerce is due to increase in smart phones and internet users, 3G/4G internet services, awareness in public, government initiative of digitalisation, advanced shipping and payment options, entry of foreign e-business players etc. Government should take steps to provide a proper legal framework so that hurdles in the growth of e-commerce are reduced to minimum.

भारतीय स्त्री शिक्षणाची स्थिती

प्रा.डॉ.एस्.एम.गावड

MÐm~mB-emVmßnm e|Sa H$mbO, hnar, Vm.hmVH$UJb

गोषवारा

शिक्षण हे समाज परिवर्तनाचे व विकासाचे प्रभावी साधन आहे. त्यामुळे शिक्षणाचा प्रसार व प्रचार करणे व शिक्षणाच्या सोयी–सुविधा सर्वांपर्यंत पोहचविणे हे जसे शासनाचे काम आहे. तसेच ह्या शिक्षणाच्या संधीचा लाभ घेऊन स्व:विकासाबरोबरच समाजाच्या विकासाला हातभार लावणे हे प्रत्येक व्यक्तीचे कर्तव्य आहे. भारताच्या एकूण लोकसंख्येमध्ये स्त्री व पुरूषांचे प्रमाण जवळपास सारखे आहे. पण शिक्षणाच्या बाबतीत याची तुलना केल्यास यामध्ये तफावत असल्याचे दिसून येते. भारतीय समाज हा रूढीपरंपरावादी व पुरूषप्रधान देश आहे. त्यामुळे पुर्वीपासूनच प्रत्येक गोष्टीत स्त्रियांपेक्षा पुरूषांना अनेक अधिकार दिले गेले. समाजामध्ये पुरूषाला श्रेष्ठत्व व स्त्रिला कनिष्ठत्वाची वागणूक दिली गेली. स्त्रियांना दिर्घकाळ शिक्षणापासून वंचित ठेवले गेले. पण नंतर समाज सुधारकांच्या प्रयत्नांमुळे व ब्रिटीशांच्या शिक्षणविषयक बदलत्या धोरणांमुळे स्त्रियांना शिक्षणाची संधी मिळू लागली. स्त्रिया शिक्षण घेऊ लागल्या. स्वातंत्र्यानंतरच्या काळात मात्र घटनेने दिलेला समान हक्क, शिक्षणाच्या वाढत्या सोयी सुविधा, शैक्षणिक जागृती इ.मुळे समाजातील स्त्रियांचे शिक्षणाचे प्रमाण वाढत आहे. पण तरीही स्त्रियांचे शिक्षणाचे प्रमाण, स्त्रियांना दिले जाणारे शिक्षण याचा सुक्ष्म अभ्यास केल्यास अजूनही शिक्षणाच्या बाबतीत स्त्री–पुरूष समानता असल्याचे दिसून येत नाही.

ग्रामीण साहित्य या शब्दोच्चाराबरोबर ग्रामीण आणि साहित्यया संकल्पना नजरेसमोर येतात. यादोहोनांही विशिष्टअर्थआहे. या शब्दातून व्यक्त होणारा आशय हेतूपूर्ण आणि परंपरेपेक्षा वेगळा असल्याचे सूचित होते. हे वेगळेपण समजून घेणे अतिमहत्वाचे आहे. कारण असे केल्याने साहित्यातील हा नवा प्रवाह कसा आहे ?त्याच्या निर्मिती प्रेरणा, वैशिष्ट्ये आणि सर्वात महत्वाचे म्हणजे या साहित्यप्रवाहाची बलस्थाने कोणती ?याचा बोध होण्यास मदत होईल.

ग्रामीण हा शब्द ग्राम या शब्दापासून बनला आहे. ग्राम म्हणजे खेडं. ग्राम म्हणजे गांव. ग्राम म्हणजे अनागर वस्ती. ग्राम म्हणजे शहरी नाही असे. या अर्थातून एक बाब स्पष्ट होते की शहरापासून वेगळं अस्तित्व असणारी वस्ती म्हणजे गाव होय. ग्राम हे एकंदर भारतीय संस्कृतीचे अदिपीठ आहे. आणि अशा गावांसंदर्भात लिहिणे, मांडणे व्यक्त होणे म्हणजे खेडयांविषयी व्यक्त होणे. विसाव्या शतकाच्या सुरूवातीपासून असं खेडयांसंदर्भात, तेथील माणसांसंदर्भात लिहिणं अधिक गांभीर्याने सुरू झाले. सुरूवातीलाढोबळपणेव्यक्त होणारा जीवनाशय काळानुरूप अधिकगहण झाला. स्वातंत्र्योत्तर काळात जसजशा नवनव्या जाणिवा बहरल्या तसतसा व्यक्त होणारा आशय अधिक गहिरा आणि माणूसकेंद्री बनला. गेल्या 25-30 वर्षात तर ग्रामीण परिसर, व्यक्ती, समूह यांची मानसशास्त्रीय अंगाने मांडणी होऊ लागली आहे. त्यामुळे अगदी सुरूवातीच्या काळातील ग्रामीण शब्दातून व्यक्त होणारा आशय अधिक व्यापक बनला असून या शब्दाने ग्रामीण परीसरातील सर्व घटक आपल्या कवेत घेतले आहेत.

ग्रामीण या शब्दाबरोबर गावगाडा हा शब्दही हटकून वापरण्यात येतो. गावगाडा म्हणजे गावाचे दैनंदीन अथवा दीर्घकालीन व्यवहार सुरू ठेवणारी यंत्रणा असे साधारणपणे म्हणता येईल. या गावगाड्याचा प्रमुख घटक माणूस आहे. माणसाभोवतीच संपूर्ण यंत्रणा फिरत असते. जगण्याच्या प्रक्रियेत आवश्यक

असणारे बरेवाईट निर्णय माणूस घेतो. ही माणसही वेगवेगळ्या गटातील असतात. ढोबळमानाने यांची गटवारी केली तर त्यांना शेतकरी, बलुतेदार, अलुतेदार, भटके किंवा फिरस्ती असे म्हणणे सोईचे ठरेल. ही काटेकोर मांडणी नाही तरीही ग्राम जीवनातील बहुतांशी घटक यामध्ये समाविष्ट होऊ शकतील. केवळ महाराष्ट्रातीलच नव्हे तर देशातील कोणत्याही गावाचे नांव घेतले की, सर्व प्रथम शेतकरी नजरेसमोर येतो. एकेकाळी 80%हून अधिक शेतकरी या देशात असल्याची नोंद आढळते. गेल्या काही दशकात वेगवेगळ्या कारणांमूळे शहरीकरणाचा वेग वाढला असला तरी आजही 60 ते 65 %लोकसंख्या शेतीशी निगडीत आहे. याचा अर्थ भारतीय ग्रामीण जीवनाचा केंद्रबिंदू शेती आणि शेतकरी हाच असून शेतीशी संबधीत अनेक व्यवसायांनी ग्रामीण जीवन समृध्द बनले. केवळ एखादी व्यक्ती नव्हे तर संपूर्ण समाज समूह या शेतीशी संबंधीत राहीला. कळत नकळतपणे ग्राम व्यवस्थेचा म्होरक्या म्हणून शेतकरीच स्थिरावला.

शेती करणे ही गोष्टही सामूहिक आहे. प्रथमदर्शनी जरी शेती मालक दिसत असला तरी त्याच्या एकट्याने शेती साध्य होत नाही. त्याला हातभार लावणारे, मदत करणारे अनेक घटक असून यामध्ये लोहार, चौगुला, महार, सुतार, चांभार, कुंभार, न्हावी, सोनार, जोशी, परीट, गुरव, कोळी या बारा बलुतेदारांचा तर आलुतेदारांमध्ये तेली, तांबोळी, साळी, सणगर, माळी, गोंधळी, डौ-या, ठाकर, भोई, गोसावी, जंगम, मुलाना, वाजंत्री, घडसी, कलावंत, तराळ अशा आठरा जातींचा समावेश होतो. फिरस्त्या जमाती नियमीत काळी गावात येतात आणि आपल्याकडील माल विकून काम करून किंवा भिक्षा मागून कमाई करतात. यामध्ये घिसाडी, बेलदार, वड्डर, कैकाडी, वंजारी, लमान, भेवानी, वैदू, गौड, गोपाळ, ददवेशी, बंदरवाले, माकडवाले, नंदीबैलवाले, कंजारी, फांसपारधी, भगत, भुसे, वाघे, मुरळ्या, जोगती, हिजडे, जोगतिणी, भराडी, वासुदेव, पांगूळ, राऊळ, ठोके, जोशी, कुडकुडे, पोतराज,कानफाटे, उदासी, अघोरी आदिंचा समावेश होतो. बलुतेदार, अलुतेदार,फिरस्ते ही सर्व मंडळी ग्रामीण व्यवस्चा भाग आहेत. वर्षभराच्या चक्रामध्ये कधी ना कधी यांचा गावातील शतक-यांशी संबंध् येतो. परस्परांना सहकार्य, आधार, मदत देत व घेत यांचा जीवन व्यवहार सुरु राहतो.

एकोणिसावे शतक भारतीय विशेषतःमहाराष्ट्रीय समाजजीवनामध्ये अंतर्बाहय बदल घडविणारे ठरले.ब्रिटीशांच्या सत्तेविरोधातील असंतोष वेगवेगळया अंगाने व्यक्त होत असताना साजिक सुधारणांविषयीचा आग्रह ही वाढत होता. महात्मा फुले, सावित्रीबाई फुले,गो.ग. आगरकर, न्य.रानडे आदिंच्या वैचारिक पुढकाराने नवक्रांतीची बीजे पेरली जात होती.समाजामध्ये माणूसपणाच्या कक्षा रुंदावण्याच्या दृष्टीने जाणीवपूर्वक प्रयत्न होत होते. यामध्ये विचारवंतांसह समाजधुरिणांनी महत्वपूर्ण योगदान दिले. महात्मा फुले यांनी तर प्रत्यक्ष कृतीसह साहित्याची निर्मिती केली. शेतक-यांचा आसूड या ग्रंथ निर्मितीने शेतक-यांची सध्यस्थिती मांडून ग्रामीण माणूस साहित्याच्या परिघावर आणला. म.फुले यांनी शेतक-यांचे होणारे शोषण शेटजी, भटजी कडून तर होतेच पण त्याहीपेक्षा सर्व क्षेत्रातील अज्ञान हेच शेतक-यांच्या दुर्दशेला कारणीभूत असल्याचे दाखवूनदिले.त्यांची मांडणी अत्यंत तर्कसुसंगत आहे. ओघवत्या शैलीत शेतक-यांची स्थिती मांडणारी ही लेखणी लक्षवेधी असून उच्च प्रतीच्या लेखनाचा नमुना म्हणूनही या लेखनाकडे पाहावयास हवे. म्हणूनच वासुदेव मुलाटे यांनी म. फुले यांच्या प्रस्तुत लेखनामध्ये आणिक ग्रामीण साहित्याची बीजे पहिल्यांदा दिसतात असे म्हटले आहे.

स्वातंत्रयपूर्व काळातील साहित्य व्यवहार प्रामुख्याने उच्च मध्यमवर्गीय, मध्यमवर्गीय समाजाच्या हातामध्ये होता. साहित्य व्यवहाराचे सर्व सूत्रे या वर्गाच्या हातातच होती. साहित्य, समीक्षा, प्रकाशन संस्था प्रकाशक नियतकालिके या सर्वांवर यांचाच प्रभाव राहीला. स्वाभाविकपणे तत्कालीन परिस्थितीत असणारा शहरी भाग जाणिवा याच साहित्याच्या परिघावर महत्वपूर्ण ठरून ग्रामीण माणूस हा नकळतपणे तुच्छतेचा, अवहेलनेचा,विषय बनला. याचा परि णाम म्हणून ग्रामीण परिसर अस्सलपणे साहित्यात चित्रित झाला नाही. वास्तवापेक्षा अवास्तव चित्रण केल्याने ग्रामीण समाजासंदर्भात गैरसमज पसरले. एका अर्थी हे लेखन ग्रामीण परिसरावर अन्याय करणारे होते. त्याचबरोबर पाश्चात्य साहित्यसंस्कृतीचे त्यांच्या वैचारिक साहित्यिक सिध्दांताचे जबरदस्त आकर्षण यामुळे या काळातील ग्रामीण साहित्य कुपोषित राहिले. या काळात ग्रामीण भागातील काही लेखक

लिहित होते. पण त्यांच्यावर असणारा बाहय प्रभाव जाणवण्याइतपत तीव्र होता. त्यामुळे ही लेखक मंडळी अस्सल ग्रामीण चित्रण करण्यापेक्षा प्रस्थापित साहित्य विषयक मानदंडांना आदर्श मानित असत. या सर्वांच्या एकत्रितपरिणामातून निर्माण झालेले साहित्य नावपुरते ग्रामीण राहिले. त्यामध्ये ग्राम जीवनाचा अंश अभावाने जाणवत होता. अर्थात या काळातील श्री.म.माटे,विभावरी शिरूरकर, श्री.ना.पेंडसे यांच्या सह मोजक्या लेखकानी वास्तवाचे भान ठेवून ग्रामीणसमाज जीवनाची मांडणी केली. हे नाकारता येत नाही.या लेखकाने गाव, माणसं, श्रदधा,अंधश्रदधा, सण् उत्सव, या सह खेडयातील समस्यांना जसं पाहिल किंवा अनुभवल तस आपल्या लेखनातून मांडले. काळाचा विचार न करता हे निच्शितच वेगळेपण होते. आज ग्रामीण साहित्याचा परिघ विस्तारलेला असताना प्रस्तुत लेखकानी यासाठीची भूमी तयार केली.याची नोंद घ्यावयास हवी.

ग्रामीणविभागाचा संपूर्णतः कायापालट होत आहे.विज्ञान तंत्रज्ञान आज खेडयापाडयांपर्यंत पोहचले आहे. मोट गेली इंजिन गेलेविदयुत मोटार आली. नांगर जाऊन ट्रॅक्टर आला.आंतरराष्ट्रीय राजकारणाची चर्चा ग्रामपंचायतीच्या ऑफिसमध्ये होऊ लागली बैलगाडीऐवजी, सायकली फटपटी जीपचा सर्रास वापर होऊ लागला आहे. बेकार सुशिक्षितांनी पर्यायी वाहतूक व्यवसाय सुरु केलेला आहे. समांतर खाजगी आणि पर्यायी अर्थव्यवस्था कधीचीच तयार झाली आहे. खेड्र्यातील जीवनमान बदलून गेलेले आहे. हे सर्व पाहून शहरी आणि ग्रामीण असा भेद करण्याची आवश्यकता नाही. आता सगळे साहित्य आणि जीवनमान सारखेच झालेले आहे. असा डावपेची सवाल अनेकवेळा विचारला जातो. यात प्रामुख्याने शहरी आणि ग्रामीण हे ठरविणा-या सीमारेषेसंबंधीची गल्लत झालेली असते. शहरी आणि ग्रामीण हा भेद भौतिक स्वरूपाचा नाही. नगरपालिकेच्या सरहदीपासून शहरी आणि शीवेपासूनअथवा वेशीपासून ग्रामीण हा भेद गृहीतधरणे समंजसपणाचे नाही. ग्रामीण आणि शहरी हा भेद शोषक आणि शोषित या प्रवृत्तीतून साकारलेला आहे. शहराच्या उपनगरीय झोपडपटटीत राहणारा समाज आणि त्यांचे तिथले जीवन हया ग्रामीण अनुभूतीचा भाग आहे. तर खेडयातला गावातला शोषक वृत्तीने वावरणारा माणूस हा शहरी मनोवृत्तीचाच

घटक म्हणून मान्य झालेला असतो. आक्षेपकांचे एक सूत्र असे :आज ग्रामीण शहरी भेद करण्याची गरज नाही. आज खेडयातील माणसांचेही जीवनमान शहरी माणसांच्या जीवनासारखे झालेले आहे. तेंव्हा ग्रामीण साहित्याला भवितव्य काय आहे ?तसे त्यांच्या निराळेपणाचे तात्विक अधिष्ठान तरी काय आहे ?हा प्रश्न लक्षात घेतल्यास त्याची उत्तरे देणे अवघड नाही. अर्थात या प्रश्नाची उत्तरे ग्रामीण साहित्य चळवळीतील प्रमुखांनी अनेकवेळा दिलेले आहे. मी ही माझ्या पध्दतीने वरील प्रश्नांच्या उत्तरासाठी एवढया विस्ताराच्या मांडणी प्रपंच केलेला आहे. ग्रामीण साहित्याचे तत्वज्ञान व्यक्तिसापेक्ष स्वरूपाचे आहे. तर सामान्यांच्या शोषणाचे हत्यार ज्या ज्या काळात चालविले त्या त्या काळातील सामान्य कष्टक-यांच्या बाजूने उभे राहणा-यांचे तत्वज्ञान ग्रामीण साहित्याच्या चळवळीला महत्वाचे वाटत आलेले आहे. लुटमारीच्या व्यवस्थेपासून ते आजच्या एकवि साव्या शतकाच्या उंबरठयापर्यंत शोषकांची मानसिकता कशी समान धर्मीय आहे. हे या एकूणच मांडणीचे सूत्र रूप म्हणूनच विस्ताराने नोंदविले मला महत्वाचे तसे आज गरजेचे वाटले आहे. कृषिनिष्ठ जीवनाचे शोषण हा ग्रामीण साहि त्याच्या तत्वज्ञानाचा पाया आहे. म. जोतिबा फुले यांनी शोषणाविरूध्दच्या संघर्षाची रेषा विदया विरूध्द विदया अशा स्वरूपात मांडलेली होती. भटशाही विरूध्द कुणबी हा लढा त्यांनी हयातभर लढविला. काळ गतीप्रमाणे आज भटशाहीचे चेहरे बदलत गेले. पण शोषण मात्र थांबलेले नाही. आणि म्हणूनच शोषित व्यवस्था जोपर्यंत कार्यरत आहे, तोपर्यंत ग्रामीण साहित्याचे अस्तित्व असणार आहे.

यादृष्टीनेच ग्रामीण साहित्य चळवळ म्हणून वाटचाल करीत आहे. डॉ. आनंद यादव, रा.रं. बोराडे, डॉ. नागनाथ कोत्तापले, डॉ. द.ता. भोसले, डॉ. वासुदेव मुलाटे, प्रा. चंद्रकुमार नलगे, भास्कर चंदनशिव, डॉ. श्रीराम गुंदेकर, प्रतिमा इंगोले, सदानंद देशमुख,पुरूषोत्तम बोरकर,विश्वास पाटील, डॉ. राजन गवस, कृष्णात खोत इत्यादी लेखकांनी ग्रामीण कादंबरीचे लेखन करून महत्वाचे योगदान दिले आहे.

आनंद यादव यांनी 1971 मध्ये लिहिलेल्या गोतावळा या कादंबरीतील नायक नारबा हा सालकरी गडी शेताच्या मालकावरच अवलंबून असतो.

सरंजामशाहीची सत्ता असणारा शेताचा मालक सर्व प्राण्यांना विकून टाकतो. त्यामुळे नारबाचे भावविश्व संपूष्टात येते. गोतावळा मध्ये यांत्रिकीकरणाचा मानवी जीवनावरील परिणाम स्पष्ट दिसतो. नवे जीवन नवे तंत्र नवे विचार यांचे सत्ताभिसरण सुरू आहे. हरितक्रांतीच्या पाठोपाठ जुन्या शेतकी तंत्राचे उच्चाटन होत आहे. यांत्रिक शेतीचे मूळ धरू पहात आहे.त्यामुळे सभोवतालच्या सजीव, निर्जीव एकूण सा-या परिसरावरच गहिरे उथळ परिणाम घडले आहेत. काही शारिरिक काही मानसिक काही बौध्दीक नंतर काही वेदना असूनही वेदनातीत आहेत. .... गोतावळात जे घडते ते फार थोडे घडणा-या थोडयाश्यानेच नारबा वर त्याच्या प्रवृत्तीच्या समष्टीवर जे ओरखडे उठतात परि णाम मुद्रीत होतात. ते विलक्षण प्रत्ययकारी आहेत. नारबाचा मालक रामू सोनवडा ट्रॅक्टर आणण्याचे ठरवतो. ट्रॅक्टरमुळे मालकाच्या वृत्तीतच बदल होतो. त्याला गुराढोराचे महत्व न वाटता ट्रॅक्टरच्या ड्रायव्हरचे महत्व वाटते. नारबाच्या जेवणापेक्षा ड्रायव्हरचे महत्व वाटते आर्थिक सांस्कृतिक स्थित्यांतरांचा ट्रॅक्टर प्रतिनिधीअसला तरी बरेच काही अगदी नारबाचे भावविश्वही उध्दवस्त करणारा तो शत्रू ठरतो. एका बाजूला शहरीकरणाचे यांत्रिकीकरणाचे काही फायदे वाटत असले तरी दुसरीकडे ग्रामजीवनाची आर्थिक सामाजिक घडीविस्कटण्यासाठी या गोष्टी कारणीभूत होतात.

ग्रामीण साहित्यातील रा.रं.बोराडे यांची 1971 मध्ये प्रकाशित झालेली पाचोळा ही कादंबरी आहे. शहरीकरणामुळे ढासळलेला ग्रामीण भागातील व्यावसायिक गंगाराम शिंपी हा या कादंबरीचा नायक आहे. आधुनिक फॅशनचे कपडे शिवणारा नवा शिंपी गावात आल्यामुळे गंगाराम शिंप्याकडे काम येईनासे होते.व त्याचा धंदा चालेनासा होतो. ग्रामीण कारागिरांच्या पारंपारिक व्यसायावर आधुनिकतेमुळे परिणाम होऊन त्यांच्या जीवनात येणा-या ताणतणावाचे दर्शन येथे गंगाराम शिंप्याच्या रूपात प्रतिनिधीक स्वरूपात रेखाटले आहे. वर्षानुवर्ष् चालत आलेल्या ग्रामीण भागातील बलुतेदारांच्या होणा-या कुचंबनेचे पडझडीचे त्यांच्या जीवनातील शोकांतिकेचे चित्रण पाचोळामधून बोराडेनी वास्तवदर्शी केले आहे. परिवर्तनाला, आधुनिकीकरणाला अकुशत असलेला गंगाराम शिंपी स्वतःच्या

हेकेखोर स्वभावामुळे सामोरा जाऊ शकत नाही. स्पर्धेच्या बदलत्या युगात नवीन तंत्रज्ञान अवगत न करता जीवनशैलीत बदल न घडवता वावरणारा गंगाराम ढासळत जातो. व संसाराचा पालापाचोळा करून घेवून स्वतःही संपतो. त्याचे कुटुंब या सर्व वाताहतीला बळी पडते.

पुरुषोत्तम बोरकर यांची 1887 मध्ये आलेली मेड इन इंडीया ही कादंबरी ग्रामीण् जीवनाचा एक मोठा पट आपल्यासमोर साकारते ग्रामीण भागातील एका गावातील समाज जुन्या आणि नव्या मूल्यांच्या अवस्थेतून घडलेला नवतरूण आणि तत्कालीन समाज व्यवस्थेतून त्यांच्या संवेदन शीलतेला छेद देणारे विविध आघात प्रत्याघात यातून एक व्यापक समाज प्रातिनिधिक रूपात लेखकाने या कादंबरीतून साकारला आहे. उजाड अवस्थेतील आपल्या गावाची स्थिती कीती विदारक आहे याचे चित्रण लेखकाने कादंबरीभर केले आहे. या कादंबरीत तरूणांचे प्रतिनिधित्व करणारा पंजाबराव साहेबराव गरसोळीकर पाटील सुशिक्षित असूनही ग्रामीण परिसर व वातावरणातील दारिद्रय, अंध्दश्रध्दा, मानसिकता यांच्यापुढे हतबल होतो. शेवटी मोडून पडतो सुशिक्षित तरूणाची होणारी विदारक कोंडी व पुढे त्याची झालेली शोकांतिका ग्रामीण तरूणाच्या वाटयाला कशी येते याचे प्रातिनिधिक रूपात केलेले चित्रण अनुभवविश्वाचे दर्शन घडवते. असे म्हणणे संयुक्तिक ठरेल. स्वातंत्रयोत्तर काळात खेडयाचे बदललेले स्वरूप आणि शहराच्या संपर्कामुळे हरवलेले खेडे पण या कादंबरीतून व्यक्त झाले आहे. मेड इन इंडीया मधून दिसणारे वास्तव ग्रामीण भागातील विविध खेडयांचे प्रतिनिधित्व करतानादिसते. जुन्या खेडयाची सर्वांगीन संरचना बदलली आहे. हे मान्यच करावे लागते.

वासुदेव मुलाटे यांची 1989 मध्ये प्रकाशित झालेली विषवृक्षाच्या मुळया ही कादंबरी ग्रामीण भागातील भ्रष्टाचाररूपी भयानकतेचे दर्शन घडवते. सहकार क्षेत्रातील भ्रष्टाचार व ग्रामीण भागाचा कायापालट व विकास करण्यासाठी प्रयत्न करत असलेला, शिक्षकी पेशा सोडून सहकारी बँकेत नोकरीस लागलेला विश्वनाथ तरटे हा कादंबरीचा नायक आहे. प्रामाणिक व कर्तव्यदक्ष असूनही त्याची नोकरीत प्रत्येक ठीकाणी उपेक्षाच होते. तो भ्रष्टाचाराला व भ्रष्ट अधिका-याना विरोध करू शकत नाही संघर्ष करण्याची तयारी

नसलेला नायक आजूबाजूची परिस्थिती पाहूनअस्वस्थ होतो.

सदानंद देशमुख यांनी 2002 मध्ये बारोमास मधून एकनाथ तनपुरे हा शिक्षक व्हायची इच्छा असलेला नायक रेखाटला आहे. या कादंबरीतील शेतक-यांचा मुलगा असलेल्या एकनाथला उच्च शिक्षण घेवूनही डोनेशनशिवाय नोकरीच्या संधी उपलब्ध होत नाही. पारंपारिक व्यवसाय म्हणून शेतीचे कामही त्याला जमत नाही. ग्रामीण् जीवनातील निसर्गाची अवकृपा दुष्काळ काळानुसार वाढत जाणारा विविध ठीकाणचा भ्रष्टाचार, भौतिक वस्तूंचा हव्यास यामुळे निर्माण झालेल्या संघर्षमय परिस्थितीचे वास्तव चित्रण सदानंद देशमुखांनी या कादंबरीतून केलेला आहे. शेतक-यांच्या आत्महत्या खेडयात् शिरलेले संधी साधू राजकारण आणि भ्रष्टाचार, दारिद्रय आणि बेकारी इ. विविध घटकांना स्पर्श करणारी बारोमास ही कादंबरी आहे. खेडयातील पाण्याचा प्रश्न मांडणारी तहान ही कादंबरी ग्रामीण वास्तवाचे चित्रण आहे.

विश्वास पाटील यांची पांगिरा ही कादंबरी झपाटयाने बदलत गेलेल्या अनेक खेडयाची प्रातिनिधिक कहाणी आहे. प्रातिनिधिक व गतिमान ग्रामीण समाजाचे समुहाचे दर्शन घडविण्याचा प्रयत्न पांगिरा मधून लेखकाने केला आहे.गावागावातील सत्तासंघर्ष, राजकीय पक्ष व त्यांच्यातील मतभेद पाण्याचा गैरवापर, भ्रष्टाचार , चंगळवाद, शेतमालाचे ज्वलंत, प्रश्न, तमाशा कलेचे चित्रण इ. विविध आयामांसह ग्रामीण वास्तवाचे भेदक चित्रण करणारी पांगिरा ही उल्लेखनीय कादंबरी आहे. सत्तेच्या लालसेपोटी गावांमध्ये विविध गट तट पडले आणि गावच्या हीतापेक्षा आपली सत्ता अबाधित कशी राहील याकडे प्रत्येकाने लक्ष ठेवून स्वतःचे हीत जोपासले येथे सर्व सामान्यांचा विचारही होत नाही. राजकारण, दुष्काळ, पाणी प्रश्न, याबरोबरच ग्रामीण भागातील वाढत्या चंगळवादाचे वास्तव वर्णन लेखकाने केले आहे.सत्तासंघर्ष, नितीमूल्यांचा -हास जागतिकीकरण आणि चंगळवादाचा प्रभाव, शेतक-यांची व्यथा या बरोबरच निसर्ग आणि ग्रामीण समाजातील बदलती जीवनशैली यांचा व्यापक पट लेखकाने या कादंबरीतून साकारला आहे. गावातील वास्तवाचे विविध आयामासह व्यक्त करणारे चित्रण लेखकाने प्रभावीपणे कादंबरीतून मांडले आहे.

आधुनिकिरण, जागतीकिकरण, चंगळवाद इ. मुळे ग्रामजीवनातील सामाजीक, सांस्कृतीक, शैक्षणीक, आर्थीक क्षेत्रावरही परीणाम झाला. हा परीणाम विधायक व घातक अशा दोन्ही स्वरूपात दिसून येतो. शेतकरी व शेती हा मुख्य गाभा असलेले ग्रामीण जीवन पाशात्य संस्कृतीचे अंधानुकरण करू लागले व चंगळवादी वृत्तीही वाढली यामुळे परंपरागत मुल्यव्यवस्था ढासळली. ग्रामीण जीवनाची होणारी वाताहात या परीस्थितीला बळी पडणारा तरूण वर्ग कादंबरीकाराणे आपल्या कादंबरीतून अधोरेखीत केला आहे. ग्रामीण सामाजिक जीवनातून पूर्वापार चालत आलेली संस्कृतीनिष्ठ पण बदलते जीवनचित्र साकारत आलेले आहे.ग्रामीण मानवी जीवनाची सुख दुखे, व्यथा वेदना, प्रेम व्देश, सत्ता स्पर्धा या सर्व घडामोडीचा परिचय ग्रामीण कादंबरी देते.

1990 नंतरच्या काळात ग्रामीण साहित्याची मांडणी वेगळ्या पध्दतीने होऊ लागली. पारंपारीक साहित्याच्या केंद्रस्थानी शेतकरी होताच पण त्याच्या बरोबरीने समाजातील वेगवेगळे दुर्लक्षीत घटकही साहित्य विषय बनले. विशेशत: राजन गवस यांनी मांडलेले देवदासींचे जीवन हादरवणारे ठरले. त्याच बरोबर ग्रामीणपरिसराला वेढून राहीलेले राजकारण बारकाव्यासह पुरूषोत्तम बोरकरांनी मांडले. विश्वास पाटील यांनी धरणग्रस्तांच्या प्रश्नांना हात घातला. तर इंद्रजीत भालेरावांनी शेतक-यांच्या दु:खाचे नवे आयाम दिले. कृष्णात खोत यांनीही उल्लेखनीय लेखन केले आहे. ग्रामजीवनाचे बदलते चित्रण कादंबरीतून व्यक्त होत आहे. झपाट्याने शहरीकरण होत असल्याची हातबलता काहीं लेखक व्यक्त करीत असले तरी आत्मभान व आत्मशोध या स्तरावर ही जाणीव अधीक आग्रहाने पुढे रेटायला हवी. असे केल्याने ग्रामीण साहित्याचा प्रवाह पुन्हा एकदा नव्या जोमाने सुरू राहील अशी आशा वाटते.

धार्मिक पर्यटनाचा मेरूमणी – श्री क्षेत्र नृसिंहवाडी

सौ. मधुरा चिंतामणी पुजारी,

e-mail. id : madhura.kul22@gmail.com

QrMa - ghH$ma^fU Ir. Eg. H$. nmQrb _hm{dÚmb`, H$ê$XdmS, Vm. {eam i ,{O.H$mëhmna

सारांश :

कोल्हापूर जिल्ह्यातील नृसिंहवाडी हे श्री दत्त प्रभूंचे ठिकाण सर्व दत्त भक्तांमध्ये खूपच प्रसिध्द आहे. निसर्गरम्य नदीकाठचा परिसर, मंदिरातील पवित्र धार्मिक वातावरण आणि श्री दत्त प्रभूंवर भक्तांची असणारी अढळ श्रद्धा या सर्व वैशिष्ट्यांमुळे नृसिंहवाडी हे तीर्थक्षेत्र आज जगाच्या नकाशावर आलेले आहे. जिल्ह्याच्या ठिकाणाहून अवघ्या ५२ कि.मी. वर असल्याने येथे भाविकांची गर्दी दिवसेंदिवस वाढतच आहे. पण नृसिंहवाडीला काही निसर्गनिर्मित तर काही मानवनिर्मित समस्या भेडसावत आहेत. काही उपाययोजनांची अंमल बजावणी केल्यास नृसिंहवाडी तिर्थक्षेत्राचा विकास धार्मिक पर्यटनाच्या दृष्टीकोनातून सुलभ रित्या होऊ शकतो.

EFFECTS OF WAR IN ELIZABETH BOWEN'S 'THE HEAT OF THE DAY'

Ms. S.S. Sarmagdum
Asst. Prof., Dept. of English, Arts, Commerce and Science College, Gadhinglaj
swayamprabhaundare@gmail.com

ABSTRACT

Elizabeth Bowen's 'The Heat of the day' is a major novel published in 1949. It is a war-time novel and reflects Bowens attitude towards England and Ireland during second world war. This paper examines the sense of Irish view of war, the horrifying experiences of civilians during wartime that disrupted the life. It also focuses on the positive and negative effects of war. Bowen satirizes the tyranny caused by war. She is very serious about the present and is worried about the future. She chiefly exposes war effects on the female's outer and inner life.

Key words : *War, Effects, civilians, life, Tyranny, Female's , outer life, Inner life.*

Elizabeth Bowen is a writer with outstanding creativity. She is influenced by Jane Austen, Henry James and Virginia Woolf but she is also affected by two world wars and Anglo-Irish war between 1919-21. All these reflections are embedded in her stories and novels.One among them is 'The Heat of the day' published in 1949, which is dedicated to Charles Ritchie. She has got first hand experiences of world wars and reflected worst effects of war on the civilians. 'The Heat of the Day' is her war-time novel set in London. The whole credit goes only to her as a sole reflector of civilians' emotions towards war. In her opinion, war is not an event only for soldiers, but it is more terrible for civilians.She writes on the war to the extent greater than any of her contemporaries. 'The Heat of the Day' is a war novel which draws upon her attitudes towards England and Ireland during world war II when she was an Air raid-warden in London and an informer on Irish affairs for the Ministry of Information. It is seen that war forced Bowen to re-examine her war experiences, disrupt her narrative and led her to depict believable lower class characters. This novel is largely devoted to the subtle emotions of love affairs in the conventional middle class society.

Elizabeth Bowen is an Irish writer, lived both in Ireland and England. Ireland is her motherland but lived an exile life in England. She got an opportunity to work at various levels during world wars. As such she got a chance to observe the life of people during wartime. Bowen, while working as a war reporter for the British Government, has to travel between Ireland and England, consequently she studied the attitude of Irish people towards England in the war. When Bowen worked as a war reporter, her lover Charles Ritchie worked as a diplomat. His personality is reflected in the character of Robert Kelway.The theme of 'The Heat of the Day' is the effects of war on the life of soldiers as well as civilians, it also deals with the romantic love-story between Stella Rodney and Robert Kelway.It is also called as a spy story of war-time London which renders the feelings of the unsettled capital, London. It attempts to exploit the effects of war on civilians' mind, soldiers and emotional dislocation.

Effects of war on civilians

As this is a war-time novel it reflects the effects of world war II, the scene and setting are chosen from London and Ireland. Bowen looks at war from different perspectives. She has rightly concentrated on the life of civilians in general and of female in particular. It is Bowen's attempt to show that war is tormenting not only to the soldiers fighting in the battlefield but it is more terrific to civilians. In this novel, war is seen to have both positive and negative effects on the people of London, who are accustomed to war, especially the air raids and blackouts. They begin to fee insecure in their own home as there is no guarantee of life of the very next day. Even home is not a safe place of residence in the war time haseach day is a new life to them. People talk about the air raids in the city of London and the death-toll in the house and on the roads even. They feel happy to be safe and alive. War becomes a part of their life and they are accustomed to it. They do not have permanent place of residence, their each day begins with the deadlines of war in the newspaper. Due to war, London atmosphere becomes tense even it is not surprising that Bowen feels exhilarated by the war-time emergence of women out of their domestic space.War has bridged the gap between the upper and the lower middle-class. As Britain needed an expanded workforce during the war, women were compelled to work at home as canteen workers, factory workers and A.R.P. warden. The character of Stella shares both the sexual freedom and social prejudices articulated in the first hand accounts of war-time experiences written by the middle class and the upper middle-class woman. War-time employment opportunities offered these women greater freedom and helped to liberate themselves from the old conception of womanhood. They felt happy to be a part of earning source and added to the income of the family. War also changed the life of upper middle-class women whereas it doesn't affect much the life of the lower middle-class women in the past too, they used to work in the factories for the whole day maintaining their domestic life. Their work was boring and tiresome and it ishere Bowen exposes the difference between the upper class choice to follow a fashion and the working class necessity to make a living which marks a class disparity in the way that woman view their war work. In this context Kristine Miller remarks :

'When one returns to 'The Heat of the Day' it becomes clear that Stella's experience of the war was much like that of upper class women like Diana Barnato Walker. Stella perceives war as a social opportunity without fully considering the complexities of class relations. As one of the 7 ½ million British women engaged in war work during the second world war, Stella, like many women of the upper middle class, avoids the drudgery of factory work in favour of a more interesting job'.

Like Bowen, Stella has first hand experiences of war, quiet habituated to changing the flats from Regents park to Weymouth street due to black outs. Her house is bombed several times in London and barely escapes from being killed. Thus, due to war a feeling of insecurity and uncertainty of life of the next day hovered her mind always. Due to war Louie has lost her home and her parents,war has made her homeless, lonely, led her to stay away from her husband in London. Black-outs made Louie and Connie to change place of residences. They realize that war affected middle-class women positively but their life remains unchanged. This fact makes them sad psychologically. People like Nettie, Mrs. Tringsbay, Mrs. Kelway and Ernestine are not affected by war for they are living faraway from London. In this war-time novel, Bowen creates an incongruous but recognizable variation on Stella in the character of Louie. In appearance, education, class, manners and almost everything two of them share essentially in their fate as women and war victims. Louie Lewis is a factory worker whose parents have been killed in an air-raid and whose husband has gone off Barbara Waston describes Lewis as:

'Louie Lewis defied categories including those of gender, there is nothing feminine about her, although she is quite biologically.'

Effects of war on soldiers

Bowen has shown the picture of war tyrannically it has forced soldiers to live away from their family Roderick who works in the army rarely visits her mother Stella.War created spies who helped to pass important and secret information, Harrison and Kelway are the product of war, Robert is wounded in the war and now works in a war office. He becomes limp and handicapped, Roderick is unable visit Ireland and look after his ancestral property. Harrison, the spy leads an unsettled life with no fixed place of residence. In the opening scene of the novel Louie observes Harrison and thinks him to be the spy. Harrison is a comic or pathetic figure, gesturing and muttering to himself as his motives are unexplored Barbara Watson remarks:

'Considering how patent the idea of the house and home is in Bowen's fiction and how much is made in this novel of the bombing of homes and uprooting of families, Harrison's lack of any homing instinct, says much about his lack of identity.'

Each family of London has lost their near and dear ones due to war. The survivors are living in a war atmosphere.

Emotional dislocation

Most of the characters are emotionally dislocated in this novel. Inspite of the tense atmosphere of the war, Stella and Robert are involved in love, people have to face a lengthy procedure for taking permission to visit Ireland. As in the world war II Ireland didn't participate and Irish people possessed similar attitude by keeping them aloof from the war. The women of the lower middle-class attempted to search a model image in upper middle-class but they failed to find it, thus reality is confronted. The characters face mental conflicts and they are seen searching for their identity but they do not get it. The feelings of characters are dislocated in war-time London so their life is distorted and disturbed.

The character of Stella Rodney is vital in the development of the novel. She is forty years old, mature, sensitive, attractive who has lost her parents, brothers and even her divorced husband so feels lonely and isolated. She develops a satisfactory relationship with Robert Kelway, loves him faithfully butStella doesn't know about the exact position of Robert in public life nor does is interested in knowing it. Their relationship is extremely intimate and private. Harrison reveals of Robert spying and hurts Stella.She is confronted by Roberts's real position in public life and so is unable to accept his reality. She is emotional and there is a confrontation of private and public life in regard of Stella.She doesn't like Harrison the spy working for British Government on the contrary he likes and accepts love from her. It is difficult to develop love relationship in war-time but Stella tries to maintain her loving relationship with Robert though she is in a dilemma. Like Bowen, Stella's son inherits ancestral home in Ireland. Stella finds a way to escape from emotional tension by going to Ireland. According to her, Ireland stands for peace whereas London for turmoil. In such a war atmosphere Stella's emotions are dislocated. Kristine Miller remarks :

'Owning few possessions Stella feels out of place in her rented furnished flat and her physical displacement parallels her growing confusion concerning public and private identity.'

Louie, a factory worker compares her life with Stella's life and realises that war changes the life of the upper class women whereas the lower middle-class women remain same working laboriously to maintain their domestic life. Louie is searching for ideal woman and finds the ideal image in Stella. Her dream gets shattered after knowing Stella's personal life and her love affair with Robert Kelway. This brings Louie back to the world of reality and also experience her imagination confronting with reality, it is seen that war has brought chaos, disorder and gloom everywhere. The moral order of society is disturbed and the lower class people are left with no ideal to follow. Women like Louie are left astray and are seen emotionally dislocated Kristine miller says :

'In contrast to Stella Louie is a factory worker who, bored with the monotony of her work and lonely in the absence of solider husband tries to find excitement through adulterous relationship'.

Mrs. Kelway and her daughter Ernestine are socially unfit and lead an uncertain life. They do not possess social nature and become emotionally unfit in the real world without any firm decisions Kelways are rootless, unstable and lack individuality on the other hand,Connie is not emotionally disturbed except the effects of war on her life. Due to wide knowledge of war she became more mature and firm.Cousin Nettie seems to be emotionally disturbed and always remains in the mood of mourning. Infact, Nettie is not insane, but her apparent insanity makes her see more of life. Nettie is intelligent to realize that women have less power to make decisions in life. Barbara Watson remarks :

'Netted in the fabric of ambiguities and deceptions, the main plot of treason and detection shares three arrays of imagery with the two sub plots one of Mount Morris, landed gentry and the other of Louie Lewis, the working class women'.

Robert's love affair, with Stella is in dislocated atmosphere of London. They develop love relation in a social vaccum forgetting the real existence of reality with past, future and family members.Their love relation is fit in the world of imagination. The atmosphere of Holme Dene prevent Robert from developing any belief in himself. The image of the traitor in Robert develops because of emotional disruptions of Kelways. Harrison, the spy for British government, doesn't have any past history who is an obscure character due to the war atmosphere with no family, his emotional attachment with Stella becomes so stronger that he forgets his sense of duty. It is seen that war has uprooted family life everywhere. Harrison is homeless with noidentity, no nursing, as a result he becomes a sinister. Roderick loves his mother and Stella brings him up to make a man of substance. Roderick is a solider in army and has to go to front to fight against enemy leaving his loving mother in London. In this way war disrupts family life of both Roderick and Stella.

Conclusion

The British Society is founded on class distinction it is war that bridged the gap between upper and lower middle class women. Bowen perceives that war has created an opportunity to come out of domestic world and their entrance into public arena. Bowen has largely concentrated on female life and visualized their inner and outer personality. She chiefly exposes war effect on the female's outer and inner life. Stella always feels that she is aproduct of war. Bowen satirizes the tyranny caused by war and is very serious about the present and is worried about the future. Bowen comments that though British Society is divided according to class distinction her female characters realize that they are all human beings, war has taught them how to survive. Louie always feels that war has broadened their outlook towards the nation. It has affected the life of human beings but not lifeof nature. At the end of the novel Stella's life is symbolically complete by the birth of Louie'sillegitimate son. Thus the novel is Bowen's mystification of the relationship between gender and class ideologies which arises from her own class anxieties as an upper middle-class owner of an Irish big house.

KASHMIRIYAT AND ENGLISH NOVEL IN KASHMIR: ANALYZING VIKRAM CHANDRA'S *SRINAGAR CONSPIRACY* (2000)

Shaifta Ayoub

Govt. College for Women, Nawa Kadal, Jammu&Kashmir

ABSTRACT

Kashmir had a composite culture comprising multiple world-views, thoughts, food habits, dressing patterns, a common language and a syncretic spirituality which transcended religious boundaries. Such a communal harmony between Muslims and Hindus should not be mistaken as homogenous rather a peaceful co-existence of heterogeneous elements. Retaining their specific religious identities, they lived together, denying their religious affiliations to affect their sense of belonging to each other as Kashmiris. This idea of a shared and syncretic religious culture with fuzzy religious boundaries in Kashmir is popularly known as Kashmiriyat. The paper will try to explore the relationship between Kashmiri Pandits and Muslims, only to reveal the bankruptcy of the idea, Kashmiriyat, which turns out to be nothing more than an unrealized vision through Vikram Chandr'a novel, Srinagar Conspiracy (2000). The novel creatively captures the rise and fall of militancy in Kashmir from the mid-1980s to the turn of the new century and reveals how Kashmiriyat as a native identity that espoused communal harmony was fractured with the onset of insurgency.

Key Words: Kashmiriyat, Pandits, Insurgency, Conflict, Identity

Crumbling *Kashmiriyat*

Ask a Kashmiri what makes him a Kashmiri, and the answer will be kashmiriyat. Ask what it means to be a Kashmiri, the answer will be 'practising kashmiriyat'. Try again and ask what kashmiriyat is and you

just end up wondering when the reply comes: it is unique to the Kashmiris. Of course! Central to any discourse on Kashmir is the idea of kashmiriyat, which is understood to be a tradition unique to the region and which transcends religious trivialities, while upholding cultural harmony. Well, till here the story is

still straight; or was that way. Post 1989, the script changes and the dispute in Kashmir is no longer territorial. (Gangahar).

Manisha Gangahar in her article, "Words from a Conflict Zone" arrestingly highlights the significance of "Kashmiriyat," and how it changed from being a celebrated collective identity marker of all Kashmiris to an ambivalent concept whose fissures were exposed with the onset of the armed insurgency and the freedom struggle. Kashmir had a composite culture comprising multiple world-views, thoughts, food habits, dressing patterns, a common language and a syncretic spirituality which transcended religious boundaries. Such a communal harmony between Muslims and Hindus should not be mistaken as homogenous, it is rather a peaceful co-existence of heterogeneous elements. Despite the diversity, the Kashmiri culture was accommodating and absorbing. Retaining their specific religious identities, they lived together, denying their religious affiliations to affect their sense of belonging to each other as Kashmiris. This idea of a shared and syncretic religious culture with fuzzy religious boundaries in Kashmir is popularly known as Kashmiriyat. It is akin to regional identity which indicates "some cohesiveness or social integration" in Kashmir (Paasi 121). Toru Tak views 'Kashmiriyat' as a "sociocultural Kashmiri identity" often believed as "indigenously secular" (Tak 28). Neil Aggarwal defines it as an abstract noun that means "origin or affiliation to Kashmir" or the "ethos of being Kashmiri" (Aggarwal 227). For Humra Quraishi it is "a common, shared cultural tradition - including rituals performed at the time of birth, marriage and death, and also language, food, dress and names - that reflect a common ancestry, bound the Kashmiris of different faiths together"(39). In his article, "Kashmiriyat: The Vitality of Kashmiri Identity," Balraj Puri remarks,

Kashmiri identity has been the most persistent and dominating urge of people. . . The Kashmiris have always perceived their identity as distinct and separate within the subcontinent. This identity was uniquely Kashmiri, which encompassed Muslims, Hindus and the Buddhists.(55)

The identity of Kashmir, that was confronted with the option of joining one of the two dominions into which the Indian subcontinent was divided in 1949, had acquired a unique character and vitality on account of 5000 years of its continuous history, its genius in reconciling claims of continuity and change, its leading role in the intellectual and spiritual life of the country, its ability to assimilate ideas and races, its splendid isolation and distinctness guarded by physical barriers, monumental achievements in every field of human activity and sense of pride in the rich heritage shared by Hindu and Muslims alike. (62)

Although it was in immediate post-1947 days when Kashmiris started defining Kashmir as a land of "communal amity," yet the term, Kashmiriyat, which defined this inter-religious harmony was coined in the mid-1970s (Tak 28). The political discourse surrounding Kashmiriyat was knit to justify Kashmir as a secular microcosm symbolic of the communal harmony in India at the macrocosmic level. As Tak says, "It was the product of India's need to define itself as a secular nation, as well as to justify its military deployment in Kashmir" (Tak 28). T N Madan, who is a Kashmiri Pandit and an anthropologist, tracing the roots of the term, "Kashmiriyat" writes, "The first thing to emphasize is that Kashmiriyat is not a Kashmiri word. It may not, therefore, be claimed to be a native category of perception. It is an artificially produced clone of *punjabiyat* and a recent coinage of not earlier than the 1980s" (Madan 65). Kashmiriyat signifies basically 'Kashmir-ness,' which upholds Kashmiri nationalism on the pedestal of cultural identity. "Far from being an abstract concept invoked from above by the political elite, then Kashmiriyat has come to symbolize, for all, an encompassing Kashmiri identity" (Wani 130). The term identity is vital in defining the relationship of an individual with the nation, society or ethnicity to which he belongs. In an interaction of the individual with the social elements, s/he identifies with a mass culture that comprises both nationalism and ethnicity. Anssi Paasi believes that "identity is understood as a 'soft' tool, one used by authorities worldwide, in the promotion of social cohesion" (138). Likewise, in order to keep the Kashmiri identity intact and to justify Kashmir's union with secular India, Sheikh Abdullah [1] created a strong discourse of Kashmiriyat using the card of culture which endorsed secularism and Sufism, transcending religious difference. Paradoxically, the term Kashmiriyat was attributed multiple signifiers, from time to time, depending upon the immediate political needs. As in 1983 elections, Farooq Abdullah's invoked the discourse of Kashmiriyat, as a "slogan to counter Delhi," which inevitably sounded like the "slogan of Kashmir's 'Muslim' identity" (Tak 31).

In his novel *The Srinagar Conspiracy* (2000), Vikram A. Chandra creatively captures the rise and fall of militancy in Kashmir from the mid-1980s to the turn of the new century. The novel opens in 1947, in Zafar Bagh, a small suburb of Srinagar, when the whole India was divided on communal lines. However, Kashmir despite being a Muslim majority state afforded to have a harmonious relationship between Muslims and Hindus. Chandra depicts this amicable relationship through the characters, Mohammed Shah and Jawahar Kaul, who are close friends, notwithstanding that one is a Muslim, and the other, a Kashmiri Pandit. Their children Habib Shah and Vijay Kaul share the same bond. In

[1] Sheikh Mohammed Abdullah, popularly known as the "Sher-e-Kashmir" (lion of kashmir), was the founding leader of the Jammu & Kashmir National Conference and the 2nd Prime Minister of Jammu and Kashmir. For a detailed account of his political career in Kashmir, read his autobiography *Aatish-e-Chinar* (The Fire of the Chinar. Srinagar:Ali Mohammad & Sons,1985.

contrast to them, Chandra says that "in other parts of the subcontinent that summer, such deep friendship between Hindu and Muslim may have been Capulet and Montague, but not in Kashmir"(Chandra 12). Although, Mohammed Shah objects to the despotic decision of the Hindu Maharaja of Kashmir to join India without taking the popular opinion, yet he succinctly declares that, "our future will be better with secular India than with those clowns in Pakistan" (Chandra 13). The story boasts of Kashmir's secular environment as "during the dark days of the Partition, Kashmir was like an oasis" and "the people of Kashmir were immune to the communal virus" (Chandra 12). Given the secular nature of Islam in Kashmir as compared to the fundamentalist Pakistani Islam, Shah clearly declares that "our Islam is of a different colour . . . Our culture is different, our ethos is different. We can't be independent, we are too small. But perhaps in India, we will find tolerance and acceptance" (Chandra 14). However, the novelist slickly traces the trajectory how pro-Indian Kashmir turned hostile to it due to the fault lines caused by wide-scale rigging of elections in 1987. The divorce is depicted as an opportunity for the foreign insurgents from Afghanistan and Pakistan to ignite the communal spark. It becomes clear how political dissension among people is given a communal hue with the loud battle cry to "crush the infidel" (Chandra 30). In the meantime, they exploit Habib's vulnerable youth, he is instigated and won over to the path of terror. Habib, like others, who are "barely in their teens, the fuzz of adolescence just about starting to stain their cheek and upper lips," is counseled in a way where he looks at the Pandit community as the heathen or the rival 'other' (Chandra30). The indifference and bitterness start reflecting in Habib's confused consciousness, which is anxious about risking his friendship with his closest Pandit friend, Vijay Kaul. The animosity in the air makes him, "read more about Kashmiriyat, that ill-defined essence of Kashmiri identity, a fusion of liberal Islam, Sufi beliefs, and vague nationalism" (Chandra 41). As he delves deeper into history, anger seeps into his very nerves about how Muslims were discriminated by the Dogra Hindu rulers. As the jihadist sentiments are invoked in the Muslim youth, their only purpose is to "die in the name of Allah" and to annihilate the heathens. Wrapping the political problem in Kashmir in a religious robe, thereby, results in communal antipathy - "they are Hindus and we are Muslims" (Chandra 37). A period before insurgency lives Kashmiriyat in its true sense in the novel. Even after joining militancy Habib strongly upholds the ideal of communal amity, which is reflected when he saves his friend Vijay Kaul's life, who is in the Indian army, by helping him to escape in his car outside Chrar-e-Sharief where the foreign militants like Jalauddin and others, were hiding inside. When Vijay asks him, "Why didn't you hand me over to your colleagues?" Habib responds emotionlessly, "I don't know. I'll ask myself that question tonight, as I try to sleep" (Chandra 199). Further, Habib shows his allegiance to his friend Vijay by facilitating him with the help of Haider Ali to get the information about the Srinagar conspiracy. The relationship between Habib and Vijay, somehow, depicts the growing complexity in the social fabric of Kashmiri culture. Likewise, when Charar- e-Sharief, which is a foremost "centre of pilgrimage" and a "symbol of Kashmiriyat," where both Hindus and Muslims worshipped is besieged by foreign terrorists, Habib's anxiety and concern about the shrine reflects when he tells Jalauddin, "Let me tell you that this shrine is more than just a pile of wood and mortar to us Kashmiris. It is a symbol of our ethos and our nationhood. It matters as much to us as anything else we are fighting for" (Chandra 186). Moreover, the emotional bonding between the two communities becomes explicit when a retired engineer Kashmiri Pandit K. L. Raina's Muslim neighbours- Rasheed Sheikh and his wife Salma volunteer to convince militants not to do any harm to Raina's. Rasheed pleads, "We know these people, they are good Kashmiris " (Chandra 112). The Muslim couple is deeply upset about the fate of Rainas and lament their helplessness to save them from being murdered by the militants. No doubt, insurgency eroded Kashmiriyat but through Habib and Vijay, Chandra is hopeful to salvage Kashmiriyat by implicitly hinting about the possibility of reconciliation between the two communities. Chandra depicts both Hindus and Muslims sharing the same racial, cultural and linguistic background, however, this communal harmony is disturbed by foreign elements who exploit the existing polarity between their religions.

No doubt, Kashmir is shaped by centuries of inter-religious, inter-regional and multi-linguistic interactions yet Kashmiriyat should not be accepted as an immutable and unquestioned Kashmiri identity.

THE IDEA OF VIRTUAL HELL AND AFTERLIFE IN THE NOVEL 'SURFACE DETAIL' BY IAIN M. BANKS

Mrs. Shailaja Arjun Changundi
Associate Professor& Head, Department of English ,D. K. A. S. C. College, Ichalkaranji
Email: shailaja6860@gmail.com

ABSTRACT

The science fiction as a genre came into existence with Mary Shelley with her first science fiction 'Frankenstein'. It flourished with the writing of well-known science fiction writers like Brian Aldiss, Jules Verne, H. G. Wells, George Orwell, Sir Arthur Clarke, AnthonyBurgess, J. G. Ballard, M. John Harrison, Barrington J. Bayley, Stephen Baxter, and William Gibson. The name that came into limelight during this period was Iain M. Banks who became world-widely famous because of the futuristic science fiction and the magnificent galactic world full of wonders of science and technology. Most famous in his science fiction is the 'Culture' series he has created in his novels. There are artificial intelligences, minds, drones, sentients, mind-states and 'Culture' citizens. This world of science and technology is parallel to the human world that exists on the earth, but as it deals with the most advanced science and technology, it's the fantastic one.

Introduction

The twentieth century science fiction was enriched, made magnificent and reached to the epoch the most imaginative and brilliant science fiction of the Scottish writer Iain M. Banks. He was born on 16th February 1954, in Dunfermline, Fife. After Graduation in English, Philosophy and Psychology at Sterling University during 1972-1975, Banks chose a succession of jobs and in free time he chose to write in the evenings. He also worked as an analyzer for IBM, a technician for the British Steel Corporation and a costing clerk for a Chancery Lane, London law firm. He flashed into limelight with his first mainstream literary fiction *The Wasp Factory* (1984), and he earned a huge publicity after the publication of his first science fiction novel *Consider Phlebas* (1987). He has written more than 27 novels including mainstream fiction and science fiction.

Iain M. Banks has created a 'Culture' series in which he has built a space world of 'Culture' and other parallel civilizations. The novels in this series are full of the most advanced science and technology. It's the parallel world which resembles the human world on the earth. The 'Culture' in the novels of Iain Banks is described as afictional society-an interstellar post-scarcity society existing about 9000 years ago. This society has virtually everything; they don't have to work at all, for earning money. There is no law or any kind of enforcement as such. The 'Culture' is a utopian society which dominates over other civilizations in galaxy and tries to bring peace in the galactic empire. But the other civilizations don't want any kind of interference in their state. As a result the incidents of clashes arise in the civilizations of space.

The noteworthy thing about the science fiction novels of Iain M. Banks is the diverse themes in the 'Culture' novels of Banks. The novels *Consider Phlebas, Look to Windward Surface Detail* deal with the clashes between two civilizations which turn into battles and face serious consequences in the end. Personal concerns also are involved in these themes which also are the reasons for the clashes between civilizations. Sometimes personal clashes are responsible for personal losses which never are recovered. Such themes are quite perfectly illustrated in the novels like *The Player of Games, Against a Dark Background Matter, and Surface Detail*. The worst thing Iain Banks wants to bring to the notice of the readers is that the alerts given through these novels are dangerous enough to care for the protection of the earth, our planet. If we don't take heed of these alerts, then we are going to face the disasters in the future which won'tspare any further chance to survive.

The novel *Surface Detail* (2010) is a 'Culture' novel by the science fiction writer Iain M. Banks which is a story of a strong female lead character fighting against the vicious system of the society in which she lives. The novel takes place around 2970 AD. This novel has back reference of Banks's earlier novel Look to Windward which deals with the injustice done to the Chel Debacle civilization. The events in *Surface Detail* take place six to eight hundred years after the events of *Look to Windward*. The novel is a story of a variety of themes in it. It's about the societal system in which the protagonist of the novel lives. It's about the virtual 'Hell' which becomes the cause of war on the serious issue of the possession of the Hell. It's about the interference of Culture in the internal issues of the society. It's about the injustice done to the 'Intagliated' race of Lededje Y'breq, a slave by birth as her parents could not repay the debt taken for their need. If the parents are not able to repay, their next generation has to shoulder this responsibility and obey everything ordered by the owner. It's about the torture that the 'Intagliated' society has to suffer from.

There are six main protagonists in the novel *Surface Detail*- Lededje Y'breq, a chattel slave, Veppers, an industrialist and playboy, Gyorni Vatuil, a soldier, Prin and Chay, Pavulean academics; and Yime Nsokyi, a quietus agent. The novel begins with the war game- the War in Heaven-that continues for several decades. This war is about determining whether to allow the Culture in their galaxy or not, from running the Hells. The Souls and afterlives in the mindstates in this novel are tortured. The Culture, being against the idea of the hell, opposes to the idea of running the hells and decides to stay out of the war; it accepts the outcome of the war as the binding on it. The novel conveyssymbolically the way in which the citizens are leading to and what will be the future of mankind if such things take place on earth. It is an alert for the human beings about its existence on the earth, as well.

Surface Detail is a novel which focuses on the issues of women existing in each and every society regarding their protection from men, being physically weaker than men. Many incidents of rape occur to them but they can't protect themselves as they lack the physical strength of men.Lededje the protagonist in the novel, has been the victim of the several rape incidents, but she is unable to fight against the system. But when everything goes beyond her limit, she decides to take revenge on her owner, Veppers. It is curious to know if she becomes successful in carrying out her decision to the final result of her wish. Powerful artificial intelligences and minds have an important role to play in this novel. The expansion of the war over the digitalized souls into the real world is also at the background of the novel.

Disgusted with her owner Veppers, Lededje Y'breq, a victim of frequent rape incidents by Veppers, takes the decision of rebelling against him and taking revenge on him. Unfortunately she was killed by Veppers while she was trying run away and escape from him. Coincidentally she was picked up by a Culture ship and is given another digital birth which proves to be a better chance for her to take revenge on Veppers. And when she was with the avatar, she recalls that she had been running all those years but nobody asked her where she might be running to. Further she continues that had they asked her she might have told them that she was running to the Culture. Here again Iain Banks wants make it significant that the Culture always care of other civilizations and tries to maintain peace and better administration. Lededje learnt that they had escaped the tyranny of money, individual power and more important that all the people-men and women alike, are equal there with no riches or poverty to put one person above or beneath another. The idea of reincarnation is there behind the change in the character of Lededje when her soul is restored and brought into use by the Culture. But unfortunately again she has become the victim of her own society. The helplessness of the protagonist remains all the time throughout the novel. There is no way of escape for her. She is the most sympathetic character of all the female characters depicted by Iain Banks.

Iain Banks has painted very powerfully the character of Lededje who has various dimensions of her nature. On one hand, Banks displays her as a very helpless character, and on other hand, she is seen as a strong lady with a very strong determination. Similarly one more character of Veppers is depicted in a beautiful manner by Iain Banks. He is a man who knows very well about the complexities of life which can bring the people of low strata of the society in his civilization. This he makes a strong point for all the policies he implies while being with them. He pays more attention to these oppressed people because he knows well that he can easily take advantage of them.

Iain Banks has focused on the specific society in the novel *Surface Detail*-the society in which Ladedje lives. It's the 'Intagliated' society of the lower strata of people who borrow the money from moneylenders but are not able to repay it. As a result they have to become the slaves of the moneylenders and have to obey the orders- whatever they are. The fine example of this is Lededje whose parents have taken loan and haven't paid it, neither they are able to pay it. As far as the tradition is concerned if the father is not able to return the loan, then the next generation of son or daughter should return it back. If he/ she also is not able to pay it then he/ she should become the slave and follow the orders given by the master. Lededje exactly is the victim of this tradition. Such slaves have to bear the tattoos on their whole body which is the most insulting thing. Theprotagonist on theon cover page of the book is seen with the tattoos all over her body.

Along with the characterization of the strong female lead character of Lededje, there is very powerful depiction of the character of Veppers, the owner of Lededje. He thinks that it is his right to rape Ledeje as many times as he likes, and further he thinks that she deserves it being the 'Intagliated' from the downtrodden community. Her only fault is that she is from the society of losers. So it's the right of the rich people to 'enjoy' such people-specifically the women. Veppers is the same kind of person who enjoys all the pleasures from Lededje and so he the cruelesttorturer as Lededje describes him. Other characters in the novel also are depicted in a fine manner. Yime Nsokyi, another character in the novel is killed during a devastating attack on her home orbital. Her lovers Prin and Chay are already in the afterlife, suffering the torments of hell.

The idea of virtual Hell, Heaven, and Afterlife is something different in this novel. It's about the use of human mind and brain which can be brought in use even after death with the help of most advanced science and technology. The idea seems to be fantastic one while reading the novel. But if thought seriously, one can notice the possible alerts, dangers and disasters in such a system. Nobody is sure about the use of this innovative science and technology- if the system is used for the better cause of humanity, then the use of such organs of human body is the best idea to bring into being. Even human body is restored for the future use. Whatever the author has described about the future science and technology in this novel, can be seen happening around on the earth also.

A glance at the science fiction novels written by Iain M. Banks lets the reader in a very, fantastic world of imagination based on the new and innovative inventions in the mind of the author. Iain Banks is really a visionary who could notice the possible alerts in the modern inventions in the field of the most advanced science and technology. What is important is that the human beings should take heed of all these alerts in proper time, otherwise the human life will really be impossible and there will be no chance for any more survival on the earth. Iain Banks who has earned hisown class of readers of ‘Culture’ novels, has become more memorable in the world of science fiction because his name was given to an asteroid after his death on 13th June 2013. The world will remember him for the magnificent ‘Culture’ he has created in his science fiction.

THE DIASPORA WRITERS AND THE THEME OF CULTURAL CONFLICTS AND CIVIL WARS IN THE MULTICULTURAL SOCIETY

Prof. Patil Raygonda Pungonda
Research Student, Dept. of English, Shivaji University, Kolhapur
Email *-raygondapatil5@gmail.com*

The term'Diaspora' from Greek means 'scattering' or 'dispersion'. It is a scattered population whose origin lies within a smaller geographic locale. Diaspora can also refer to the movement of the population from its original homeland. This research paper tries to throw light on the current situation of Indian and other countries regarding economic, social, cultural and political problems as well as movements which have affected the concern of creative writers, especially novelists. Social and political activities have affected lives of common people all over the world. These activities find place in creative writings. Theterm 'glocal' is a blend of global and local. It refers to both issues which are global as well as local.This research paper presents somedeliberations with special reference to the Ethnicity, Terrorism and Naxalite Movement depicted in fiction byDiaspora writers. Especially researcher has considered sensibility of Michael Ondaatje, Kiran Desai and Jhumpa Lahiri in their novels respectively : *Anil's Ghost*, *The Inheritance of Loss* and *The Lowland*.

Ondaatje has used the modern presentation technique of mixing different genres. According to Linda Hutcheon, the famous Canadian academic, the historiographic-metafiction is a method of writing. It is a characteristic of postmodernism. Michael Ondaatje is a postmodern diaspora writer. He won the Booker Prize for his novel *The English Patient* (1992). His other novels are *Coming Through Slaughter* (1976) *In the Skin of a Lion*(1987),*Anil's Ghost*(2000),*Divisadero*(2007),and *The Cat's Table(*2011). His recently published novel is *Warlight.* His novels depict life engrossed by conflicts. In the post war existence, the life has become like labyrinthine. It seems that life is bricolage of disassociated moments. In this context this research paper throws light on the characters living in multicultural societies depicted by DiasporaWriters.

Michael Ondaatje, born in Sri Lanka, is one of the postmodern Diaspora Writers. Such writers are concerned with the global problems in their novels. The theme of ethnic conflicts and civil wars is related with language, literature and culture considered by diaspora writers in general global scenario. Ondaatje's work offers insight into the global society and the problematic situation of culture. There are problems of subalterns, others and immigrants, who want to settle peacefully, but are denied space on various reasons.The most important problem is sustenance of multiculturalism. Michael Ondaatje is such a Canadian novelist who has successfully blended fact and fiction. He is postmodern memoir and fiction writer also.As Patricia Waugh says, metafiction is a fiction writing which self-consciously and systematically draws attention to its status as an artifact in order to pose questions about the relationship between fiction and reality.

Politics of power and cultural clashes becomes the theme of the novel *Anil's Ghost.* It is in the midst of merciless civil war supported by political forces in Sri Lanka. It is about Tamil and Sinhali groups. It is like hide and seek of human skeletons and victims of ethnic conflicts. Nameless and unidentified dead bodies have been symbolically representing lost identity of citizens. In a search of victims and culprits, this novel fragments the mental conditions of Anil

Tissera. She has become an American forensic pathologist. She is bornSri Lankan. Sarath Diyasena, an archaeologist, has been helping her to find out culprits of ethnic wars. Once again, ironically, it is for social justice. Justice sought for the nameless victims of the ethnic civil war. It has become a part of Human Rights Investigation by the United Nations. Anil and Sarath discover the skeleton of a recently murdered man, nicknamed Sailor. The victim had been murdered and buried in the ancient burial ground. Ironically it was a government protected zone. Another victim of brutality is an artist and painter Anand. His wife Sirrisa is kidnapped and killed. Sarath is also killed. Dr. Germany and Palipana also become victims of ethnic civil war and conflicts. Everything happens as if the Sri Lankan's have forgotten philosophy of Lord Budha. Who will enlighten them? Although unrest, Blind man Ananda paints eye of Lord Budha for celebration of yearly function, ironically symbol of peace. Ondaatje is concerned with civil wars and cultural conflicts faced by common civilians.

The Inheritance of Loss by Kiran Desai explores the lives of postmodern characters.These characters give more importance to earning money, their career and social honour. The social reality is focused truthfully by writer. Many post Independence Indians are trapped in their poverty as well as caste and class system in India. There are both the lower class and the upper class people all over the world. But the condition of Indian lower-class people is the worst. The hopes and dreams of frustrated people are forcefully conveyed in this novel of Kiran Desai. This novel depicts truthful history in fiction form. Most of the characters are found struggling to find employment.Along with their ultimate dream of immigrating to America or other foreign countries for better job; theytry to settle in foreign countries for social status also. It is reality that many Indians have been trying to escape the rigid caste system of their homeland and improve their economic conditions. They can not adjust themselves in Indian social strata. But in foreign countries also only some of them have got success but most of them are frustrated due to various hardships and conflicts they have to face as immigrants or as 'others'.

The story of '*The Inheritance of Loss'* is set in the 1980s in Kalimpong, India. It is located in the northern part of India near Darjeeling. The main characters are Sai, a seventeen-year-old girl living with her grandfather, who is a retired judge. The novelist has nicely depicted the character of judge. He has lost his identity. His marriage for dowry is stark reality of Indian life. He hates himself to be an Indian.there is inferiority complex in him. He goes to European country for education. But he is not accepted by Europeans. Although he is highly educated man and who has attended Cambridge University yet has fallen in social position due to the country's political unrest. He carries the weight of guilty feeling i. e. having abandoned his wife. He feels that he is paying off his guilt by allowing his granddaughter, Sai, to live with him after her parents' accidental untimely death in Russia. Sai also doesn't love Indian conditions. But, due to unfortunate accident she has to live with her maternal grandfather. Gyan is Sai's Math tutor. In the course of time he becomes her boyfriend- a gap filler. Other major character is the cook in judge's house. Pannalal is name of this cook. Biju is the son of the cook. Biju has gone to America to seek job and better social position. But he has to work there illegally in kitchens in New York City. Pannalal is very proud of his son Biju. Throughout the novel, there are two stories.One following the lives of the people in Kalimpong, the place hit by Ethnic terrorism-Nepalese guerrillas.Other story is concerned with the life and stark reality of Diaspora; following the frustrated life of Biju; who has achieved nothing. Many a times he is humiliated by his friends. Story of Biju is parallel to the life of Retired Indian Judge.

Once, this Sai, an innocent girl, neither Indian nor foreigner, is restless in her home. She has been looking at a *National Geographic* magazine while waiting for her boyfriend and math tutor, Gyan. She has lost her identity. She is very innocent. She doesn't know about Nepalese guerrillas. In add to her restlessness, the judge, her grandfather has become somewhat whimsical person. He is a bully. He is asleep in his chair, but as soon as he wakes, he expects to be served by Sai and the cook. He is proud of his social position in India. Suddenly, Nepalese guerrillas approach this house. They break in, and demand weapons. Everyone is terrified by this unexpected event. No one comes to help them. They have no phone and therefore no way to call the police. The young guerrillas are aggressive terrorists. They sit down and make themselves at home. They steal food and liquor and humiliate everyone in that house, especially the judge, who is in the highest in rank of the social orders. It represents the anger and hate of the guerrillas in the house. The guerrillas also take an heirloom trunk of the judge. Then, the judge sends the cook to the police station to report the break-in incident. Ironically, the police come and interrogate the cook to insult the Judge. Their humiliating investigation concludes in suggesting that it is the cook who instigated the crime because he is of a lower social class. Poverty of cook becomes a cause of insult and also big hurdle and sin.

The writer, Kiran Desai, in other part of the novel focuses on Biju, the cook's son who lives in New York City. He lives there illegally. He works selling hot dogs for Gray's Papaya. Due to fear he becomes self-conscious. Biju constantly compares himself to the other overly confident workers he is surrounded by. They are very crude and bully.Once they take him to a prostitute. They insist that he should participate to enjoy a prostitute; suggesting that he is not a man unless he has sex. It is an immoral act. Biju feels humiliated. The loss of virtue and virginity kills his life force. He does not feel himself to be a confident man. He tries to find his Indian identity and culture. There is search for glorious Indian identity.

There is shift. Once again, the writer returns the narrative to Northern India and the judge's home. The house has been ravaged by the police and still the intruders have not been identified. The socio-political situation has been focused. The cook no longer has his pride. But Sai is sad for the cook because she feels very close to this man. She tries to help him feel better.

Life of immigrant Biju is highlighted again. Readers witness all the kitchens in the basements in New York City where he has worked like a criminal. Readers also witness the mistreatment given to him by others who seem to despise him because he is from India. Biju is even looked down upon by the immigrant Pakistanis, whom Biju personally feels are below him. He is confused because he must reassess his values. Biju realizes that he has become a servant like his father in India. He has no social honour. He couldn't achieve status and economic stability in India or in foreign country. It is outcome of poverty and subaltern situation of Biju.

The generation gap and painful experiences are blended together. Indian life and culture is contrasted with life of foreign settlers. There is mixture of culture and life in multiculturalism. More is revealed about Sai's life with her grandfather. Both of them have experience of foreign life. The judge promises Sai that he will educate her because she is too good for the government school. The judge is haunted by the trunk that the thieves stole when they took their food and alcohol. That trunk, an heirloom, had been his father's. It makes him remember his days in England. He recalls how lonely he had been and how he left his fourteen-year-old wife in India. The guilty feeling makes him restless. At Cambridge, he became negatively obsessed with his Indian identity. Many a times, he used to wash himself over and over again. He had been using white powder to hide his Indian feature, blackish or dark complexion. It is loss of culture.

Kiran Desai has focused three generations of immigrants. Experiences of Sai, as the second or third generation of immigrants, are reflected in her social status and opinions. When she first came to live in her grandfather's home, she felt very different. Previously, Sai had lived in Europe and attended a Catholic school where she had associated with Westerners. When she first rode the train to Cho Oyu; she saw the worst and dirty conditions of common Indian workers. Even, the nun who escorted her told her that the lower classes in India are like animals. The nun claimed that these poor people use the streets as a toilet and have no shame. Consequently, Sai feels that she belongs to a higher, elite class. But, she tumbles from her elite class to low class of Gyan due to love tangle and physicality.

The Naxalite rebellion has been a significant political movement of our time and has interested many writers creativity. Such movement has occupied the centre stage for the better part of the century in the ongoing political discussions and creative writings. It is described by Prime Minister as a "single biggest internal security challenge". One of the important themes of *TheLowland*is the Naxalite movement and aftermath. It was shortlisted for the Baileys Women's Prize for fiction and Man Booker Prize in 2013. It is set in Calcutta. Even motherhood is also affected by such movements. Totally changed mother is found, at the end of the novel, who is neither Indian nor American. This striking character of mother occurs in '*The Lowland*', the second novel of Jhumpa Lahiri. This novel is first published by Alfred Knopf and Random House, in 2013. It deals with the theme of violent politics of 1967's India

The Naxalite movement has become important theme in creative literature. It is the subject of Asif Currimbhoy's '*Inquilab'*. It throws light upon the origin and development of the rebels and revolutionaries' activities. His play presents the violent Naxalite revolt that overtook Calcutta in 1970. It is concerned with socio-economic as well as political issues. In other words such movements and activities are historic. They become focal points.

In an interview to Samik Bandopadhyay in April, 1983 Mahasweta Devi said: "Once I became a professional writer I felt increasingly that a writer should document his own time and history. The socio-economic history of human development has always fascinated me…. The Naxalite movement between the late sixties and early seventies with its urban phase climaxing in 1970-71, was the first major event after I became a writer that I felt an urge and an obligation to document".

There is two-fold effect of poverty. Subhash Mitra and Udayan Mitra are brothers. Subhash is elder by fifteen months. By nature Subhash is cautious whereas Udayan is reckless, charismatic and impulsive. Udayan is drawn into Mao-inspired revolutionary politics, which is also considered as Naxalite and communist movement. Udayan considers that this revolutionary movement is a rebellion against poverty and inequality for social justice. On the contrary, Subhash wants to be an educated person. He is a man of practical sense. He studies hard and wins a place on a Ph.D. program in the United States and moves to Rhode Island. He does not want to return to India. He wants to pursue a peaceful life of scientific research in America and settle there. He is dutiful and devoted brother.

At some extent, fate plays an important role. Due to misfortunate event, the brotherly bonds are broken. Course of life takes tragic turn by political violence. Udayan is an idealistic student. He is now newly married who is ready to give everything for his parents, his pregnant wife and also his brother Subhash. But, unfortunately Udayan becomes a victim of political movement. There is untimely death of Udayan in a terrible clash. After Udayan's tragic death, Subhash returns to India. He is emotionally overwhelmed and shares family sorrows. In frantic madness , he takes a decision. Although opposed, he marries his brother's pregnant widow, Gauri. However they are not happy in married life. The turn of life creates different tensions between husband and wife. Then there is birth of Bela, a biological daughter of Udayan.In the course of time the tensions start to come between mother (Gouri) and daughter (Bela).

In the novel 'The Lowland' the nature of Gauri as a beloved of Udayan, then fateful wife of two brothers and in the end as the mother of Bela is very different one. Gauri is also affected by poverty as well as this Naxalite movement. First part of the story takes place in the marshy lowland in the suburban part of Calcutta, West-Bengal. This is very intricate novel about family relations and behavioural relations.

The readers witness a different kind of mother in Gouri. Gauri's parental instinct battles with her yearning for independence. Gauri keeps a terrible secret to herself. Jhumpa Lahiri has depicted in Gouri, a character of third generation Indians in America. It is about migrant wife and then an Indian woman. Gouri decides to abandon her daughterBela,conceived with Udayan and brought up by Subhash. Although Bela is her child, Subhas considers her as his own beloved child. It strikes Gouri. So Gouri decides to become a completely changed woman. She wants to pursue her own dream of studying philosophy and building an academic career. She transforms herself into angry and selfish woman, who wants to repay Subhash for his generosity and kindness. She follows the path with chilly disregard for Subhas. Such type of behaviour strikes, no doubt, the Indian readers. It is against Indian culture. There is sacrifice of motherhood in double sense. Gouri prefers career to family life and accepts foreign culture.

It is agreed that Jhumpa Lahiri is adept at depicting the particular unhappiness at the core of the families she crafts. 'The lowland', as a symbol and as a metaphor, is used to represent the dark, dank and weedy place that haunts our lives. And in turn it represents a new corner of Naxlite movement and aftermath on mother and motherhood; especially immigrant mother. This is a kind of revolt and rebellion for social status and education.

Jhumpa Lahiri is really successful writer in penning the character of migrant woman, mother and motherhood of different generations. It has become a part of Acculturation. Central character Gouri gives more importance to her own career in multicultural society. She has successfully enlarged the concept of modern educated but revolutionary woman.

These three novels by Diaspora writers focus on the changing situation of human life and need of global sustenance. These novels have glocal values and appeals. Poverty and lack of value-education can be root causes of human frustrations, conflicts and wars. Social relations are affected by various conflicts and civil wars. So, these creative writers have emphasised need of social values in multicultural nations.

ADVANCED AND INNOVATIVE PRACTICES IN ENGLISH LANGUAGE TEACHING IN INDIAN CONTEXT

Dr. Dinesh D. Satpute
Assistant Professor, Department of English, Y. C. Warana Mahavidyalaya, Waranangar
dineshsatpute2010@gmail.com

ABSTRACT

English has been playing an important role on the scenario of Indian Higher Education science pre independence period to till date. Attempts have been made to promote and adopt advanced and innovative methods to certain extent. However, the ELT as compared to Global context is remained the most backward area. The vast country like India has not unique Education pattern of ELT. The ELT mechanism varies from state to state as per regional state policies affecting performance of the learners at different levels from pre primary to PG.

To quote Waters, There is a need for more longitudinal studies of innovation, and particularly useful would be studies of the sustainability of innovations or how they are modified over time. Retrospective analyses could also be valuable, such as studies which review how an innovation moves through stages of adoption, implementation, and then abandonment, renewal, or institutionalization. Finally, more contributions on the management of innovation in language education from scholars outside the main Anglophone countries would be particularly welcome (Waters, 2009).

Even after seventy years of Independence of our country, ELT mechanism is seen to be utterly traditional and insufficient at each level of learning. Neither the teachers nor the Indian students are in position to express at their work places and everyday life situation in English who take help of regional languages with few exceptions. Many graduates are losing job opportunities due to lack of their poor exposure to English either at written or at spoken level. In the present paper attempt is made to seek ELT advancement and innovation at global level by reviewing ELT practices and their application in Indian Context.

Key Expressions: *English Language Teaching (ELT), Advancement, Innovations, Global ELT Context, Indian ELT Scenario*

English speaking population across the world is increasing day by day. With some exception almost all countries across the world have ELT mechanism from Elementary Education to Higher Education. It has become prime need in the era of Globalization. But even today India is not in position to provide efficient ELT mechanism. At this juncture quality is the global concern.Higher education has its role to play in ths regard. In case of ELT at national level and global level it's a flourishing as well as challenging phenomenon.

Let's see some global and national level advancements and innovations in this regard.

Innovation in Language Teaching and Learning David Carless The study of innovation in language education began to generate particular interest only from the 1980s onwards, with important early contributions including Kennedy (1988) from a UK perspective and Henrichsen (1989) from a US one. In recent decades, interest in the topic of innovation has grown substantially, particularly in general education in the work of scholars such as Michael Fullan (e.g., Fullan, 2001) and Andy Hargreaves (e.g., Hargreaves, 2003), and also in language education, as evidenced by recent books: Murray (2008), Alderson (2009), and Wedell (2009). The wider field of applied linguistics needs to pay greater heed to the insights that innovation theory and practice can contribute (Waters, 2009). The main rationales for change are indicative of the centrality and ubiquity of innovations. Governments, school managers, teachers, or all of these want to make education more effective for students. Innovations may help schools to keep up-to-date with the latest developments or research findings, and can also be a force to encourage educational equity and fairer opportunities for diverse sections of society.

Educational change may also contribute to the development of economic competitiveness. There are less idealistic reasons for innovation too. Governments and policy makers sometimes want to create a facade of being up-to-date or to create an aura of activity. Changes may also be made so as to strengthen accountability systems or for short-term political advantage (Wedell, 2009). A valuable contribution comes from documented accounts of successful medium- or large-scale innovations in the school sector. A useful example is a discussion of the implementation of task-based teaching of Dutch as a second language (Van den Branden, 2006) in schools in Flanders.

Carless (2011) puts forward the case for “contextually grounded approaches” to pedagogic innovation. A key theme in all three of these works is that innovations need to be designed in ways which are receptive to and respectful of both local classroom realities and wider national cultures. In view of the multiple challenges facing the implementation of innovations, it is worth considering under what circumstances there are prospects for success.

The following conditions act as facilitating factors: innovation in language teaching and learning.

• The innovation is not overly ambitious and has support from sufficient relevant secondary innovations.

• It has appropriate time frames and seeks to facilitate early, small-scale success which generates momentum and positive sentiments.

• Teachers are brought on board at an early stage, and feel belonging and ownership that is of more than a token nature. These teachers may act as brokers, “champions,” or opinion leaders.

• Effective institutional-based professional development and support are built into the project.

• The innovation is contextually and culturally appropriate, and does not promote values which are incongruent with those of implementers.

• Problem-solving strategies are built into the project and there are change-management strategies to tackle challenges arising.

Let’s see Chia Suan Chong’s contribution to ELT regarding advancement and innovations. She has evolved top ten innovations viz.

1. Digital platforms
2. Online corpora
3. Online CPD (continuous professional development) and the global staffroom
4. Mobile learning and BYOD (bring your own device)
5. Communicating with people online
6. Online authentic materials
7. The IWB (interactive white board)
8. Dogme (or materials-light teaching)
9. Students steering their own learning
10. Teaching soft skills and critical thinking skills

Above advancement and innovation in Indian Higher Education is impracticable due to unwillingness of our system.One may think why such blame is there on the system. Yes, it may be so. But it is true.The issues like ELT unfriendly classroom environment, lack of trainned and qulified faculty, overcrowded classes almost 120+ can’t facilitate teaching and learning. From Primary schools to PG level homogenious ELT mechanism should be evolved as a remedial measure. Nationwide ELT awreness should be created among the concerned stakeholders.

Blended Learning,hybrid learning,flipping classroom,techonology mediated instruction,web enhanced instruction and mixed mode instruction are also useful innovations for ELT. This type of Teaching and Learningcombines online digital media with traditional classroom methods . It requires the physical presence of both teacher and student with some element of student control over time,path or pace ,place etc.It is a student – centered approach to creating a learning experience.

Collaborative learning (CL) and peer assistance can be used in ELT. English language teachers widely recognize that students do not learn well when they are isolated receivers of knowledge. Of course, they must overcome isolation in order to learn. Hence, CL exercises such as peer review,CL research assignments,group presentations,CL papers and discussion groups are inportant components of classrooms because they encourage active learning,giving students the opportunity to become more deeply engaged with learning,and with one another.One very effective use of Clin the English classroom involves asking students to dignose and then respond to their peers' demonstrated work work. Student should be taught to methods of dignosis and response.

Scaffold complex learning have some innovative stragies boost th ELT as follow: * Procedural facilitators: e.g. encouraging student to use signal words such as who,what,whenwhy and how after reading a passage.*Modelling: the teacher might modelthe generation of questions about text.*Thinking out loud: this models the thought processes*Anticipating difficult Ares: during the modeling phase, the teacher anticipates student error or difficulties.*Providing prompt or cue cards.*Providing half done examples and having them work out the conclusions can be an effective way to teach students how to ultimately solve problems on their own.*Providing Checklists: student can be taught self-checking proccedures to help them regulate the quality of their responses.*Reciprocal teaching: having the teacher and students rotate the role of teacher. The teacher provides support to students as they learn to lead discussionsand ask their own questions.* When students are beginning new tasks and topics,provide models,prompts,sentence starters,coaching and feedback. As the students grow in competence ,teacher should give less support and more opportunities for independent work.*Teacher should give students choices about the level of difficulty or degree of independence in project: encourage them to challenge themselves but to seek help when are really stuck.* Teacher must teach students to use learning and organisational strategies,research tools,language tools (dictionaries or computer searches) spreadsheets,and word processing programs.* Teacher should model the use of tools:show students how to use an appointment book or electronic notebook to make plans and manage time,*Experimenting with peer tutoring:teaching students how to ask good questions and giving helpful explainations.*Exprimenting with cooperative learning strategies and small group work.etc.(Tandon, Chauhan: Uni. News ,2018)

In our country ,there are Institutions like EFLU, Hyderabad, Centers for ELT , Aurangabad , Pune etc are there ,but these centers are not sufficient to train the concern human resource in India. Research in this area in such institutions is also laging due to inavailibility of required infra as well as expertise.Therfore, thought should be given to the ICT and NET web ,it has become practicable to facilitate ELT learners and Teachers to update and improve their English language through ELT advancement and innovations.

However, in comparision across the world especially in European nations, Indian lag behind ELT advancement and innovations.There are different reasons,why we lag behind in this area, but the main reason is lack of willingness of the stakeholders related to it.And hence, it is the need of time to prepare the upcoming generation to cope up with global cut throat competition in every sphere of life. Let's hope that HRD and States Education Ministries may pay heed to this globally emerged area of education to meet the challenges of present era.

Conclusion

The advanced and Innovative practice in ELT is an issue in Indian context. Due to infrastructural issues in India ELT seems to be backward. The Elementary Education cannot afford ideal classroom situation for ELT. Teaching as well as learning community is not ELT friendly due to unnecessary fear and shyness. Lack of proper training programs to teaching fraternity, insufficient ELT exposure at both institutional and home levels in day today life affected ELT mechanism. Insufficient time schedule available in the classroom situation. Reluctance of Government to issue is crucial reason behind the ELT mess in Indian context. Positive willingness of all the stakeholders including parents is need of time to adopt advanced and innovative practices in ELT from Elementary to PG in Indian Context to cope up Global cut throat competition

INNOVATIVE PRACTICES TO BE A GOOD TEACHER

Dr. P.M. Patil
Head, Department of English, Arts, Commerce and Science College, Palus
Tal-Palus. Dist-Sangli. 416310

ABSTRACT

"The best teachers are those who show you where to look, but don't tell you what to see."

-Alexandra K. Trenfor

The word 'innovation' means something new. It is a change which evokes the new idea. It is a process of research to achieve concrete benefits. Everything is changing with changing time. Nothing is permanent in this world. The perspectives and innovations have changed the face of education and the role of the teacher. It to essential to shaping the mind of students and encourage them with teaching. To be a good teacher, a teacher should use innovative tools and techniques for teaching and various methods of learning. His role should be as a facilitator of learning, an overseer, a consultant, organizer, assessor, promoter, participant, resource, tutor and observer. He should create a positive and supportive attitude in students. He should develop great empathy with his students. He should be a creative, knowledgeable and the collector of innovative teaching and learning ideas. The present paper modestly attempts to throw light on the innovative and creative qualities for being a good teacher.

Key Words: *Teacher, teaching, students, innovation students .*

The word ‘innovation’ means something new which is used to describe a development that is ‘new’. It suggests evoking the new idea. The term ‘innovation’ has many meanings; it can be interpreted differently. It is an improvement, a change, something new; something that did not exist before; something that is new in a specific context. Basically, innovation is a process of research and implementation in order to achieve concrete benefits. It is not just the result of a development, but it is the path towards achieving that development. A more useful view of innovation incorporates this idea of integration in some form. Delano, Riley, and Crookes’ definition (1994) does this by considering the impact on how learning and teaching are perceived:

An innovation in a second language teaching program is an informed change in an underlying philosophy of language teaching/learning, brought about by direct experience, research findings, or other means, resulting in an adaptation of pedagogic practices such that instruction is better able to promote language learning as it has come to be understood (489).

This definition highlights the role of the teacher, whose philosophy and pedagogic practices play a key role in the process of innovation. Technological innovations are parts of education and language teaching. In recent years, the change has had the biggest impact on teachers. The teacher can develop his creativity in the classroom with his innovative teaching techniques. To be a good teacher, everyone should be a good listener first. He should develop great empathy with his students; refresh his repertoire with new ways to help them learn, and deepen his own understanding of his subjects. A common misunderstanding is that teachers are less experimental or less confident. So, the teachers need to be encouraged to develop their strengths, skills, and knowledge. There are lots of books, training course, free online courses, online resources which can help us develop as teachers.

There are some innovative steps to be a good and creative teacher. The steps are: to become a knowledgeable and collector of teaching ideas, connect with other teachers, share his learning with others, remove the blocks to creative thinking, practice his creativity, experimenting and reflecting on his teaching and make the creativity a daily goal. It means that the teacher should be creative and knowledgeable. A good teacher can bring more to class with his experiences and outside interest. Though formal training helps us to develop as a teacher, it is important to connect with others in our field. He can get inspiration and motivation from the great speakers and writers. To enhance his development, the teacher should learn with other teachers through their articles, videos, discussions, and other activities. It is essential to read their blogs and to discuss with them, to join their association and attend talks and workshops. The inspiration taken from great personalities will create the desire. The teacher should imitate great personalities in teaching and learning practices. The teacher should be a collector of new teaching ideas. For the teacher, the important thing is to collect ideas and organize them in a proper way. Like learner, the teacher should pick things up from others, shares his knowledge and experience with other peers.

He can start his blog and describe his teaching ideas with others; the conversation and discussion happen between them can stimulate more ideas. Many people think that they don't have imagination, and are not clever enough. However, they should think that no one can claim that every person has the same skills and abilities as everyone else; they should think that all people have the potential to be creative. So, it is necessary to work on our self-esteem, be supportive colleagues who share the same interest and goals and make us feel good about ourselves.

The practice makes man perfect and it brings discipline and patience among us, so the practice is essential to maintain our ability. It is also said that our brains benefit from regular exercise which can set our mind also. The sound mind can encourage our creativity, imagination and bring satisfaction. It's not good for the teacher to stick to the same old ideas and techniques without trying something new. It can demotivate our students. The teacher should try to come out with new ideas, but remember to stop, think and evaluate the experience when done. He should learn from his success and mistakes. His creativity can help him to solve problems. He needs to make his creativity as a part of his daily routine rather than an occasional activity. He should look at every activity with his critical eye. He should also think that his activity or lesson should be motivating, productive and interesting for his learners. Besides all, he should have patience, dedication and a passion for excellence.

By using various innovative practices, a teacher can refine his teaching and make himself a source of expertise. There is no definite and perfect method of learning. A teacher who uses all methods at one place, he is called a good teacher. He can use various learning methods like Blended learning, Self-paced learning, Digital learning, and Problem-solving learning method. To make his teaching effective, these methods can provide the space for both, teachers and students. Blended learning is a different and innovative method of learning. e.g. 'Take your book and read the first chapter', this is a sentence we must have heard, but today it is replaced by 'click on the link and follow the instructions on your laptop'. The first situation deals with a classical method and second one with modern learning. It means that blended learning is a mix between a traditional classroom and modern learning method. With blended learning, teachers are able to engage learning in large groups. Self-paced learning is a learning process in which we can make our own decisions instead of answering questions within a certain span of time. Students are able to answer questions within the time that is needed for them. Each student can decide what time is needed to answer the questions. Self-paced learning makes it possible for students to answer the questions in their own time. As students don't have time pressure, the memory performance will improve. This method of learning makes students happy. It is a solution for many problems.

Problem-solving learning is an ongoing activity. It is useful to discover the new idea what we don't know. It is a student-centered strategy which requires students to become active participants in the learning process. It presupposes that students can take on some responsibility for their own learning and can take personal action to solve problems, resolve conflicts, discuss alternatives, and focus on thinking as a vital element of the curriculum. It gives students opportunities to use their newly acquired knowledge in meaningful real-life activities. In this learning process, students learn by working on problems. It helps in developing the brainstorming approach to learning concepts. Today, digital learning is the best and most accepted one. It is a combination of online learning, e-learning, and blended learning.

In nutshell, everything is changing with changing time. There is nothing permanent except change. The perspectives and innovations seem to have emerged in the field of education that has changed the facets of the traditional system of education. The teacher should change with changing scenario in the field of teaching and learning. A teacher should shape the minds of students and encourage them to think independently. To become a good teacher, it is important to be organized, create lesson plans, objectives, activities and assessment plan well before teaching. He can also use the multimedia for teaching and learning. It is essential to get our students interested in learning by fostering a positive, supportive, and challenging classroom environment. The role of the teacher should be as a facilitator of learning, an overseer, a classroom manager, a consultant or advisor and at times a co-communicator with learners. A teacher can also play the role controller, organizer, assessor, promoter, participant, resource, tutor, and observer. According to George Polya, 'the teacher should put himself in the student's place, he should see the student's case, and he should try to understand what is going on in the student's mind'.

E-mail: shubhangi.jarandikar@gmail.com

Abstract:

Advertising is a primary tool of marketing. It plays vital role in the sale of any product. It is very important to make an effective advertisement of the product which has convincing, persuasive quality making impact on the customers' mind. Language is a powerful tool of advertisement. It has a strong influence over people and their behaviour. The slogans of the advertisements are short, catchy and attractive. To make them catchy and attractive, various linguistic tools, devices, word formation processes are used. Innovative and creative uses of language in the slogans make them remarkable. The present research paper gives the analysis of the slogans from linguistic point of view.

Key Words: *Advertisements, slogan, catchy, linguistic*.

Objectives:

1. To study the catchy language used in the slogans of advertisement from linguistic point of view.
2. To study various linguistic tools, devices, word formation processes used to make the slogans of advertisement catchy.
3. To analyze the role of language in the effect of advertisement.

Research Methodology:

Interpretation and analysis Methodology

INTRODUCTION:

Advertising is a primary tool of marketing. It plays vital role in the sale of any product. The companies have to advertise their products or services in order to inform the customer and to persuade the customers to buy the products or services. Advertisement is quite familiar phenomenon on media. It has become part and parcel of our life. The business companies have to choose right type of media considering the type of the product, target customer, objectives of the advertising, customer demographics, advertising budget, etc. to reach the customers. Today several ways of advertising media are available- Broadcast Media-TV and radio, Print Media-newspapers, magazines, leaflets, brochures, billboards, direct mail, online media-social media, websites, blogs, outdoor media-hoardings, billboards, posters and mobile.

Advertising has become necessary for the both –at the time of launching new product or service and to sustain the sales of existing product. So it is very important to make an effective advertisement of the product which has convincing, persuasive quality making impact on the customers' mind. The effective advertisement only enables the product to stand itself in the cut throat competition of other products. They are very short, concise but have long lasting impact on the people's mind.

DISCUSSION:

An advertisement consists of various elements- symbols, visual content, design, cast, costumes, colour, etc. But above all, it is language which is most important. Because people identify and remember the product through language. Language is a powerful tool of advertisement.

Language has a powerful influence over people and their behaviour. This is especially true in the fields of marketing and advertising. The choice of language to convey specific messages with the intention of influencing people is vitally important.

Since English is an international language, its use in advertising has become a familiar matter. The effective use of English in advertising is a remarkable way to bring a great success to business organizations. Therefore in advertisement you have to use emotive words which may attract the attention of consumers. For that you have to use various kinds of attractive language devices. It is quite interesting to study the advertisements from linguistic point of view. The language used in the product name, slogan, body copy of advertisement needs to be carefully designed as the impact of the advertisement depends upon it. In present research the researcher intends to analyze the various linguistic tools, devices, word formation processes used in the formation of the slogans of the advertisements. As per www.businessdictionary.com the definition of slogan of advertisement is as following:

Simple and catchy phrase accompanying a logo or brand that encapsulates a product's appeal or the mission of a firm and makes it more memorable. And which (when used consistently over a long period), becomes an important component of its identification or image. Also called catch line, strap line or slogan.

The slogans of the advertisements are short, concise, compact still attractive and catchy. This analysis of slogans of advertisements from linguistic point of view is done with reference to the advertisements quite familiar to us through print and electronic media. On studying and analyzing the slogans of advertisements, the following linguistic tools, devices, word formation processes are found to be used frequently to make the slogans catchy and attractive.

Blending is a word formation process in which two parts of two different words are blended to form a new words usually the first part of the first word is blended to the last part of the next word. A word thus formed shares both original meanings. The word formed in such way becomes catchy and has a distinctive effect. Sometimes parts of words from different languages are brought together to make it innovative.

e.g.

JioFi-'JIO 4G ON YOUR 2G/3G PHONE'(Jio)

'Buttermeez Dil!' (Amul)

'Ye Hai Youngistan meri Jaan' (Pepsi)

Compounding is another frequently used word formation process used in the slogans. In compounding two or sometimes even three root words are brought together to form a new word. The combination of these words has a distinctive effect on people's mind & they become memorable. These compounds are used as adjectives and later become widely used in normal situation.

e.g.

'2-Minute-noodles' (Maggy)

'Moms MAGGI' (Maggy)

Code mixing is simply mixing of two or more languages while communicating. Now, it is common for a speaker who knows two languages to take one word or more than one word from one language & introduce it while speaking another language. India is a multilingual country. Hindi is our national language whereas English is global/international language. It has become a requirement for an Indian to know these two languages along with their regional language. The media has reached to every corner of our country. So while making advertisement it is always found that there is combination of Hindi & English words or English & regional language words.

e.g.

'Ye hai right choice Baby, Aha!' (Pepsi)
'Mood kiya, Book Kiya' (BookMyShow)
'acche din are finally here!' (Zomato)

Adjectives give more information about a noun or pronoun. In advertisements adjectives are used to describe the striking features of products. Adjectives are used to promote a product. The most widely used adjectives are fresh ,good, new, creamy, silky, beautiful, ideal etc. Also comparative & superlative forms are used frequently in the advertisements.

e.g.

'The cool drink to Hang out with' (Fizz)
'Rajni can't. We can. Super fast delivery, order food onlineon' (Zomato)
'Get closer to what you love' (Airtel)

Figurative Language, sound devices, rhyming words are used to make the slogans rhythmic and memorable. Figurative language is used to make it more arresting.

e.g.

'DIVIDED BY TEAMS, UNITED BY KINGFISHER'
(Kingfisher)

Sound devices like repetition, assonance, consonance, alliteration are used to create remarkable slogans.

e.g.

'Look young, stay young' (Pears)
'Taste bhi, Health Bhi' (Magi)
'Taste a thunder' (Thums-up)
'Have a break, have a Kit-Kat' (Kit-Kit)

Rhyming words are used to make musical slogans.

e.g.

'We achieve…we care
We lead…we share' (Indian oil)
'bol baby bol, malai tikka roll' (Zomato)

Emotive words, imperative sentences, rhetorics are used for the emotional appeal to the expected target customer.

e.g.

'Connecting India' (BSNL)
'Diamond are useless, Gift your wife a Maid'. (bookmybai)
'Open happiness'. (Coca Cola)
'Hungry? Grab a Snickers!' (Snickers)
'Keep the innocence of your skin young' (Pears)
'Why Boys should have all the Fun' (Pleasure)
'Why is laundry only a mother's job' (Ariel)

Deliberate word play or a word with dual meanings is used to make the advertising interesting.

e.g.

'Bound together with Boundless energy' (Indian Oil)
'Dil ki Deal' (Snapdeal)
'Dil to roaming hai' (makemytrip)
'Falling Gets me dirty, Failing makes me learn'. (Surf Excel)

Brevity is inherent feature of the slogan. Short sentences with lot of meaning are made not only to make the advertisements memorable but they become one with the brand or product name.

e.g.

'The complete man' (Raymond)
'My Pepsi, My way' (Pepsi)
'Oh Yes Abhi' (Pepsi)
'The Taste of India' (Amul)

Creative, innovative words are used to create fun, amusement as well as to make them more emphatic.

e.g.

'Swad se Swagat'. (Amul)
'Isko lagaa dala, to life zinga lala' (Tata sky)
'the Baap of All Apps' (Ask me)

Conclusion:-

Though advertisement is a concise and compact thing of few seconds it needs great efforts for its formation. It involves contribution of many elements before its final appearance in front of people. The symbols, setting, actor actress performing the roles, direction, costumes etc. play together for the ultimate appearance of the advertisement. The language used in the name of the product, dialogues and slogans of the advertisement is very important for the overall impact of the advertisements. The researcher has studied and analyzed slogans from the linguistic point of view. The following conclusion can be made after the analysis.

1. The use of language in the making of effective advertisement is important.
2. Various linguistic tools are used to make the slogans catchy, attractive and thereby the advertisements effective.
3. The language students with their creative abilities have good career opportunities in the field of advertising and marketing.

RECENT TRENDS IN ENGLISH TEACHING AND LEARNING

Mrs. Sunita J. Velhal
Associate Professor in English, Dattajirao Kadam Arts, Science and Commerce College, Ichalkaranji.
Email: velhalsj@gmail.com

ABSTRACT:

Teaching is a two-way process which involves the learner and the teacher. The role of the teacher is to impart the knowledge to the students. Today, the educational institutes feel the need of improvement in teaching methods in accordance with the global skills development among the students. The newer and newer technologies are emerging in the education field. The new trend of the use of ICT has become prominent in teaching methodologies. English is an international language; lingua franca that can be learned with use of various new methods and materials. The new trends can support teaching English communication skills. The present paper brings out the new devices, ICT methods and sources in teaching and the pros and cons of their application in Indian Scenario.

Keywords: *Role of Teacher, Skills enhancement, New trends, Use of ICT, English Language Teaching, Indian Scenario.*

The educational institutes insist upon quality enhancement by using new methods, technologies and devices. The barrier of location has become less significant with the use of new technologies. The world has come closure and there is ademand of the perfection in communication skills at global level. English has become an ideal language for educational technology. The educational technologies are beneficial to both teachers and students. There are many career opportunities in global market which need the communication skills, soft skills, technical skills, interpersonal skills, ICT literacy etc. English is a link language for this purpose. It is widely accepted that advances in information technology and new developments in learning science provide opportunities to create well-designed, learner-centered, interactive, affordable, efficient, flexible, e-learning environments(Khan, 2005, Sarica, Cavus 2009,). The role of teacher is changing now-a-days from traditional classroom teacher to facilitator or counselor. There are new methods and materials used in teaching English.

There have been various approaches of teaching English. The method adopted first was Grammar Translation method. The focus of learning English at that time was develop reading skills. So, the emphasize was on learning the vocabulary and grammatical structures.

Then direct method developed as the reaction against grammar translation method. Next, the audio-lingual method of teaching emerged which dealt with memorizing and drilling. Both these methodsemphasized on teaching language directly without using MT to explain in English the new terms or grammar. Shirzad (2016) quotes Larsen-Freeman (1986) and Simensen (1998, p. 50) who state that "in the audio-lingually inspired approaches, grammar teaching consisted normally of pattern practice drills only, and had no explicit explanation of grammar. At the time this was usually called an implicit approach to the teaching of grammar".

In modern period, new communicative language teaching developed as the goal of learning foreign language changed to acquiring communicative competence. Competence involves implicit language knowledge as well as the ability to apply it. The concept of communicative competence was developed by Hymes (1972) . He defined communicative competence as knowledge of "when to speak, when not to, and as to what to talk about with whom, when, where, in what manner" (Hymes, 1972, p. 60). Communicative approach aims at developing student-centered teaching. The teacher becomes only the supporter in the learning process.It promotes communication by creating situation and reduces the boredom in learning a foreign language.

After the review of various methods adopted by educators, the paper intends to focus on the new techniques of English teaching and learning. The new trend in education field is based on e-learning which includes use of ICT, computer software, web-based learning i.e. through e-mail, blogs, games etc. The conventional classroom teaching is losing its effectiveness as the new generation of students have become tech-savvy. The following are technologies which can be used for teaching.

1. E-mail: The teachers and students can communicate through the mail. The teacher can provide necessary information giving some activity and the students can communicate each other to discuss that topic. In this way, they can be well-prepared before beginning that topic in the class. The teacher can assign any type of task like brain-storming activity or debate through mail. Thus, English teachers can take benefit of the sites of mail account without any charge. It helps to improve the writing skill of the students. The students can express themselves through e-mail.

2. Use of Apps and Gamification: In the recent years, apps related to education which enable the teachers and students to interact. Such apps and games can enhance the knowledge of English language. The online tests and quizzes can be taken with the help of the apps like Kahoot, Google classroom or with Moddle -based teaching. Teachers do not need to print and evaluate the papers. Different types of test software can be used for giving interactive tests like multiple-choice, jumbled sentences, matching etc. Teachers can create their own web sites. Skype is also powerful technological application that can help the students to improve their skill of speaking.

3. Blogs: Blogs can serve as a form of personal or professional communication and expression of thoughts. The teachers and students can write the blogs to publish on the internet. It helps to develop the reading and writing skills of language. They can have discussions on any topics to enrich their knowledge.

4. Other Devices: Othertechnological devices which can support language learning and teaching include Android mobile phones or I-phones, Ipods, PDAs, paper-white Kindles, Tabs, laptops, etc.

Conclusion:

All such developments in educational technologies have brought forth the need of teacher training. Teachers are expected to develop their knowledge and skill of using new technology. The role of teacher is not restricted to instructor. These technologies are a boon to the educational field. Nowadays, the government is trying to make school education ICT-based. The textbooks are printed with QR-codes to scan and get information of the unit prescribed in text. The school teachers are given training for using it with a particular app. Likewise, the teachers teaching at higher education level have to be trained in using various android apps like DU Recorder, Lexis Audio Editor, Cinema FV5 Lite, etc.However, in Indian scenario of education field is not much developed in the use of technologies. If we want to engage students with such technologies, then they at least need android cell phones but the economic conditions of number of students are so lower that they do not afford to buy such mobiles. Secondly, it is possible to handle small groups of students per teacher. But the classrooms in India are mostly over-crowded and even lacking the common facilities. So, it's very difficult to provide such facilities to all the students at a time. It needs great infrastructural and social changes to bring this dream of technologically-equipped classes.The instructional settings need to be drastically changed by making them equipped with computer networks and other technological devices.

ACHIEVING GREAT POTENTIAL IN RAPID READING

Smt Bhargande Sulakshna Kisanrao
Assistant Teacher, Sharadchandra Pawar School, Solapur
Email: sbhargande@gmail.com

ABSTRACT

Developing strong reading skills in students is one of the key goals of every early education programme. It is through reading that students expand their vocabulary, pronounce, reading speed, comprehension competency and learn about the world. Reading is also the key to success in spelling and writing.Speed reading aims to increase the number of words taken in at a glance. Instead of pausing at every word student can take in a phrase or a whole sentence at a glance. If students can increase his word span to say four or five words per glance, it is obvious that they are going to be able to enjoy considerable increase in their speed of reading.

The experimentalmethod has been selected for present research, because the subject of research is experimental. Teacher made Pre and post test resources have been used for mensuration by researcher.

The main findings of research are: Before implementation of activity 60% students of standard V were pronouncing incorrectly. But after the implementation of activity. It is decreased to 20%. From the conclusion of activity result V standard students vocabulary is increased from 40% to 60% after implementation of activity. By the observation of activity record it is noticed that V standard students has 20% word knowledge before implementation of the programme but after the programme it is increased to 45%. Reading speed of V standard student is 20% before the implementation of all activities but it is increased to 60% after implementation of activities. Reading hobby of V standard student is developed from 10% to 40% because of all these programmes.V standard student has 20% comprehension competency.

Keywords: Achievement, Potential, English Language, Reading, Vocabulary, Gangai Sapate Prashala

INTRODUCTION:

The Grasp of the reading principles in this innovative research accomplishes five things for the students-

1. It accelerates reading speed.
2. It teaches reading flexibility.
3. It builds word grouping ability.
4. It introduces the concept of pacing.
5. It builds comprehension of material read for both the average and above - average students. Learning these five things enables them to overcome inefficient reading habits that have accumulated over the years. This growth is accomplished by stressing the underlying principles of reading improvement while adding recent developmental reading innovations and not by using expensive reading machines.

It requires no magic to improve reading skills under the Achieving Great Potential instruction in this research, but it will demand practice and persistence if student would like to develop their skills to their full capacity. The format of this research enables student to move from one reading skill to the next at their own leisure and as they increase their ability. This will keep student from being unduly pressured or bound to a classroom where they may tend to limit their progress.

TITLE OF THE RESEARCH:

Achieving Great Potential In Rapid Reading.

OBJECTIVES OF THE RESEARCH:

These are the following objectives of this research:

1. Creating activities to clear English pronunciation of 5th standard student and checking its effectiveness.
2. Creating activities to enhance English vocabulary of 5th standard student and checking its effectiveness.
3. Creating activities to increase speed of reading English of 5th standard students and checking its effectiveness.
4. Creating activities of developing comprehension reading habits of English

language of 5th standard students and checking is effectiveness.

HYPOTHESIS OF THE RESEARCH:

Null hypothesis

1) There is no significant difference between pre testand post testmarks median of students of 5thstandardactivityof English reading.

SELECTION OF THE SAMPLE:

1) Selection of Marathi method:

Sr. No	Sample Selection	Sample selection	Method of sample selection	Sample of selection method/ reason of selection
1	Marathi	Study of Marathi Medium	Purposive	The present research because of Marathi medium students
2	Hindi			
3	English			
4	Kannada			
5	Urdu			
6	Telugu			

2. Selection of Schools:

The researcher select of Gangabai Sapate School of Tarapur village used method of purposive sample.

3. Selection of Standard:

Sr. No.	Standard	Sample selection	Method of sample selection	Reason of sample selection method
1	Std. 5th	Standard 5th	Purposive sample selection	The present research is for Marathi medium 5th Std. students
2	Std. 6th			
3	Std. 7th			
4	Std. 8th			

SELECTION OF THE METHOD:-

This research was undertaken for 5th standard to bring improvement in English reading skill Activity.The research accused experimental method to bring out effectiveness in English reading of 5th standard.

SELECTION OF TOOLS AND TECHNIQUES OF RESEARCH:

In the present research by considering the objectives of research the researcher prepared test. This test has been selected for pre and post test. Resources have been used for collecting information. In the present research the researcher has used the English reading Test prepared by researcher. The present test is designed for the 5th std. Students, 40 questions are given in this test.

FINDINGS:

As per the objectives the findings of research are given below.

1. Before implementation of activity 60% students of standard V were pronouncing incorrectly. But after the implementation of activity. It is decreased to 20%.
2. From the conclusion of activity result V standard students vocabulary is increased from 40% to 60% after implementation of activity.
3. By the observation of activity record it is noticed that V standard students has 20% word knowledge before implementation of the programme but after the programme it is increased to 45% .

4. Reading speed of V standard student is 20% before the implementation of all activities but it is increased to 60% after implementation of activities .
5. Reading hobby of V standard student is developed from 10% to 40% because of all these programmes.
6. V standard student has 20% comprehension competency.

CONCLUSION:

The activities could be implemented not only for Std. 5th but also for Std. 6th and 7th with slight modifications.Similar activitiescan be used for developing clear pronunciation skills inany other language.It would be beneficial if similar activitiescould be implementedfor the Primary School level.The teachers could attend training sessions to keep themselves updated.

A JOURNEY TOWARDS MUSLIM WOMEN'S EMPOWERMENT IN 'THE GIRL IN THE TANGERINE SCARF'

Dr. Rachana Vijay Musai
Raja Shivchhatrapati College, Mahagaon, Tal: Gadhinglaj.
Email: rachanamusai@gmail.com

INTRODUCTION:

MohjaKahf's protagonist KhadraShamy is a strong woman. She stands as an image of revolt against stereotype images of Muslim women. She strongly refuses to play the role of traditional housewife and nourish herself according to the will of her husband. Kahf's novel deliberately objects to the patriarchal and hegemonic discourse which is attached to the meaning of veiling. The novel deals with the important events that affects to the U.S. after 9/11. Khadra's struggle is inward and outward. Her struggle especially deals with her Arabness, Americanness and Islamness. The hegemonic structure of the U.S. creates obstacle in the process of self-realization of Muslim women. Hence, MohjaKahf explores the notion of veil as a symbol of Muslim women's empowerment.

The islamic practices are based on the notions of 'ijjat' and 'sharum.' Unfortunately, these notions are applicable only to women, whereas, Men are enjoying more freedom than women. 'Veil' or 'burqha' is the symbol of Muslim women's suppression. Muslims are following the manly interpretation of 'shairya.' Now-a-days, more importance is given to the 'fatwas,' rather than real Islamic values. Hence, there is a need to understand the principles of Islam. Quran has highly stressed on the principles of equality between men and women. Many Quranic verses are supported to women's freedom and education. Hence the Quran' says:

And women shall have rights similar to the rights against them.
According to what is equitable,
But men have a degree
(of advantage) over them
And God is exalted in Power, wise (2.228)

In modern times, Muslim feminists like Fatima Mernissi and Aziza Al-Hibri have tried their best to offer feministic approach to Islam. They insists to focus on the reinterpretation could highly contribute to Muslim women's empowerment. They strongly asserts that Islam is gender neutral.

In the novel *The Girl in the Tangerine Scarf*MohjaKahf has given different perspective to look towards veiling. According to her, veiling is a symbol of resistance and it reveals Muslim woman's autonomous identity. For the support of her modern perspective she creates the images of strong and aggressive veiled women. Through the protagonist Khadra, she deeply analyzes the inner working of Muslim women. These Muslim women have fought against the obstacles like race, culture, gender, religion, and veiling etc. Though, Khadra is an aggressive woman, her husband Juma wish to control her personality by the help of his rigid notions regarding womanhood. He once asks her "What's for dinner?" to which Khadra responds "I don't know. Why are you asking me? Like I'm the one who supposed to know?" Juma's answer to her is quietly rude. He says, "let's see, who's the wife in this picture?" (241) But Khadra's strongly replied, "I am not a womanI don't know How to cook!" Juma shouted, "well, it didn't come with my Boob's!" Khadra shouted back, "You can LEARN it! Her, I'll show you!......put chicken in pan. Put pan in oven. It's that simple. Okay? Now Leave me Alone" (241). Thus, through her ability to oppose prejudice notions, Khadra emerges as an aggressive woman. The novel *The Girl in the Tangerine Scarf*opposes to the patriarchal interpretation of Islam. Kahf holds the veiw that Muslim women are suppressed by traditional Muslim men as well as western feminist who cannot interpret the struggle beyond veil. Abdurrqib comments that:

"By overlooking the particularities of their veiling practices (or of their actual oppression) and reinforcing the boundaries between western women and the other, veiling practices are linked to universal practices or oppression, sexual control and nationality." (2006:59)

CONCLUSION:

Thus, the novel presents the image of empowered women who refuses to be passive. Kahf highlights new meaning of veiling which strongly opposes the traditional negative meaning. Khadra's process of self-realization ends with her multiple identity as an American, An Arab, and a Muslim.

Through the various incidents in the novel, Kahf highlights the functioning of U.S. hegemony Muslims in America are struggling to get prove their faith and identity towards nation and Islam. The issue of Islamophobia is depicted through the behavior of various characters. The innocent and moderate Muslims in America are the victims of hate crimes. Khadra is obliged to decide between veiling and unveiling her education and modern attitude permits her to hold the veil for the sake of preserving culture. Her decision is free from any prejudiced opinions. She holds the veil as a symbol of choice. Thus, through her protagonist, Kahf attaches positive meaning to veil.

ENGLISH LANGUAGE EXCERCISES

Prof: J.K Patil.
Asst Prof, Department of English, Shivanand College Kagwad.
Email*: jkpknk@gmail.com*

ABSTRACT:

Language exceeds personality to be exposed as per the situations. It has out come of essence of reaching humanitarian. Every spoken and written language create fantasy of excellence in the speaker as well as listener. Very clarity is searched in confining of meaningful and purposeful speech among the speakers intentionally. Language reveals human emotions, skill, intention, desire, exposition and excellence only in reaching the ambition of its complete communication. Carrying various spells according to previous linguistic practices further gaining listening and understanding with a creativity fulfillment of language comes out. English in England differs in communication in its own neighboring provinces. In each and every counties English pronunciation various similarly in India because of various languages in different states. English of India differs in tone, style, and presentation. In India vibrant tones are found: the same word is pronounced very differently and in a very strange tone. Linguistic changes in one same language of different regional speakers is accidently and because of necessity of communication: for the time being it has been accepted.

INTRODUCTION:

Communication yield panorama of vibrant and rainbow vision terrific advances in its milestone journey. Verbal and non- verbal speech effectively advocated with lots of sources flowered fragranced to enhance each with their own introduction and recitation. Speech of early human practice has been remodeled as per the challenges of the age, invention, discovers and socio-economic revolutions. Para-lingual activity of every sect, tradition, culture and religion generated proficiency in its entry of linguistic affairs. Significant of speech resides in formation of proper organizational sequence of language based on the area and environmental appearances. Worlds language microscopic observation brought common intention of communication for exchange of ideas, emotions, requirement, harmonious living and maintaining good, social, healthy relationship. Language is not at all a cosmic manifestation: but a manifestation of humanity to live alike rational being. India has its own deep rooted glory of ancestral language that is Sanskrit. We belong to a great cultural past. Even though Sanskrit has lost importance of official and un-official use. Unlike Sanskrit it cistern languages Kannada, Marathi, Hindi, Tamil, Telagu, Punjabi, Bengali, Malayalam both the Dravidian and the Devanagari script have coming to either threat of loosing their use of communication or used but mixed with English language. Anyway communication is happening in very critical stage of either language.

To glance on communication of local, colloquial expression we find maximum use of English vocabulary in every important and un-important transformation of conveying of messages. Considering every sources of every language with emerging contribution words might be executed for further discussion. Comparison of Indian languages bifurcating with respect to their origin, state of use, regional requirement etc are accountable matters for research of languages. Our linguistic ancestral practices enhance in a process of either growth or progress as per the situations in contemporary society. We have forgotten of our glory of Sanskrit language which has various aspects of different fields with wonderful knowledge yet we practice in the scientific age.

They are referred for up bringing of solutions for our speech problems. Social media has redefined English language in a stenographer's style the soul purpose of communication of finally stands with message conveyed properly and correctly. In this way challenges are undertaken under many observations and supervisions of both grammatical and colloquial references. Technology has linguistic bonsai in chatting of learned class of contemporary class. Sophistication of language in a polished touch a passion of classical age remained hand chained with some few masters of language advocators. G.B. Shaw's essay "Spoken English and Broken English", "Highlighted differences of pronunciations distinguished from Irish to Scotland, American to Oxford University". With this perspective English language around the world differs in pronunciation and presentation. Let us have a glance over Indian English language Spoken.

Language Decisions of Previous Education System

Literally at present we have British system of education introduced by Lord Mount Batten. It has no Indian traditional methodology in teaching and also in practice. We have undergone a paralyzed British system of education like "An old wine in a new bottle". Some of the significant strategic drivers at the national and state levels have formulated school education with changing scenario of post independent India. In 1949 the 8^{Th} schedule of the Indian constitution, titled languages declared Hindi and English has official languages. This focus on both languages has given nationally some importance means a little importance. Both of languages are not at all national languages they are among the other statutory recognized 14 Indian languages. Too in 1961, a strategic consensual decision taken by the state to the implement the Three language Formula. This was later modified by the Kothari Commission to accommodate the interest group identity. It includes Mother tongue and regional languages: national pride and unity foresighted Hindi and administrative and progressive language English accepted hole heartedly without objection. The Commission described these changes as "Impelling considerations that where more political and social, then education." Through this multilingualism triggering and somehow feeding the requirements of the modified system of education and administration Hindi has been accepted but English is ruling in education administration, business, film industry, health and suppose to be in all the fields.

Challenges Ahead Both English and Indian Languages

English of discretionary march over Indian languages of both South, North, East and West which have on the way of producing trance linguistic policy to over come the threat of English language or in the journey of redefining modern style of communication. Speech of rustics have little more mastery of Mother Tongue in communication than city people. Urbanization has affected language in scratching its firm potentiality and literary convection. Industrialization and technology have introduced a very strange vocabulary. Local languages because of the force of English language converting into multilingual and trance lingual as people's use of mixed languages, passioned with their own freedom of communication. As we know a famous text "Necessity is a mother of all inventions" use of mixed languages become necessity to meaningful communication. Major challenges are faced by students coming from a Rural and under developed areas, some are of trible background, Economically and Socially backward, Uneducated families and a mass of labors and traditionally for remind backward communities practice unwritten communication which has many follies and fears. To over come this threat English medium school have weeded in every walks of Indian life. All local love, appreciation and celebration of local languages are already spoken with mixture of unnumbered English words. No any Indian local language speaker either Kannada, Marathi, Hindi, Tamil, Telugu, Panjabi or English speaker is speaking any of the sentence in one perfect or correct language.

A study of English teaching learning process in under-graduate and post-graduate is fascinating professionally with the intention of emerging job requirement. There are innumerable problems in this teaching learning process which need to be thought from the bottom level with much care and concern. No students or speaker by any way left or sent either in exemption or relaxation. This is a challenges task to execute with hard effort of a teacher, parent, and society in large.

Drastic Changes Required to Reform The Filtered Communication

Classroom communication differs from communication of people outside the unconventional methods elasticized communication. Everybody speaks all the languages in India as they listen, learnt and try to lead in the language where there is no proper or correct language for communication. As they mind they speak means no languages filtered and perfect now a days. So, we can not approve as a language teachers any spoken language which is illegible and unconvincing a proper communicative to be accepted.

Our total education system from bottom level needs to be very prompt in learning language which is correct in any one language. If a trainer them sleeves speaking with lots of mistakes in English than who else wood correct the system. There is no antivirus which we install for computer for the proper functioning of computer such antivirus for the correcting English language of the English trainer and English teachers. That's how correction is in need correctors. It means our foundation of teaching language teaching as collapsed unknown to many job holders and highly educated English speakers who speak very worst English.

Globalization of marketing has sold everything in an affordable price including language. English of marketing representative has no meaning other than selling the goods. Unlike them most of the challenges of languages either Indian or English are dumped in the dustbin. Urbanization and fashionable society no matter what they project in which way is secondary. Here purity and perfections are negligible factors in promoting there intention of enjoyment of entertainment full field some how. Our awareness of language purification should work in a fastest application of perfect language is possible only through social media.

CONCLUSION:

Exercise of modern technological language is diverting minds towards little confuse of British and American English. So far recent developments in other linguistic procedures are concern, the modern language has much more technical term then language of earlier practices. It seems redefinition and linguistic scarcity of bringing the lost Shakespeare, Milton, Wordsworth, and many world framed classic writer exuberance of decorative language. Apart from huge mesmerizing estimation of emporia language English has been reduce to the extent of overwhelming linguistic reductions. Languages are always designed with intention of yielding a very fruitful relations. World has witnessed English language in establishing its linguistic empire. Nobody could or none of the language in the world can create such a great, vast empire.

DEVELOPING EMPLOYABILITY SKILLS THROUGH ENGLISH LANGUAGE TEACHING

Dr. V.R. Dalavai

Assistant Professor of English, Government First Grade College, Hunnur, Tq-Jamkhandi, Dist-Bagalkot, Karnataka-587119.

dalavaivrd@gmail.com

ABSTRACT

The paper discusses how employability skills have become an immense area of interest among the employee and employer world alike. It is the need of the hour to cultivate communication skills, soft skills, strong work ethic, Time management etc,. The students should be able to increase their ability to articulate their skills. The aim of the paper is to highlight the role of English language teacher to prepare his students to equip with proper employability skills.

English has, no doubt emerged to be the universal language and is playing an important role in the contemporary world for various political and economical reasons. In the present era of globalization, communication in English has gained greater significance. English for variety of its characteristics like clarity of expression, flexibility, simplicity and rich vocabulary has grown steadily over the years and hence widely spread all across the globe. Today English is used for variety of purposes. In India, English is taught compulsorily in most of the states and it continues to be the medium of instruction in technical, medical, law and other fields. It is an interesting fact that the English press in the country is very powerful and enjoys greater circulation and influence than the vernacular press. The court proceedings, the inter-state communications are usually done in English.keeping in mind the growing importance of English in India,A.L.Kohli has rightly said that “English has been rightly described as the language of opportunity. Aknowledge of English is a successful passport of employment”.

Traditionally speaking, the aim of teaching English in India is to enable the students to appreciate language and enjoy literature. But there is a shift of priority today. In the world of information technology where communication acts as the back bone of the industry, English acts as the nerve centers of communication. Hence, the economic growth of the country is now being decided by the quality of English available for services in a country. In this connection, the opinion of Joe TunSein is worth noticing. He opined thus, “Education is building character through knowledge; but in today’s world, education is also about employability”.

Employabilityis an important consideration both for the employee and employer. Today for the students it is not just enough to acquire the awareness of the skills ofemployability but they need to try to increase their ability to articulate their skills. In other words, the students should be able to put into practice all their capability and skill of using the language. If it happens, they could pursue their academics and potential job searching successfully as their performance is always fostered by practice.

In any organization communication skills can be taken into account as the very spirit and life blood. Much importance is given to the communicative aspects of language. Communication is understood not in what we speak but what others understand. It is to be noted that success in today’s life has become a correlative to acquisition of good communicative skills. Communication is not only articulation of words but also takes place without the use of words, that is to say with the help of gestures. So the skills of positive body language should be inculcated by the students that earn them rich rewards by enhancing their professionalism.

In the present day scenario, there is a flood of job opportunities for the youth who have flare for English language and soft skills. To achieve success in one's career, it is, therefore to acquire an ability to use English as per the global requirements effectively. The school and college years are a great time to develop these skills, irrespective of one's choice of careers. Following is the list of emerging career options for the youth.

- Call center
- Fashion Photography
- Animation
- Hotel Management
- TourismManagement
- Investment Banking etc,.

Many of the jobs mentioned above require the following skills. The employee should maintain strong work ethic. They should be reliable and self-motivated. They should be able to adapt and transfer the critical methodsof the discipline to a variety of working environment is much expected today. While studying in the college, by participating in various competitions and leadership programmes, the students could learn these skills.

Time management is a great value and skill which involves proper planning and following a schedule. In any profession, following the perfect time management is all essential. Most of the organizations seek employees who can identify a problem, develop solutions and the way they implement them. This skill helps the employee to be more independent in taking decisions.

There are the interpersonal skills which enable the employee to acquire good working relationship based on trust and mutual understanding. These skills develop the ability to handle situations in a critical and self-reflective manner. The students in their college days acquire these skills by participating in the debates, quiz competitions and other club activities which offer projects and assignments. The role of the English teacher in the class as well as outside the class room is very significant. Teachers are encouraged to try out in their class rooms with innovative techniques which enhance their student's professional developments. The English teachers should try out the following methods;

- Group discussions
- Problem solving exercises
- Case studies
- Quiz
- Role –playsetc,

The above activities and such others provide an abundant opportunity to work with colleagues to solve common problems in a supporting environment. In true sense, 'Life Skills' are communication skills that are designed, targeting the students and even working professionals to improve their self esteem, decision making strategies, time and stress management and job survival techniques. These are the employability skills provided for the aspirants with an opportunity to both analyze and evaluate their career goals and skills in order to assist them in their professional life. Hence, in modern professional organizations, a great deal of importance is therefore attached to devising and maintaining an efficient system of communication. Therefore, it is the need of the hour for the English teachers to perform various roles as trainers, facilitators, motivators, providers, advisors, mentors and counselors.

In the present scenario, our universities and colleges need to do a job of providing better learning opportunities to update their impersonal communication and leadership skills, which in turn need to be tested and certified in formal soft skill training programs. In other words, there is a need for updating our curriculum to equip our students to fulfill the requirements of the present job market. There has been an increasing demand for developing English communication skills, which is common necessity of all global companies. It is infact, time for all the educational institutes to bring in required changes in their syllabi that enables its students to become globally competent.

A BIOLINGUISTIC STUDY OF ENGLISH LANGUAGE ACQUISITION AND PRODUCTION

Mrs.Sophia Ahmad Mulla
S.B.R.College, Mhaswad (MS)
mullaahmad2011@gmail.com

ABSTRACT:

In India English is not the first language, so the strategies used for the teaching and learning practices in the classrooms should be dynamic. English should be taught with focussing the needs of the students. Students with different learning abilities have problems in learning English using direct method. They need some of the innovative strategies which will nurture their learning skills as they grow. Some of the skills are communicative approach, audio-lingual way, role- playing, conversation, feedback, view, counter-view, narration etc.The present paper deals with the theory of innateness and theory of principle of symmetry in the light of Biolinguistic mechanisms. Moreover, it also includes the use of technology to facilitate better understanding, acquisition and production of English.

Keywords: *Strategies, dynamic, innovative, innateness, symmetry, Biolinguistic, acquisition, production.*

The process of learning is dynamic one. It develops as the student grows with exposure to an unorganized linguistic environment. The ontogenic history shows that the capacity of language acquisition is species-specific. It is the output of integration of neuronal and reciprocal adaptation of various physiological processes. The human mind is a computational device and number of processes such as understanding, thinking, producing, remembering, deciding and judging language proceeds through the net of infinite neurons.Moreover, these nets also correlate sensory and motor activities. All sensory organs such as eyes, ears, nose, tongue, mouth carry out muscular actions. Resultantly, the language is produced after listening sounds, imitation of sounds, reading and writing the words in English. Furthermore, theory of innateness emphasizes on cognitive ability and communicative aspect of student. Besides this, the Principle of symmetry correlates language to beauty and simplicity. The symmetry in structure, shapes of words, phrases and sentences plays vital role in the production of language. Ultimately, Symmetry impacts on the memory and flourishment of language

Theory of Principle of Symmetry:

The Theory presents the beautiful aspect of the language. It co-relates the language with the symmetry in Nature. It also gives information about the symmetry in the human body cells. There are views of Researchers which support the concept of symmetry in language. At the same time, it canvasses the symmetrical patterns of the bases in the Nucleic acids present in the genes of the cells to produce genetic codes.

Language is a beautiful system made up of many elements. Each element has a specific purpose. According Euler (1996) behind every process in the universe there can be maximum or minimum rules. Noam Chomsky states the language is "a design system". Similarly, Alan Turing (2000) studied morphogenic ideas and applied them to the human brain. Human brain has the symmetry. The issues put in a letter written to neurophysiologist J.Z. Young by Coveney and Highfield in this context is as follows:

"Satisfactory explanations of (i) gastrulation, (ii) polygonal a symmetrical structures, e.g. starfish, flowers, (iii) leaf arrangement in a particular way the Fibonacci series (0,1,1,2,3,5,8,13….) comes to be involved, (iv) colour patterns on animals, e.g. stripes, spots and dappling, (v) patterns on nearly spherical structures such as some Radio-laria, but this is more difficult and doubtful. The brain structure has to be one which can be achieved by the genetical, embryological mechanism and I hope that this theory that I am now working on may make clearer restrictions this really implies." (1995;388)

Many scientists studied about the symmetrical aspects in plants as well as animals. In addition, Einstein (1891) had a cumulative effect after learning the petal of various flowers like an iris had three petals, a primrose five petals, a ragwort with thirteen, daisy thirty four and Michaelmas daisy with fifty five or eighty nine petals . Some examples in Nature are arrangements of scales on a pineapple and magnetic flux lines in semiconductors of electricity. Similarly, the occurrence of pattern such as word order in language can be interpreted to the Fibonacci numbers in study of phyllotaxis due to symmetry of breaking. This is perhaps done by looking at syntactical patterns in different languages.

Noam Chomsky (1995) argued for a naturalistic stance towards the study of the Biology of language by treating it as mental, chemical, optical and electrical perspective. Even the sequences of bases in the amino acids present in DNA and RNA are also symmetrical. The sequence of AGTC i.e. Adenine, Guanine, Thymine and Cytosine is repeated after fixed parts. It is like angle of rotation in a square, triangle, hexagon and octahedron. Human languages permit a variety of word-orders such as SOV, VSO, VOS, OSV, OSV and so on.

Few examples-

I like roses.

Roses I like.

In the above sentences the order of subject and object is changed but the meaning is same. However, such compositions help to use words in multiple ways in order to flourish language. It has been found that there is syntactic symmetry but no semantic symmetry in the following-

1. Ravi is easy to please.
2. Ravi is eager to please.

In this vein, there is also phonological symmetry in words such as:

1. Eye and I
2. No and know
3. Nose and Knows
4. Knight and Night
5. Right and Write

Again, there is morphological symmetry in words such as week, weak, seek , sick. There can also be sentences or words which have semantically symmetrical shades:

He has shining eyes.

He has gleaming eyes.

He has glistening eyes.

Thus, the symmetry creates beauty in various shapes, colours and designs in objects, natural materials coordinate different organs for the acquisition of language. There is instinctive impact on memory. The use of Principle of symmetry helps to work out more activities/tasks like use of words, formation of phrases, sentences, conversation, reading and writing the language. Symmetric considerations might play an important role in the production of syntactic patterns. On the contrary, symmetrical display of genetic components produce special double helix, different structures of viruses genetic coding ,universal scaling, phyllotaxis (arrangement of leaves on plants), honeycomb of bees, ice flakes, crystals of inorganic compounds stripes on the skin of animals and so on.

Technology provides new possibilities for language teaching. The new language learning applications, e-dictionaries' and e-books offer both teachers as well as students endless opportunities for learning Open-access resources allow them to easily share material in online platforms. Computer Assisted Language Learning (CALL) can also promote the use of target language and create authentic tasks (Thomas, Reinders and Warschauer 2012:26). Students can relate to the tasks in real life environments and thus their motivation to use the language may increase. Such tasks can give them opportunity to; for example, get to know people from other cultures who can give them insight to the way of life in other countries. Besides the contact with the outside world, teachers can enhance their classes with up-to-date texts, videos and other material (Motteram 2016:88).In addition, mobile devices can be used pretty much anywhere, which can take the language learning outside classrooms. Students can, for instance, use the language learning applications whenever they want to or continue talking with people online in the country or abroad.

Moreover, JenniRaiskinmaki, in Bachelor's thesis University of Jyvaskyla of language and communication studies English (2017 :5) states that it is important for teachers to stay in track of the new inventions in technology, to benefit from the opportunities they can offer for language teaching using the positives and negatives in the field and need of the student. Teachers have a key role in students' e-functioning, which means, for instance, guiding them in the use of multiple new modalities (Dooly 2015:14). Even though the younger generation can be competent users of technology in their free time activities, they might not be able to use the same media effectively for learning. Teachers should use fairly simple exercises and applications in their teaching since the point to engage the students with the learning content rather than to spend lots of time understanding the complexities of the applications. Also, teachers need to guide their students in the correct way of using technology, especially considering the privacy, copyright and security in an online environment(Thomas, Reinders and Warschauer 2012:26). No matter how competent the students are in the use of technology, teachers need to make sure that they understand their responsibilities. As Dooly (2015:19) states, technology is an integral part of today's society and so raising students' competence using technology teaches them skills that they will need in the future.

Finally, the feedback of teachers and students reveal that the use of technologyis integral part of teaching and learning practices. One can enrich the process by experience and working devices while teaching English. This way the acquisition and production of English becomes multifaceted and more creative

.

INNOVATIVE THEMES IN VIJAY TENDULKAR'S PLAYS

Prof. Sunil S. Deokar

Head, Department of English
Rayat Shikshan Sanstha's, SSGM College, Kopargaon, Dist. Ahmednagar (Maharashtra)
Email: deokarsunil27@yahoo.in

ABSTRACT

Drama is an imitation of real life, it is ideal representation or combination of the real and the imaginative world, drama is an art which depends on reality, actor with his performance put life in the imaginary events and present characters like ideal human, it is only art which can bound together dimension of space and time. It is audio and visual art which can bring revolution in the society. Vijay Tendulkar is a famous Marathi play writer who attracted towards new school of drama known as heralds. The major dramatists of this new school are Harold Pinter and Edward Albee, these dramatist use their skills to represent innovative ideas, new themes, new subjects and new techniques in their plays.

Keywords: *innovative ideas, representation, imaginative world, revolution*

INNOVATIVE AND REVOLUTIONARY IDEAS, BASE OF PLAY

Vijay Tendulkar's plays includes characters who fought against odd situation and individual problems, author is intelligent who repressents their commitment and their will power which is helpful for find new solution in the form of innovative ideas and aspiration. He never produces characters that turn their back and escape from problem. His art to combine comic scenes and situations put energy in his characters to fight against social and individual problems. Tendulkar's plays deals with problems like social inequality, and the place of individual in the society. He creates his own new world which reflects real life of the middle class and the lower middle class people who live in Maharashtra and are soul of the Marathi culture. Vijay Tendulkar uses his techniques to create world around protagonists in which he or she feels opposite or contrast so they struggle for their life values and survival. They revolt with the help of innovative thoughts that resulted in their failure in the traditional Marathi society.

Individual Verses Society

Vijay Tendulkar's plays introduce characters who revolt against society. It is clear that individual is unable to break unity, though he is right or his ideas are innovative.If he works according to his ideas, then majority of people work against him. Consequently, he loses his patience and behave abnormal whom people call mad. Thus he presents in his plays situation where individual *versus* society, Tendulkar succeeds in his efforts to convey a quest of his heart and mind for individual freedom. In all the six plays,

Innovative themes create social contrast

Tendulkar never hesitate to write on the shocking subjects like sex and violence in human life. Marathi customs are well known for male dominance, resulting his themes and representation of female characters, irrespective of age, class, status and background, atrocities and cruelties of the male characters under the umbrella cover of the patriarchal order.

Reflection of realism shocking for social life

Tendulkar focuses on the torture of second sex in male dominated society. He not only depict Physically but also mental torture of women. Marathi society males like father, brother, husband beat, thrash, unrelenting drudgery; sexually their daughter, sister, and wife. He further focus on psychological torture of women who are abused and subjugated; psychologically, they are tormented and tortured; mentally they are compelled to comply with the life-denying stereotyped societal norms and mores, and emotionally, they are deprived and blackmailed. In his plays, violence inflicted on most of the women characters stems from various patriarchal segments such as traditional marriage, conventional sexual morality, outdated religious rituals and economic dependence.

Unique characters represent innovative themes

Tendulkar's prominent characters represent various aspects of human life. These are Miss Leela Benare and Mrs Kashikar, Kamala and Sarita, Laxmi and Champa, Gulabi and Gauri, Rama and Manik. Dramatist focus on defects in their nature through them create an atmosphere in which words used ironically and also hypocrisy, hollowness, egoism, falsehood, vulgarity, barbarism, corruption and narrow-mindedness. These women characters, blank in similar pairs, face problems of identity and survival, resting on their superficial differences, who are commanded by men, for their pleasures and under their dominancy survive. They are speechless and powerless against the male supremacy and are victims of time. Tendulkar's treatment of various aspects of vulnerable position of women in modem and yet conventional the public order provides an insight into the vices of the society such as hypocrisy, hollowness, egoism, falsehood, vulgarity, barbarism, corruption, narrow-mindedness, etc.

It is in this portrayal of the filth and unpleasantness in society around him that his plays mark a definite departure from the previous Marathi theatre. The preceding discussion of Tendulkar's major plays reveals the fact that the social status of woman in the contemporary Indian society is more or less the same even in the twentieth century, especially in the post-war period, with the multifarious social, economic, educational and legal reformative measures in the background. The country where the patriarchal system with feudal mentality continues to operate in one way or the other, the real empowerment of women in all respects is a distant cry, especially in the middle layer of society—the so-called upholder of the conventional ethos and morality. What has been proving the stumbling block in the way of realization of true freedom and true identity of women in India is not the paucity of means and money, but it is the mentality, largely nurtured and governed by the patriarchal order of our society which denies the equal status to women. In his attack on society the playwright's mutiny against the feudal values and his demand for the new code of conduct are clearly perceptible.

A close examination of Tendulkar's plays like *Silence! The Court is in Session* and *Kanyadaan* reveals that even educated and self-reliant women characters are not only supposed but also compelled to conform to the obsolete and stereotyped familial customs, ethical mores and traditional norms. As and when they refuse to abide by the demands or rules of the patriarchal order, they face social hire in the myriad forms such as apathy, disgust, disgrace, dehumanization, violence, expulsion from home, etc., whereas their male counterparts, the so-called protectors of women, go scot-free. Leela Benare, an unmarried school teacher, in *Silence! The Court is in session* is dragged into the court for her sexual affairs out of wedlock; whereas her male counterpart, Prof. Damle is set free. Benare is not only dismissed from her job but the vulture males brutally order that the foetus in her womb must be destroyed. An educated and unconventional woman like Benare, though economically independent, is not given chance and choice even in her personal matters. In *Kanyadaan,* the educated Jyoti is used by her father and abused by her husband. In *Kamala,* the plight of another educated woman like Sarita, trapped in the conventional marriage, is no better than that of a domestic hand and a bastard. It establishes the fact that even the objections and protestations of the educated women are finally swallowed up by the silence imposed upon them by their male aggressors even in the contemporary society. By dramatizing the suppression of educated women, Tendulkar disapproves the malehegemonic social order which has failed to overcome the traditional barriers of sex-discrimination and does not allow gender-equality. It is observed that women, in his plays, occupy a unique position among the oppressed section of mankind. What Simon de Beavoir says of women very well applies to Tendulkar's women characters. "They have gained only what has been willingly to grant; they have taken nothing, they have only received." His plays reveal that the reasons of exploitation and oppression go on changing, but the victim or the oppressed remain the same. The playwright also highlights the Indian penal system, which is discriminatory and arbitrary in the sense that it has failed to dispense justice in adequate terms to women even in the modernized and democratic Indian state.

Tendulkar satirizes the traditional sexual morality for its double standards—one for males and another for females. In his plays, women are expected to follow the traditionally prescribed roles within or outside family. Men are tacitly allowed to enjoy extramarital relations; whereas if women do so, they have to face ignominies at the hands of their male counterparts. While Benare *in Silence! The Court is in Session,* is forced to abort her foetus, Champa *in Sakharam Binder* is strangled to death and Rama in *The Vultures* is beaten to abort her womb, their counterparts Professor Damle in *Silence! The Court is in Session,* Sakharam in *Sakharam Binder* and Rajaninath in *The Vultures* respectively enjoy immunity from any legal action or social chastisement. Moreover, most of the women characters are sexually abused, exploited and subjugated. Though they want to raise their voice against the injustice done to them, they have to muffle their voices, fearing one thing or another. This suggests that, in the world of Tendulkar, there are two worlds—one for males and another for females. By treating the theme of sexual morality in the context of man-woman relationship, the playwright brings to light the lopsided character of the existing social order in India. By exposing the double standards of morality, the playwright emphasizes the need of new code and morality for happy and healthy man-woman relationships. In the dramatic world of Tendulkar, the institution of marriage, the prominent segment or constituent of patriarchy, also acts a source of women's exploitation and suppression. Most of the female characters, who are economically dependent, are trapped in the traditional marriage, where they are confined to dreadful drudgery, bearing and rearing children, looking after all sorts of needs and requirements of their male counterparts. They completely rely on their husbands or male partners for their family life or day-to-day social life. Within marriage, they fall victims to the sadistic tendencies of males, but they cannot think of leaving them, as they have nowhere to go and settle. Under the conventional marriage, man is supposed to be a bread-winner and woman is supposed to look after fireplace and home.

CONCLUSION

Tendulkar's experiments and abnormal characters put life in Marathi drama. Its impact is seen in the form of the development of modern Marathi theatre. He is unique dramatist who never emphasizes on entertainment of the audience present in theatre on the other hand his goal is to show such scenes which seems shocking to awake their sensibility, His purpose is clear to innovate and stir his audience to introduce them with social and individual questions which further are helpful for find out base of human relationship and the reality of human existence

LANGUAGE POLITICS IN INDIA

Suryakant L. Gaikwad
Coordinator, Centre for Distance Education, Shivaji University, Kolhapur
Email-suryakant.gn@gmail.com

Introduction:

The problem of national integration is increasingly becoming crucial in Indian politics, because, India is not only large but also incredibly diverse. Therefore, several problems have emerged in India during last 70 years of independence. These problems are related to religion, caste, regionalism, underdevelopment, Linguistic animosity etc. Among these Linguistic Regionalism is the most crucial problem. It has posed a challenge to Nationalism. In India, the feeling of National Unity was deeply rooted in the common people before independence. But this feeling of national unity has begun eroding after Independence. India became a union of states independence. Hence the major problem of reorganization of the states on linguistic basis arose in India.

Historical background of Language and Politics in India:

In ancient period, Language, Religion and State were three centers of power in the state. But day by day importance of the Religion and king is decreasing. At that time, many folk languages were spoken by the people. In the 9th century, the folk languages were strongly established in the society. Therefore, in medieval period, local languages and literature provided the important base for the unity of people. The linguistic literature was based on the religion. After the advent of British rule, Indian social and political reformers felt the need of establishing nation-state in India. However their opinion differed on what basis the state has to be organized. They did consider language as the basis of organizing the state.

The British rulers adopted the policy of 'divide and rule' in order to continue their power in India. In 1901 British government declared the decision of partition of Bengal in which the feeling of nationalism was at the peak. Hence Bengalis resented this decision and started agitating. After the partition of Bengal the issue of language became sensitive in India. This agitation took violent form, and ultimately the British government was forced to cancel the decision. On August 25, 1911, the Government of India, sent a dispatch to the secretary of state for India in London recommending that His Majesty's Government reunite the province of Bengal and separate it from Assam, Orissa and Chota Nagpur. It was suggested that simultaneously the capital of India be shifted from Calcutta to Delhi, the historic seat of Hindu and Moghul empires. Governor Genaral agreed the proposal and the decision was announced at George V's great Durbar in December of that year.

The first movement was launched in the Telugu-speaking area of Madras Linguistic state known historically as Andhra or Andhradesha. Andhra intellectuals in May 1913 convened a conference from which an organization known as the Andhra Mahasabha emerged. Although the advancement of Telugu culture was its primary aim, the Andhra Mahasabha ultimately became a political organization dedicated to the formation of a separate Telugu-speaking state. In 1915 they called upon the Congress to recognize Andhra's ambitions by granting it separate status in the administration of Congress affairs. Both Mahatma Gandhi and Annie Besant opposed the proposal, but it was finally accepted by the Congress in 1917, and separate Provincial Committees for Andhra and Sind were established. In 1918 Montagu suggested that this was an appropriate time to propose the redrawing of provincial boundaries. In 1927 the legislative council of Madras passed a resolution by a vote of forty to thirty two, which called upon the Governor General to constitute a separate Andhra province. However in 1929 Sir John Simon Commission report was published. The Simon Commission was not unfavorable to the idea of Linguistic redistribution. On the recommendation of Simon Commission, British Parliament has passed the Government of India Act of 1935, it created 4 new provinces. Thus the total number of provinces was 11. At the time of independence there were eleven states and 564 Princely states in India. In 1948 most of the Princely States merged with India. Indian state was divided in four categories. In the Part A there were nine states, in Part B there were five large Princely states and Part C there were five small states and there were two states in Part D [Basu, (1997), 429].

In December 1946, when the Constituent Assembly met for the first time to draft independent India's Constitution, the movement for Linguistic Provinces sprang to life again. To deal with the question of linguistic states the government appointed as different Commissions.

Dar commission

On the recommendations of drafting committee of the constituent assembly, Rajendra Prasad appointed the linguistic provinces Commission popularly known as the Dar commission on 17th June 1948. This Commission was set up to recommend whether the states should be recognized on linguistic basis or not and also fixing boundaries if Indian Union. According to Dar Commission the redistribution of provinces might wait till India become a nation and was fully integrated. It recommended that states need not be created on Linguistic basis.

The supporters of the demand for linguistic provinces were shocked by Dar Commission's recommendations. The widespread opposition which greeted the publication of the Dar Commissions Report promoted the Congress party, meeting in its annual session in Jaipur in December 1948, to appoint its own linguistic Provinces Committee known as JVP Committee.

JVP Committee

The Committee included Jawaharla Nehru, Vallabhabhai Patel and Congress President Pattabhi Sitaramayya. This committee was appointed to study the recommendations of the Dar Commission in the light of the decisions taken by the Congress in the past and the requirements of the existing situation [Indian National Congress, (1920-56) 2]. The committee submitted its report to Congress working committee within three months and was published on 1st April 1949. However this committee did not favor to the formation of new states on Linguistic basis. The JVP committee recommended creation of Andhra according to which the process of creating Andhra started.

Formation of Andhra-first Linguistic state

Intense agitation was launched by the Telugu speaking people in Madras province. During the agitation, leader of the Telugu speaking people Potti Shriramallu died. Realizing the intense feeling among the Telugu speaking people, in 1953 Andhrapradesh, a State of Telugu speaking people was created as the first linguistic state by the Government. This decision influenced the other linguistic groups. Consequently they began demanding reorganization of states on the basis of language.

State Reorganization Commission

In October 1953, Andhra state was created on linguistic basis. Pressurized by the agitation, Government constituted Fazal Ali Commission in 1953. The Commission included of Shri. Sayyed Fazal Ali, (Governer of Orissa) Shri. Hridaynath Kunzuru and Shri. Kavalan Madhava Pannikar. Fazal Ali was the chairman of the Commission. The Commission was to submit their recommendations to the Government of India by 30th June 1955. The Commission suggested that the Government was in favor of the reorganization of states on a rational basis and the task of the Commission was to recommend what should constitute the rational basis. [Sharma, (2010) 108] The Commission suggested 16 states and 3 territories..

State Reorganization Act 1956

State Reorganization act was passed by Government of India on the recommendations of Fazal Ali commission. In 1956 Central ministry after a serious thought, enacted States Reorganization Act for creating 14 States and 6 Union Territories. As a result of this reorganization, areas belonging to the former Princely States and those belonging to the former British Indian Provinces were merged together. 14 states; Andra Pradesh, Assam, Bihar, Bombay, Kerala, Madhyapradesh, Madras, Mysore, Orissa, Punjab, Rajasthan, Uttar Pradesh, West Bengal, Jammu and Kashmir were created. The Commission had recommended the creation of Vidarbha and Hyderabad states. But it was not accepted by State Reorganization Act and Vidarbha was merged into Madhya Pradesh. The Commission had recommended creation of three union territories but State Reorganization Act created 6 Union Territories viz. Himachal Pradesh, Manipur, Delhi, Andaman and Nicobar Islands, Laccadive Minicoy and Amindivi (Lakshadweep) Islandsand Tripura.

The state of Mysore, Rajasthan and Travancore-Cochin (Kerala) were organized into larger and more compact units. The state of Hyderabad was divided into three parts and its territories were merged with the adjoining states of Andhra, Bombay and Mysore. The state of Saurashtra was merged with the reorganized bilingual state of Bombay. The State of Madhya Bharat became a part of the reorganized state of Madhya Pradesh. The state of PEPSU was merged in the state of Punjab. The territories of all Part A states except those of the state of Assam, Orissa and Uttar Pradesh were also reorganized. Six Centrally administered areas created they were Delhi, Himachal Pradesh, Manipur, Tripura, Andaman and Nicobar Islands, Laccadive Minicoy and Amindivi (Lakshadweep) islands. The political map of India, especially in the South was drastically changed by the States Reorganization Act of 1956.

Developments after States Reorganization Act of 1956

The national question of the Indian states was settled by the States Reorganization Act of 1956. But the states of Bombay, Punjab and Assam remained bilingual. In Mumbai, Marathi and Gujarati speaking people were fighting for the establishments of two separate linguistic states. A separatist movement arose among the Nagas living on the Assam Burma border. In Punjab, as regards religion, the population of the Punjab was divided into Sikhs and Hindus. Therefore, the linguistic movement continued to expand even after the reorganization of states.

The Samyukta Maharashtra Samiti launched a strong movement for the Establishment of separate state of Maharashtra. The movement succeeded and the bilingual state of Bombay was divided in May 1960 into Maharashtra and Gujarat. Goa became Union Territory in 1962. In 1966, Punjab was reorganized and its several parts were distributed among three units; the core Punjabi Suba, the new state of Haryana and Himachal Pradesh.

Throughout the Colonial period, the North East was treated separately and differently from other regions of British India. The reorganization focused on the state of Assam in northeast India which posed a diverse set of issues for Indian Leaders and had been Left largely untouched by the SRC [Chada, (2002) 50]. Decades of missionary conversions among the tribal population had enlarged the gulf between people residing in the plains and those residing in the hills. The overlapping of the Naga and Mizo Tribes across India's border with Burma and China exemplified the close link between issue of ethnic autonomy, National security and territorial control in this area [Ghani, (2010) 4].

In 1970s the Northeast was split up and several new states were created following the establishment of Nagaland in 1963. Statehood was conferred upon Manipur, Meghalaya and Tripura on January 21, 1972. The Kingdom of Sikkim joined the Indian Union as a state on April 26, 1975. Over a decade later, Arunachal Pradesh and Mizoram became states on February 20, 1987.Himachal Pradesh became State in 1971. This was followed by Goa on May 30, 1987.

In the first phase states were reorganized on linguistic basis but after 1980s a need was felt to devide large states ino smaller, to address the issue of under development. In the year 2000, three new states were created; Chhattisgarh (November 1) was created out of eastern Madhya Pradesh; Uttaranchal (November 9) which has since been renamed Uttarakhand, was created out of the hilly regions of northwest Uttar Pradesh; and Jharkhand (November 15) was created out of the southern districts of Bihar.

In 2013 Telangana state was separated from Andhra Pradesh on the basis of under development. Therefore many groups or tribal people are demanding separate state. These include Gorkhaland to be carved out of West Bengal, Maru Pradesh from Rajasthan, Vidarbha from Maharashtra and Harit Pradesh, Purvanchal and Bundelkhand from Uttar Pradesh. All these demands are identity based on dialect, and yet they are economically and administratively viable. It remains to be seen how the situation pans out, but suffice it to say that current demands for reorganization of Indian states comes from a complex picture involving religion, language, ethnicity and economics.

Conclusion

Languages originated during ancient period and during medieval period, the developed considerably. Many linguistic groups in India emerged in 12th century. During British period these linguistic groups development separate identity and hence they demanded separate state for each language. British Government supported the formation of provinces on the basis of language and culture. After Independence linguistic movements were developed in India. Government of India created 14 states and 6 Union territories through State Reorganization Act. After 1956, many states were created on the issue of development, ethnicity and culture. At Present there are 29 states and 7 territories in Indian federal system.

TRACING THE POLITICAL HISTORY OF CHINA THROUGH THE MOVIE *'THE LAST EMPEROR'*

Ms. Riya Pawar

Christ (Deemed to be) University, Bangalore

ABSTRACT

China has had a long and complicated political history that has often been traced through different dynasties that ruled over it for centuries together. This research essay tries to analyse and evaluate the socio-political conditions in China during the early 20th century, when China was ruled by the Manchu Dynasty. The research essay tries to trace the history of China under Manchu dynasty with the help of the film 'The Last Emperor', which is a British-Italian biographical drama film released in 1987. This essay is a critical analysis of the depiction of the socio-political conditions of China. It is an analysis of the social, political and cultural conditions that eventually led to the end of the old order and the beginning of the new order in China.

INTRODUCTION

The traditional history of China is traced back into early times through different dynasties that ruled over China. It was the Manchu or Ching Dynasty (1644-1911), which lasted for centuries together with a powerful impact on the modern history of China. The Manchu dynasty was overthrown and replaced by the Republic of China. It was due to the encounter with the west since the early 17th century, that the age-old, rigid orthodoxy of socio-political structure of China began to shake and finally dismantled in the late 19th C. like in the rest of the world, the Europeans tried to monopolize Chinese trade since 16th-17th century. The Manchus through their rigid orthodoxy did not allow the western interference in their celestial empire, envisioning the threat of spreading revolutionary tendencies in their controlled and closed Chinese society. Thus, despite the incessant attempts of the foreigners to impact the Chinese, the empire succeeded in defining certain lines of prohibition for them.

It was in the second half of the 19th century that the Chinese history saw a steady decline of the empire of the Manchus. With the death of the Emperor Hsein- Feng in 1861, the empire was taken over by Tzu- Hsi, the Empress Dowager of the King. She acted as a regent head of the Empire for more than 30 years. First, through her own son as the child Emperor, who died in 1874, and later through a three-year-old child who was adopted as an heir to the throne of China. Being a powerful personality, she governed China till her death in 1908 through her various power displays such as suppressing the Tai-Ping rebellion, as well as controlling the western aggression or the Japanese imperialism. It was during her reign that the revolt began in China against the old order, with the reform movements as a way of modernizing China. Her rule witnessed the death of the old order and a struggle for a new order. The reform movement ended in the revolution of 1911. With that, there was a serious decline in the empire of the Manchus.

The movie The Last Emperor (produced in 1987) takes over from this declining phase of the Chinese empire through the life of Pu-Yi, the last Emperor of China. It is a biographical drama film, based on his autobiography From Emperor to Citizen (Published by UOP, 1988). It depicts the life of Pu Yi from his ascent to the throne as a 3-year-old boy to his imprisonment and release by the Communist Party of China. The movie is also based on another contemporary source Twilight in the Forbidden City by Reginald Johnston (OUP, 1988).

However, the present paper traces the political history of China through the movie, The Last Emperor. The movie unfolds in a flashback-forward style, connecting the present of Pu Yi with his life in retrospection. It opens up in the period 1950 when Pu Yi is captured by the Red Army of the recently established People's Republic of China. Pu Yi is thus, introduced as a political prisoner and a war criminal at the Fushun prison. Pu Yi cannot stand the unforeseen humiliation as an Emperor and attempts suicide but is revived and made to face the trial.

He recalls his first entry into the Forbidden City in 1908 as a toddler when he is adopted by the Empress Dowager Tzu-Hsi. He is coroneted as the Emperor by the will of Empress Dowager; however, it is she who controls the Empire with her power as a regent. The movie shows in flashback the various incidents in the early life of Pu Yi from his imperial upbringing in the Forbidden City to his marriage and his subsequent exile. As a child, he is educated about the stringent norms of the Forbidden City where he faces the paradox of being an Emperor and a puppet at once.

Further, he is tutored by a Scotsman Reginald Johnston, who introduces him to the Western-educated mind. This fascinates Pu Yi and sows in him the seeds of reforming his own small world within the Forbidden City. However, he soon becomes aware of the disempowered life of the so-called Emperor of China. Ultimately, he is captured by the Red Army and is kept under the 'Communist Re-education Programme' for political prisoners. He is accused of collaborating with the Japanese invaders during the second Sino-Japanese war. During his interrogation with the camp authorities, he is exposed to the atrocities by the Japanese and finally writes his confessions of being misconstrued by the government. He is then rehabilitated and set free in 1959.

INTERPRETATION OF HISTORY THROUGH THE MOVIE

The discontent for the Manchus led to the uprising of the People's Republic. In 1912, the emperor was made to abdicate the throne and the power was transferred to the government made of people's representatives. It created the Republican Constitution, through which the Nanjing authorities agreed that the emperor is retained with his title for life and be, bestowed a large pension that would retain his standard of living. In the movie this transfer of power is shown through two incidents; in the first, the younger brother of the child emperor is mesmerized by the power of the emperor, when the young emperor displays his different powers. When the brother makes him realize that he is no longer the emperor by showing him the new emperor, Pu Yi is heartbroken and disillusioned. He even tries to escape the Forbidden City time and again, but he has been kept under house arrest in the Forbidden City. This shows the limitations of the monarchy and the limiting role of the monarch in the People's Republic. He makes many desperate attempts for reformation but every time he fails, and that shows that he was actually a powerless monarch and the real power lies in the hands of the revolutionaries in the beginning and later with the communists.

i. The History of Repression

The larger part of Pu Yi's life is spent under repression. This repression is transferred from the traditional history of China to its modern counterpart. The movie is the best example of the culture of repression in China, from monarchy to the republic or to the communist regime, the political arrangements in China had undergone a tremendous upheaval, however, the political undercurrents have always been dominated with the culture of repression. It I just the substitution of one repressive order by the another. Hence, in the last phase, the camp commandant, who is a part of the repressive order of the People's Republic is in turn repressed by the Communist government.

ii. The Palace politics

The movie displays the most heinous ways through which the palace politics works in the Forbidden City. The movie shows the superficial grandeur and glory of the Forbidden City behind which there lies the criminal acts of power politics. In the beginning, it is the power of the Queen Dowager that made the young emperor a puppet and allowed her to be the ghost ruler. Even when he grows up, he has been dictated by the palace politics, as a young man facing many political upheavals, he again becomes a victim of the palace politics through his wives. Hence, the conspiracies and the selfish motives always dominate the life of the emperor and hence, the inner politics of the Forbidden City.

iii. Revolution, Revolt of communist and Civil War

The emperor is stuck in the Forbidden City but is curious to know about the world outside. The movie shows in the background the various activities of warfare during the civil war in China. The civil war broke up between the communist as well as between the army troops and the labour. The Republic of China had its own threats of the Japanese invasion, communist uprising and the warlord insurrections. The movie displays the strife between different forces in China in the background of the growing up of the Emperor.

iv. The History of the End of the Old and the Beginning of the New Order

After the end of the Manchu regime, there was a rising contact with the western ideas of equality, liberty and brotherhood that captivated young Chinese community. They were mainly the immigrant Chinese who were fancied by the new ideas of western style that reflected through the influences on their way of thinking, living and their perspectives on life. Pu Yi represents the generation of young Chinese who felt suffocated in the old repressive order and had a strong desire to embrace new liberal life.

The incidents of his Scottish tutor bringing the bicycle to the Forbidden City, and also making the emperor wear spectacles are symbolic of breaking the norms of the traditional order. Even the young emperor follows the western culture and revolts against the tradition by cutting his long braided hair or making his wives wear western dressing style, playing lawn tennis, indulging in ball dance and turning himself into a western playboy is a radical shift from his personality as a tradition-bound emperor to a modern man of a free will. However, his free will could not last long as he is consistently under observation by the Army of the Republics. This created his impression as a rebellious emperor, who was suspected to have a secret desire to revolt against the People's Republic of China and to restore the monarchy. Pu Yi's attempts of reformation in the Forbidden City are symbolic of the replacement of obsolete feudal traditions and autocracy by the new order of modernization through the Western principles of individuality, equality and democracy. Thus, the early period of modernization in China since the late 19th c during the Republican era dominates the movie throughout.

CONCLUSION

The movie the Last Emperor covers the unexplored aspect of the history of China during the fall of the empire. The last emperor appears to be a least significant character in the broader history of China; however, he represents the socio-cultural upheaval behind the political change. Despite the poetic license granted to the creativity of filmmakers, the movie remains an important source to trace the then history of China because of the historical authenticity of these two sources on which the movie is primarily based. Since both the writers Pu Yi and Johnston carry a tutor-pupil relationship, the plot of the movie unfolds the history in an amusing yet realistic manner. The movie hence can be entrusted as an important cultural document revealing the political history of China.

TOWARDS EXPONENTIAL GROWTH IN MACHINE TRANSLATION: TESTING OF TRANSLATION FROM ENGLISH INTO MARATHI WITH THE HELP OF GOOGLE TRANSLATE

Dr Shubhangi Jarandikar

Dr Nitin Jarandikar
Asst. Professor, Radhanagari Mahavidyalaya, Radhanagari

ABSTRACT:

Man's urge for translating 'text' is age-long. This urge encompasses numerous issues ranging from knowledge to power. Today, human civilization is entering to its fourth cycle of industrial revolution. While aspiring to "Rule the Flat World", the society during the early phase of globalization witnessed the major obstacle of 'human language'. Digital identities were struck with the human language problem. And so is the relevance of translation acts. Google Translate is a significant development in the field of Machine Translation. As has been stated in its mission statement, Google wishes "to organise the world's information and make it universally accessible and useful". Introduced in 2006, Google Translate is today a 'bai-lingual' machine translation tool. It can translate any text into 103 languages. To assess and evaluate the claims of Google Translate, the researchers decided to validate the translation of English text into Marathi text with the help of Google Translate. While selecting journalistic discourse, the researchers' hypothesis was that the translation of the English text into Marathi text with the help of Google Translate will carry higher percentage of accuracy.

Keywords*: Machine Translation, industrial revolution, algorithm, artificial intelligence*

Objective: To study how far Google Translate is a useful tool for the translation activity.

Review of Literature: There are a good number of works available exploring pros and cons of Google Translate, but there is no work done so far assessing translation of English text into Marathi.

Hypothesis: The translation of the English text into Marathi text with the help of Google Translate carries higher percentage of accuracy.

Scope and Limitation: The present study is restricted to the translation of journalistic discourse. Similarly, it is confined to the translation of English text into Marathi and not vice versa. It is possible to explore further the authenticity of Google Translate using different registers, and translations from Marathi into English.

> "The use of statistical techniques, coupled with fast processors and large, fast memory, will certainly mean we will see better and better translation systems that work tolerably well in many situations, but fluent translation, as a human expert can do, is … not achievable".
>
> - Keith Devlin[2]
>
> "Let's not kid ourselves – there are lots of mistakes in human level translations. The bar is not as high as you would imagine". - Kevin Knight[3]

[2] British mathematician and ex-director of Stanford University's Centre for the study of Language and Information (Cf. Stix, Gary)

[3] Founder of the MT software 'Language Weaver' (Cf. Stix, Gary)

What Keith Devlin and Kevin Knight are proposing are the two views about the Machine Translation (MT). These views appear to be contradictory to each other. And at the same time, it is also to be noted that both of them are concerned about the very act of translation. Both of them are admitting the limitations of the MT. Man's urge for translating 'text' is age-long. This urge encompasses numerous issues ranging from knowledge to power. Today, human civilization is entering to its fourth cycle of industrial revolution. It is true that the journey from the first cycle to the fourth cycle of industrial revolution is not pretty old. It's hardly 200 years old. At every stage of industrial revolution, human civilization has experienced socio–political, economic and cultural upheavals. The fourth cycle of industrial revolution is no exception to it. The scientists, scholars and academicians are talking about the threat to human existence itself as a consequence of the fourth industrial revolution. The synthesis between man and machine is a remarkable feature of this industrial revolution. This phase is trying hard to overcome the limitations of the digital language by replacing it with the human language. While aspiring to "Rule the Flat World", the society during the early phase of globalization witnessed the major obstacle of 'human language'. Digital identities were struck with the human language problem. And so is the relevance of translation acts.

Since 1960s the experiments are going on to invent the machine translation technology. While tackling any number of languages with their distinctive dialects, the researchers faced the frustrating experiences in the field of MT. In fact, the US govt. sponsored Automatic Language Processing Advisory Committee reported in 1966, "There is no immediate or predictable prospect of useful machine translation" (92, Stix). IBM's "Electronic Brain", Paris based 'Systran' Company, 'Candide' system, 'Language Weaver', 'Babelfish' are some of important stages in the development of the MT. All of them exploited "the brute force computing methods" and tried to bring the MT closer to human performance.

Google Translate is a significant development in the field of Machine Translation. As has been stated in its mission statement, Google wishes "to organise the world's information and make it universally accessible and useful". Google works on its "information" dissemination agenda through its numerous apps and tools approved and accepted globally such as Gmail, Google Maps, Google Calendar, Google Earth, Google Classroom, Google Keep, YouTube, Google News, Google Voice and so on and so forth. Google's Artificial Intelligence (AI) wing works incessantly in tune with its mission statement in a more effective way. In fact, Google's AI wing is far more ambitious as it is working hard on the human-machine synthesis for a good social cause.

While adhering to its mission statement– to make the world's information "universally accessible" –Google has to work on the linguistic barriers. However, at this point, while talking about Google and Google Translate, certain things should be taken into account. Though Google talks about its agenda of dissemination of information, one must not forget that Google is not any NGO; it has its own capitalistic interests. It would be too naïve to assume that it's an incorporation solely working for any noble cause. The second thing is that Google Translate or for that matter any MT software or tool never takes into consideration any kind of literary translation. (Perhaps, there is less trade and commerce in literary translations than in the technical translations.) So it is futile to go for literary translation with the help of Google Translate. (It gives horrific translation in case of idiomatic expressions and literary passages which are full of connotations and linguistic complexities.) Another thing to be noted with the Google Translate or the other present day MT tools is that they are primarily statistics oriented rather than linguistics oriented. It is more concerned with the possible algorithmic combinations than any possible linguistic and syntactic set of combinations. In fact, algorithms are the backbone of the Google systems.

In 2018, Google AI drafted its principles and has underlined the need of inventing “responsible AI practices” and the need to be “accountable to people” (Dean, Jeff). Google AI team is working on the issues such as flood prediction, earthquake aftershock prediction, helping farmers in preventing plant diseases, ophthalmological complications or detecting prostate and breast cancer tissues (Dean, Jeff). It appears that by way of synthesis between algorithmic phenomenon and human language, Google dreams of making human life more promising. The present day Google tools such as Google Duplex, Sound Search and Google Assistant are the glimpses of coming day Google’s AI revolution. In this way, Google is working on text translation, audio translation and image translation about which it appears that Google would be obsessed in the coming days.

Introduced in 2006, Google Translate is today a ‘bai-lingual’ machine translation tool. (In Mandrian, ‘bai’ means 100) (Hofstadter). It can translate any text into 103 languages. Though considered to be the reliable translation tool, the critics of the MT continue to argue about “the shallowness of Google Translate” (Hofstadter), and its “elusive goal” (Stix). They argue that MT is all about ‘bypassing’ or ‘circumventing’ the act of understanding language. They are of the opinion that “machine based systems will never equal the human linguist” (Stix). In the light of all these pros and cons of the MT and Google Translate, being students of linguistics and Translation Studies, it becomes necessary for the researchers to assess the claims made by Google Translate.

To assess and evaluate the claims of Google Translate, the researchers decided to validate the translation of English text into Marathi text with the help of Google Translate. To carry out this research, the researchers relied on the journalistic discourse. So the researchers’ preference is for a technical translation rather than any literary translation. By selecting journalistic discourse, the researchers’ hypothesis was that the translation of the English text into Marathi text with the help of Google Translate will carry higher percentage of accuracy.

To work out on the hypothesis, the researchers selected the online editions of the five leading English newspapers from India namely, 1) Indian Express (22, 30, 31 January and 02 February 2019), 2) The Times of India (22, 31 January and 02February 2019), 3) The Hindu (20, 22, 31 January and 02 February 2019), 4) The Deccan Herald (22, 30, 31 January and 02 February 2019) and 5) Hindustan Times (22, 31 January and 02 February 2019). From every newspaper the news items (preferably 2-3 sentences) under the following heads were selected:

1) Front page headlines, 2) Economics, 3) Entertainment, 4) Editorial and 5) Technology

The whole data was comprised of forty five (45) news items. All these news items were translated into Marathi with the help of Google Translate.

All the translated news items were analysed on a three point scale:

Point 1: Translation up to the mark

Point 2: Clumsy or awkward translation, but delivers the content

Point 3: Irrelevant translation

After analysing the source language text with the target language text, the researchers came across the following observations:

1. Translation of 15.55% news items is up to the mark.
2. Translation of 40% news items is clumsy or awkward, but delivers the content.
3. Translation of 44.44% news items is irrelevant.
4. Translation of 08.88% news items related to front page headlines is up to the mark.
5. Translation of 02.22%news items from economics is up to the mark.

6. Surprisingly, in case of entertainment news there is not a single translation, which can be claimed as up to the mark. On the contrary, there is the highest percentage of irrelevant translation as far as entertainment news items are concerned (20.00%).
7. In case of technology related news items, there are 04.44% up to the mark translations, 11.11% clumsy translations and 06.66% irrelevant translations.

After analysing the data, the researchers have come to the following conclusions:

The critics of the MT will definitely argue, “Didn’t we warn you? The MT will lead you nowhere.” Yes, to some extent, it seems true. Only 15.55% translations are up to the mark and 44.44 translations are irrelevant. But one should not ignore the 40% translations which are clumsy and awkward, but could be able to convert the content. People who receive warning about flood levels or earthquake aftershocks, or plant diseases will definitely be not bothered by the clumsiness of language. For them getting the message/warning will be a priority and not the linguistic accuracy. So if the percentage of up to the mark translations is added to the clumsy and awkward translations, it does surpass the irrelevant translations.

Thus the assumed hypothesis for the research clearly fails. The Google Translate appears to be far away from FAHQT (“fully automatic high-quality translation). However, due credit should be given to researchers and technicians (and of course statisticians) who are working hard in the direction of the MT technology for the noble social cause. And if one has to believe in what Kevin Knight has argued about the accuracy of human translation, it’s absurd to blame Google Translate.

INTRODUCTION:

Draupadi, daughter of king Drupada is one of the central characters of epic Mahabharata. With brother Drishtadyumna, she took birth from sacrificial fire (yagnya) done by her father. On the completion of yagnya a heavenly voice (Aakashvaani) uttered that she would be the reason for the fall of Kuravas. Also known as Panchali, she was the most beautiful lady of that time. Her beauty became boon as well as bane to herself. She was empress of Yudhistira's kingdom, yet she was used for betting in the game of dice. Yudhistira lost her and the consequence was 'Cheerharan'. At the second time of game of dice it was agreed that loser would be given an exile of 12 years and one year of Agnyathavaasa. Due to this Draupadi has to live in exile with her husbands. Her bane yet did not end. After the completion of war Ashwatthama killed her five children. A mother never wishes to see death of her children. She wept, felt discomfort. Seeing her sorrow Bhima decided to finish Ashwatthama. Draupadi stopped him and said something that a normal woman could not dare. She said that being a mother she cried of her children's death but she did not wish to see Ashwatthama's mother cry of his death. Such a prodigious quality Draupadi was having.

Secret of Five Husbands (Pancha Patitva)

Many laureates allege marriage of Draupadi to five husbands. It is disrespect to a woman. It is highly opposed by many authors. The story goes like this.

After Arjuna won the Swayamvara of Draupadi, all returned home with her. Mother Kunti was inside. Sons said that they got Bhiksha (Draupadi) of the day. But they did not tell what. Not knowing it, Kunti told to distribute it themselves. How bhiksha, which is in the form of Draupadi, be distributed? All were in puzzle. Lord Vedavyasa appeared there and told about the secret of Pandavas, Draupadi and their marriage. Pandavas were the incarnation of five deities. Yudhistira is incarnation of Yama, Bhima of Vayu, Arjuna of Indra and Nakul and Sahadeva are of Ashwini Deities. In Draupadi there lie four women viz. Shyamala, Bharati, Shachi and Usha who are the wives of five deities respectively. When Yudhistira was in contact with Draupadi, Shyamala used to be actively present and others used to be in dormant state. Similarly when Bhimasena was in contact with Draupadi, Bharati used to be actively present and others in a dormant state. This process continued with other cases also. This avoided the overlapping of the contacts of these couples. The physical personality of the wives was one but their actual presence was relative to their husbands. The whole set up seems to be beyond human logic and human understanding. That is why it is called atimanusha.[4] Hence there is a respect to the dignity of woman.

Conversation between Draupadi and Satyabhama

Draupadi was a woman of many noble qualities. She was a house wife, an empress, administrator, a manager, an accountant and played many roles in her life. Her workaholic nature attracted her husbands towards her and they used to obey whatever she said. During their exile Krishna visited Pandavas with Satyabhama. There Satyabhama saw all Pandavas doing what Draupadi said and it amazed her and she asked her what she did to her husbands that they all obey her. And Draupadi answered. This is the conversation between Draupadi and Satyabhama through which she teaches not only Satyabhama but every woman of the society. It is altruism of Draupadi which has been depicted in her advises throughout the conversation available in Chapters 231 and 232 of Vanaparva of Mahabharata, written by Lord Vedavyasa. This paper studies

[4] Prof K T Pandurangi in foreword to the book **Mahabharata Tatparyanirnaya Part-3**, page xix

the English transalation of these chapters written by Kisari Mohan Ganguli in his Magnum Opus 'The Mahabharata of Vyasa' (1883-1896).

METHODOLOGY

The methodology of collecting data is from various secondary sources available such as books, magazines, blogs and websites.

OBJECTIVES OF THE STUDY

1) To know the real meaning of marriage in the words of Draupadi.
2) To learn the qualities women need to have.
3) To earn knowledge on managing life style from Draupadi's teachings.

LIMITATIONS OF THE STUDY

1) The study is related to a part of Mahabharata.
2) The study may be dissented because of its irrelevance to present age.

ANALYSIS OF DATA

Vaisampayana said, "After those brahmanas and the illustrious sons of Pandu took their seats, Draupadi and Satyabhama entered the hermitage. With joyful hearts the two ladies laughed merrily and comfortably seated themselves. O king, those ladies, who always spoke sweetly to each other, having met after a long time, began to speak about various delightful topics arising from the histories of the Kurus and the Yadus. In private, the slender-waisted Satyabhama, the favorite wife of Krishna and daughter of Satrajit, asked Draupadi these questions.

Satyabhama: *'By what behaviour, O daughter of Drupada, do you able to rule the sons of Pandu, who are heroes, possess strength and beauty like the demigods themselves? Beautiful lady, how is it that they are so obedient and are never angry with you? Without a doubt they are ever submissive and watchful to do your bidding! Tell me, O lady, the reason for this. Is it the practice of vows and asceticism? Is it incantations and drugs? Is it the power of science or the influence of your youthful appearance? Is it the recitation of specific mantras, the Homa, collyrium or other medicines? Tell me immediately, O princess of Panchala, what that blessed and auspicious thing is by which I may likewise make Krishna obedient and submissive to me.'*

After Satyabhama posed these questions, the chaste and blessed daughter of Drupada responded.

Draupadi: *'O Satyabhama, you are asking me about the practices of wicked women. How can I answer or speak about the objectives of such wicked females? It doesn't become you to ask such questions or to doubt me by thinking that I have resorted to such behaviour. You are intelligent and Krishna's favorite wife. You should know better. From the moment a husband learns that his wife is addicted to incantations and drugs, he begins to dread her like a snake hidden in his bedroom. Can a man troubled by fear have peace? And can one without peace have happiness? A husband should never be made obedient by his wife's incantations.'*

'We hear of painful diseases transmitted by enemies. They who desire to kill another send gifts laced in poison so that the man who contacts such lethal powders by tongue or skin is quickly deprived of life. Women have sometimes caused dropsy and leprosy, decrepitude and impotence, idiocy, blindness and deafness in men. These wicked women, ever treading the path of sin, at times likewise injure their husbands. But the ***wife should never do the least injury to her lord****. Hear now, O illustrious lady, of the behavior I adopt toward pleasing the high-souled sons of Pandu.* ***Keeping aside vanity and controlling desire and anger, I always serve with devotion my husbands and their other wives****. I wait upon them with a deep devotion of the heart, by restraining jealousy and relinquishing any sense of degradation or humiliation that may arise due to the services I perform. My husbands, the sons of Prtha, handsome like the moon, are mighty warriors that blaze like the sun or fire. They are endued with fierce energy and prowess and are capable of slaying their foes with a mere glance of the eye. I serve them ever fearing to utter what is false or evil or to look, sit or walk with impropriety, or to cast glances indicting any misgivings in my heart.'*

*'****My heart is not attracted to any other****, be they celestial, man, Gandharva, young, decked with ornaments, wealthy or comely. I never bath, eat or sleep until my husbands and their attendants have done so.* ***Whether they are returning from the field, the forest or the town, I hastily rise up and honor my husbands with water and a sitting place****. I always keep the house, the household articles and the food well ordered and clean. I carefully store the rice and serve the food at the proper time.* ***I never use angry or fretful speech***

and I never imitate wicked women. I always do what is agreeable to them and I am never idle. I never laugh except at a joke and I never stay at the house-gate for any length of time. I never stay for long in places for answering the calls of nature or in pleasure-gardens attached to the house. ***I always refrain from laughing loudly*** *and indulging in high passion and from anything that may give offense. Indeed, O Satyabhama, I am always engaged in waiting upon my lords.'*

'I find separation from my husbands to be something extremely disagreeable. ***When they leave home for the sake of any relative, I renounce flowers and fragrant pastes of every kind*** *and I begin to undergo penances. Whatever drink, food or enjoyment my husbands reject or dislike, I also reject and dislike. I always devoutly seek the good of my lords. I* ***always discharge without idleness of any kind those duties my mother-in-law imparted to me*** *and all else that is known to me. Those duties are with respect to relatives, alms-giving, offering worship to the gods, oblations to the diseased, boiling food in pots on auspicious days to be offered to ancestors and guests and service to deserving persons.'*

'In a fully humble state of mind and observing the approved rules and regulations, I serve my meek and truthful lords who are themselves ever observant of virtue considering them poisonous snakes that are capable of being easily excited. Such behavior, which is based upon regard for the husband, is the eternal virtue for women. ***The husband is the wife's god*** *and* ***he is her refuge****. Indeed, there is no other refuge for her. How then can the wife do the least injury to her lord? In sleeping, eating or adorning myself,* ***I never act against the wishes of my lords****. Always guided by my husbands,* ***I never speak ill about my mother-in-law****.'*

"O blessed lady, ***my husbands have become obedient to me because of my diligence, alacrity, and humility with which I serve superiors. Every day, I personally wait upon the revered and truthful Kunti, that mother of heroes, with food, drink and clothes. I never show any preference for myself over her in matters of food and dress****. And I never verbally reprove that princess equal to the earth herself in forgiveness."*

"Formerly, eight thousand brahmanas were fed daily in the palace of Yudhisthira off plates of gold. Yudhisthira entertained Eighty thousand additional grhastha brahmanas of the Snataka sect. There were thirty serving maids assigned to each of them. In addition, ten thousand sannyasis had their food carried to them on plates of gold. All these ***brahmanas were duly worshiped by me with food, drink and clothing taken from stores, only after having offered a portion to the Supreme Lord."***

"The illustrious son of Kunti had a hundred thousand serving maids with arm bracelets, golden neck ornaments, costly garlands, wreaths, gold and sprinkled with sandalwood paste. Adorned with jewels and gold, they were all skilled in singing and dancing. ***I knew the names and features of all those girls and also what they were, what they are, and what they did not****."*

"Kunti's son of great intelligence also had a hundred thousand maidservants who daily used to feed guests with plates of gold. While Yudhisthira lived in Indraprastha, a hundred thousand horses and a hundred thousand elephants used to follow his procession; these were the possessions of Yudhisthira while he ruled the earth. It was I, however, who ***regulated them and established the rules to be observed by them****. And it was* ***I who had to listen to all complaints about them****. Indeed, I knew everything about what the maidservants and other classes of attendants of the palace, the cowherds and the shepherds of the royal establishment did or did not do."*

"It was I alone amongst the Pandavas who ***knew the income and expenditure of the king and the extent of their wealth****. Those bulls among the Bharatas, assigning to me the burden of looking after all those that were to be fed by them, would pay their court to me. This load was extremely heavy and would have been incapable of being born by persons of evil heart. I used to bear it day and night, sacrificing my ease and all the while affectionately devoted to them. While my husbands were engaged in the pursuit of virtue, I alone supervised their inexhaustible treasury, which resembled that of Varuna. I used to serve the Kuru princes day and night, bearing hunger and thirst so that my nights and days were the same to me.* ***I used to be the first to wake up and***

***the last to go to bed**. This, O Satyabhama, is the charm that has made my husbands obedient to me. Never have I practiced the charms of wicked women nor do I ever wish to practice them.”*

Hearing Draupadi’s virtuous words, Satyabhama, having first reverenced the virtuous princess answered saying,

***Satyabhama:** “O princess of Pancala, O daughter of Yajnasena, I am guilty. Please forgive me! Among friends, conversations in jest arise naturally and without premeditation.”*

***Draupadi:** “I shall now tell you how to attract the heart of your husband without the use of deceitful means. By adopting such a method, dear friend, you will be able to draw away your lord from other females. In all the worlds, including that of the celestial beings, **there is no god equal to the husband.** When he is gratified with you, you may receive from him every object of desire; when he is angry, all these are lost. It is from her husband that the wife obtains offspring and various articles of enjoyment. It is your husband that provides you with handsome beds and seats, robes and garlands, perfumes, great fame and heaven itself.”*

*“One cannot obtain happiness in this world easily. Indeed, the woman that is chaste obtains happiness along with distress. Always adore Krishna with friendship and **willingly accept any physical inconveniences or sufferings**. By offering beautiful seats and excellent garlands and by providing Him with various perfumes and prompt service, act in such a way that He will become devoted to you thinking “I am truly loved by her!’ **When you hear the voice of your lord at the gate, rise up from your seat and wait in readiness within the room. And as soon as you see Him enter your chamber, worship Him by promptly offering Him a seat and water to wash His feet. When He commands a maidservant to do anything, get up and do it yourself. Let Krishna understand this temper of your mind and let Him know that you adore Him with all your heart**.”*

*“O Satyabhama, **whatever your husband speaks in your presence, do not blab of it** even if you think it doesn’t deserve to be concealed, for if any of your co-wives were to speak on that matter with Vasudeva, He might get irritated with you. Feed those that are dear and devoted to your lord and always seek His good. You should always keep yourself aloof from those that are hostile against your lord, those that seek to injure Him and those that are addicted to deceit. Forgo all excitement and carelessness in the presence of men, conceal your inclinations by observing silence and do not converse or associate in private even with your sons Pradyumna and Samba.”*

*“You should **form friendships only with highborn and sinless females who are devoted to their lords** and you should always **avoid the association of wrathful women who are addicted to drink, who are gluttonous, thievish, wicked and fickle**. Such behaviour is reputable and leads to prosperity. Not only is it capable of neutralizing hostility, but it also leads to heaven. Therefore, worship your husband by adorning yourself in costly garlands and ornaments and smear your body with ointments and excellent perfumes.”*

CONCLUSION

The meaning of the word **altruism** is selfless concern for the well being of others. The style Draupadi teaches Satyabhama is her own way that can be termed as **Draupadism** and is not only confined to her but also to each married woman of our society. She was a good woman having expertise in managing family, kingdom, spiritual practices, accounting, self life and social life and others. Her advices in this conversation are proved to be of high moral and altitude and they should be brought into everyday lives of all women to change personal and social life.

A ROLE OF ICT IN TEACHING ENGLISH LITERATURE

Prof.Akhade Kavita D.
Dada Patil Mahavidyalaya, Karjat
Ahmednagar

ABSTRACT

The use of literacy texts in a language learning classroom can be a source of valuable authentic material, cultural enrichment, language enrichment and to develop personal involvement (Collie & Slater, 1987). Furthermore, literature can be motivating material and help learners to develop their interpretative abilities (Lazer,1993). Recent studies have demonstrated how the use of technology in the teaching of literature such as a the use of e-mail (Meskill &Ranglova, 2000; Jackstadt & Muller-Hartmann, 2001),multimedia(Yeh, 2005), and the internet(King, 2000; Sachaumann, 2001) contribute to learning the target language. While most of these studies demonstrate exemplary uses of technology, there has been limited research focusing on teachers' pedagogical approaches in teaching literature in the language learning classroom. Paran(2006) calls for more research investigating the approaches taken in teaching literature with specific types of language learners and in specific countries. This paper aims to address the current gap in the literature through a case study of four teachers' integration of information and communication technology (ICT).

Keywords- *authentic material. Cultural enrichment, motivating material, pedagogical approaches. etc.*

Methodology

How to ESL teachers' integrate ICT in teaching English literature? The age range of the pupils involved in the study is 18-21 years. The literacy texts taught by the teachers included a range of novels, short stories and poems prescribed by the SSPU, pune. The duration of interview with each participant was no longer than 45 minutes. The interview was recorded and subsequently transcribed. The total number of lessons observed was 20 and each lesson lasted from 30 minutes to an hour.

Discussion

1.ICT as an aid to comprehension

Based on the data, all of the teachers used ICT as a presentation tool to address, learner difficulties in comprehending literacy texts. An instance was observed in Teacher A's teaching of 'A Cup of Tea' where she used a CD-ROM to explain and check learners' understanding of the short story. The traditional mode of reading from a book was transformed as learners viewed a multimedia presentation which contained animation, narration and lines from the original texts. The teacher believed that the CD-ROM helped not only in describing the events in the story but also with the setting of the story. The teacher's use of the CD-ROM is related to her belief about how the use of multimedia could aid the learners' comprehension of the text. The learners' low levels of proficiency would have been an obstacle for them to appreciate the story through reading alone and the use of multimedia enabled them to access the text through a different medium.

2.ICT to promote learner response to literary texts

Analysis of the data also revealed that teachers' TPCK included knowledge of how to use ICT in a student-centered way. For example, in Teacher D's lesson on the poem If by Rudyard Kipling about a father's advice to his son, there was evidence of ICT being used to encourage learners' response to the poem. The aim of the lesson was not to learn about the mechanisms of the poem but rather to see how the learners responded to the poem.

Although they did not compose their own poems, the learners were able to demonstrate an understanding of it by relating it to songs. Two of the learners who were proficient in the language were chosen to present their own responses to the poem. The teacher believed that this activity was a way to promote peer teaching. Although the activity was not related to the exam, the teacher believed that it would help the student to "internalize the poem and that[it] will help them understand the poem better". Although there was no collaborative work and not all learners had the opportunity to use ICT, the learners were engaged in oral interaction with the whole class. The teacher ended the lesson by giving a short writing task which required the learners to choose a piece of advice from the poem and the reason why it is important to them. In my view, the use of ICT as a presentation tool in this lesson was effective in creating a learning environment where learners were free to share their personal views both orally and in writing.

3.ICT to promote language awareness

An analysis of the lessons further reveals that the teaching of literature was also integrated with language practice. For example, a behaviourist approach was observed in Teacher A's lessons where she used the CD-ROM to teach vocabulary. In the first lesson observed, the teacher selected students to match description of characters with the right character trait as part of revision for the story.

4.ICT to increase learner motivation

The teachers' integration of ICT was also influenced by its impact in motivating learners to learn English literature. Teacher C stated that the use of ICT was more interesting than reading books and enabled learners to be more focused. For example, in the eighth lesson he used a PowerPoint slide to involve them in producing the answers to a question on the novel 'The Guide' through collaborative work. The learners were required to work in pairs to write down in not more than 150 words their "assumptions of Raju the Guide". The teacher felt that learners paid more attention and that their motivation was higher.

Teacher B stated that the use of a CD_ROM was to add a "variety of teaching methods". One example is where the teacher used a song "Yaha Koun Hai Tera Musafir Jayega Kaha" during the revision lesson on "The Guide".At the beginning of the lesson, the learners were given the lyrics to the song entitled "Yaha Koun Hai Tera Musafir Jayega Kaha" which was related to the story prior to the revision lesson. The song was accompanied by movie of the story. The teacher acknowledged that there was no focus on the language; the aim of the activity was just to sing Hindi song "because students like music, they like to sing but they don't really sing Hindi songs". She believed that the learners could be inclined towards different ways of learning and the use of multimedia presentations that included music and visuals could help learners to remember better.

Conclusions

This paper aimed to provide an analysis of ESL teachers' integration of ICT in teaching literature using the TPCK framework. The effectiveness of the lessons largely depended on teachers' knowledge on how to use ICT in ways that could benefit learners, and not just for the sake of convenience. In sum, the evidence from these case analyses would suggest that teachers' TPCK is related to their beliefs about the value of technology in addressing learners' needs such as language difficulty and motivation. The use of generic tools such as PowerPoint presentation appeared to be more amenable to a broader range of pedagogical strategies compared to the use of prepared ESL computer programs. Teachers' integration of computer programs was mainly restricted to the approach embedded in the programs. They were not used in ways that promoted learner collaboration but rather as a whole class activity. Although there were episodes where its use could be considered effective, there were also instances where it would have been more effective if the teacher had used the activities to promote interaction between learners. The evidence from the case analyses would suggest that teachers' TPCK could be further developed with more guidance on how to creatively integrate any prepared computer programs in ways that promote learner integration during English literature lessons. This could begin by requiring teachers to examine their own beliefs about the value of any prepared programs and to evaluate their potential their potential use in meeting learner needs.

Email:Sarika_panwal@rediffmail.com

ABSTRACT

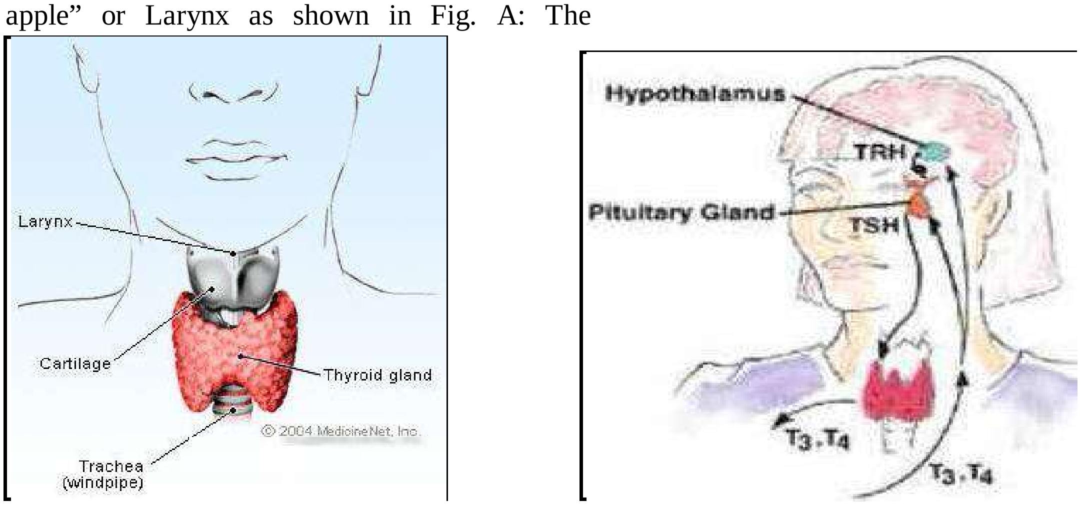
As per survey conducted by Indian Thyroid Society (ITS) one in ten adults in India suffer from hypothyroidism, hyperthyroidism or thyroid cancer."The World Health Organization (WHO) has identified iodine deficiency is the main cause of Thyroid disorder. Other effects of iodine deficiency are physical and mental retardation, cretinism, endemic goiter, hypothyroidism, and poor outcomes in pregnancy. Data Mining is playing important role in predicting many diseases. This research evaluates parameters like gender and the age group that are most likely to be affected by thyroid disease.

The current study includes analysis of symptoms and causes of thyroid disease among the population. The researchers used classification models, association and clustering models using weka data mining tool.

Keywords:*data mining, classification model, thyroid disease, association model*

I) INTRODUCTION

Thyroid hormones are useful in regulating body energy, body temperature, the body's use of other hormones and vitamins, and the growth and maturation. The Thyroid gland is a small gland, having weight near about 28 gm., situated in front of neck and just below "Adams apple" or Larynx as shown in Fig. A: The function of Thyroid gland is to take Iodine which is available in many foods and convert it into Thyroid harmones: Thyroxine(T4) and Triiodothyronine(T3). Thyroid cells are only cells that absorb iodine in our body. These cells combine iodine and amino acid tyrosine to make T3 and T4.



. Fig. A

Every cell in the body depends upon thyroid harmones for regulation of their metabolism. The normal Thyroid gland produces about 80 % T4 and about 20 % of T3.

The Thyroid gland is controlled by pitutary gland . It is small gland having size of a peanut at the base of brain. When the level of thyroid harmone (T3 and T4) becomes too low, the pitutary gland produces Thyroid Stimulating Harmone(TSH) which stimulates the Thyroid gland to produce more harmones of T3 and T4.

Under the influence of TSH , the Thyroid gland will produce and secretes T3 and T4, thereby increasing their blood levels. The pitutary gland senses this and responds by decreasing it's TSH production and automatically Thyroid gland stops to secrete T3 and T4 harmones.

This pitutary gland also controlled by another gland known as the Hypothalamus . The hypothalamus is part of brain and prepares Thyroid Releasing Harmone (TRH) which tells to pitutary gland to release TSH.

The Thyroid gland can produce either too much hormones or too less hormones. If Thyroid gland producing too much hormones, it is called as Hyperthyroidism and if it produces too less hormones, it is called as Hypothyroidism. Symptoms of Hypothyroidism are fatigue, cold intolerance, constipation, dry skin, too much weight gain, muscle weakness, heavier menstrual periods, thinning hair etc. Symptoms of Hyperthyroidism are nervousness, restless, inability to concentrate, weakness, irregular heartbeat, vomiting, sweating etc.

II) EFFECT OF THYROID IN INDIA

A National Workshop was held in Chennai on the Advanced Management of Thyroid Disorders dated on 5th June 2014. The delegate of workshop stated that 42 million people in India have thyroid disorders. Hypothyroidism is the most common of thyroid disorders in India, affecting one in ten adults.

The prevalence of hypothyroidism in India is 11%, compared with only 2% in the UK and 4·6% in the USA. Compared with coastal cities (e.g., Mumbai, Goa, and Chennai), cities situated inland (e.g., Kolkata, Delhi, Ahmadabad, Bangalore, and Hyderabad) have a higher prevalence (11·7% vs. 9·5%) of Thyroid disease. According to AmbrishMithal, chairman of the Medanta Division of Endocrinology and Diabetes (Gurgaon, India), the reason of more causing Thyroid disease in India than western countries is iodine deficiency of country. He also stated that, the highest prevalence of hypothyroidism (13·1%) is found in people aged between 46–54 years, with people aged 18–35 years are being less affected (7·5%).

Swapan Jana, a public health expert and secretary of Society for Social Pharmacology (Kolkata, India) stated that although Thyroid disease is an easy to detect and inexpensive to cure , the patients with hypothyroidism are remain unaware about this and thus disease effects on work performance and economic productivity of Indian People. He further said that "In the past, iodine deficiency was blamed for the causing of hypothyroidism in India, but the disease is still alive in this country, though the promotion of iodized salt since 1983"

In the past two decades, the manufacturing of iodized salt has been increased by almost nine times from 0·7 million metric tons per year in 1985–86 to about 6·2 million nowadays. "Iodine supplementation can also bring auto-immunity, resulting in goiter and thyroid dysfunction", says Mithal.

According to Sanjay Kalra, consultant endocrinologist at the Bharti Hospital (Haryana, India), "India has just completed its transition from iodine deficiency to iodine replete status. AmbikaGopalakrishnanUnnikrishnan, chief endocrinologist at the Chellaram Diabetes Institute (Pune, India), stated that: "Across the world, with the progress of iodization, autoimmune thyroid disease has become the most common cause of hypothyroidism.

Environmental factors other than iodine deficiency are also responsible for hypothyroidism in India. Mithal said, "The unregulated use of pesticides and exposure to endocrine disruptors could be a reason", he also stated that “Unclean drinking water and exposure to industrial pollutants like resorcinol and phthalic acid also cause for Thyroid disease.”

According to Kalra, “it is important to create awareness in the population and early management of this disease in India.”

III) DATA MINING IN HEALTH CARE

Data mining means extracting unknown patterns from huge volume of data which consist of different methods and algorithms.

Today’s Healthcare industry creates huge amounts of complex data about patients, hospitals, medical devices etc. Data mining is used in various applications such as Healthcare management, Customer Relationship Management, to detect fraud and abuse, Medical device Industry, Pharmaceutical Industry, Hospital Management etc.

Different data mining tools are used to analyze and evaluate different healthcare problems like Heart Disease, Cancer, HIV/AIDS, Diabetes Mellitus, Kidney dialysis, Brain Cancer, Tuberculosis, Dengue and Thyroid Diagnosis.

IV) EXPERIMENTS AND RESULTS

Data Set Description

The primary data collected for experimental purpose is from hospitals in Maharashtra. The data has total 200 instances which include males as well as females. This research evaluates parameters like gender and the age group that are most likely to be affected by thyroid disease. Following attributes are used for analysis of research,

Attributes of the classification models used in the experiments

Sr. No.	Attribute Name	Value Type
1	Age	Continuous
2	Gender	M,F
3	Heredity	Y,N
4	Gain Weight	Y,N
5	Cold Intolerance	Y,N
6	Sweating	Y,N
7	Omitting	Y,N

Various Data Mining Algorithms are applied on collected data.

A) Classification

The Zero-R classification algorithm of WEKA is used which illustrates that the thyroid disease is mostly affected in the females than males. It is shown in Fig..B and C.

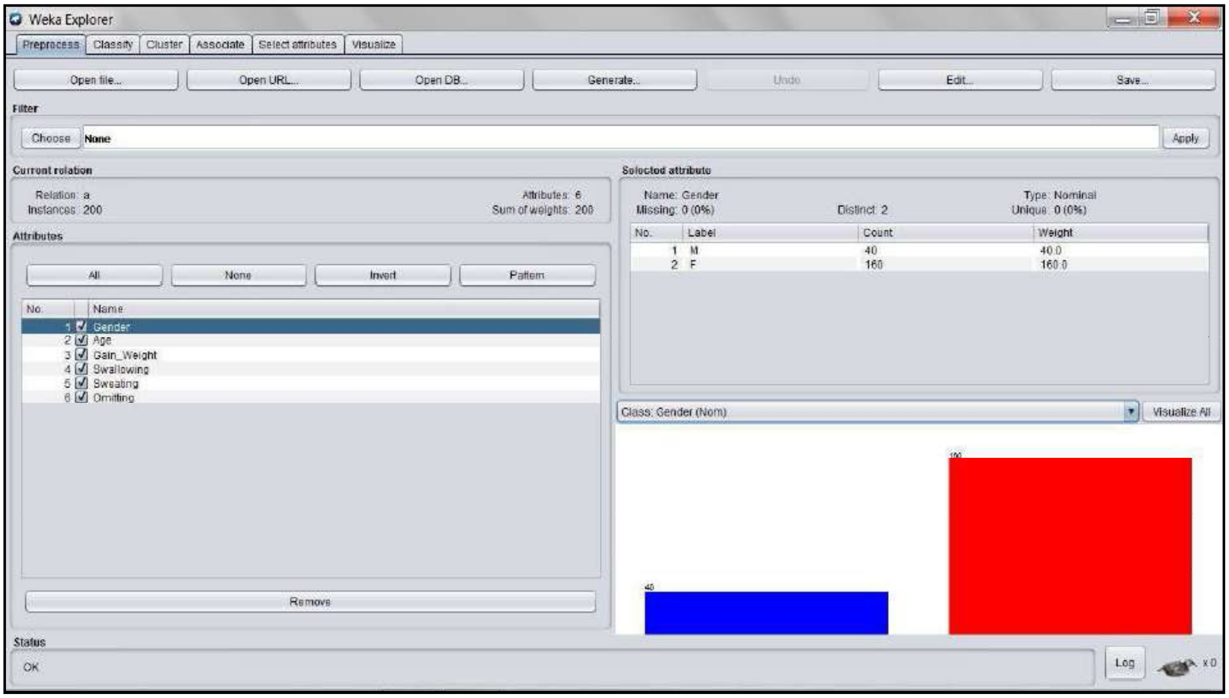


Fig. B

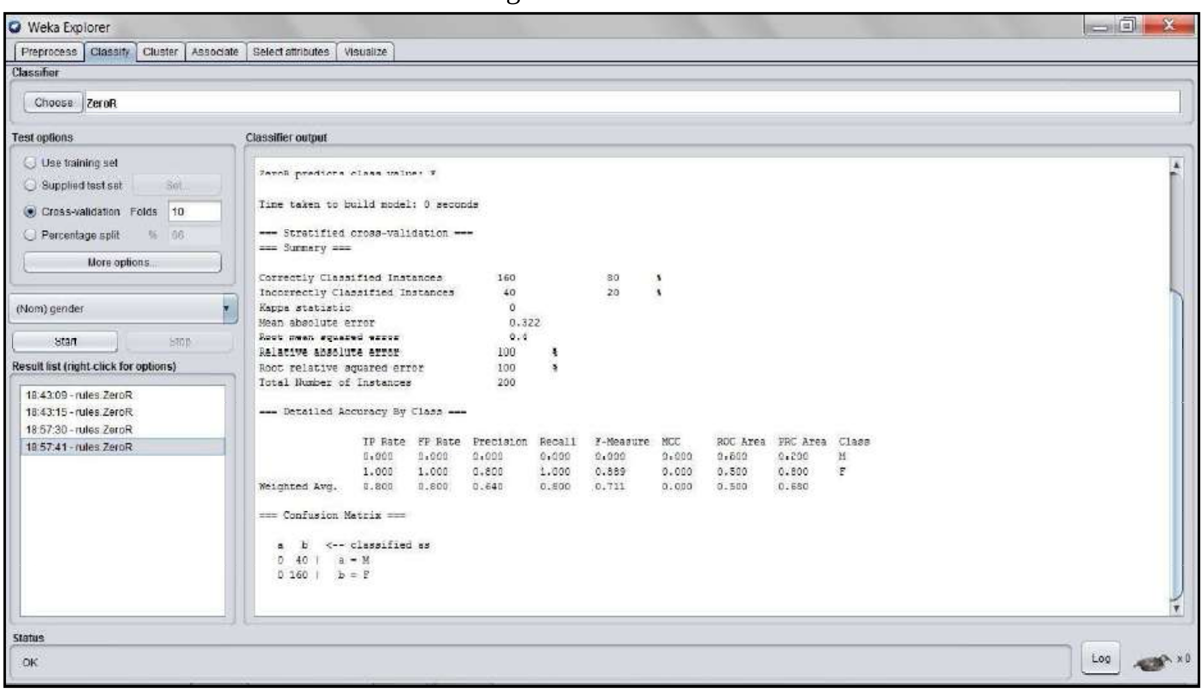

Fig. C

B) Clustering

The Research used K-Means Clustering algorithm which stated that the age group of persons between 21-30 mostly affected by Thyroid disorder. And next age group 41-50 is also mostly affected by Thyroid disorder. It is shown in table no. D, E & F

The Simple K-Means algorithm also given result that, Thyroid disease is not hereditary .It is given in Table G

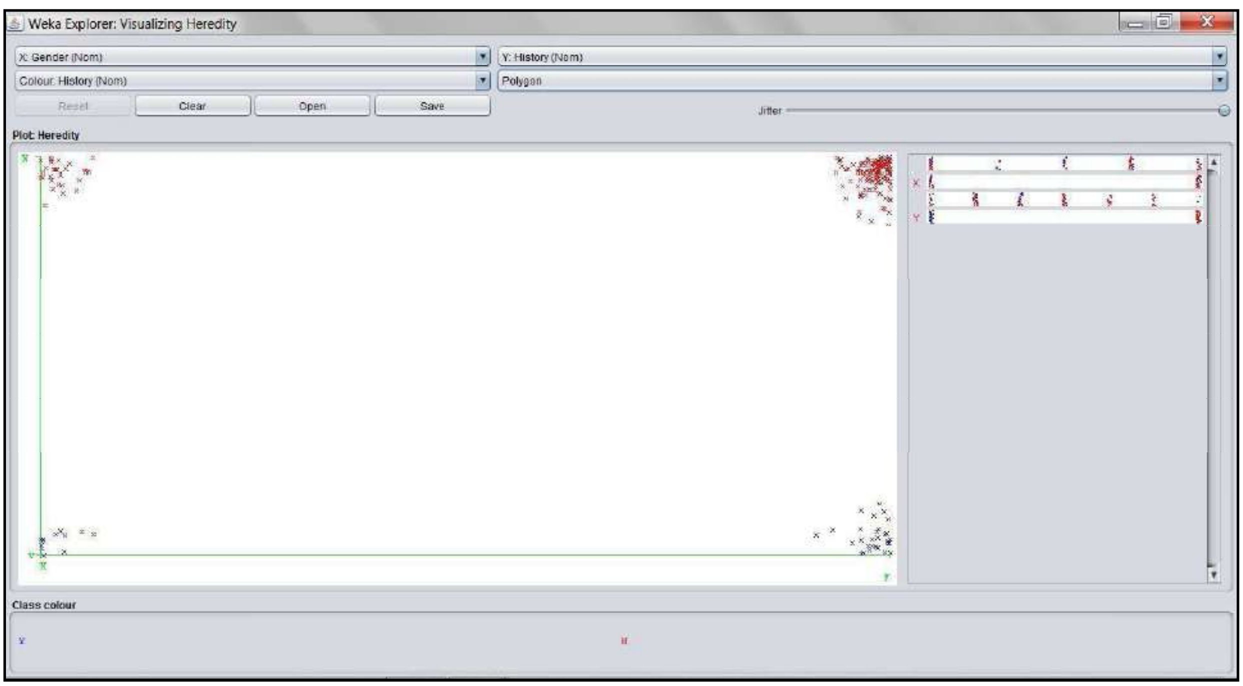

Fig G

C) Association Algorithm

The research also used Apriori Algorithm to generate various rules based on data collected which are helpful in analysis as shown in Table H

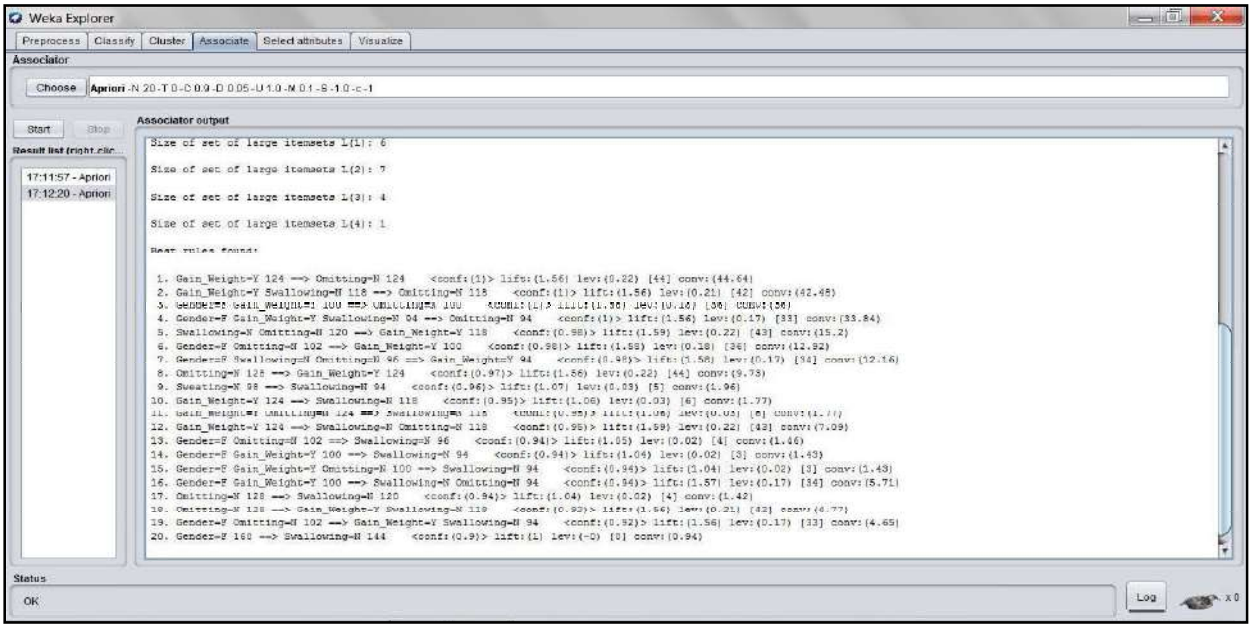

Fig H

V) CONCLUSION

This research has used Zero-R Classification algorithm, K-Means Clustering algorithm and Apriori Association algorithm applied on collected data .This research showed that, the females are mostly affected than males by thyroid disease. Also research illustrated that the age group 21-30 of persons from data collected have more chances of Thyroid disorders. According to the data collected, it is analyzed that thyroid can affect from age of 11-20 years. Further, the results also stated that, Thyroid is not hereditary

ALLELOPATHIC EFFECTS OF AQUEOUS AND ALCOHOL EXTRACTS OF *DURANTAPLUMIERI* (JACQ) ON NITROGEN METABOLISM IN *SORGHUM VULGARE* (PEARS)

A. N. Sadale
Department of Botany, AjaraMahavidyalaya, Ajara

Abstract

Field experiments were conducted to evaluate the allelopathic effects of aqueous and alcoholic extracts of D.plumieri (Jacq) on enzymes and nitrogen fractions in two varieties of S. vulgare (Pears). The findings revealed that the activity of nitrate reductase (NR) in CSH-7 variety was enhanced when the plants were sprayed with increasing concentrations of both the typesof extracts but it was inhibited in M35-1. On the other hand, the nitrite reductase (NiR) activity in both the varieties was inhibited. The nitrate contents in CSH-7 was decreased by aqueous extracts but increased due to alcoholic extract except at 0.25%. However, it was decreased in M35-1 variety by both extracts. The nitrite content in CSH-7 variety was decreased due to both the extracts but remains more or less unchanged in M35-1. The level of soluble protein nitrogen in CSH-7 variety was increased but decreased in M35-1 variety under both the types of extracts with the exception of 0.25 % alcoholic extract where it was increased by 13.90%. The insoluble protein nitrogen content in CSH-7 was more adversely affected by both the extracts as compared to M35-1. Its content was only increased at 25% aqueous and 100% alcoholic extract as compared to control. The total nitrogen contents in both CSH-7 and M35-1 varieties were also decreased due to various concentrations of both the aqueous and alcoholic extracts of D. plumieri. These results indicate that overall nitrogen metabolism in both the varieties of S. vulgare was inhibited by allelochemicals present in leaves of D. plumieri.

Key words:*Allelopathic effects, Allelochemicals, Nitrate, Nitrite, Aqueous extract, Alcoholicextract*

Introduction

Allelopathy is a relatively new and potential area of research.In natural and agricultural ecosystems,it is receiving increasing attention because allelochemicals significantly reduce the growth of other plants and yield of crop plants (Inderjit and Duke, 2003). According to Elisanate et al. (2013), the action of allelochemicals on plants is known to be a diverse actionincluding a large number of biochemical reactions resulting into their modifications and finally affecting the growth of other plants.

Durantaplumieri(Jacq), a common hedge plant belonging to family Verbenaceae, is smooth shrub with struggling and drooping branches.Even though the leaves, stem and fruits of it are poisonous with changes in biochemical parameters, it is used in abnormalities in liver and renal functions, as febrifuge, diuretic and treatments for malaria, intestinal worms and abscesses.Although the *Durantaplumieri* has been studied by number of workers for their potential medicinal value, its allelopathic effects on plant physiological processes are still unknown.

Sorghum vulgare, belonging to family poaceae, is considered the fifth most important cereal crop after rice, wheat, maize and barley. In India, among the food grain crops, it occupied an important place because it is a staple food of very large population and fodder crop of dry land agriculture.

Nitrogen is most essential for plant life because it is a major constituent of every component of a cell. Its deficiency severally causes reduction in plant growth and ultimately the yield characteristics (Scott, 2008). Hence an attempt has been made to evaluate allelopathic effects of *D. plumieri* on enzymes and fractions nitrogen metabolism in *S. vulgare.*

Material and Methods

The seedlings of *S. vulgare* varieties were raised in fertile soil in the earthen pots from the seeds (MAHABEEJ). After one month of their normal growth, the seedlings were foliar sprayed with increasing concentrations (0.25%, 0.50%, 0.75% and 1.00%) of aqueous and alcoholic extracts of *D. plumieri*, twice a week. When the plants became two months old were used for determination of enzymes activity and various fractions of nitrogen metabolism. *In vivo*activity of nitrate reductase and nitrite reductase were determined following the method described by Jaworsky (1971). After determination of enzyme activities, the nitrate, nitrite and proteins contents of the fresh tissue used for enzyme preparation were estimated by following methods of Kolhoff and Noponen (1933), Jaworsky (1971) and Lowry et al. (1951), respectively. In same manner, the various fractions of nitrogen via NO_3-N, NO_2-N, soluble protein –N and insoluble-N were estimated from oven dried powdered leaf material by the methods described byKolhoff and Noponen (1933), Jaworsky (1971), Lowry et al. (1951) and Hawk et al. (1948), respectively.

Result and Discussion

It is evident from the results (Table No.1)that the activity of nitrate reductase in CSH-7 variety was enhanced due to increasing concentrations of both the aqueous and alcoholic extracts but slightly inhibited by 13.24% and 03.49% at both 0.75% aqueous and alcoholic extracts, respectively. On the other hand, its activity in M35-1 variety was inhibited by both the types of extracts.

Very few reports are available about influence of allelochemicals on nitrate reductase activity. As nitrate reductase is a substrate inducible enzyme its activity might be induced due to easy availability of its substrate in CSH-7 (Table 2). It was also correlated with the increased nitrite content in the leaf tissue under both the types of extract (Table 3). On the contrary, decreased nitrate content in M35-1 variety might be responsible for decreased nitrate reductase activity.

** Each value is mean of three determinations.*
Values are expressed as mg per g fresh tissue.
Values in parenthesis indicate percent increase (+) or decrease (-) over the control.

The activity of nitrite reductase in both the varieties was inhibited due to foliar spray of the aqueous and alcoholic extracts of *Duranataplumieri*(Table 4). The inhibition of activity in CSH-7 variety has been shown a perfect positive correlation with increasing concentrations of both the extracts. Similarly, the activity of this enzyme in M35-1 variety was also inhibited by various concentrations of both types of extract but there was no consistent pattern. The decreased nitrite reductase activity in CSH-7 might be due to decreased nitrite content at lower concentration of both extracts (Table 3). However, the increased nitrite content at lower and moderate concentrations indicates that some other reasons such as unavailability of reducing power or reduced enzyme protein synthesis might be responsible for decreased enzyme activity. On the other hand, decreased nitrate reductase activity in M 35-1 variety might be caused decreased nitrite content and hence decreased nitrite reductase activity.

** Each value is mean of three determinations.*
Values are expressed as g per 100 g dry tissue.
Values in parenthesis indicate percent increase (+) or decrease (-) over the control.

Perusal of Tables 5 and 6 reveals that the nitrate nitrogen content in CSH-7 variety was decreased when plants were foliar sprayed with aqueous extract but it was increased with increasing concentrations of alcoholic extract with the exception of 0.25 % concentration where it was decreased (29.41%) as compare to the control.On the contrary, its content in M35-1 variety was decreased under both the types of extract.However, more decrease was observed due to all concentrations of alcoholic extracts as compare to aqueous extracts.

The nitrite-nitrogen content of CSH-7 variety was decreased due to both the types of extract of *Durantaplumieri*. On the contrary, its content in M35-1 variety was remainsmore or less unchanged even under both the aqueous and alcoholic extracts. Very similar to nitrate contents more decrease in nitrite contents were observed due to alcoholic extract as compare to aqueous extract.

The soluble protein nitrogen content in CSH-7 variety was increased at moderate concentrations of aqueous extract but slightly decreased by 15.82% and 3.60 % at 0.25 % and 1.00 % concentration, respectively. Similarly its content was also decreased (13.67 %) only at 0.25 % alcoholic extract and thereafter it shows a positive correlation with increase in concentration of alcoholic extract. Contrary to this the accumulation of soluble protein nitrogen content in M35-1 variety has shown a perfect negative correlation with the increasing concentration of aqueous extract with the exception of 1.00 % where it was slightly (05.30 %) increased over the control. Its content was also increased only at 0.25% alcoholic extract by 13.90 % and thereafter decreased as compare to control.

The insoluble protein nitrogen content in CSH-7 variety was decreased due to both the types of extract. However, it did not shown any consistent pattern and more decreased due to alcoholic extract as compare to aqueous extract. The insoluble protein nitrogen content in M35-1 variety was decreasedat 0.25 % and 0.50 % aqueous extract by 16.67 % and 11.10 % over the control, respectively and then increased with increasing concentrations of extract. On the other hand, it was slightly increased only at 0.25 % and 1.00 % concentrations and then remained unaffected at moderate concentrations.

Total nitrogen content of CSH-7 variety was decreased due to various concentrations of both the aqueous and alcoholic extracts.Even though its content were less than the control has shown a positive correlation with the increasing concentrations of alcoholic extract. Total nitrogen content of M35-1 variety was also decreased due to both the types of extract with the exception of 1.00 % aqueous extract and 0.25 % alcoholic extract, where it was slightly increased by 01.65% and 00.15% over the control, respectively.

From these results, it is clear that the nitrogen metabolism in both the varieties of *Sorghum vulgare*wasmuch adversely affected by the allelochemicals present in *Durantaplumieri*.

ABSTRACT

The goal of the manufacturing process is to produce a product that has utility. The manufacturing process is one of the important steps in the production process. It refers mainly to the change of material or dimensions of the piece that is produced. The transport, handling or storage of the dose of the pieces are not included in the manufacturing process, since these stages are not involved with the change of material or the dimensions of the piece that is produced. The geometry of the finished product must have certain tolerances, which must be met to be acceptable and useful. This study helps to understand present manufacturing process of water pump parts.

The Metal working processes involves forging, extraction, wire drawing, rolling etc. Machinery process involve drilling, grinding, Turning and milling. The processes of casting involve permanent model casting, die casting, sand casting and centrifugal. The processes of joining involve wilding, brazing, joining and soldering. The processes of surface finished includes honing, surfacing and lapping. Shearing and forming processes includes pinching, blacking, drawing and forming bending. So this paper focus on the different sub process of the manufacturing of water pump components. And the researcher suggests how to improve present practices in water pump components manufacturing.

Keywords:- *Manufacturing Process, Water pumps, Components, Quality, Dimensions, Production Line etc.*

I)Introduction: -

The goal of the manufacturing process is to produce a product that has utility. The manufacturing process is one of the important steps in the production process. It refers mainly to the change of material or dimensions of the piece that is produced. The transport, handling or storage of the dose of the pieces are not included in the manufacturing process, since these stages are not involved with the change of material or the dimensions of the piece that is produced. The geometry of the finished product must have certain tolerances, which must be met to be acceptable and useful. This study helps to understand present manufacturing process of water pump parts.

The Metal working processes involves forging, extraction, wire drawing, rolling etc. Machinery process involve drilling, grinding, Turning and milling. The processes of casting involve permanent model casting, die casting, sand casting and centrifugal. The processes of joining involve wilding, brazing, joining and soldering. The processes of surface finished includes honing, surfacing and lapping. Shearing and forming processes includes pinching, blacking, drawing and forming bending. So this paper focus on the different sub process of the manufacturing of water pump components. And the researcher suggests how to improve present practices in water pump components manufacturing.

II) Objectives of the Study

1. To understand present manufacturing process of water pump parts in the company.
2. To study the trend of operation process effectiveness to product considering raw material and final quality of it.
3. To study present quality control practices in manufacturing process of the company.
4. To study the present working location of the workers in workshop of the company

III) Scope of the Study

1.The entire study conducted in Small Scale Engineering Firm working in MIDC Area, Palus Dist. – sangli.

2. The study is mainly focusing on manufacturing process of water pump parts in an organization.
3. The study is based on the data collected during the financial year 2017-18.

IV) Significance of the Study

1) This study helps to understand present manufacturing process of water pump parts in small scale manufacturing firm.
2) It enables to understand the meaning and significance of the operation process in production.
3) Due to the study of operation management, it shows that utilization of resources and inventory of available in the organization.

V) Review of Literature

1) Carlos F. Gomes, Mahmoud M. Yasin, João V. Lisbon, (2004) "A literature Review of manufacturing and measurement performance measures in an organizational context "

The key to the future of manufacturing performance measurement is information. Availability, reliability and responsibility As such, the facet of the availability of information. underlines the need for a systematic system of performance measurement information, Where information is not only tracked and stored, but also made available to the public. Management and relevant external entities. Reliability covers the reliability of the manufacturing resources, the reliability of the flow of information obtained from the flow of Workshop, as well as the reliability of the market information.

2) Manufacture of cooling channels that use earthworm voids caused by a process based on friction stirring: taking into account the cooling and fluid parameters (SolalehSalimi, Mohammad Haghpanahi, PouyaBahemmat) (2018)

In this research, the manufacture of MHE is investigated using a newly developed FSC process as a significantly profitable manufacturing method. The geometrical characteristics that are caused by different FSC tools and effective in the thermal and flow behavior of the coolant in the screw are acquired experimentally. Subsequently, the impact of the selection of FSC tools on the analytical parameters of flow resistance, convection and thermal conduction resistance is studied. Heat transfer rates and pressure drop are selected as the main completion criteria

3) The influence of the process parameters on the friction and stir welding of Al-Mg alloy and polycarbonate.HamedAghajaniDerazkola, MajidElyasi (2018)

The possibility of a different friction welding between the AA5058 aluminum alloy and the polycarbonate (PC) in the design of the lap joint was eliminated. Different aspects and processing parameters were analyzed to establish an adequate working window for the fabrication of an Al-PC biomaterial structure.

.4) Four types of innovation in the manufacturing process and their management concerns, Yuji Yamamoto *, Monica Bellgran (2013)

This work has proposed a model of four types of MPI. MPI covers a wide range of activities, from technological innovations to important changes in the work processes and cultural changes of an organization. Although researchers have discussed different types of innovation in the literature, MPI has been classified as a type of innovation among other types and no additional classifications have been made within MPI.

.5) Flexible microfabrication platform for the manufacture of microfluidic devices of PMMA G. Trotta, A. Volpe, A. Ancona, I. Fassi (2018)

In this work, the improvement in terms of flexibility of microinjection molding technology, based on the use of micro fabricated laser fs-laser inserts in a standardized mold, has been fully demonstrated. The combined technological approach provides an easy and low-cost method for the fabrication of large-scale polymeric microfluidic devices. This modular approach requires the replacement of only small inserts in the mold when the geometric characteristics of the device are changed. These inserts can be structured effectively by laser micromachining fs, reproducing the desired micro geometry with micrometric precision without the inconvenience of the long processing time required by the mold machining

VI) Research Methodology

1. Primary Data: -

- The primary data is collected through the discussion, observation with purchase department & operation head in the company.
- Data collected to machine work shop, employee and observation how to operations in jobs

2. **Secondary Data**: -

The secondary data collected through following sources: -

- Annual Reports of the organization.
- Company Manuals, Records. Reports etc.

VII) Data Presentation and Analysis

7.1 Products of the Company

A. **Pump Components**

Barrel-Pump Testing

Diffuser

Discharge-Elbow

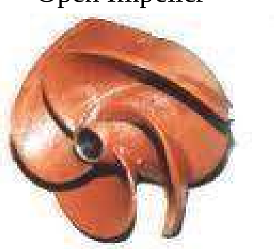
Enclosed Impeller

End Suction Pump

End Suction

NDI Testing

Open Impeller

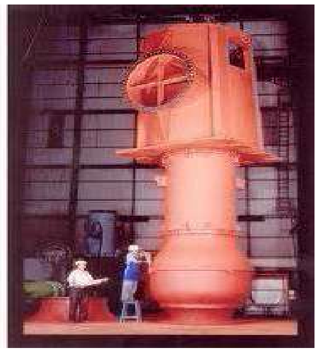


Pump Casing

Split Case

Split Case Pumps

Vertical pumps



B. Valve Components

Butterfly Valve

Ckeck Valve 06

Ckeck Valve 10

Kinetic air Valve

MDNRV Testing

MDNRV

Multi Door Non Return Valve

Sluice Valve 01

Sluice Valve 06

7.2: Production Process for Pattern Shop: -

Patterns are made from resin, aluminium, gunmetal and cost iron pattern making activity has following procedure involves offer receipt of component layout from the customer.

1. The drawing given by the customer is studied and marking for sample are mode on the CRC sheet.
2. From the sample the actual wood is cut as in the sample called as mould.
3. If the pattern is of resin, then the mould is made of plaster of Paris instead of wood.
4. After coring and moulding resin is spread on it.
5. Resin takes 30 to 45 minutes for the binding for pattern.

7.3: Production Process for Machine Shop: Machining of components has following procedure involved after receipt of drawing and components from customer.

1. Drawing study: -

The actual drawing given by the customer are studied or drawing are prepared by their given dimensions and measurement.

2. Process Planning: -

The planning for the process is carried out because different jobs required different machining steps. Process planning is also known as manufacturing planning, process planning, material processing, process engendering, Machin processing, routing study Facing: -

These parts are first polished and put on facing matching for smoothing the parts for matching. Facing.The process of removing material from the end of the work piece to produce a flat surface.

3. Boring: -

The boring is made on horizontal boring machine for big parts and for small parts. They are used for horizontally matching of parts. In machining, the drilling process consists of enlarging a hole that has already been drilled or castr, using single point cutting tool or with a loan head that contains several of those tool.

4. Turning: -

The turning is made on vertical turner length (VTL) machine. Here the whole body parts are vertically turned for machining their inner surface

5. Drilling: -

The parts are taken on drilling machine the points on the parts are made according to dimension and holes are made. A drill bit enters the work piece axially and cut a blind hole or through hole with a dimeter equal to that of the tool a drill bit is a multipoint tool and usually has a punted end.

Ring fitting: -Here the metal rings are fitted on particular parts inside the notes made.

6. Assembly: -

The different small parts are assembled (integrated) together and a single job is completed. All parts are assembly in the water pump in the like barring, shaft employer, etc.

7. Inspection: -After all, process the final inspection here is made by the superior and for dispatch. In their finishing quality cutting and others operations are check quality control

X)Conclusions: -

In this manufacturing process if we reduced use of the electricity and workers load it helps to improve of the quality and production. It is necessary to make minimum recourses utilization, change in the old machines, maximum use of automation machine lines etc. are required.

IX) Findings: -

1. The company using some manual machines. E.g. lathe machines
2. Deferent product of the company e.g. pump components, pump casing, vertical pumps, valve components, etc.
3. Machine jobs heavy and widened. E.g. vertical pumps, non-return valve, etc.

X)Suggestions: -

1. In the company use of minimum manual machine because time consuming and easy to work of machines of different jobs.
2. Use latest technology machines then improve quality of the product. E.g. CNC machine, computerized machine.
3. Use of the maximum material handling equipment. E.g. crane, tractors, trollies etc.
4. Use of solar panel in company because own electricity power generates, its save the electricity

ABSTRACT

In this paper we study Fuzzy set, Fuzzy number and Fuzzy Regression. Also we study comparison between Statistical Regression and Fuzzy Regression.

Keywords:- *Fuzzy set, Fuzzy Number, Membership Function, Classical Linear Regression, Fuzzy Regression.*

INTRODUCTION

Fuzzy concept was introduced by Zadhe in 1965. Zadhe is the father of Fuzzy Set.

- **What is Fuzzy ?**

The word fuzzy means "Vagueness" or "unclear information" or "the concept which does not give exact information about any matter ".

E.g. The word Young , Tall, High and good.

Aim of the Research :

- To know some basic terms in fuzzy theory.
- To know Fuzzy Set and Fuzzy Number.
- To study comparison between Statistical Regression and Fuzzy Regression.

Some basic terms in fuzzy theory:-

Crisp set:-This is an any classical or ordinary set.

e.g. {0,1} is a sample space of Bernoulli trials .

If we consider, X consisting natural numbers less than or equal to 20 i.e $X \leq 20$,

X={1,2,3,4,5,6,7,8,9,10,11,12,13,14,15,16,17,18, 19,20}

To find out the set of perfect square numbers we have,

p={1,4,9,16}

Here, X is universal set & p is crisp set.

- **Membership function:-**

Let, X bean universal set. Then the fuzzy subset A of X is defined by its membership function,

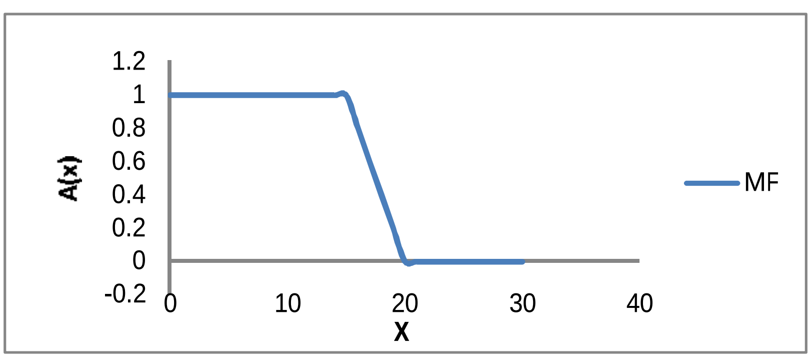
μ_A: X→ [0,1]

which assign a real number μ_A(x) in the interval [0, 1] to each element $x \in X$, where the value of μ_A(x) at x shows the grade of membership of x in A.

E. g. Let, A=Child

Membership function is:

$$A(x) = \begin{cases} 1 & ; if\, x \leq 15 \\ (20 - x)/5 & ; if\, 15 < x < 20 \\ 0 & ; if\, x \geq 20 \end{cases}$$



Graphical representation of membership function

Fuzzy set:-

Let A be a crisp set then the pair (A,μ_A(x)) is called as fuzzy set. Where μ_A(x) is membership function.

α- cut set:-

A fuzzy set *A* in *X* and any real number α€[0, 1],then the α -cut or α -level set of *A*, denoted by $\alpha_A$is the crisp set,

α_A = {x € X :μ_A(x) ≥ α }

The strong α-cut, denoted by $\alpha +_A$is the crisp set,

$\alpha +_A$ = {x € X :μ_A(x) >α }

E.g.

let A be a fuzzy set whose membership function is given as,

$\mu_A(x) = \frac{x-a}{b-a}$; a ≤ x ≤ b

$\frac{c-x}{c-b}$; b ≤ x ≤ c

To find the α-cut of A.

we first set α €[0,1] to both left and right reference functions of A. That is,

$\alpha = \frac{x-a}{b-a}$ and $\alpha = \frac{c-x}{c-b}$

Expressing x in terms of α we have x=α(b-a)+a and x=c- α(c-b).

which gives the α-cut of A is ,

α_A = [α(b-a)+a, c- α(c-b)]

Fuzzy Number:-Fuzzy numbers are special fuzzy quantities.

Definition: A fuzzy number is a fuzzy set A on R such that,

i) A must be a normal fuzzy set

ii)α level set of A are closed intervals .

iii)The support of A,{x: μ_A (x)>0} must be bounded

Types of Fuzzy Numbers:-

1) Triangular Fuzzy Number
2) Trapezoidal Fuzzy Number

1] Triangular fuzzy number:-

A triangular fuzzy number A can be defined as a triplet [*a*, *b*, *c*]. Its membership function is defined as:

$\mu_A(x) = \frac{x-a}{b-a}$; a ≤ x ≤ b

$\frac{c-x}{c-b}$; b ≤ x ≤ c

2] Trapezoidal fuzzy number:-

A trapezoidal fuzzy number *A* can be expressed as [*a, b, c, d*] . Its membership function is defined as:

$\mu_A(x) = \frac{x-a}{b-a}$; a ≤ x ≤ b

1 ; b ≤ x ≤ c

$\frac{d-x}{d-c}$; c ≤ x ≤ d

Classical Linear Regression:

Statistical linear regression analysis is widely used statistical tool to model relationship between independent and dependent variables and is useful in a non fuzzy environment where, the relationship between variables is exactly defined.

In a basic regression model there are n independent variables & the regression function is linear , it can be stated as;

Y= xβ+ ε

i.e $Y_i = \beta_0 + \beta_1 x_{i1} + \ldots\ldots\ldots\ldots\ldots + \beta_n x_{in} + \varepsilon_i$

Where,

Y_i = Response variable in the i-th observations

x_{in}= Independent variables in the i-th observations

β_n = Unknown parameters

ε_i = A random error terms

Assumptions:-

1. $E(\varepsilon_i)$ The errors have zero mean
2. $Var(\varepsilon_i) = \sigma^2$The variance of the errors is constant
3. cov(ε_i; ε_j)=0 The errors are statistically independent of one another
4. $\epsilon_i \sim N(0, \sigma^2)$is normally distributed

Fuzzy Regression:

Fuzzy regression is a non statistical method. Fuzzy linear regression developed by Tanaka, Uejima&Asai in 1982 .it's aim to model vague & imprecise phenomena using the fuzzy function defined by Zadhe .

Two general way to develop a fuzzy regression model

i) Model where the relationship of the variables is fuzzy.

ii)Model where the variables themselves are uncertain.

The fuzzy linear function as follows;

$$\tilde{Y}=\widetilde{\beta_0} + \widetilde{\beta_1}x_1+\ldots\ldots\ldots\ldots\ldots\ldots+\widetilde{\beta_n}x_n=\tilde{\beta}x_i$$

Where

$\tilde{Y}$= Fuzzy output

$\widetilde{\beta_n}$ = Fuzzy coefficient

(x_1,…….,x_n) =non fuzzy input

Some Fuzzy Regression models

i) $\tilde{Y}= x\tilde{\beta} + \tilde{\varepsilon}$, ii) $\tilde{Y}= \tilde{x}\beta + \tilde{\varepsilon}$& iii) $\tilde{Y}= \tilde{x}\tilde{\beta} + \tilde{\varepsilon}$

Use of Fuzzy Regression :

Statistical regression has many problems which can occur in the following situations:

- Difficulties to verifying distribution assumptions
- Vagueness in the relationship between input and output variables
- Ambiguity of events or degree to which they occur
- Inaccuracy and distortion introduced by linearalization

In such situations statistical regression is fail so we go for Fuzzy Regression.

Comparison between statistical regression and fuzzy regression:-

1. Statistical regression is based upon classical set theory & employs the concept and techniques of probability theory.
2. Fuzzy regression is based on fuzzy set theory. Hence the degree of membership of an object to a set is defined by a membership function & possibility measure provide a basis for the manipulation of involved fuzzy sets.
3. In Statistical regression model deviations between the observed values & the estimate values are supposed to be due to measurement.
4. In Fuzzy Regression model deviations are assumed to depend on the indefiniteness of the system structure not on its measurement errors.

ABSRTACT

This paper is concerned with Machine learning and deep learning can significantly help in solving the healthcare problems by developing classifier systems that can assist physicians in diagnosing and predicting diseases in early stages. However, extracting knowledge from medical data is challenging as this data may be heterogeneous, unorganized, and high dimensional and may contain noise and outliers. Most appropriatemethod can be chosen only after analyzing some of the available machine learning and deep learning techniques and validating their performances in terms of accuracy and comprehensibility. Main objective of this study is to understand the use of machine learning and deep learning in medical diagnosis

1.INTRODUCTION:

What is Artificial Intelligence?

In computer science, artificial intelligence (AI), sometimes called machine intelligence, is intelligence demonstrated by machines, in contrast to the natural intelligence displayed by humans and other animals. Computer science defines AI research as the study of "intelligent agents": any device that perceives its environment and takes actions that maximize its chance of successfully achieving its goals.

AI is “a system’s ability to correctly interpret external data, to learn from such data, and to use those learning’s to achieve specific goals and tasks through flexible adaptation”. Colloquially, the term "artificial intelligence" is applied when a machine mimics "cognitive" functions that humans associate with other human minds, such as "learning" and "problem solving"

There are many applications of Artificial intelligence. One of that is machine learning.

What is Machine Learning?

Machine learning is an application of artificial intelligence (AI) that provides systems the ability to automatically learn and improve from experience without being explicitly programmed. Machine learning focuses on the development of computer programs that can access data and use it learn for themselves.

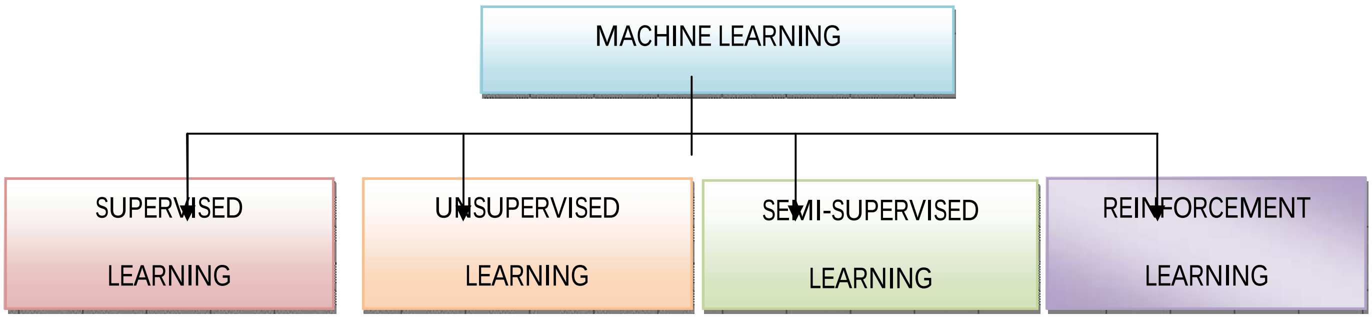
Machine learning (ML) is the scientific study of algorithms and statistical models that computer systems use to progressively improve their performance on a specific task. Machine learning algorithms build a mathematical model of sample data, known as "training data", in order to make predictions or decisions without being explicitly programmed to perform the task. Machine learning algorithms are used in the applications of email filtering, detection of network intruders, and computer vision, where it is infeasible to develop an algorithm of specific instructions for performing the task. Machine learning is closely related to computational statistics, which focuses on making predictions using computers. The study of mathematical optimization delivers methods, theory and application domains to the field of machine learning. Data mining is a field of study within machine learning, and focuses on exploratory data analysis through unsupervised learning. In its application across business problems, machine learning is also referred to as predictive analytics.

Machine Learning is the field of study that gives computers the capability to learn without being explicitly programmed. ML is one of the most exciting technologies that one would have ever come across. As it is evident from the name, it gives the computer that which makes it more similar to humans: *The ability to learn*. Machine learning is actively being used today, perhaps in many more places than one would expect.

Types Of Machine Learning:

Machine learning is classified into basic four types-

1. Supervised Learning
2. Unsupervised Learning
3. Semi-supervised Learning
4. Reinforcement Learning



Supervised Learning

Supervised learning is commonly used in real world applications, such as face and speech recognition, products or movie recommendations, and sales forecasting. Supervised learning can be further classified into two types - Regression and Classification.

Regression trains on and predicts a continuous-valued response, for example predicting real estate prices.

Classification attempts to find the appropriate class label, such as analyzing positive/negative sentiment, male and female persons, benign and malignant tumours, secure and unsecure loans etc.

In supervised learning, learning data comes with description, labels, targets or desired outputs and the objective is to find a general rule that maps inputs to outputs. This kind of learning data is called labelled data. The learned rule is then used to label new data with unknown outputs.

Supervised learning involves building a machine learning model that is based on labelled samples. For example, if we build a system to estimate the price of a plot of land or a house based on various features, such as size, location, and so on, we first need to create a database and label it. We need to teach the algorithm what features correspond to what prices. Based on this data, the algorithm will learn how to calculate the price of real estate using the values of the input features.

Supervised learning deals with learning a function from available training data. Here, a learning algorithm analyzes the training data and produces a derived function that can be used for mapping new examples. There are many supervised learning algorithms such as Logistic Regression, Neural networks, Support Vector Machines (SVMs), and Naive Bays classifiers.

Common examples of supervised learning include classifying e-mails into spam and not-spam categories, labellingWebPages based on their content, and voice recognition.

Unsupervised Learning

Unsupervised learning is used to detect anomalies, outliers, such as fraud or defective equipment, or to group customers with similar behaviours for a sales campaign. It is the opposite of supervised learning. There is no labelled data here.

When learning data contains only some indications without any description or labels, it is up to the coder or to the algorithm to find the structure of the underlying data, to discover hidden patterns, or to determine how to describe the data. This kind of learning data is called unlabeled data.

Suppose that we have a number of data points, and we want to classify them into several groups. We may not exactly know what the criteria of classification would be. So, an unsupervised learning algorithm tries to classify the given dataset into a certain number of groups in an optimum way.

Unsupervised learning algorithms are extremely powerful tools for analyzing data and for identifying patterns and trends. They are most commonly used for clustering similar input into logical groups. Unsupervised learning algorithms include K means, Random Forests, Hierarchical clustering and so on.

Semi-supervised Learning

If some learning samples are labelled, but some other are not labelled, then it is semi-supervised learning. It makes use of a large amount of unlabeled data for training and a small amount of labelled data for testing. Semi-supervised learning is applied in cases where it is expensive to acquire a fully labelled dataset while more practical to label a small subset. For example, it often requires skilled experts to label certain remote sensing images, and lots of field experiments to locate oil at a particular location, while acquiring unlabeled data is relatively easy.

Reinforcement Learning

Here learning data gives feedback so that the system adjusts to dynamic conditions in order to achieve a certain objective. The system evaluates its performance based on the feedback responses and reacts accordingly. The best known instances include self-driving cars and chess master algorithm Alpha Go.

DEEP LEARNING:

Deep structured learning or hierarchical learning or deep learning in short is part of the family of machine learning methods which are themselves a subset of the broader field of Artificial Intelligence.

Deep learning is a class of machine learning algorithms that use several layers of nonlinear processing units for feature extraction and transformation. Each successive layer uses the output from the previous layer as input.

Deep neural networks, deep belief networks and recurrent neural networks have been applied to fields such as computer vision, speech recognition, natural language processing, audio recognition, social network filtering, machine translation, and bioinformatics where they produced results comparable to and in some cases better than human experts have.

Deep Learning Algorithms and Networks −

- are based on the unsupervised learning of multiple levels of features or representations of the data. Higher-level features are derived from lower level features to form a hierarchical representation.
- use some form of gradient descent for training.

2. STATEMENT OF THE PROBLEM:

1. What is Machine learning?
2. What is deep learning?
3. What is the use of machine learning and deep learning in medical diagnosis?

3. OBJECTIVES OF THE STUDY:

The main aim of this research is to find out how machine learning is useful for medical diagnosis yet so the objectives of study are set out as

follows,

1. To study the main concept machine learning.

2. To study the main concept of deep learning.
3. To study what is the use of machine learning and deep learning in medical diagnosis.

4. METHODOLOGY:

4.1 Sample Design:

In this study researcher have use convenient method for sampling.

4.2 Technique of Analysis:

Use secondary data for comparison like

1. Internet
2. Machine Learning by Tom M. Mitchell
3. A Course in Machine Learning by Hal Daumé
4. Fundamentals of Deep Learning: Designing Next-Generation Machine Intelligence Algorithms Book by Nicholas Locascio and Nikhil Buduma.

4.3 Methods of Data Collection:

a. Secondary Data:

Present researcher has been collected data from websites, books, and internet.

5. SIGNIFICANCE OF THE STUDY:

1. This research is significant to the new learners and professional users also.
2. This study is also important to researchers who want to do further research in this area.

6. LIMITATIONS OF THE STUDY:

1. All the points related to machine learning have been not covered in this study.
2. There are many applications of machine learning. But this study is limited only for the medical diagnosis application.

7. RESULTS AND DISCUSSION:

Medical diagnosis

Machine learning can be used in the techniques and tools that can help in the diagnosis of diseases. It is used for the analysis of the clinical parameters and their combination for the prognosis example prediction of disease progression for the extraction of medical knowledge for the outcome research, for therapy planning and patient monitoring. These are the successful implementations of the machine learning methods. It can help in the integration of computer-based systems in the healthcare sector.

Diagnosis *via machine learning works when the condition can be reduced to a classification task on physiological data, in areas where we currently rely on the clinician to be able to visually identify patterns that indicate the presence or type of the condition.*

To break this down into details:

- **Classification**. The results are areas of medical diagnosis that can be reduced to a classification problem: given some data, diagnosis can be reduced to the problem of mapping that data to one of N different outcomes. In some cases, N = 2: the task is just to identify whether the data (e.g., an x-ray) displays the condition or not. Note that there are other problems (e.g., image segmentation) that can be tackled with deep learning, but I haven't yet seen them used *in isolation* for *diagnosis.*
- **Physiological data**. The results below tend to be using medical imaging data or data from other kinds of sensors. The explosion of results in these areas is, in large part, ascribed to the creation of data sets (e.g., these ones) that are far larger than those that were previously available. A common approach to annotate a data set (e.g., label whether an x-ray contains a tumor) is to have a set of clinicians give their opinion and to collate the responses.
- **We rely on visually identifying patterns**. The alternative to an automated diagnosis system would be to have an expert clinician look at your data (perhaps discuss it with some fellow experts) to determine the outcome. This point captures why deep learning *should be successful* in this area: deep learning automates the entire process of extracting patterns and learning relationships in this kind of 'unstructured' data. There are many

non-medical applications of deep learning (e.g., face recognition) that have similar requirements; because of this, the tech is quite mature. Indeed, even models trained on medical images are now being open sourced.

Where should this approach not work?

The pattern above gives some insight into areas where this approach *should not currently work. D*eep learning does not tell us how patients should be treated or how well they will fare when being treated. However, specifically related to the points above, there are domains that:

- **Aren't classification problems.** If we don't understand the disease well enough, we can't create data to train any algorithm. For example, there are conditions that do not have a well-understood progression that can be enumerated into a set of stages. In these cases, it would be very challenging to build a reliable model to tell us what stage of progression a patient is at—because we don't know what the stages should be.
- **Lack (or have subjective) data.** If there is little or no data, we cannot train models. Granted, this is starting to change—there are deep learning experiments that demonstrate learning from extremely small data sets. Where there is data, but it and/or patterns within it are subjective (e.g., the momentary experience of pain or stress)
- **Do not rely on medical devices**. Similarly, domains where a diagnosis cannot be derived by attaching the patient to some kind of machine and collecting a single "sample" of data.

There are various diseases of nervous system which are diagnosed by machine learning. Two out of which are mentioned below. In which, how machine learning is used to diagnose multiple sclerosis disease is find out by researcher.

Autism Spectrum Disorder Disease:

Autistic spectrum disorder (ASD) is a neuron developmental conditions which affects the brain's growth and development characterized by impairments in reciprocal social interactions, communication skills and stereotyped behavior. ASD affects approximately 1 in 100 individuals with recent estimates from the USA, suggesting that this figure could be even higher. ASDs are composed of five disorders, namely, autism, pervasive development disorder not otherwise specified (PDD-NOS), Aspirer's syndrome (AS), childhood disintegrative disorder (CDD) and Rett's disorder (RD). The diagnosis of ASD is not an easy process and generally requires certain behavioral and cognitive characteristics. Today, researchers are trying to find ASD diagnostic approaches through electrophysiological and neuroimaging techniques. Since EEG recording and analysis is one of the fundamental tools in diagnosing and identifying disorders in neurophysiology, researchers strive to use the EEG technique for diagnosing individuals with ASD. A group of studies has shown that EEG signals of individuals with ASD are relevant to age and intelligence quotient (IQ)-matched control subjects based on different conditions.

Multiple Sclerosis Disease :

Multiple sclerosis (MS) is a chronic disease of the central nervous system, which is made up of the brain and spinal cord. It is an unpredictable condition that can be moderately involved in disabling. There are many possible causes of MS, including viruses, autoimmune disorders, environmental factors and genetic factors. Women are affected more than twice as often as men, according to the National MS Society.

Multiple sclerosis (MS) is an inflammatory disorder of the brain and spinal cord in which focal lymphocytic infiltration leads to damage of myelin and axons. People worldwide, with an onset age commonly between 20 and 40 years, and an incidence more than twice as high in women compared to men.

The majority of MS patients (85%) usually experience a first attack defined as Clinically Isolated Syndrome (CIS), and will develop a relapsing-remitting (RR) form. Two thirds of the RR patients will develop a secondary progressive (SP) form, while the other third will follow a benign course. The rest of MS patients (15%) will start directly with a primary progressive (PP) form.

They all rely on using conventional magnetic resonance imaging techniques (MRI) such as T1-weighted, gadolinium-enhanced T1-weighted MRI, as well as T2-weighted and FLAIR, due to a high sensitivity for visualizing MS lesions. Conventional MRI is also used for quantifying lesion load (LL), a marker of inflammation process but only a moderate predictor of MS evolutions.

SYMPTOMS OF MULTIPLE SCLEROSIS:

MS affects normal sensation, thinking, and movement. Symptoms vary depending on the part(s) of the body where the myelin sheath is damaged. Symptoms of MS are often mild. In rare cases, people may have some paralysis and lose the ability to write, speak, or walk.

Common symptoms include:

- Vision problems, including double vision, blurriness, partial color blindness, eye pain, and partial or complete loss of vision
- Thinking and memory problems
- Fatigue
- Muscle weakness
- Dizziness
- Numbness or weakness on one side or the bottom half of your body
- Trouble with coordination and balance
- Loss of bowel or bladder control
- Sensations such as numbness or tingling (called “pins and needles”)
- Tremors, spasms, or seizures
- Electric-shock sensations caused by moving your head in a certain way

Symptoms of MS often come and go. Relapses may last for days, weeks, or months.

For it to be considered a relapse, symptoms must last at least 24 hours and occur at least 30 days after the last relapse. During remission, your symptoms may continue or disappear for a while. Lesions can form and permanently affect nerves i n that area.

HOW IS MULTIPLE SCLEROSIS DIAGNOSED BY MEDICAL SCIENCE?

Like other autoimmune diseases, MS can be difficult to diagnose. Most often, the first symptoms of MS are vision problems. Symptoms can also affect different parts of the body. Your doctor will ask about your health history and do a full exam. Early detection of MS is important because it gives us the opportunity to seek treatment and plan for the future. An exact diagnosis of MS is based on medical history and neurological examination using imaging techniques such as magnetic resonance imaging (MRI), lumbar punctures (LP) for cerebrospinal fluid (CSF) analysis, evoked potentials, and blood samples analysis. Obtaining a history about the onset of the first symptoms, any neurological disorders as well as illnesses such as diabetes and thyroid diseases, food habits, geographic locations, and history of medications taken and substance abuse is important. MRIs can identify any scar tissue formation and damage in the CNS. Evoked potentials test that include visual, brain stem auditory, and somatosensory evoked potentials offers information about demyelization in the optic nerve and CNS. In addition, CSF analysis for myelin basic protein and immunoglobulin- gamma determinations and blood sample analysis for detect of vitamin deficiencies may be diagnostically helpful.

Before making a diagnosis, your doctor will want to rule out other possible causes of your symptoms. To do this, they may order certain tests, such as:

- **Blood tests.** Your blood can show signs of illnesses that cause symptoms similar to those of MS.
- **Neurological tests.** Your doctor may want you to see a specialist. A neurologist can test how well your central nervous system is working. They will look for changes in eye movements, muscle coordination, weakness, balance, sensation, speech, and reflexes.
- **Spinal tap (lumbar puncture).** A small amount of fluid taken from your spine can show abnormal amounts of blood cells or proteins associated with MS. A spinal tap can rule out a viral infection or other possible conditions.
- **Magnetic resonance imaging (MRI).** An MRI can show detailed pictures of the brain and spinal cord, and if there are any lesions, or scars. Lesions aren't always caused by MS. In order to diagnose MS, you must:
- Have damaged myelin in at least two areas of the CNS.
- Have had at least two relapses, or episodes, that caused damage.

Your doctor also must have ruled out all other potential diagnoses.

USE OF DEEP LEARNING FOR MULTIPLE SCLEROSIS DISEASE DIAGNOSIS:

DEEP LEARNING:

Deep learning is a machine learning approach that uses layered hierarchical, graphical networks to extract features from data at progressively higher levels of abstraction. In recent years, methods based on deep learning have attracted much attention due to their breakthrough performance for classification in many application domains, including image recognition and natural language processing. Unsupervised deep learning can be particularly useful in neuroimaging, a domain in which the number of labelled training images is typically limited.

Deep learning has produced good results for a few applications such as computer vision, language translation, image captioning, audio transcription, molecular biology, speech recognition, natural language processing, self-driving cars, brain tumour detection, real-time speech translation, music composition, automatic game playing and so on.

Deep learning is the next big leap after machine learning with a more advanced implementation. Currently, it is heading towards becoming an industry standard bringing a strong promise of being a game changer when dealing with raw unstructured data.

Deep learning is currently one of the best solution providers for wide range of real-world problems. Developers are building AI programs that, instead of using previously given rules, learn from examples to solve complicated tasks. With deep learning being used by many data scientists, deeper neural networks are delivering results that are ever more accurate.

The idea is to develop deep neural networks by increasing the number of training layers for each network; machine learns more about the data until it is as accurate as possible. Developers can use deep learning techniques to implement complex machine learning tasks, and train AI networks to have high levels of perceptual recognition.

Deep learning finds its popularity in Computer vision. Here one of the tasks achieved is image classification where given input images are classified as cat, dog, etc. or as a class or label that best describe the image. We as humans learn how to do this task very early in our lives and have these skills of quickly recognizing patterns, generalizing from prior knowledge, and adapting to different image environments.

MS is a disease of the central nervous system, in which the body launches a defensive attack against its own tissues. MS can range from relatively benign to somewhat disabling to disturbing.

In view of this, researchers employ deep learning to extract latent spatial features in myelin maps, both on their own and combined with structural MRIs, to determine whether the deep-learned features can improve the detection of MS pathology

MRIs are a very important tool in diagnosing and treating MS, as they can disclose the telltale scars, also called lesions, on the brain or spinal cord. However, manually segmenting lesions from 3D images is tedious, time-consuming, and often not reproducible.

MS can be diagnosed by magnetic resonance imaging (MRI) scan of the brain, lumbar puncture, evoked potential tests and evaluating the size and location of lesions (areas of inflammation and myelin damage). In general, MRI is widely used to monitor the pathological progression of MS. The history of the disease, the results of neurological examination and MR images are certain indicators for the multiple sclerosis disease. MR is a sensitive examination for determining lesions. However, in order to make the final and exact diagnosis, there are some other criteria like McDonald Criteria that need to be made use of. MR images were caught by MR devices (Magnetom - Siemens Medical Systems, Integra Achieve - Philips or/and GE Healthcare) with 1, 5 tesla power. MRs which were obtained outside Hacettepe Hospital were uploaded by compact discs (CD) to PACS (Picture Achieving and Communication System). Lesions were counted within millimeter (mm) units measures using turbo spin echo (TSE) sequences. Lesion information was taken from three areas, namely brain stem, corpus callosum, periventricular area, upper cervical area.

Magnetic Resonance Imaging (MRI) information is read for three zones, and lesion changes (increase/decrease in number, size) are calculated.

Genetic algorithms have been applied to determine the CNN synaptic weights that, for a given MR Image, perform a binarization in such a way that only MS lesions are detected inside the brain area. The subsequent steps have been necessary in order to remove the skull and other unwanted pixels. Because of different shapes and intensity of the lesions, it has been necessary to train the genetic algorithm on images presenting different characteristics.The evolution of the CNN has been carried out using CNN Simulator, a software environment for the analysis of CNN dynamics; at each step of the training process, the error function to be minimized by the GA was the number of different pixels between the desired and the actual output of the CNN.

Multimodal deep learning should be used to discover and model correlations between hidden patterns in the normal-appearing brain tissues of co registered pairs of myelin maps and T1-weighted (T1w) MRIs. Myelin and T1w scans are used to provide complementary information in that the former contain myelin-specific features while the latter contain more general morphological features. Both types of features are known to be impacted by MS, but the benefits of deep learning for extracting myelin or myelin-T1w features are unknown. According to researchers hypothesis that deep learning can uncover spatial features in myelin maps that are more sensitive and specific to MS pathology than mean myelin measurements, and that multimodal deep learning can extract more sensitive and specific features than those extracted from either myelin or T1w modality alone.

Deep learning refers to neural networks with many layers (usually more than five) that extract a hierarchy of features from raw input images. It is a new and popular type of machine learning techniques that extract a complex hierarchy of features from images due to their self-learning ability as opposed to the hand-crafted feature extraction in classical machine learning algorithms. They achieve impressive results and generalizability by training on large amount of data. The rapid increase in GPU processing power has enabled the development of state-of-the-art deep learning algorithms. This allowed training of deep learning algorithms with millions of images and provided robustness to variations in images.

8.FINDINGS:

1. Machine learning is very important concept in Artificial intelligence.
2. Deep learning is sub concept of machine learning is also useful in medical diagnosis.
3. Deep learning analysis of MRI is accurate as compare to new radiologist.
4. Disease like multiple sclerosis diagnosed by deep learning very clearly.
5. Today's one of the best topic for research is Machine Learning and deep learning for medical diagnosis.

9. SUGGESIONS:

1. MRI, CT etc. scan centers should use machine learning or deep learning techniques for analysis of MRI or CT scan.
2. Medical sciences should include knowledge of machine learning and deep learning for radiologist.

10. CONCLUSION:

So, according to researchers view deep learning gives a big hand for medical disease diagnosis. With the help of deep learning, MRI analysis is made accurate as compared to new radiologist.

DY^{3+} DOPED POTASSIUM BORATE GLASSES FOR YELLOWISH WHITE (WARM WHITE) LED APPLICATION

Pravin P. Pawar

Department of Electrical Engineering, Indian Institute of Technology,Madras-600036, India

Rupesh S. Gedam

Department of Physics, *Visvesvaraya National Institute of Technology, Nagpur-440 010, India*

ABSTRACT

In this article, Dy_2O_3 doped Potassium Borate (KBD) glasses were synthesized by melt-quench technique and studied their spectroscopic properties for LED application. Two sharp peaks at 486 and 575nm and one feeble peak at 669nm is observed in the emission spectra under the excitation of 350nm. The glass KBD-4 doped with 0.5 mol % Dy_2O_3 shows highest emission intensity among all glass samples. The CIE chromaticity of glass KBD-4 shows emission in the yellowish white zone of the chromaticity diagram with colour coordinates x = 0.38 and y = 0.42. The CIE plot and images of glass samples under the excitation of 350nm indicates that these glasses can be used for intense yellowish white (Warm White) LED application.

Keywords: Glass; Potassium Borate;Rare Earth; Luminescence;WarmWhite LED.

1. Introduction

Luminescence, lasing and sensing properties of rare earth (RE) ions have drawn enormous interest in recent years for science and technology application [1]. The 4f–4f and 4f–5d electronic transitions of rare earth makes rare earth doped glasses are of great interest [1-3].

The borate based glasses have interesting structural and optical properties. Addition of rare earth oxide to these glasses one can allowto study and develop new material for optical applications. RE^{3+} doped glasses are potential candidate for lasers, waveguides, optical fibers, solar concentrators, plasma display panel,optical amplifiers, light-emitting diodes (LED's) and optical detectors etc. [2, 3].

The blue emission originating from Dy^{3+} at $^4F_{9/2}\rightarrow{}^6H_{15/2}$ is a magnetic dipole ($\Delta J = 0, \pm 1$ but $0\leftrightarrow 0$ is forbidden) transition varies with the host glass environment around Dy^{3+} ions. The yellow emission due to $^4F_{9/2}\rightarrow{}^6H_{13/2}$ transition is a forced electric dipole transition (hypersensitive) with the selection rule $\Delta J = \pm 2$ and it is strongly influenced by the crystal field strength around the rare earth ion and red emission at 662 nm assigned to $^4F_{9/2}\rightarrow{}^6H_{11/2}$ transition is an electric dipole allowed [4].

Borate glasses have been used as electro-optic switches, electro-optic modulators, non-linear parametric converters and solid state laser materials. On the other hand, borate glasses show high transparency, low melting point, high thermal Stability and good glass forming ability [5, 6].

A.N. Meza-Rocha et. al. [7] reported that the addition of potassium at the cost of zinc decreases the density and increases the molar volume of the glasses. The glass transition temperature and chemical durability decrease with increasing potassium content [8]. Thus, the space occupied by 2K$^+$, electronegativity and field strength between Zn^{2+} and $2K^{+}$ involving a higher ionicity of K-O bonds in comparison with Zn-O bonds and could open additional possibilities of obtaining tunable color light emitting application [8].

As mentioned above the addition of rare earth oxide is expected to modify the structural and optical properties of glasses. In this article, Dy_2O_3 doped potassium borate glasses have been synthesized by melt-quench technique. The optical properties of these glasses were studied and optimized the glass samples for LED application.

2. Experimental

The glasses with general formula 30 K_2O: (70-X) B_2O_3: X Dy_2O_3, where X= 0, 0.1, 0.3, 0.5, 0.7 mol %,were synthesized by melt quench technique. The high purity chemicals such as K_2CO_3 (E-Merck; >99.9%), B_2O_3 (E-Merck; >99.9%), Dy_2O_3 (Sigma Aldrich; >99.9%) wereused to synthesize the glass samples.

A proper amount of chemicals were weighed in an electronic balance (SHIMADZU AUW220D). All the weighed chemicals were thoroughly mixed together with acetone in an agate mortar-pestle. The mixture was then kept in a platinum crucible and melted in an electric furnace at 950 ^{0}C for 3 hours. The molten mass was quenched in rectangular aluminum mold at room temperature and annealed at 325 ^{0}C in an annealing furnace for two hours and allowed to cool at room temperature. The glasses were then optically polished and characterized by UV-Vis absorption and fluorescence spectroscopy.

Fig. 1: Images of potassium borate glasses doped with Dy_2O_3

Fig. 1 shows images of optically polishedDy_2O_3 doped potassium borate glasses. The images show change in the colour of glass samples from colourless to light yellowish green with addition of Dy_2O_3at the cost of B_2O_3.

3. Result and Discussion

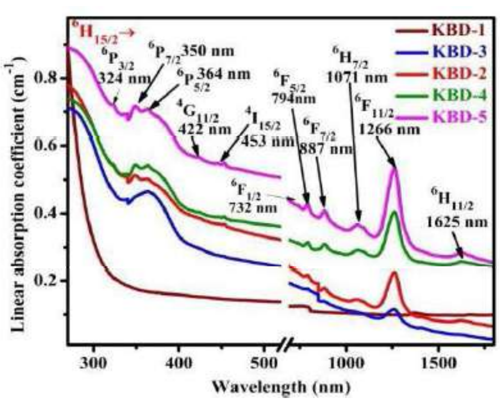

Fig. 2: UV-Vis-NIR absorption spectra of KBD glass samples

Fig. 2 reveals the UV-Vis-NIR absorption spectra of KBD glasses measured in the range 325-1800 nm. A spectrum reveals eleven absorption bands having different intensity at various wavelengths. The spectra show curved absorption edges showing the amorphous nature of the glass samples. The glass KBD -1 having 0 mol % of Dy_2O_3 does not show any absorption peak. The absorption bands are located at 324, 350, 364, 422, 453, 732, 794, 887, 1071, 1266, and 1625 nm which are assigned from ground level $^6H_{15/2}$ to various excited levels within the 4f shell at $^6P_{3/2}$, $^6P_{7/2}$, $^6P_{5/2}$, $^4G_{11/2}$, $^4I_{15/2}$, $^6F_{1/2}$, $^6F_{5/2}$, $^6F_{7/2}$, $^6H_{7/2}$, $^6F_{11/2}$ and $^6H_{11/2}$ levels of Dy^{3+} ions [2, 9, 10]. Intensity of all absorption peaks in the range 325-1800 nm increases with the addition of Dy_2O_3 at the cost of B_2O_3 as shown in Fig. 2. The intensity of 350 nm peak (corresponds to $^6P_{7/2}$ transition) is highest among all peaks. So the glasses are excited at the wavelength of 350 nm.

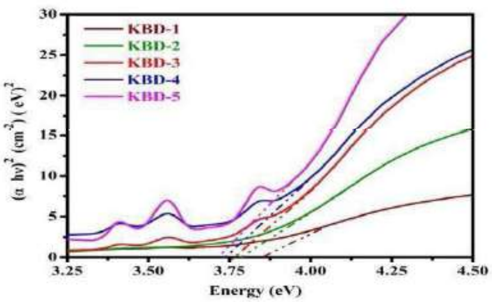

Fig. 3: Determination of optical energy band gap (E_g^{opt}) for allowed direct transitions (n=2) using Tauc's method

The optical energy band gaps were obtained by extrapolating the linear portion of the plot towards X axis as shown in Fig. 3 and 4 [11, 12]. The obtained bandgap values are depicted in table 1.

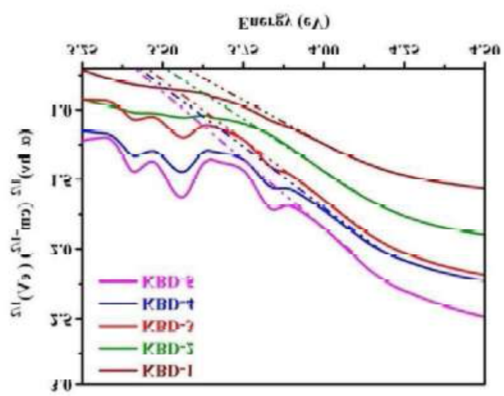

Fig. 4: Determination of optical energy band gap (E_g^{opt}) for allowed indirect transitions (n=1/2) using Tauc's method

Table 1: Allowed direct and indirect band gap values for KBD glasses

Band gap	Unit	**KBD**-1	**KBD**-2	**KBD**-3	**KBD**-4	**KBD**-5
Direct	(eV)	3.86	3.78	3.76	3.74	3.71
Indirect	(eV)	3.58	3.51	3.45	3.42	3.41

The addition of Dy_2O_3 to the host glass system decreases the direct and indirect optical energy band gaps (E_g^{opt})[13, 14]. Decrease in band gap is due to the change in glass structure occurred by the addition of Dy_2O_3 at the expense of B_2O_3. Formation of new extrinsic band made by Dy^{3+} on the lattice between the boron and oxygen ions results diminishing optical energy band gap [1]

.

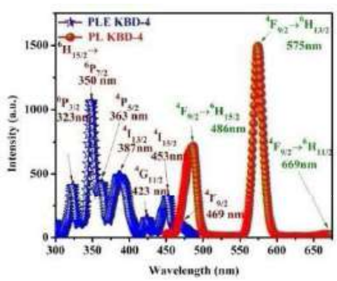

Fig. 5: Combined excitation (λ_{em}= 575 nm) and emission spectra (λ_{ext}= 350 nm) of KBD-4

Combined excitation and emission spectra for glass KBD-4 is shown in the Fig. 5. Figure discloses the various excitation and emission bands present at the various wavelengths in both spectra. The excitation spectra monitored at 575 nm shows seven excitation peaks located at 323, 350, 363, 387, 423, 453 and 469 nm which are attributed to $^6H_{15/2} \rightarrow {}^6P_{3/2}$, $^6P_{7/2}$, $^4P_{5/2}$, $^4I_{13/2}$, $^4G_{11/2}$,$^4I_{15/2}$ and $^4F_{9/2}$ respectively [12]. The excitation band at 350 nm attributed to $^6P_{7/2}$ is high intense among all the bands which is further used to excite the glass samples [11].

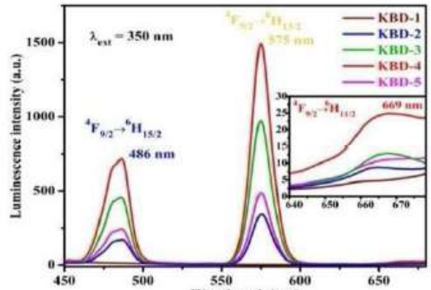

Fig. 6: Emission spectra for KBD glasses

The emission spectra of Dy_2O_3 doped K_2O-B_2O_3 glasses under the excitation of 350 nm are shown in Fig. 7. The spectra shows two sharp peaks at $^4F_{9/2}\rightarrow{}^6H_{15/2}$ (486 nm), $^4F_{9/2}\rightarrow{}^6H_{13/2}$ (575 nm) and one feeble band at $^4F_{9/2}\rightarrow{}^6H_{11/2}$ (669nm) belongs to 4f electronic transitions of Dy^{3+} ion [1,11, 12]. The peak at 575 nm corresponds to $^4F_{9/2}\rightarrow{}^6H_{13/2}$ transition is hyper sensitive in nature among all bands. This hyper sensitive transition belongs to electric dipole (ED) transition and the emission intensity of this transition is strongly affected by the crystal ligand field of atoms. On the other hand 486 nm transition belongs to $^4F_{9/2}\rightarrow{}^6H_{15/2}$ is magnetic dipole (MD) transition and is not sensitive to the crystal surroundings [11]. The remaining one feeble transitions at 669 nm belongs to $^4F_{9/2}\rightarrow{}^6H_{11/2}$ is MD transition [11]. The selection rules indicate the MD transition is allowed, whereas hypersensitive ED transition is forbidden [2, 4].

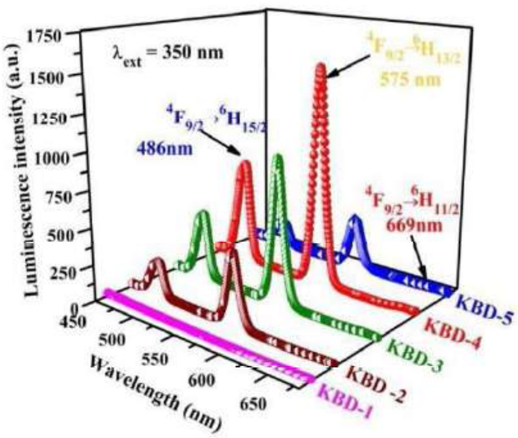

Fig. 7: Emission spectra of KBD glasses (λ_{ext}= 394 nm)

Fig. 7 illustrates emission spectra in the wavelength range 450-710 nm with the excitation of 350 nm. Figure shows emission peak intensity of all the bands increases up to KBD-4 and after that it decreases due to concentration quenching. At higher concentration (> 0.5 mol % Dy_2O_3) the Dy^{3+} ions come closer and closer and transfer excitation energy from one Dy^{3+} to nearby Dy^{3+} ions results concentration quenching.

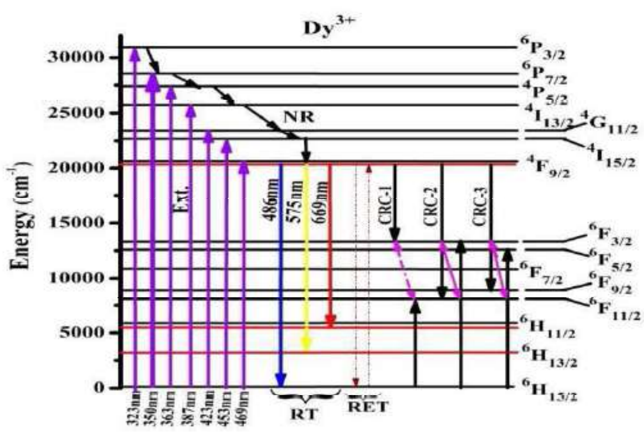

Fig. 8: Energy level diagram for KBD glasses

The luminescence mechanism of these glasses exited at 350 nm can be explained by energy level diagram as shown in Fig. 8. The excited Dy^{3+} ions de-excites to ground level by emitting a photon or phonon through radiative or non-radiative transitions respectively. Here the energy levels above the $^4F_{9/2}$ level are so closely spaced and hence the Dy^{3+} ions relaxes mostly at the $^4F_{9/2}$ level by non-radiative transition. Due to increase in the concentration of Dy^{3+} ions at $^4F_{9/2}$level, relaxed Dy^{3+} ions having high energy jumps to the various levels from $^4F_{9/2}$ to $^6H_{15/2,\ 13/2\ \text{and}\ 11/2}$ respectively at different wavelength [16].

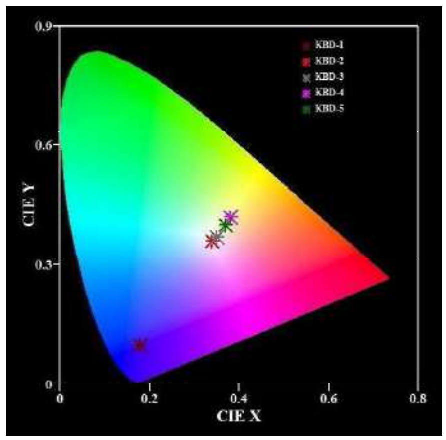

Fig. 9: CIE-1931 colour diagram for prepared glass samples

Fig. 10: Images of glasses under UV excitation

Table 2: CIE-1931 colour co-ordinates of all glasses

Glasses	Chromaticity co-ordinates	
	X	**Y**
KBD-1	0.18	0.09
KBD-2	0.34	0.36
KBD-3	0.35	0.37
KBD-4	0.38	0.42
KBD-5	0.37	0.40

CIE colour co-ordinates were computed for glasses excited at 350 nm (table 2). Fig. 9 illustrates the CIE-1931 colour co-ordinates for KBD glasses. The CIE chromaticity co-ordinates x = 0.38 and y = 0.42 and the images of the glass samples (Fig. 10) under the excitation of 350 nm shows glass KBD-4 have highest emission intensity in the yellowish white region [15, 16].

Table 3: Luminescence intensity of each band, Y/B ratio and CCT for all glass samples

Glasses	Luminescence intensity (a.u.)			Y/B ratio	CCT (K)
	$^4F_{9/2} \rightarrow {}^6H_{15/2}$ 486nm (Blue)	**$^4F_{9/2} \rightarrow {}^6H_{13/2}$ 575nm (Yellow)**	**$^4F_{9/2} \rightarrow {}^6H_{11/2}$ 669nm (Red)**		
KBD – 1	----	----	----	----	-3278
KBD – 2	168	343	9	2.0416	5206
KBD – 3	456	970	13	2.1271	4878
KBD – 4	701	1498	25	2.1369	4269
KBD – 5	241	484	11	2.0082	4410

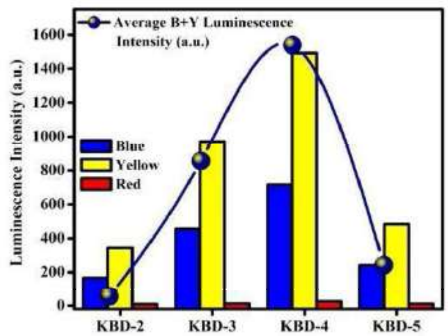

Fig. 11: Luminescence intensity and average Y+B intensities of glasses

Fig. 11 depicts the luminescence intensity for each band and average Y+B intensities for all glass samples. The luminescence intensity of all spectral transition along with the average Yellow/Blue ratio ($^4F_{9/2} \rightarrow {}^6H_{13/2}$)/($^4F_{9/2} \rightarrow {}^6H_{15/2}$) and CCT is shown in table 3. Y/B ratio depicts the local environment site symmetry and the electro-negativity of the surrounding ligands. It is observed from these results that the Y/B values changes due to the change in symmetry around the Dy^{3+} ion site [17]. From table 3 it is noted that the glass KBD-4 have highest Y/B ratio 2.1369 among all glasses, which indicates the intensity of yellow peak (575 nm) increases with the addition of Dy_2O_3 up to glass KBD-4 and then decreases and gives highest emission intensity in the yellowish white region Fig. 8, 9. The calculated value of CCT (4269 K) is very close to the CCT of yellowish white region.

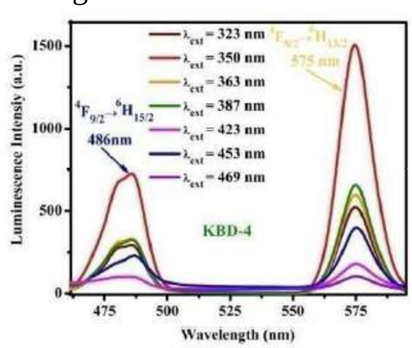

Fig. 12: Emission intensities of KBD-4 under various excitations

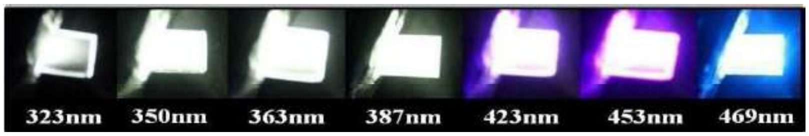

Fig. 13: Images of glasses under UV excitation of 350 nm

Fig. 12 reveals the emission spectra of glass KBD-4 under different excitations. It is evident from the figure that the glass KBD-4 excited at 350 nm shows highest emission intensity among all glass samples. The images in fig.13show the glass KBD excited at 350 nm isbrighter than other excitations having highest emission intensity.

Table 4: CIE-1931 colour co-ordinates of glass KBD–4 at various excitations

Glass KBD-4	CIE chromaticity co-ordinates	
	X	Y
323	0.34	0.37
350	0.38	0.42
363	0.36	0.39
387	0.37	0.38
423	0.32	0.31
453	0.33	0.32
469	0.26	0.28

CIE colour co-ordinates of glass KBD-4 under various excitations is depicted in the table 4. It is noted that glass excited at 350 nm show highest emission intensity with colour co-ordinates x = 0.38 and y = 0.42 [52].

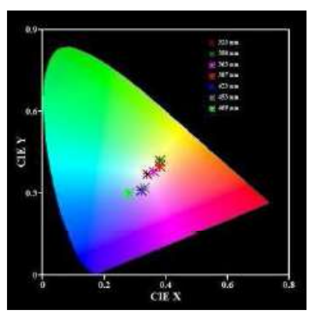

Fig. 14: CIE-1931 chromaticity diagram of glass KBD-4 excited at different wavelengths.

Fig. 14 illustrates the CIE chromaticity diagram of glass KBD-4 under various excitation wavelengths. It is noticed from the figure that location of the colour co-ordinates shows in the yellowish white region up to 387 nm and then it shows co-ordinates in the violet-blue region due to the maximum excitation energy passes through the glass sample and diminishes the emission colour and intensity. The glass excited at 350 nm excitation shows highest emission intensity in the yellowish white region. Therefore, these glasses are useful for the fabrication of warm white LED.

4. Conclusion

The direct and indirect optical energy band gap decreases with the addition of REO's. The decrease in E_g^{opt} with the addition of REO's may be due to structural changes in the glass matrix. The emission spectra of glasses (KBD-2 to KBD-5) show two sharp peaks at 486, 575 nm and one feeble band at 669 nmunder the excitation 350 nm. The CIE chromaticity coordinates (x = 0.38 and y = 0.42) and the images of glass samples under the excitation of 350 nm shows glass KBD-4 have highest emission intensity in the yellowish white region and which can be useful for Warm White LED for household and vehicles headlight application.

STUDY OF BIODIVERSIY AND SURVEY OF SOME MEDICINAL PLANTS ON NARANDE HILLS, HATKANGALE (KOLHAPUR)

Mr. S. T. Ingle
Dept. of Botany, D. K. A. S. C. College, Ichalkaranji, Dist. - Kolhapur -416115 (M.S.)
Email: subhashingle529@gmail.com

ABSTRACT

An attempt has been made for survey and Biodiversity of medicinal Plants in religious holy place is "Narande" hills, it is famous for "Nagoba" temple. It is located 3 Kim. Away from Hatkangale Tahsil. These hills have great significance in utilization of wild resources of medicinal plants. During the study of biodiversityand survey, thirty plants assessed by Quadrate method. These are found to have Medicinal values as remedy for different health problem by local people. It is revealed that, these wild resources (medicinal plants) are utilized by local people as per their needs but not exploited on a large scale.

Keywords: *Biodiversity, Narande hills, medicinal plants, Assessment.*

Introduction

It is the fact that over 70-80% of the world population depends on the crude plant drugs to get rid of their health aliments. An Indian material Medica includes about 2000 drugs of natural origin derived from different traditional systems and folklore medicines[1] while in modern medicines over 130 drugs originally extracted from higher plants. In last few decades, new trends of 'Herbal Drugs' from medicinal plants has becoming more prominently apparent[2,] Now days it has been estimated that the present global market is going at the rate of 20% annually[1]. Here the concept of Ayurveda begin and flourish between 2500-500 BC in India. The use of medicinal plants were documented in old literature half majority of them are found in *Rig-Veda* and *Athervveda* and also in *Charakasanhita* (900 BC), *Sushruta Sanhita* (600 BC) and *Ashtang Hridaya* (700 AD). Thus Ayurveda now has become scientifically organized.

India is a store house of medicinal plants and there are some 1250 Indian medicinal plants[4]. Survey of Kolhapur district shows 600 plant species of some therapeutic value. Out of them some important medicinal plants are found in the forest *Narande* hills. *Narande* hills are a holy place for Hindu temple in hilly region of Hatkangale Tahsil. It is situated at 16'45N, 74'22' E and at altitude 773 m. The vegetation is dry deciduous[5]. Narande is the part and parcel of Sahayadri ranges. The biodiversity of Narande hills show different medicinal plants in the form of herbs, shrubs, trees and climbers.

The common medicinal plants are assessed in this area like as *Plumbago zeylanica* L, *Gloriosa sauperba* L., *Discoriea bulbiflora* L., *Borrhavia diffusa* L., *Vitex negundo, Launea procumbens, Lantana camara* L., *Terminalia arjuna, Clerodendrum serratum, Grewia tiliaefolia* etc.

Material and Method

The assessment of medicinal plants studied with the help of a Quadrat method. The shape of Quadrat is usually square. The size of Quadrat varies with the type of vegetation to be studied. The Quadrate of 10 m by 10 m size are laid randomly at three differ rent places and species are recorded with their number in each. The plant species are identified by using standard literature[6]. The abundance, density, frequency and frequency percentage of each species are determined by using the standard methods. Then use the Standard methods[8]. The herbarium specimens are maintained in the college department by following routine herbarium techniques.

Observation

Table1. **Assessment of Medicinal plants by Quadrate analysis**

Sr. No.	Name of plants species	Quadrate 1	Quadrate 2	Quadrate 3	Total No. of species in all Qua.	Total no. of Qua. Studied	No. of Qua. in which species occur	Abundance	Density	Frequency %	Frequency class

30.	***Dichoma tomentosa Causs.***	03	01	06	10	03	03	9.5	9.5	100	E

Result and Conclusion

It is reveled from the (Table.1) that out of 30 medicinal plants 26 Plants are representing 100% frequency and 04 plants are 66%i frequency all Quadrates. It is used by local practitioners or vaidya's for treatment of various health problems.

Acknowledgement

First author is thankful to the joint secretary, UGC (W R O) Pune, for providing financial assistance through granting minor research project. Authors are also thankful to Principal Dr. Milling Hujare and Laboratory Staff for their technical help in present investigation

ABSTRACT:

Data Mining is a tool which is powerful to helps the extraction of projecting information from sets of large data which helps to incorporate to focus on the most important information in data storehouse. Data mining discovers hidden information from large databases. Data mining techniques provides practitioners and researchers the tools which are needed to analyze large, complex and frequently changing social media data. Data mining uses various statistical, graphical methods and machine learning methods to separate the knowledge in the form which is useful for many real life applications. Social network analysis has become a very popular field of a modern research because it is highly useful for many applications. In this paper we have reviewed various techniques of data mining used for social media data analysis.

Keywords: *Data Mining, Social Networking Sites, Social Media, Social Network Analysis*

Introduction:

Now a days, People uses Social media platform to discuss their different ideas, issues and opinions. Social Media are primarily Internet based tools for sharing, exchanging information and comments contents among themselves in virtual communities and networks. Today Social media is an important part of our life from shopping to electronics mails, education and business rules. Social media plays an important role for transforming people's life style. Social media includes social networking sites like Facebook, Twitter, Whatsapp and blogs where peoples can communicate with each other [3].With the huge use of social media via the internet, an unprecedented amount of data is available [5]. These data can be analyzed using different data mining tools and techniques. Social Network Analysis (SNA) is defined as the study of social networks in order to understand social network structure and behavior [1].

1. Social Networks Background:

A social network is a social structure made up of a set of social actors (such as individuals or organizations), sets of dyadic ties, and other social interactions between actors[6]. A Social network is a heterogeneous and multi relational dataset represented by a graph. Vertexes represent the objects (entities), edges represent the links (relationship or interaction) and both objects and links may have attributes. Social networks are usually very large for representing many real world applications [1]. Network construction from general, real world data presents various unexpected challenges owing to the data domains themselves (e.g., information extraction and preprocessing) and to the data structures used to knowledge representation and storage [2].

Figure 1.1 Example of a Social network.

Social networking is the practice to expand the number of one's business and/or social contacts of one’s by making connections through individuals, often through social media sites such as Facebook, Twitter, LinkedIn and Google+[18]. A Social network can be generally understood to be a kind of computer application which facilitates the creation or definition of social relations among the people based on general interest, activities, professional interests, associative relations, family and so on[1]. Representing and finding a social network from a data source can be a difficult problem. This challenge is due to many factors namely the ambiguity of human language, incompatible representation of information, multiple aliases for the same user and the ambiguity of relationships between individuals.

Social media refers to a variety of information services used to collaboratively by many people placed into the subcategories shown in following table [5].

Category	Examples
Microblogs	Twitter, GoogleBuzz
Photo and Video Sharing	Flickr, YouTube
Social bookmarking	Delicious, StumbleUpon
Social Networking sites	Facebook, LinkedIn, MySpace
Wikis	Scholarpedia, Wikihow, Wikipedia, Event maps

Today the rise and popularity of social media is Surprising and shocking. For Example, Consider the popular social networking site Facebook, during the last 15 years of operation Facebook reached over 2100 million active users [7].Figure 1.2 illustrates the exponential growth of Facebook during its last thirteen years [17]. The network statistics provides the ranking information about social media websites. Facebook is ranked 1st in the world for internet sites based on the amount of daily internet to the site [7].

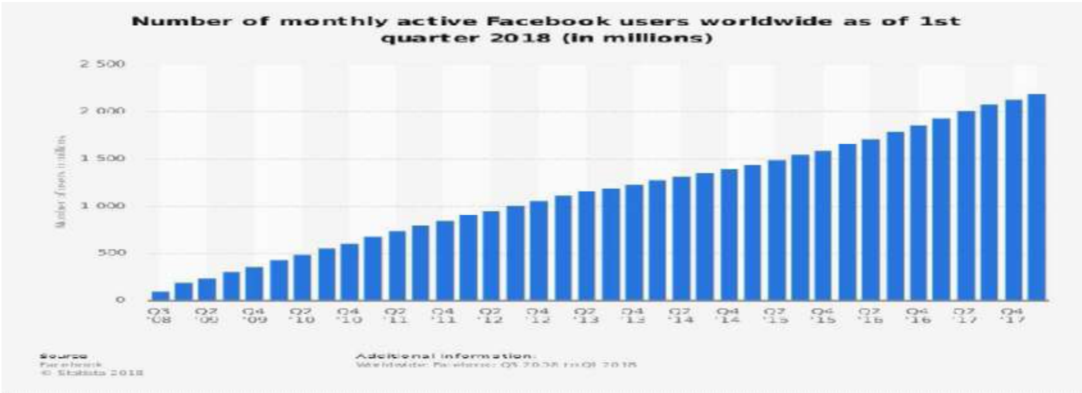

Figure 1.2 Total Facebook Active Users per Year

Figure 1.3 Illustrates the exponential growth of Whatsapp from August 2013 to February 2017[19].

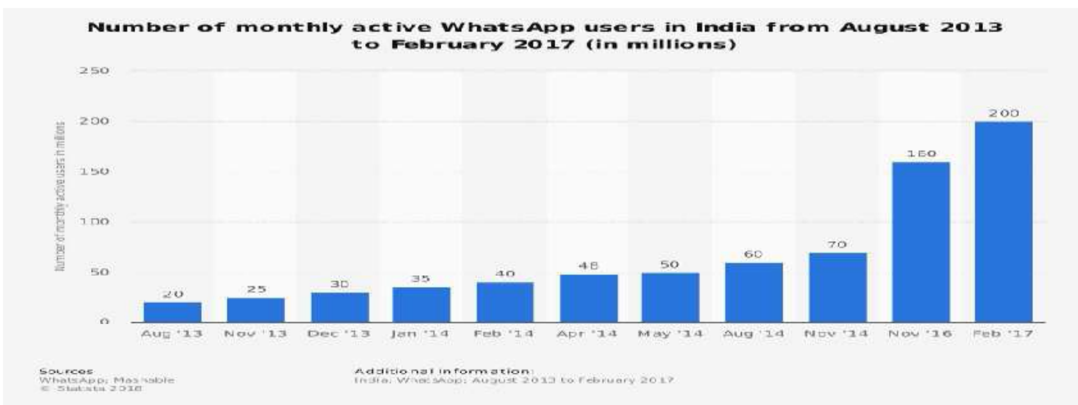

Figure 1.3 Whatsapp Active Users

2. Social Networking Pros and Cons:

2.1 Pros of Social Networking [9]

- Ability to connect to other people all over the world.
- Easy and instant communication.
- Real-time news and information discovery.

2.2 Cons of Social Networking

- Information overwhelms.
- Privacy issues.
- Social peer pressure and cyber bullying.
- Online interaction substitution for offline interaction.
- Distraction and procrastination.
- Sedentary lifestyles habits and sleep disruption.

3. Need of Data Mining:

We need data mining to obtain fruitful knowledge from our noisy data and it is achieved through a step by step process. Data mining helps to remove inconsistent data, extract patterns relevant to the analysis task, transform data into forms appropriate for KDD (Knowledge Discovery in Databases) and finally present the minded knowledge to the user through visualization. It helps to sort out the raw data, analyze it and process it into valid, relevant and accurate data effectively; data mining techniques have to be employed. Data mining is the process of analyzing large amounts of data in an effort to find correlations, patterns, and insights [13].

Following diagram shows different types of data mining processes.

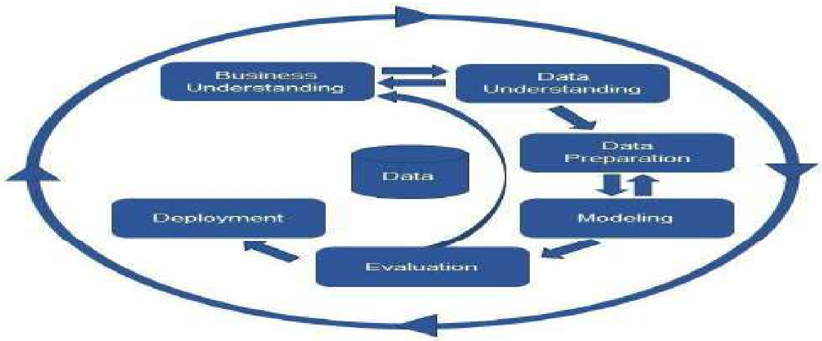

Figure 3.1 Data Mining Process Model

The main idea of data mining comes under following two categories [1].

a. Predictive data mining: It creates the model of the system from the given data.
b. Descriptive data mining: It generates significant data sets from the existing data.

4. Data Mining Techniques:

The aim of these above ideas is achieved by the following data mining techniques [1].

- **Characterization**: It is used to generalize, summarize and possibly different data characteristics.
- **Classification**: Data Classification is the process in which the given data is classified in to different classes.
- **Regression**: This process is similar to classification. The major difference is that the object to be predicted is continuous rather than discrete.
- **Association**: It discovers the association between various data bases and the association between the attributes of single database.
- **Clustering**: It involves grouping of data into several classes such that it describes the data. It breaks the large data set into smaller groups to make the designing and implementation process to be simple.
- **Change Detection**: This method identifies the significant changes in the data from the previously measured values.
- **Deviation Detection**: It focuses on the deviations between the actual values of the objects and its expected values. This method finds out the deviation according to the time as well the deviation among different subsets of data.
- **Link Analysis**: It traces the connections between the objects to develop models based on the patterns in the relationships by applying graph theory techniques.
- **Sequential Pattern Mining:** This method involves the discovery of the frequently occurring patterns in the data.

Following diagram shows some of the data mining techniques which are applied on social media for mining data.

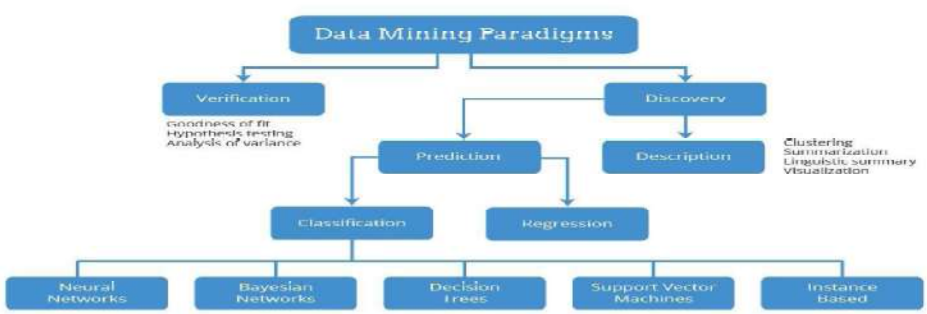

Figure 4.1 Data Mining Techniques Model

5. Social Network Analysis and Data Mining:

Data mining tools can answer industry questions that traditionally have time consuming to resolve. Data mining of social networks can be done using the graph mining methods such as prediction, classification/topologies, efficiency, pattern detection, measurement and metrics, modeling, evolution and structure, data processing and communities [2]. To extract the information represented in graphs here we need to define the metrics that describe the global structure of graphs, find the community structure of the network and define metrics that describe the patterns of local interaction in the graph, develop efficient algorithms for mining data on networks and understand the model of generation of graphs [1].

Social network and its analysis is an important part and it is widely spread among many young researches. Social network research emerged from psychology, sociology, statistics and graph theory. Based on graph theoretical concepts a social networks interprets the social relationships as points and their relationships as the lines connecting them [2]. Following are the various types of social network analysis.

5.1 Socio-Centric(Whole) network analysis

The focus of a whole network analysis is on measuring the structural patterns of those interactions and how those patterns explain outcomes, like the concentration of power or other resources, within the group. The underlying assumption is that members of a group interact more than a randomly selected group of similar size. Socio centric network analysts are interested in identifying structural patterns in cases that can be generalized in a whole network study. The actors of the network are usually known or easily determined. This is because a socio centric network study usually focuses on "closed" networks implying that the boundaries of a whole network are a priori defined [16].

Following are the key elements of socio centric network analysis.

- Emerged in sociology.
- Involves quantification of interaction among a socially well defined group of people.
- Focus on identifying global structural patterns.
- Personal network analysis
- Involves concentrations on interactions between an individual and all other Person related to ego.

5.2 Knowledge(Egocentric/Personal) based network analysis

In the social network parlance, the person we are interested in is referred to as the "ego" and the people referred to by the "ego" as his affiliate, advisor, friend, or relative, are known as "alters"[16].

Following are the key elements of egocentric based network analysis.

- Emerged in Computer Science
- Make generalizations of features found in personal networks.
- Knowledge discovery based on entities associated with actors in the social network.

Conclusion:

This study surveyed on social media, social analysis, data mining, data collection, and social data analysis methods. In this Valuable information is hidden in vast amounts of social media data, presenting huge opportunities for collaboration between computer scientists, social scientists to use data mining technologies. This paper also focuses on how active users on social media are increased day by day. Data mining provides efficient way to execute and make use of database. This paper briefly reviewed the various data mining techniques which are used for social network analysis. Social media data are vast, noisy, distributed, unstructured, and dynamic, which poses novel challenges for data mining. In this paper, we offer a brief introduction to mining social media.

CITATION ANALYSIS OF THE STUDIES OF 'BOTANY' CONDUCTED IN SHIVAJI UNIVERSITY DURING 1962-2012

Mrs.Shobha G. Dolas
Ph.D Research Scholar
E-mail: shobhadol2@gmail.com
Dr.ShaliniM.Sakharkar
Research Guide
Email: drshalinifulmali958@gmail.com

Abstract

Citation analysis is very important intrusions source for the Library. It plays vital role in the purchasing. In the present Research Paper research do chart this Productivity of awarded in subject of botany by Shivaji University 1962-2012. In their researcher open called out chronological growth of theses, authorship pattern, Gender wise research of Guide, Cited pattern researcher, Geographical distribution of citations

Keywords: *Bibliomentric analysis, Authorship pattern, Citation analysis,*

Introduction

Shivaji University is the local gateway to Knowledge University and different learning recourses provided by basic condition for all users. Our University all war to open and all courses in available in university. Among the different types of subject division are university are all 1961 to till date theses in library s storehouse. Citation analysis is a worthwhile are of research. "Citation analysis" refers to references in one text to author text, with information on where that text afound. Citation analysis is useful for understanding subject relationships, author effectiveness, and publication trends and so on. With citation analysis one can evaluate and interpret citations received articles, new bulleting, books, report, journals, association report, notes and other indications of scientific activity. The present study analyses the citations cited by the researcher in the theses of botany's. Accepted by Shivaji university of Kolhapur during 1962-2012

ObjectivesOf The Studly

This study has been undertaken with the prime objective of following aspects

1..To find out the chronological growth of thesis
2.To find the authorship patterns of the studies in Botany
3.To find out the gender wise researcher
4.Tofindthe Geographical area wise distribution of researcher

Scope Of The Study

The present research is limited to submit in total 100 citations PhD awarded in botany's subject by Shivaji University Kolhapur in the year 1961 to 2012.

Literature Review

Citation analysis is a set of method of analysing the scientific & technological. Literature & to trace the relationship, among science ofbotany's citation such as

1. Library and Philosophy and practice (e-journal) : Citation Analysis of Doctoral Theses in Education , University of Maiduguri, Nigeria, written by YhayaAliyuhe find the distribution of by subject area , ranked in the order or their scores from heights to lowest.

Curriculum and Instruction ranked highest with seventeen scores, representing of 32.7 percent. Guide and counselling with thirteen scores representing 25 percent or Logiest educational physiology and educational measurement and evaluation score representing same to two –two 3.8 same percent.

2. DESIDOC Journal of Library and Information Technology (DJLIT) : A Bibliometric study (2003-2012) written by Ramesh Pandita he find

the volume wise authorship pattern of article ,volume wise distribution of articles , geographical distribution of contribution ,contributors and authors he find that most of contributors and authors from India considering the 23 country number rank obtained to India Singapore is ranked on second number UK is ranked on third number and so on.

3. International e –journal of library science: Citation analysis of Ph.D theses awarded by Shivaji University, Kolhapur in the subject of "Enverment Science" (1972-212) written by DolasShobha G. And ShakharkarShalini M. , She find out In the cited documents Books has highest numbers are 796 score 65.51 presented , Single authors contribution is second stand by 410 score 33.34 presented from researchers

4. S. Thanuskodi from Annamalai university he find Instituted wise contribution referencing character characteristics ,forms of documents cited as 53.03% is journals , 22.32% books, 12.55% seminar / conference these position of citation shows mostly of journals

5. A bibliometric analysis of contribution in the journal 'Library Trends' written by
Taapas Kumar Das Mr. of Visva-Bharati central library santiniketan is analysed degree of collaboration , average length of contribution , distribution of citation Volume wise Distribution i.e. he find the study of citation year wise percentage 21.84% citation used by author, 23.30% citation mostly used by user as above.

6.Annals of Library and information Studies: A Bibliometric Study (2002-2010) writtenByShalini M. Sakharkar. Foreign countries contributed in this Indian Journal asFound in the study of nine volumes it reflects the popularity of the journal. MaximumPaper was contributed by B. K. Sen and average length of paper was 6 pages (63).And Single author's domination.

Methodology

The Study covers 100 thesis containing references total 26244, during the year 1961-2012 was collected fromShivaji University, Kolhapur library. The data collected was recorded on to sheets with pre-designed columns. All the required data like 1. Chronological growth of thesis,2. The study authorship pattern, 3.Gender wise researcher 4.Study of citation analysis pattern researchers. , 5. Geographical area wise distribution of researcher.Tabulated. The data was subjected to the analysis as per the objective of the study.

Analysis of the Data

Table No.1 Year-wise distribution of publications

Table 1 .Shows the year-wise distribution of references. The variations from year to year and the number of thesis have up and down during 1961- 2012. In the years1995 has highest number of references 7124 stand thesis followed by 2012 stand second cites 3327references 2010 stand third references 2861. The year 1990 lowest references 135

Table -1Number of Year wise theses Distribution references

Year	Year wise number of total theses	No. Of References	Percentage
1971	2	451	1.06
1972	1	404	0.95
1973	2	921	2.18
1975	2	799	1.89
1977	1	511	1.20
1978	1	402	0.95
1980	2	718	0.16
1981	4	2392	5.66

1982	2	648	1.53
1983	2	744	1.76
1984	7	1980	4.68
1985	1	171	0.40
1986	2	872	2.06
1987	5	2150	5.08
1988	3	1547	3.66
1989	1	447	1.05
1990	1	135	0.31
1991	1	152	0.35
1992	2	536	1.02
1993	2	460	1.08
1994	1	193	0.45
1995	6	7124	16.86
1996	1	207	0.48
1999	2	654	1.54
2000	4	1097	2.59
2001	3	731	1.73
2002	6	1761	4.16
2003	1	408	0.96
2004	3	1585	3.65
2005	1	330	0.78
2006	2	479	1.13
2007	5	2759	6.53
2008	3	642	1.51
2009	3	1131	2.67
2010	8	2861	6.77
2011	2	516	1.22
2012	5	3327	7.99
Total	**100**	**42245**	**98.05**

Table .2 Shows the Authorship pattern

Out of 100 thesis total citation 26244, the number of single author articles is the highest and it accounts for 10490. The two authored articles are accounts for8655, threeand more thanauthored articles6769andnot mention authors name 330.

Table 2. Authorship pattern

Sr No	No. of Authors	Total of Cited Author	Percent	Total Calculation	Presents
1	One author	10490	39.97	10490	39.97
2	Two author	8655	32.97	19145	72.95
3	Three author more than	6769	25.79	25914	98.74
4	Not mention author	330	1.25	26244	100
	Total	26244	100		

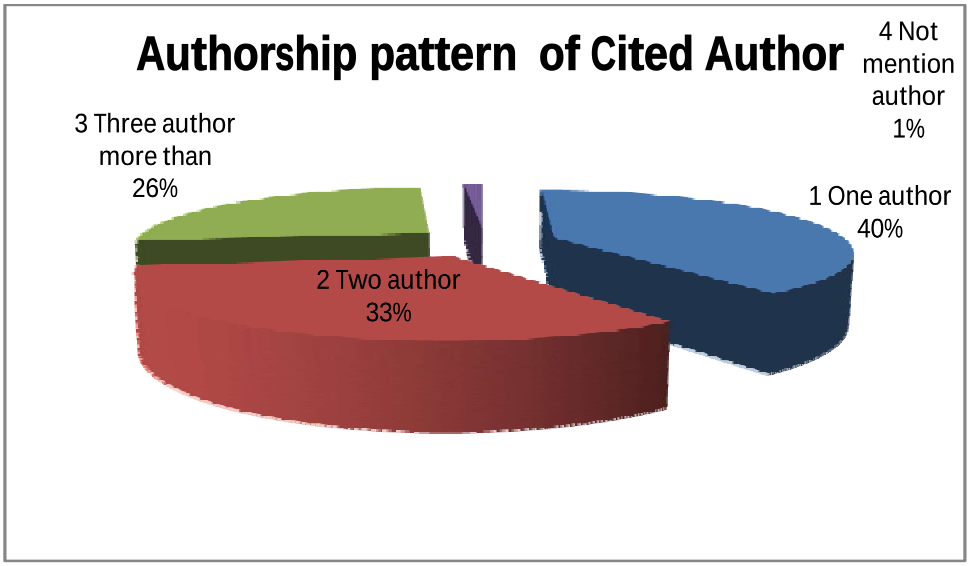

Table No.3 Geographical gender wise authors
Table 3.Shows the Gender-wise distribution of authors.The variations from year to year and the number of thesis have up and down during 1961-2012. In the highest number of Male 13325 stand and second cites Female 10482 authors and third numbers of not mention author 2437. The total authors 26244.

Table 3 Geographical gender wise authors

Gender wise authors	Total	Percentage
Male	13325	50.77
Female	10482	39.94
Not mention author	2437	9.28
Total	26244	100

Table 3 **Geographical gender wise authors**

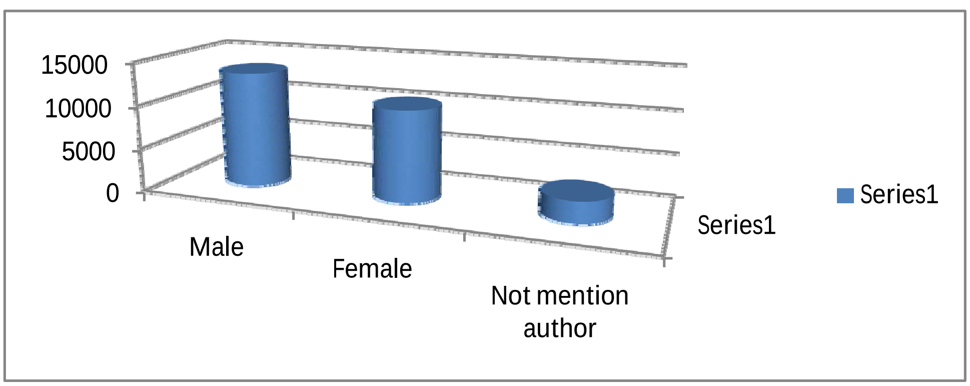

Table 4. Geographical distributions of authors
Table no. 4 shows that author distribution of thesis in references author of the forerunners majority number of contribution is from authors total 23171 (88.29 %),followed by authors stand second Indians authors number of total 2743 (10.45%) , Third stand not mention authors 330

(1.25%) total number of references authors 26244.

Table :4. Geographical distributions ofauthors

Geographical author	Total	Percentage
Author Indian	2743	10.45
Forerunners authors	23171	88.29
Not mention author	330	1.25
Total	26244	100

Table- 5 Degree of Collaboration

Table no. 5 shows that author distribution of thesis in references author of the Single author majority number of contribution is from authors total 10490 (39.97 %),followed by authors stand second Multi authors number of total 15754 (60.02%) ,

Authors	Total	Perce sent
Single Author	10490	39.97
Multi author	15754	60.02
Total	26244	100

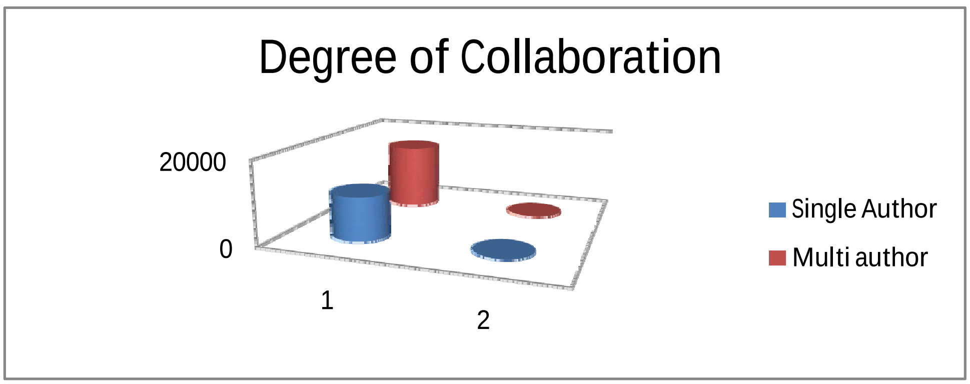

Table.5:Degree of Collaboration

The authorship pattern determines the type of research. It is found table4 that out of thesis and total citation 26244, the number of single author citations is the lowest and it accounts for total thesis authors 10490, multi author total year highest 15754and total years authors 26244. It helps it determine the degree of collaboration, in quantitative terms, of "Botany' theses" for the period of 1961-2012.

DC=Nm/(Nm + Ns)

DC=Degree of Collaboration

Nm= No of Multi-Author Publication

Ns=No of Single Author Publication

DC= 10490/26244

This shows the domination of multiple-authors over the single authors in the botany thesis during the period 1961-2012.

Table .6. Gender wise researcher

Table no. 4 shows that subject distribution of thesis of gender wise the majority number of contribution is from research of Male 63 (63.00%),followed by research stand second females number of and lowest researcher 37(37.00%) and male researcher and female researcher total number of 100 .

Table 6: Gender wise researcher

No.	Gender	Total Researcher	Percentage
1	Male	63	63
2	Female	37	37
	Total	100	100

Table 7: Gender wise guide

Table no. 7 shows that subject distribution of thesis of gender wise the majority number of contribution is from Male 81.00 (81.00 %),followed by research stand second but do not mention male and females number of 19(19.00%) and Female guide total number of 100 (100%) is lowest guide female .

Table.7. Gender wise guide

No.	Gender	Total Guide	Percentage
1	Male	81	81
2	Female	19	19
3	Not mention	00	00
	Total	100	100

Conclusion:

The Citation analysis study of the Botany for the period of 1961-2012 reveals that total number of contribution of period were 100 publication. These theses in number of contribution of references 26244.

The following conclusions are draw from the present study.

1. In the years 1995 has highest number of references 7124 stand thesis followed by 2012
2. The number of single author articles is the highest and it accounts for 10490.
3. In the highest number of Male 13325
4. Shows that author distribution of thesis in references author of the forerunners majority number of contribution is from authors total 23171 (88.29 %)
5. multi author total year highest 15754
6. That subject distribution of thesis of gender wise Researcher the majority number of contribution is from research of Male 63 (63.00%),
7. that subject distribution of thesis of gender wise Guide the majority number of contribution is from Male 81.00 (81.00 %),

STUDY OF NETWORKING OF COLLEGE LIBRARIES IN KARNATAKA

Y. B . Koradur
Librarian, STC College,Library andInformation Center, Banahatti
S. S. Bidare
Librarian, KLE's SCP Arts, Science andDDS Commerce College

ABSTRACT

This study evaluates the Networking in the college libraries in Karnataka. The present study demonstrates and elaborates the network security aspects among college professionals in Karnataka.Various factors motivating Colleges for implementing resource sharing, important objectives and areas ofresource sharing. Various considerations for networking for College Libraries for resource sharing are also discussed.
Keywords: *Network, College Libraries Networking, Karnataka, Hardware, Software andINFLIBNET*

Introduction

Global information technology and communication capacity is escalating, and India,with its population of more than a billion, is fast emerging as a knowledge hub.The growth of Indian telecom and of IT skills subsequently developed leave India wellplacedto use infrastructures to create centers of excellence that unite universities, collegesand research institutes as well. Libraries play a vital role to explore the large number ofdata and information with the use of ICT and networking with the emergence of knowledgein an education world.

Networking is also known as computer networking, is the practice of transporting andexchange data between nodes over a shared medium in an information system. Networkingcomprises not only the design, construction and use of a network, but also the management,maintenance and operation of the network infrastructure, software and policies.Computer networking enables devices and endpoints to be connected to each other on alocal area network (LAN) or to a large network, such as the internet or a private wide areanetwork (WAN).

Today college libraries are unable to satisfy all the information requirementsof their users from their own collection. Library networking is meant for promoting andfacilitating sharing of resources available within a group of libraries with the purpose ofproviding information services optimally to all the potential users and also to make use ofnational and international resources.

What is Network?

The term networks generally reflect to computer networks which allow different configuredcomputers to communicate among them and share resources and information available withthem.

UNISIST – II defines information networks as "A set of inter-relatedinformation systems associated with communication facilities, which are cooperating throughmore or less formal agreements in order to implement information handling and to offer betterservices to the users".

The National Commissions on Libraries and Information Centers in itsNational Programme Document (1975) defined a network as "Two or more libraries engaged in acommon pattern of information exchange, through communications for some functionalpurpose".

Such Library Networks in India:

The automation and networking of many universities, national institutions and other institutions of higher learning has been initiated by the national agencies dealing with information and library networks like INFLIBNET, DELNET, CALIBNET and other metropolitan and city networks which have started developing various bibliographic databases of their holding. NICNET and ERNET have made email/internet service available to the academic as well as in government sectors.

Types of network

There are three types of network viz., LAN, MAN and WAN. INFLIBNET comesunder Wide Area Network (WAN), where the data transmission rate is 100 Kbps. The channelof communication can be categorized as:

• Leased Line.
• Broad Band.

The nodal centres contain the databases of all documents available in their respectivecollege libraries (nodes) in standard format. Updates pertaining to bibliographicaldetails of latest documents acquired, are sent from nodal clients to their respective nodal centresfor every fifteen days. The nodal centres update their databases after receiving these detailsfrom their respective nodal clients.

The user of college library (node) requests the nodal centre concerned forinformation regarding the availability of a document required by him. The nodal centre sendsthe information to the user if it is available in its server. If the information is not available, thenodal centre requests other nodal centres, gets the required information and provides the same tothe user concerned.

When the user of college library came to know that the required documentis available in a particular library, he requests the librarian concerned for getting the bookthrough inter-library loan or he personally visits that library for using the book.

Need for the INFLIBNET

The INFLIBNET is a worldwide network, it could begin operations with the telephone lines initially and later with the satellite based communication. It is now being used by so many college libraries in Karnataka.This includes network feature, which is important for library networkactivities.INFLIBNET is work as nodal centre and their respective college libraries in Karnataka nodes. INFLIBNET offers free technological advice to the librarians.We know that now all colleges are comes under UGC i.e. University Grant commission. If UGC takes initiative to join all these collegesthrough the INFLIBNET network and make available the resources of libraries to each other, then it willbe the great step for UGC. And it canalso implemented at different levels. Some of them are Local, Regional, National and International

The major objectives of the INFLIBNET

- To promote and establish communication facilities to improve capability in information transfer and access that provide support to scholarship learning, research and academic pursuit through cooperation and involvement of agencies concerned.
- To establish Information and Library Network "INFLIBNET": a computer communication network for linking libraries and information centres in universities, deemed to be universities, colleges, UGC information centres, institutions of national importance and R & D institutions etc. avoiding duplication of efforts.
- To facilitate academic communication amongst scientists, engineers, social scientists, academics, faculties, researchers and students through electronic mail, file transfer, computer/audio/video conferencing etc.

Hardware and Software requirements for Networking

Software's

• Windows XP, Windows Server
• Library Software Package
• Visual Studio Packages
• MS-Office
• Multimedia software
• Networking tools
• Internet Explorer,
• Latest Antivirus Software and
• Net

Hardware's

- Intel Procure 2.7 GHZ
- Intel G 31 Mother Board
- 128 GB RAM
- 250 GB SATA Hard Disk
- Cabinet with SMPS
- Optical Mouse, Key Board
- Monitor
- Laser Printer

Need of the Networking

Network based services are very cost effective and offer many opportunities forproviding useful services to the member library users which are not possible manually.Some of the important needs for network based services are given below:

- Library Network offers great potential and new areas of sharing information amongdifferent college libraries.
- Online access and dissemination of information is possible without physicalpresence in library.
- E-journals can be accessed by many users at a time in a networked environment.
- Sharing of on-line e-journals can be made among many users at a time amongmember library users in the networked environment.

Objectives of the Networking

- To find out the availability of library resources in different subjects in the college libraries in Karnataka State.
- Exchange of documents and data.
- To promote sharing of resources.
- To build bibliographical databases.
- To build various types of databases like final year projects of the students, thesis,presented paper of seminar and workshops, etc.
- Help in the establishment of referral service, online retrieval of information andonline union catalogues
- To be done electronic mailing, file transferring
- To know the fund allotment for procurement of various library resources by theirmanagement.
- To find the various types of information services.

- DVD-RW
- Scanner
- Network Interface Card X2 10/100/1000 Mbps
- UPS at least 2 hours battery backup time or above
- Switch, Router, Network cabling and
- Broad Band Internet connectivity

- To know the existing staff pattern among the member libraries.
- To identify IT Facilities available in the libraries to find out the interest to theauthorizing of colleges of sharing their resources.
- To develop the professional relation with giving best services with the use ofnetworking.

Methodology

We can collect primary data through ask directly with our library professionals with our relation. The questionnaires canbe administered personally and ask to important college libraries in Karnataka through which we can gather the data for resource sharing. After getting such handsomedata, we can proceed further for Networking of Libraries.

Conclusion

Library Networking is an important factor in the growing era of informationexplosion. The libraries located in different geographical areas became a necessity for better resource sharing, networking of libraries using Information Technology is essential. As we know that NAAC has made mandatory for all theColleges to subscribe online journals of reputed publishers which costs near to more than lack rupee per year. Colleges of Karnataka can be minimize their expenditureand maximize their facilities if they plan to make networking of their libraries with the help ofINFLIBNET and Library Professionals together. Thus we can say that if wecan make the different portal of college library network, it would be veryfruitful to the students, staff and management of the institutions and off course to the library professional. A feasibility study to implement this networking and to identify the gaps must be taken up so that the existing model could be suggested to the Karnataka College Libraries.

THE STUDY OF THE USER'S AWARENESS, ACCESSIBILITY OF GREY LITERATURE

Mr. Khandekar G.B.

Librarian .(Asst. Prof.), Night College of Arts & Commerce.Ichalkaranji - 416115 (MS),
klp.ganesh@gmail.com

ABSTRACT:

The greatest challenge involved with GL items is the process of identification and location. As there are limited indexing and acquisition, availability or access is usually marred by uncertainty. The Absence of editorial control, raising questions about authenticity and reliability are the other constraints. Despite these problems, GL is continually referenced in scholarly activities, and therefore, remains an issue that librarians must contend with. There is a need for specialized bibliographic instruments to facilitate the identification and retrieval of GL.

This Research paper focuses on the study of User's Awareness and Accessibility of Grey Literature in Medical College Libraries.

Keyword: Library, Awareness and Accessibility, Grey Literature

Introduction

Grey Literature (GL) means publications / sources of hard copies and soft copies of theses, dissertations, clinical trial data, internal report, technical reports, trade literature, newsletters, factsheets, and proceedings of conferences, seminars, and workshops, institutional publications which are normally not available with booksellers. They are primary sources of information useful for academicians and researchers.

"Grey Literature is a term used to describe information products which are created and distributed in order to disseminate knowledge (ideas, facts, opinions) rather than to sell for a profit. In practice, and for that reason, Grey Literature is known as information which is not marketed and distributed by commercial publishing houses. The term 'grey' stems from the fact that such information is not published and not available through the traditional channels of publishers and booksellers. "Grey does not imply any qualification; it is merely a characterization of the distribution mode." (Owen, 1997). "In fact, a large proportion of Grey Literature is distributed in both modes: 'grey' in the form of pre-prints, 'white' in the form of a published article. The quality is often identical; the main difference being that 'white' literature has a quality stamp provided by the publisher and its embedded peer review process."(Owen, 1997)

- **Objective:**
- To study the user's awareness, accessibility of Grey Literature in selected medical college libraries.
- **The Rationale for Research Topic**

  The Librarians of Medical Colleges can play the vital role in bringing together all the Grey literature related to health care. There is a need to disseminate current information from the Grey literature.
- **Methodology**

  For this research, a descriptive method has been used. For collecting data, an Interview method was used.
- **Tool used for Data Collection**

  The investigator has used both primary and secondary data for the research work. An Interview method was administered for collecting the required primary data. Secondary data were collected mainly from the brochures, newsletters, records and different types of publications available in Medical College Libraries.
- **Scope and Limitations**

  The Researcher covered Selected MBBS (Government and private) Medical College Libraries for the Study.
- **Result and Discussion**

  A. Awareness and Organization of GL

Grey literature is not a very new concept. The concept was there, but, not many of the respondents may know that it is called Grey Literature. Some may not have a clear idea regarding the broadness of the concept. Even they may not be aware of all types of GL. How familiar are the respondents with the organization of GL in their own libraries? These issues are explored in the sub-sections.

B. Awareness of the Concept of Grey Literature

The users were asked whether they had known the concept of Grey literature or no.

Table No. 01

Awareness of Grey Literature

Know the Concept of GL	Faculty	Student	Grand Total
No	6	9	15 (3.75%)
Yes	194	191	385 (96.25%)
Grand Total	200	200	400

The above table shows that Grey Literature was known to majority i.e., 385 (96.25%) of users, this means that 96.25% of the respondents had aware the concept of GL, and the remaining 15 (3.75%) were not aware of GL.

7.1.2 Knowing the Availability of GL in the Library

Considering the mild apathy on the part of the user community to regularly bring to the attention of the other users the availability of recently released GL, some special efforts have to be made by the librarians. This could be done through organizing orientation programmes/workshops for the faculty members. Such programmes help in inculcating the habit of regularly tracking the new products of GL. These should be regularly brought to the notice of their users.

Therefore, the question was how do users come to know about the existence or otherwise of any particular GL in a library.

Table No. 02

Knowing the Availability of GL in the Library

Sr.No	Availability of GL in the Library	No. of Users (N=400)	Percentage
1	Through Catalogue	111	27.75
2	New Arrival List	167	41.75
3	Web Notices/Alerts	25	6.25
4	Browsing at the shelf	82	20.5
5	Not Answer	15	1.25
	Total	400	100

The above table gives the response of users on the ways of knowing the availability of grey literature in their libraries. Among the respondents, 41.75% users mentioned that they depend upon the new arrival list to know the availability of new GL in the library. Another 111 respondents (27.75%) opined that they rely upon the catalogue. This does not mean that the respondents do not use the other approaches. But, their first preference is stated here. From this, it can be concluded that a large majority of users rely upon new arrival lists.

C. Comfortableness withOrganization of content or classification scheme of GL

The technical processing of documents has become a necessity in order to organize systematically the library resources, in general and GL in particular. Such an organization is for easy and quick access and enhanced utilization. Classification is a means for an arrangement of resources in a logical sequence by assigning a definite location in a notational language i.e. a ‘Class number’ or ‘Call number’. The libraries have to facilitate easy access to its users by adopting classification and cataloguing schemes. Hence, the technical processing is a means of systematically organizing GL collections in the libraries.

Table No. 03

Comfortableness with Organisation or Classification scheme of GL

	Faculty Experience						
Experience in Years	**0-3**	**3-8 (A)**	**8-12 (B)**	**12-15 (C)**	**15-30 (D)**	**30+ (E)**	**Grand Total**
Comfortable with arrangement and classification	3.0 (60%)	3.1 (62%)	3.0 (60%)	3.3 (66%)	3.0 (60%)	3.1 (62%)	3.1 (62%)

The above Table shows, the level of comfort felt by the respondents with respect to the organization of GL. This sense of being how comfortable the respondents were with the organization (classification and arrangement) of GL is measured on a 5-point scale. It was therefore, concluded that a majority of medical college libraries recognized for research had organized their GL with an easy to follow a commonsense-driven classification scheme in their libraries. [Such local schemes are not the conventional schemes like CC, DC, UDC or NML, but these are functional.]

D. Organization of GL: Extent of Comfortableness with Cataloguing System

The Library catalogue was found essential, mainly to know the availability of particular information sources. It also indicates the location of the information resources in the library. Normally, libraries select the system which is comfortable for its users to follow or access. Moreover, libraries conduct user education and user instruction or orientation programs to facilitate and explain to make the users comfortable with the system.

Table No. 04

Familiarity with Cataloging System of GL

	Faculty Experience						
Experience in Years	0-3	3-8 (A)	8-12 (B)	12-15 (C)	15-30 (D)	30+ (E)	Grand Total
Comfortable with cataloguing	3.0 (60%)	3.0 (60%)	3.0 (60%)	3.2 (64%)	3.0 (60%)	3.1 (62%)	3.0 (60%)

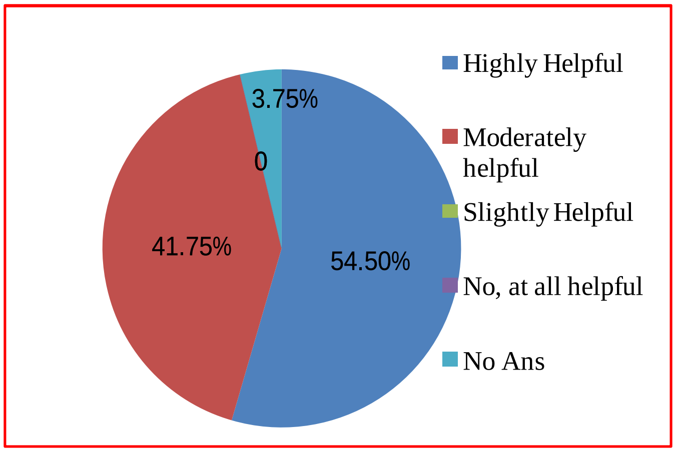
The previous section showed the number of respondents who were comfortable with the organization of GL, classification, and arrangement. In addition, this Table shows the Mean responses about being comfortable with cataloguing as per experience, and its overall mean was ‘3.0’ on a 5-point scale.

It was therefore, concluded that a majority of medical college libraries recognized for research at any level have organized their GL with an easy to follow classification and cataloguing schemes from the point of view of users.

E. Co-Operation and Assistance of Library Staff

Library staff provides information services to its users with the help of reference and information resources available in its collection. Quite often they are seen using institutional publications, dissertations, and technical reports.

Chart No. 1
Library Staff Co-Operation and Helpfulness



The above Chart shows, that the number of respondents comfortable and satisfied with the library staff services is 96.25%. They have felt that the staff is highly cooperative and helpful in getting information about GL.

One of the major methods of providing assistance is to give orientation to the new users. It may be organized collectively at the beginning of an academic year or individually when a new faculty or student joins the institutions. It may be through lectures, presentations or hands-on training. This may be carried out in a need-based manner. Even the library staff needs orientation after library staff gets trained in new information related services, they can give better orientation to their users.

F. Rank wise features

Table No. 05
Rank-wise Features

Rank	Features	Mean of Means
1	Digitized catalogue Entries	3.37
2	Adequacy and Comprehensive	3.20
3	Ease of Access	3.10
4	Library Permit to Borrow	3.02
5	Relevant and need-based GL	2.91
6	Old GL: Extent of Use	2.73
7	Avoids Duplication: Helps Selection of Topics for Research	2.72
8	Research Purpose: Extent of Use	2.71
9	Up-to-datedness and Recentness	2.61
1	Text-based Access through CD or Server	1.96
11	Facilitating Online Access	1.58
12	Teaching Purpose: Extent of Use	1.41

The above table is self-explanatory. ‘Digitized Catalogue’, ‘Adequate and Comprehensive Collection’ and ‘Ease of Access’ are the top three ranking features expected of a good GL collection. These are the minimum requirements expected of a GL collection. 'Text-based Access' and 'Online Access' are the needs at high-end. The other needs are in between and much based on the policy and management of the library in question.

G. Recommendation of GL for Procurement

Every Library's main objective is to procure and disseminate information about the relevant documents satisfying the information needs of its users. It attempts to collect a variety of documents. GL is one such a variety. The library is getting the recommendations from users for procuring GL materials from wherever it is residing.

Table No. 06

Recommendation of GL for Procurement

Sr. No	Recommendation of GL for Procurement	Faculty	Students	Total
1	Yes	150	151	301 (75.25%)
2	No	44	40	84 (21%)
3	No Answer	06	09	15 (3.75%)
	Total	200	200	400

The above table shows the pattern of recommendations of the respondents for the Procurement of GL. Among the users, 75.25% a majority of respondents have recommended titles of grey literature for procurement to their libraries on regular bases. On the other hand, 21% users have stated that they do not recommend grey literature at all. Either they are happy with the present collection of GL, or they may be relying on some other source.

From the point of building a need-based active collection, covering all related disciplines, all the faculty working in various areas of specializations, the users are encouraged to recommend grey literature for procurement. This not only helps the institution to develop the need-based quality collection, but also is an opportunity to get the required grey literature for the entire institution.

H. Keeping Track of Recently Released GL

In today's digital era, with the rapid development of the universe of knowledge, the user has to keep tracking new information about his/her area of research. GL exists in all disciplines of knowledge. It meets the information needs of various people from different aspects. It's important that users in all the fields keep themselves updated with the latest developments and be aware of work carried out by others in their subject field.

Table No. 07

Tracking the Availability of GL in Subject Filed

Sr. No	Tracking availability of GL	Faculty	Students	Total
1	Yes	135	138	273 68.25%)
2	No	59	53	112 (28.00%)
3	No Answer	06	09	15 (03.75%)
	Total	200	200	400

From this, it is noticed that a large majority of the users were actively engaged in research/teaching activities, and therefore, they regularly seek / scan recently released grey literature. This also shows the interest and enthusiasm of the respondents in collecting the latest information relevant to their research disciplines. Therefore, there was a need for a centralized service or mechanism to bringing whatever GL that have surfaced. This active user community will appropriately make use of the current awareness service, if extended. It can be concluded that a large majority of users are aware of their subject field.

- **Findings**
- It was noticed that 96.25% respondents knew the concept of GL. (Table No. 01) This implies that they were aware of GL. They access GL through many devices. (Table No. 02.)
- They were comfortable with the classification scheme, an arrangement of GL in storage medium and cataloguing system. (Table No. 03 and 04) This familiarity or comfortableness with cataloguing, classification increase with years of experience, but after reaching a peak it declines as seniors get more involved with managerial tasks and less with active research activities. Libraries use easy to follow classification and cataloguing systems. The library staff is cooperative and conduct regular orientation programmes hence, the collection was accessible. In short 'Digitized Catalogue Entries' and 'Ease of Access' are the first and third ranking features. (Table No 05 rank 1 and 3)
- Many respondents (75.25%) even recommend GL for Procurement to their libraries. (Table 06) They also know how to track the presence of new GL appearing in different Subject fields. (Table 07) This clearly shows the users' awareness, accessibility and use of GL.

- **Suggestion**

  - The Medical college libraries in Maharashtra should have uniform policies to guide the acquisition, processing, and management of Grey Literature.
  - Such policies should be harmonised among these medical college libraries to facilitate the sharing of resources to minimize duplication of research efforts.
  - Library staff, Faculties, and students must work together to facilitate the acquisition and management of grey literature emanating directly or indirectly from within and without these libraries. This process must be formalized

- **Conclusion**

The faculty and students who are actively engaged in research, teaching and learning have felt the importance of GL. Having noticed the value of GL, mainly for research and study, a large majority of them is found accessing and using GL collections existing in the holdings of the Medical college libraries. The faculties in the medical colleges have been experiencing an increase in demand for GL, especially by the users engaged in research.

DIGITAL/COMPUTERISED VISITOR MANAGEMENT SYSTEM FOR LIBRARIES

Minaj M. Naikawdi

Librarian, Smt. AkkataiRamgondaPatilKanyaMahavidyalaya,Ichalkaranji

minajnaikawdi2011@gmail.com

ABSTRACT:

Higher Education system in India has undergone a revolutionary change since last decade. After an interval of five years, institutes engaged in higher education need to be reaccredited by agencies like NAAC, NBT, and DBT etc. In the present scenario, libraries are expected to maintain their usage data for the sake of accreditation outcomes. As per revised accreditation framework, libraries are expected to upload data about no of teachers& students accessing library physically per day for the said period. In such circumstances digital/computerized Visitor Management software permits libraries to automate the entire process of registering a visitor, and capturing detailed information in seconds by simply scanning an ID

Keywords- *Library, Digital, Visitor, Management, Log-Book, Usage.*

INTRODUCTION:

Libraries are meant to support their user community to keep them abreast with the latest developments in their respective subjects and to provide information support for research. At the same time library is a source to get information support for their self-development too.Library provide their users with resources as well as space which user needs forstudy, learn new things, and thrive. In a nut shell, libraries tried at their level best to serve their users effectively & efficiently.While doing all these things, it is important to know who are thosespecific users out of large number of user community using library most frequently, how frequently they are physically visiting our library, how they use our services. It is an essential part of any active system to collect visitors' data. This data is important in analyzing effectiveness and efficiency of library services, additionally it helps to evaluate utilization of the library by the user community. Although user visit data is important, it is difficult to collect exact and error free user visit data manually.

WHAT IS A VISITOR MANAGEMENT SYSTEM?

Visitor management is the recording and collection of visitor data,process of tracking everyone who enters library premiseseither manually or through automated check in.A visitor may be a student, a faculty, a book distributor, a guest, a consultant, essentially, anyone who is not a regular student is a visitor.

- VISITOR MANAGEMENT SYSTEMS IN TRADITIONAL MANUAL SYSTEM:

Previously, old fashioned version of a visitor management system is the visit registers usually kept on at the library entry desk. When a visitor enters, they write down their name and the time. It's not a particularly good visitor management system (and certainly not environmentally friendly). But it does work — as long as libraries don't need an easily searchable visitor log, visitor photos, and ID badges. And as long as libraries are happy paying someone to sit at the front desk all day, just in case a visitor may arrive.

WHY DIGITAL VISITOR MANAGEMENT SYSTEM IS NEEDED?

Higher Education system in India has undergone a revolutionary change since last decade. After an interval of five years, institutes engaged in higher education need to be reaccredited by agencies like NAAC, NBT, and DBT etc. In the present scenario, libraries are expected to maintain their usage data for the sake of accreditation outcomes. As per revised accreditation framework, libraries are expected to upload data about no. of teachers& students accessing library physically per day for the said period. As today libraries have automated/computerized their in-house operations. But very few ILMs like SOUL, NewGenLib etc. have separate user visit management module. So still today libraries are keeping manual user visit registers or sheets at the entry gate for counting user visits to library. It is a time consuming & tedious work to do, to collect all the data and analyze it properly.

- How many visitors are there in library right now?
- How many did have visit library yesterday?
- What about on a particular date?

Anyone may probably struggle to answer any question, And if could answer them at all, they likely had to pull out the visit registers that holds visitor sign-in or find the old Excel spreadsheet in their systems and manually count the entries. While getting that visit registers or spreadsheet open, here are a few more questions which remain unanswered:

- How many of the names can be actually read or were typed incorrectly?
- How many visitors don’t have a time noted as to when they arrived?
- Who forgot to sign out?
- Was the sign-in or sign-out time that was recorded accurate?

VISITOR MANAGEMENT SYSTEMIN MODERN DAYS

Exact opposite of above-mentioned situation, Digital/Computerized visitor management systems are used to sign-in and track visitors who visit libraries. Digital visitor management systems are computerized version of the visitor sign-in sheet or visitor log book that is commonly used at libraries. Computerized/digital visitor management systems make the visitor sign-in process more efficient and provide an improved ability to track visitors.It allow libraries to gather and analyze library user traffic data. Whether library may track a simple metric, like how many people visit daily, or something more complex, such as how many people visit different sections, such data can be used from a traffic counter to improve library’s services and operate in a better efficient way.

Digital/Computerized Visitor Management softwarepermitslibraries to automate the entire process of registering a visitor, and capturing detailed information in seconds by simply scanning an ID Manage sign in types such as faculty, students, parents and library staff, external users or ex-students too. It allow visitors with easy and hassle free check-ins.

Hardware/Software requirement for Digital/Computerized Visitor Management

System:Digital/Computerizedvisitor management system requires of the following basic hardware/software:

1. Networking is required to interconnect the computers, computer peripherals. The intension of the network is to shareuser information to client machine.Nature of network would depends on requirement of the library. Local Area Network (LAN) is useful
2. Visitor management system software: This software is what runs the digital visitor management system. In most cases, this software would be installed on an existing desktop computer (servermachine)that is already located at the library.
3. Camera (optional): A camera can be attached to the computer which allows the visitor's picture to be captured by the visitor management system software.
4. Barcode scanner: A barcode scanner must be connected to the computer, allowing barcodes to be entered into the visitor management system. This scanner can also be used to sign-in visitors who have been pre-registered in the system and who hold a visitor card that contains a barcode.By scanning a printed barcode on the visitor card, visitors can be quickly signed in when they enter in the library premises.

As libraries have already all this set-up with them, there is no need of extra hardware except visitor management software.

Advantages of digital/computerized Visitor Management System:

Digital//computerized visitor management system provides advantages over the traditional manual visitor sign-in process as follows:

a) Visitors can be pre-registered in the system, speeding up the sign-in process when the visitor arrives.
b) Visitor card can be quickly printed that contains the visitor's photo.Visitor information can be recorded with more accuracy and more consistency.
c) Visitor information is stored in a computer database, which facilitatesgeneration of visitor’s reports periodicity-wise(i.e. daily, weekly, monthly or even yearly), user group/category-wise, gender-wise,subject-wise. These reports can be used to tell how many times each visitor has signed-in and signed-out and when, and tell which visitors were in the library during any given time period. Reports can be created that show all visitors who are presently in the library.
d) If visitor photos are captured, photos can be useful in investigating security incidents that may have occurred when a visitor was on the premises.

HOW DOES THE SYSTEM WORK?

1. Digital/Computerized Visitor is most efficient when combined with hardware for scanning student IDs and when it is set up on a dedicated computer station. Once the Log-in mode is activated, as students enter the room, they scan their IDs
2. System RespondsCustomizable "welcome massage”.
3. Students are then directed to a screen to select the Primary Purpose of their visit to complete the log-in process (Optional)
4. As students leave the library, they again scan their IDs to log-out**.(Optional)
5. The librarian, or system administrator has access to the Student Activity data, which will show the student ID number, student name, date, time in, time out**, and purpose of visit*.

The data is searchable (for a specific student, time period, etc.) and reports can be displayed and printed to show usage trends daily, weekly, monthly, by grading period, semester, etc.

CONCLUSION:

THE FUTURE OF VISITING MANAGEMENT SOFTWARE:In near future there won't be manual visit log-books/sheets anymore. Digital/computerized visitor management system would be mandatory like ILMS for libraries. If we took few more steps, it is possible to integrate existing visitor management system with ILMS.

MARKETING OF INFORMATION PRODUCTS AND SERVICES INLIBRARY AND INFORMATION CENTRE

Dr.R.P.Adav
Librarian,The New College, Kolhapur
Email.rpadav@gmail.com

ABSTRACT

Libraries have been considered essential to educational and research activities and have relied on Institutional financial support for their continuing operations the value of the library is also being called Into questions with increasing "googleisation" and new generations of users are making new demands on library service provisions. Directors of library are competing with multiple demands for funding on their campuses. They must understand client needs, plan service provision, promote the available services, deliver them efficiency and effectively and fight for financial and other support. Marketing has become an essential tool in justifying fund requirements. Using various market research techniques including surveys, focus groups and analysis of suggestions, libraries can understand the needs and design appropriate services and facilities. As librarian we should be actively marketing and promoting our library services this paper aims to throw light on marketing for information products and services in libraries. Practical solutions are provided on how to implement a marketing strategy, with particular emphasis on the value of using information products and services.

INTRODUCTION:-

Contemporary, conventional and modern management systems recognize that marketing is an essential component of any organization or institution's work plan. Even the products and Services of libraries are important and if the users do not know them, the products would not reach the target groups. Libraries being the institutions, which transfer the knowledge and content to the Society need to make available resources to the users. The current society is the knowledge-driven one the knowledge of technology makes the society and country stronger.

Concept making it available is the world of informing the users of libraries and Information centers about the information products and services to the end users. As the collection of libraries new extend beyond an unexpected boundary, the knowledge repositories available in The libraries should be made known to the users. Thus in our rapidly changing world, the Knowledge of how to market library products and services is becoming more and more important In order to secure the survival and prosperity of our libraries.

INFORMATION AS GOODS

The world is moving towards a knowledge based society for which information is of Primary importance. The last decade national and international initiatives have emerged to Establish information Infrastructures, aimed at increasing the use of information to a wide variety If users. Hence in implementing information systems, much focus is given to view information as a Commodity like any other product. Why and how information is viewed as a commodity?

Knowledge production needs investment of time, money, energy etc. Information and Decision making clearly has a cost, time, personnel, money and other related factors.

The cost of creating knowledge structure even is not measured in direct terms, people used to find the means of some forms of measuring the cost of it. The information is a produced as a result of human efforts is available as a commodity and naturally against the payment. The fact of Understanding the time spent for making lists, thinking, organizing and other related activities leads to conclude that information produced is available against money.

The following factors add to strength to view information as goods.

- It is true that we get information for cost, able to sell it for cost, as information is a product. Information is less influenced by incremental costs. Information is liable to have an infinite Distribution of a single idea. Since intellectual property rights hold well for information Production, it is measurable as product.
- In industrial economy, the technological increase is more. In achieving economy of Production, people consider commodities base, short-terms good & long term goods, Incremental costs of production and the property rights issues increase. In such situationInformation needs are high.
- In service economy, labor base, labor management and other related activities need Proper services drawn from different factors. The service economy is technology based. The incremental costs are significant in the service in the service economy. Ultimately information needed for effective service.
- It is clear that the cost of information production increasing information is acquired in Bulk quantity repacked & distributed aggregators buy, consolidate and redistribute it. The intellectual property issues made the information as an influential commodity. The ownership and control over costs of access is prime importance. Thus information embraces the characteristics of a commodity and now treated and sold like a product. Hence the study of marketing of information products and service arises.

CONCEPT OF MARKETING

Marketing has been described as"the process of planning and executing the conception, Pricing and promotion and distribution of ideas, goods and services to create exchanges that satisfy Individual and organizational objectives". Thus the marketing is not confined only to products, but extended to services, ideas, knowledge and information. According to **kotler (2001)** marketing is a social and managerial process by which Individuals and groups obtain what they need they need and want through creating and exchanging of Products and value with others. In other words "the art of helping your customer become better

This modern concept emphasizes that marketing is customer-oriented. The customer centered difference between marketing and selling. Selling focusing on the needs of the seller and marketing on the needs of the buyer. Selling is preoccupied with the seller's need to convert this product into cash marketing with the idea of satisfying the needs of the customer by means of the product. Marketing programmed, a non-profit organization can increase its chances of satisfactorily serving Stakeholder and client markets and also improving the overall efficiency of its operations. When the question of marketing in libraries is concerned, it embraces many related concepts and activities, the traditional libraries and the modern libraries continued to do. The term 'Marketing 'is now used extensively in literature, however there were activities in the past in Libraries that concerned the marketing activity. For example, advertising extension work, outreach, Publicity and public relations.

History of marketing library products:

- One hundred years ago at the 1896ALA conference, Luite Streams spoke about advertising the library and the library materials. In the earlier period, advertising was addressed to promote the optimum use of library materials. For advertising, several methods were employed such as display, notification, brochure, audio visual materials etc.

- Another similar work employed was the extension work. Even it is not perfectly coincideWith marketing, the concept comes forced to it. In Harrod's The Librarians Glossary Groups if people who might otherwise be un ware of the library…'But most of the 20th century library activities as advertising, extension work publicity and public relations Have often been met with the resistance fro, the library world on the whole.

Why marketing is necessary?

Whether marketing is essential for libraries and information centre? Since libraries Function mainly as not for profit organizations, the marketing concept is not required. This felling Tends to occupy the mind of many library and information professionals. Let us discuss some Factors that necessitate the marketing of information products and services.

- Each institution wishes ratio achieves high levels of customer satisfaction.
- Each wants to enhance the perceived value of their services.
- Both want to ensure the survival of their respective institutions.

Tony leisner, an expert in services marketing who did substantial work on library Marketing advocated that increased customer satisfaction will result in increased willingness to use And pay for the services offered. An enhanced perception of the value of the organization will translate and increased levels of the support and that usage and funding is necessary for the Continued survival and existence of the institution.

In the modern day world it is true that business institutions learn from the not for profits and social service organizations also learn from business institutions. The goals of the two types are Similar and many of the techniques used by them are also similar.

MARKETING PLANS AND TECHNIQUES OF INFORMATION

It is clear understanding that marketing of library and information products Same as the consumer products, the ideas and strategies are considerably differ from other products And also in the electronic era where information products are not visible like print books the Electronic information is not limited to one document we need a different mechanism to do the Marketing of information products and services.

Strategic marketing requires libraries to understand their customers changing information needs in order to proved customer focused services. Promotional materials such as newsletter, pamphlets posters and promotional letters have A key part to play in raising the profile of the organization. They are vital tools for promoting Existing and new services, and for encouraging new users to try the range of services, and can be produced in house on a small budget.

The following are the techniques one can employ are the awareness building; branding and Outreach let us discuss them briefly

Awareness building:

The world of information is too big as no one can able to document its availability in the Modern web based information available at anywhere in the world it becomes possible to access Any piece of information available at anywhere in the world. This situation warrants the creation of Awareness among the users about the information availability in all the knowledge repositories Irrespective of the location. Information professional need to be performed the following Awareness creation function to market their products and services.

Highlighting services of information centre by creating website.

- Newsletter of library and information centre or institution must cover the articles\announcements about the centre.
- Broadcasting of messages through e-mail to targeted groups.
- Use of bulletin boards to highlight new services.
- Prepare a cover letter to go with materials the centre wants to send to the library customers. Provide highlights of what is being sent. Packaging is an important aspect of marketing.
- Resort to notification service to the end users based on user profile.

Branding

- Highlighting information centre service, logo and address on brochures and web portal.
- Order seals or stamp with the information centre logo and address to affix to communications from the information center. Establish the library and information brand.
- Distribute paper or laminated bookmarks with the logo and address of the information center.

The above activities resemble marketing strategy used by commercial vendors. However in marketing service the above plans have more impact on the consumers when the Concept or need of the information arises among the users they should e made in a position to Recall the library and information center. It is the logic behind the branding of the library and Information centers.

Outreach

For adapting the strategy outreach one can do the following.

- Give presentations to various departments current and targeted prospective users.
- Proactively send articles press releases, announcements of books etc. Based on the profile and the knowledge of users areas of interest.
- Set up new product/service trails for specific user groups.
- Send welcome letter and invitation to the new users.
- Schedule orientation classes for new users.
- Hold on open house in the information center.

The activities help the users to reach the library and information centers.

TYPES OF MARKETING

Quality marketing requires an integration of three marketing strategies.

- **Forward marketing** that focuses on customers.
- **Interval/inward marketing** that focuses on staff development.
- **Reverse marketing** where by libraries from strategic alliances/ collaboration with other Network and national and international information systems.

The proper employment of these marketing strategies is vital for total quality marketing of Library and informational products and services.

Forward marketing

Forward marketing refers to the marketing approach that librarians undertake to meet Information needs of their users. Hence librarians provide values to their customers by providing The demand information product and services that fulfill their information needs. In developing a Customer value strategy, libraries need to understand how the users can be segmented.

A few quality services attributes of information products and services should be considered by librarians in providing quality services. They are:

(a) Responsiveness i.e. willingness to help library users with prompt services according to the Specific time needed by the library user. Timeliness is crucial for quality information service, As information has value to its intended user only when it is delivered t time when Information is needed for decision making.

(b) Reliability i.e. that library users have confidence and trust that information delivered to They are accurate and correct for them to make quality decision making.

(c) Availability i.e. that library and information products and services are always available when users want to be use them. The information products can be arranged systematically So that it is easy to locate.

(d) Caring i.e. that the information center staff is able to provide friendly and personalized Attention to each and every user. For specialized and personalized information services, the Information center staff should be able to search retrieve and consolidate information that is

Available in library collection or from other libraries or from the web and repackage the information according to the specific user.

Internal marketing :

For internal marketing the goal of the libraries must be communicated to all levels of staff So that they understand the future direction of libraries and have a shared aspiration towards realizing the vision of library to develop as a modern and need oriented information center.

The internal marketing lay dawn emphasis on the orientation and training required to the Library and information center personnel so that they would become ideal services oriented Professionals. The training to the information professional thus is considered to be a component in Marketing of information products and services.

Information products and services:

The new electronic media has changed the basic definition of a library collection. They seem To be the last to go in the information evolution which would be the last mile to the virtual library the nature of the electronic products has made a dramatic change in the services offered in the information world. The highly personal nature of services in libraries and information centers makes the delivery of services so challenging. The services are not just limited to the conventional Products such as books. Services cannot be done just by storing of one's information requirements and demands so that they can be used for others users.

Alert services :

The alert service is information transfer technologies in which selected (customized/personalized) data is captured and the notification of the content is delivered into the User at prescribe intervals or based on information extraction. The alert services can be augmented by filtering indexing and directory services to help Manage information overload.

Other services:

There are other information services is a new concept. Fee based services Need to oriented to this issue more kind of services.

Factors affecting pricing

Pricing of library services is influenced by several factors (Blagden, 1982), such as the Following:

(a) The historical factors that library services have been free all these years may depress the price Structure, i.e. it may undervalue the worth of benefit in any cost benefit analysis.

(b) A purchaser's willingness to pay at a particular price may not exactly measure the fullbenefit that accrues to him.

(c) The dual psychology if what a customer is actually willing to pay and what he says he isprepared to pay.

(d) The decision of users to use library services in special libraries is not likely to be based on the cost / price factor. This is because such users are not likely to be aware of the fact that the Information services charge is already recovered indirectly as the coast of maintaining the Library, i.e. , as overheads.

Market mix :

in marketing terms pricing is viewed as part of the marketing mix, along with promotion, place (distribution), product (i.e. the product/service we want to offer) and (for services) people and process. Marketing textbooks all stress that is important to see price in this context, rather than in isolation.

Philip kotler, a marketing guru who has written extensively about marketing of services and marketing is non-profit organizations has redefined the price of the marketing mix as cost to their users. This is a useful reminder that a user will look at all the time money and energy they have expended in order to use the service not just the [art the information vendor charge for. Therefore, user might be willing to pay extra for a service that delivered information directly to their door because the overall cost to them is lower, rather than paying less and having to collect the information themselves.

A common way of distinguishing costs is to look at whether they are fixed or variable costs, and whether they are costs or overheads. Fixed costs are those which are the same whatever the usage 9eg, a report, photocopier rental). They may also involve an up iront commitment. Variable costs are those which vary according to usage (eg. Online searches, information services by brokers).

Directed costs are those which can be associated directly with the service (eg.a journal or piece Of equipment bought specifically for use in one service) and overheads are costs which benefit a Range of services (eg. The cost of equipments). A salaried information professional employed on a Specific service might be seen as a fixed, direct cost. An information service by the information Broker or consultant out for the same service would be a variable direct cost.

Pricing strategies:

Cost-oriented: we can estimate what is the cost for the information providers, and then Work out the prices, and it can be based on what percentage cost-recovery (or profit) the Information providers want. This strategy is employed by the information centers which charge the internal users where the users may have access to the costing date. Here it may be important that the system is perceived to be fair. If information center staffs divide their time between several Timing (e.g. the time it takes to generate an invoice or retrieve and index collection). Staff costs for Administration, marketing etc.

Competitor-oriented: the center should look at other information centers are charging, And react accordingly. One can decide to charge the same to undercut or to present the service as Better in some way, so that charges can be more. It the center is charging internally others might Consist of external information brokers, or other information centers it is ideal to find out what Other information centre prices, even if one is adopting other strategies.

Demand oriented: in fixing the price one can look at “what the users will bear”: the Perceived value of the service. This means one could charge more for a service which is seen as Being value-added or elite (e.g., extra-fast delivery; delivery by electronic mail; formatting Information into a report). One needs to find out what the users perceive as being value added. This is generally the referred approach for those who take marketing seriously. However, costs and costs recovery objectives are obviously still relevant. The cost of information depends on nature, Situation, who and when is required. The value of information is not stable; it may get reduced as Time progress and the age of information goes up.

MARKETING REALITIES FOR LIBRARIANS

In the enthusiasm to borrow marketing concepts form business one is apt to forget the Realities of the library sector. Whole scale application if marketing techniques without proper Evaluation of their relevance to the information fields may become unproductive. Some of the factors which are relevant in evolving marketing policies for libraries (Gee, 1981) are now briefly discussed.

- Marketing tools are so many and so specialized that library and information centers can hardly find staff and resources for them. Hence, a promotional approach rather than selling or marketing is more suitable for library and informational centers it needs to be examined How far classical theories of customer oriented marketing are applicable within the realities Of information service organizations.
- The ultimate users of library and information centers services are individuals with unique and changing needs and no a mass. Hence an information service can be seen as a catalyst for a system and an individual. It is necessary to distinguish between marketing of Consumer

goods like soap, candy or radios and marketing of information embodied in a Physical medium, i.e. intellectual goods.

- The product distributed by libraries is information bought from publishers and other Production agencies. Information is not created by libraries. For successful promotion what are needed are professional based on knowledge of information materials, users and their Needs, experience, competence craftsmanship, comprehension of the clients uncertainly and the net result of saving time. A library sells service.
- Since library and information centers sell help or services or information products, Marketing should be concerned not merely with growth, but also with improvement. Seeking and serving new customers/clients should not be at the cost of existing users.
- Technical or professional merit of the information product or service alone does not decide the usefulness of the library more important is its ability to satisfy user needs

CONCLUSION

Libraries are being forced to explore the possibilities of cost recovery and profit potentials for their survival. Libraries must change according to changing market conditions. Libraries need to achieve an imaginative design of service and products, and develop communication methods and a feedback mechanism to improve service. Though the concept of charging for information, particularly in developing counties like India, is a difficult task, libraries must consider what funds that can be generated this way. It must be carefully considered which services can have only a token price, which one cover a reasonable proportion of cost, and which can generate revenues. The impact of the information technology and the adoption of the marketing approach will help improve services for users and enhance the reputation of libraries and information services and professionals.

SURVEY OF HEALTH SCIECNE LIBRARY SERVICES TO USERS FOR THEIR EXPONETIAL GROWTH: WITH SPECIAL REFERENCE TO KOLHAPUR DISTRICT.

Mr.Raghunath R. Chavan

Librarian, ShriVijaysinhaYadav Arts and Sciecne College, PethVadgaon

Ph. D. Scholar, J. J. T. University, Jhunjhunu, Rajsthan

ABSTRACT

The present study is focus on services of health science libraries in Kolhapur district. Researcher has been analyzed the secondary data to explore some points of user expectations from health science libraries. Researcher has been chose the sample of 20 libraries in Kolhapur district which are given support services to health science library users for their curriculum and practice purpose. The analyze data to find out the user expectation from health science library for their exponential growth. The study is focused on traditional to modern services, such as reference to referral, print to non-print, digital to e-resources, internet to web based and related facilities.

Key words:*Health Science, User, Kolhapur*

Introduction:

Now day's libraries and information centers provide variety of documentation and information services to support research and development, industrial productivity, management, marketing and trade activities and all other programme of development of government and non-governmental institutions.

The services are an effective means for providing information and knowledge to students and research scholars as well as teachers in colleges. Library service comes in to existence when it establishes relation among these books with the reader, the reading materials and the library services are very essential in college's libraries to its students and teachers. Therefore librarians should have knowledge about needs of students and teachers because they are the persons to serve.

The library shall establish and maintain a range and quality of services that will promote the academic programme of the institution and encourage optional library use. A library service plays a vital role in improving educational standards in research effects. It also plays a key role in decision making in industries and Govt. in the beginning it was thought that information services was sole domain of special libraries. Gradually the concept is spreading to college and university libraries also. The enormous development in indexing and abstracting services based information services has forced the college libraries to take the responsibility of providing information services.

Survey Area:

Kolhapur is a historical city. There are many institutions are providing various types of education in arts, commerce, science, education, engineering, and medical. In Kolhapur district 20 various types of health science colleges are there. Among them 895 faculties which are providing health science education in Medical, Dental, Ayurvedic, Homeopathic, Physiotherapy, Nursing and Pharmacy. Hence I have undertaken this survey work.

Objectives:

The library, its devices and operations aim to serve the needs and demands of the users. The librarians must know his users in order to be able to serve them effectively. The proposed research work will be based on the following objectives:

1. To study the information resource facilities and services available in the health science libraries inKolhapur district.

2.To identify the information requirements of the health science library user in Kolhapur district.

3.To observe an effective use of the library resources and its services.

This type of service take in to consideration immediate need of the Readers and provided information through computers. The new information (From Magazine's, Articles, Reports, patents) to closely related to the working nature of Readers and the field of their interest is selected with the help of computers due to which such services are defined as selective Dissemination of information (SDI)

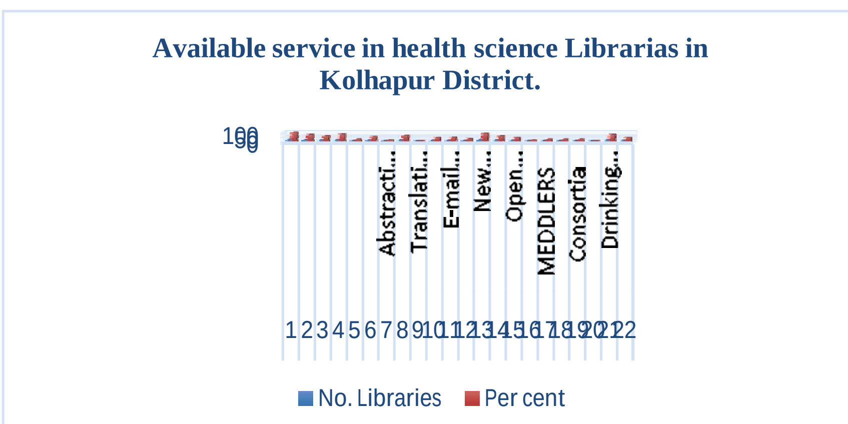
Analysis of received data:

For more information researcher asked regarding available services of health science libraries in Kolhapur district. Received information is explain in table.

Information of available services in the libraries:

Sr. No.	Available services	No. Libraries	Per cent
1.	Reference services	20	100
2.	Inter loan services	15	75
3.	Newspaper clipping services	12	60
4.	Book-bank facility	16	80
5.	Bibliographic services	04	20
6.	Night reading room facility	10	50
7.	Abstracting and Indexing services	02	10
8	Reprographic and Xerox services	13	65
9	Translation services	00	00
10	Internet and Fax services	08	40
11	E-mail and Scanning services	09	45
12	Digital library facility	05	25
13	New arrival display	18	90
14	CAS and SDI services	12	60
15	Open accesses	08	40
16	Campus Wi-Fi	02	10
17	MEDDLERS	04	20
18	E-books and E-journals	04	20
19	Consortia	04	20
20	User orientation program	00	00
21	Drinking water facility	15	75
22	Toilet facility	08	40

The above table contents are shown in bar chart.



The above table and bar chart is explained that 100% libraries are provided reference services, were as 80% libraries are provided Book-bank facility, 75% libraries Inter library loan and Drinking water Facility, 60% libraries are having New paper clipping services, Reprographic and Xerox services and CAS and SDI services, 50% libraries have night reading room facility, 40 to 45 per cent libraries provide Internet and fax services, E-mail and Scanning services, Open accesses and Toilet facility. 20% libraries are having Bibliographic services, Digital library facility, MEDDLERS, E-books and E-journals, and Consortia. 10% libraries provide Indexing and Abstracting services and Campus Wi-Fi. Not a single library provide their users Translation services and User Orientations Program.

Findings:

Today's age is electronic and digital ageso libraries are keep up to date with modern services and facilities. Here is seen that no anyone library is organize user orientation program and Translation services , 90 per cent libraries have not provide the Wi Fi and abstracting and indexing facilities, 80 percent libraries don't have bibliographic, digital library facility, e-books and e-journals with consortia.

Conclusion:

The user is a significant aspect of any library. Growth of library depends upon the number of users. Generally the user always requires good and health services from the library. The users indirectly concern with working period of the library, the library collection, infrastructural facilities, and right services to right users in right time.

To save the time of readers and also to provide every reader his book and every book his reader, open book access system should be implemented by the libraries.To make the library 24×7 accessible, the books should be digitized and campus should be made Wi-Fi enabled.The services like E-book, E-journals and E Thesis etc. should be made available to the readers.The libraries should organize Orientation programs to orient the readers about facilities and services available in the library to make the optimum use of library services.Internet facility should be made available to the readers. Every reader should be provides separate password for internet access. It is the responsibility of library to assist the readers for proper searching on internet. Loading, scanning and printing services should be provided to the readers.

Introduction:

21st century is the century of Information and Communication Technology(ICT). It has changed the society into information society and has to become integral part of our lives. Impact of ICT has been evident in almost all sectors like travel, banking, medical, postal, and educational also. Invention of smart/mobile phones is a vital achievement of technological developments. Technology not only changed the way of people access information, but has also given birth to new channels of communication. Recently I have read the news about a few city colleges from Mumbai are now allowing students to carry Smartphone's into examination halls. Becausethey are may not be able to take the exam without one. It shows that day by day technology going to makes everything easyforus. It solves many problems; reducesour efforts, also savesourmoney and time.Smartphone is one beautiful product of technology and plunging prices of handsets and nominal call, Internet have put mobile phones in the pocket of common people in India. India is the second largest country where more than 1 billion people using Smartphone's.They are using smart phones for various purposes in different sectors beyond merely talking and texting.In education sector academic libraries have always accepted the challenges of adopting new technologies, implementing use of modern equipments, and automating it in services, so that it can provide better services to satisfying the user needs.

When we are walking around campus of the college around the country, cell phones are ubiquitous. Recently, one faculty member asked me can we make some policies regarding Smartphone's in college. I thought since, it is seen that mobile devices are extensively used by today's younger generation; academic libraries can take advantage of it and start providing their services through smarts phones.Universities and Colleges in various countries are successfully providing library and information services through mobile phones. The oxford university library provides access to the online library catalogue, maps, contacts, news, travel information and podcasts through mobile phones. Similarly, libraries of American University, Washington D.C., Black State University, Boston College, Texas Christian University etc. offer mobile interfaces, applications and services over mobile phones. With the same time, it is important to realize howwe can offer these services from our end.Can we provide library services through the doors of Smartphone's? With this aim, the current study is being conducted to highlights the applications of Smartphone technologies in the context of effective services in the academic environment.

History of Smartphone Technology:

In 1924 first mobile was made which used in car for only voice communication. It was the **0th generation** of mobile technology. Nippon and Telephone stared first automated mobile system in Japan in 1979 which was called **1st Generation**. In 1983 USA started using Motorola Dyna TAC mobile phone. In 1984 Bell Labs developed Analog cell was used public service speed up to 204kbps. In the 1990s the **2ndGeneration** mobile phone emerged primarily using the GSM standard. In that generation text data is being sent using SMS services. GSM phones provide Internet facility for wireless user. It acts like a modem for fax, e-mail, and browsinginternet. General Packet Radio Service (GPRS) invented in **2.5 G Network**. It was the packet switching network. GPRS limitations overlay by EDGE in **2.75 generation**. It was very popular because of its higher bit rates. In 3rd Generation circuit switching method was used instead of packet switching. 3G become necessary for smart phone users because its features like fast internet and wide coverage. In 1998 in Japan first pre-commercially **3G networks** was launched by NTT Docomo branded as Foma. It included wireless web based access, email, video conferencing; multimedia services consisting mixed voice & data streams. MMS application is messaging with graphics, pictures messages, delivering photos requires Smartphone's. **4G technology** is a transition from the earlier technology. It promises to bring some of the revolutionary changes in the mobile world which very favorable for the mobile users. Fasters data and IP packet transmissions, high quality voice and multimedia in real-time anywhere across the globe are some incontrovertible features of the 4G mobile phones.

Different Operating Systems of Smartphone's

A mobile operating system, also called a *mobile OS*,is an operating system that is specifically designed to run on mobile devices, which has similar features of a PC. Operating systems are Android is an open source founded in Oct 2003 by Andy Rubin and backed by Google, iOS developed by Apple in 2007, Windows Phone 7 in 2010 by Microsoft, BlackBerry in 2012, Firefox OS by Mozilla in Feb 2012, Sailfish OS by Linux Kernel, Tizen by Linux foundation. Now days Android is the best-selling smart phone platform.Marshmallow 6.0 is the current version of Android OS available via Google Play.

Advantages of Implementing Mobile Technology in Academic Libraries

1. **Ability to access Information:** Availability of Information at every corner of the world is possible through of smart phone technology. Who are not able o visit library they can get constant information link via mobiles.
2. **Audio/Video Facility:** A collection of audio books both free and subscribed are available for Smartphone.

3. **Personalized Services:** It helps users to interact with library staff to get specific information or reference away from library.
4. **E-Books & E-Journals Access**: Library can deliver E-Books and E-Journals to users through Smartphone.
5. **Location based Services:** Mobile technology enables libraries to offer location based services through global positioning system (GPS). Libraries can guide users to locate specific document and service through maps and navigation tools.
6. **Time Saving:** No need to record information about resources while browsing and searching.Manual method of charging and discharging resources takes time of users now by using Smartphone's it's solve time consuming problem.
7. **Limitless Access**: User can access resources anywhere by 24*7 at their desktop.

Smartphone Services in Libraries

Ancient time libraries were collections of books, manuscripts, journals and other sources of recorded information. Now days, traditional libraries are going into digital and virtual ones, user can access the vast collection remotely by using ICT. The information revolution continues libraries will experiment with mobile devices and services to support the information needs of their users wherever they are. Smartphone can fit in our pocket and take anywhere allowing them to carry thousands of books without weight. Smartphone can saves money, time of humans. There is no need to go book store, free books. Much more books are freely available on Internet which can read by using smart mobile phone. Latest technology in smart phones provides to turn some of the books into audio books.Now a day some digital libraries in foreign countries are providing e-services through smart phone apps.Library Services through Mobile Technology can be provided through various tapes:

1. **Mobile Library Websites and M-OPACs (Mobile OPACs):**

A Growing number of libraries are creating mobile versions of their websites for their patrons. Offering information about library services, collections, access to library catalogue, portable exhibit information, subject guides, e-resource access, quick links to mobile reference and all formatted for their small screen. M-OPAC is simple to use smart phone based mobile OPAC search engine app to search the library books. Most of the Libraries can upload the data of library in simple excel format in M-OPAC database. It provides same platform like desktop OPAC. User can search according to title, author, publisher, keyword, subject and many more to the patrons.

2. **Instant Messaging Services:**

I.M. is real time communication based on typed communication (Chatting). It offers quick announcement, reminders about important events, or provide requested information. It provides real time access to your library's collection via user's smart phones and tablets. Most of the automation software's such as Libsys provide option to send SMS alerts. So user can get the information about last date of book submission, renewal of book, library hours, book reservation, new arrivals, library events alerts etc.These types of individual text notification services provided by libraries today are similar to the campus wide alert systems provided by Academic Libraries keep entire communities updated on School closing, event changes or cancellations, emergencies, and sports team scores.

3. **Access to Online Bibliographic Databases:**

Libraries' gives bibliographic services in iphone or Android phone. It is very important to researcher. Library also provides access of various types' full test and bibliographic databases. The user can just enter search terms and see results that are designed specifically for mobile viewing, integrated search and original document search.Example: OCLC's World Cat Mobile application pilot allows users to search for and find books and other materials available in their local libraries through a web application they can access from a PDA or Smart Phone.

4. **Mobile Collection:**

Academic Libraries are offering their patron's digital media Collections that they can take to-go, enabling them to benefit from library services remotely. Many academic libraries are offering audio books and E-Books, E-Journals, web databases, dissertations streaming music, films, images which can be used on mobile. These collections can either be downloaded from the library website on users own devices or libraries lend mobile devices with the collections already available with them. Most of the E-book publishers provide 24*7 accesses to the library subscription from any Internet terminal with in campus, as well on mobile devices such as iPads, Android devices and Kindle app.

5. **New Arrival Preview:**

Academic Libraries can provide to disseminate information about the newly acquired documents through Smart Phones. The image services in a library might be offer high quality images of newly added titles.

6. **Q R Code:**

QR code is a type of matrix barcode which is machine readable optical label that contains information about the item to which it is attached. QR code consist of black modules square dots arranged in a square black grid on a white background paper, which can be read by an imaging device required camera scanner. The use of Q R code for library services purposes are as follows.

- **Notice:**We display the notice on the notice board in the form of words etc. the users now a day's use the smart phone if they install the google app Q R Code scanner on their mobile then they can download the notice regarding our library. They can only scan the Q R code from library and when they get time to read they can read the Q R Code and found the notice regarding library.
- **Bibliography:** List of book on subject we can display in the form of Q R Code.
- **New Arrivals:** List of new arrivals in the library display the library resources in the form of Q R Code.
- **Web Sites:** Q R Code also used for website name.

7. **Ask a Librarian Service:**

Library receiving a high volume of enquiries such as library hours, document availability, definitions etc then library staff can provide instant answers and links to articles/ references in real time. Users can also talk with librarian if they have any query. These Service can be provided through SMS, email or text which is easily accessible through smart phones.

8. **Library Virtual/ Audio Tours:**

Library Virtual/ Audio Tours, instruction/ orientation programs have been quite significant to remotely located users of different geographic regions. Users who don't have time to attend workshop can get access to library tours on their smart phone. It can be quickly, inexpensively and reduce the time of staff to spent helping new users to conduct orientation programs. It can be easily provided on mobile devices and downloads from library websites.

Conclusion

The requirement for the mobile applications services are increasing day to day improves demand and easily available services. This growth has been force to the academic libraries drive services in new way. An increasing number of academic libraries provide services and content delivery though smart phones drive academic user demands and expectations. Academic institution librarians will need to think creatively about developing services for smart phone users. It should be based on both user needs and preferences and the relationship of services to the academic program of their institute. Invention of smart phones makes an opportunity to academic libraries to develop new types of services (mentioned in the paper) which will reach to user's hand. Smart mobile will acquire all the digital things in next few years. So it wills great chance to academic libraries keep update ourselves for that.

ECONOMIC LAWS IN INDIA & ITS GROWTH

Mr. Hingmire Mallikarjun C.
Asst. Prof. , Dayanand Law College, Solapur

ABSTRACT

In modern era, Indian economic policy requires help of Govt for its survival. India has consciously resorted to economic planning in a big way to achieve ultimately the goal of a 'socialist pattern of society' in the country. When the Indian Constitution was being drafted, the laissez-faire philosophy had already become a thing of the past in practically every democratic country and the concept of social welfare state had taken roots instead. The Indian Constitution makers were naturally influenced by contemporary philosophy. This was underlined by Ambedkar who, emphasizing economic democracy along with political democracy, pointed out that in a poor country like India, political democracy would not have much meaning if the economic conditions of the people were not to improve.

INTRODUCTION-

Article 19 (1) (g) guarantees freedom to carry on any trade, business or profession but even this fundamental right is subject to reasonable social control, and the state is not debarred from nationalizing any trade, business, industry or service, either wholly or partially.5 Article 301 guarantees. Article 301 guarantees freedom of trade and commerce throughout the country but Parliament and state legislatures may impose restrictions on this freedom under certaincircumstances6 and this freedom does not stand in the way of nationalization of any trade or industry.7 Article 19 (1) (f) while guaranteeing a right to acquire, hold and dispose of property also enables the state to impose reasonable restrictions on the exercise of such a right.8

The framers of the Constitution envisaged economic and social planning to achieve a welfare and egalitarian society in India. It is apparent from entry 20 in the concurrent list on "Economic and Social Planning[1]

Thus, the Parliament as well as the state legislatures are entitled to make suitable laws pertaining to socio-economic planning in the country However, articles 19(f) and 31, which gave fundamental right to property, are repealed. Instead, article 300A has been inserted by the Constitution (44th Amendment) Act 1978, which authorizes the state to acquire private property for a public purpose in accordance with the authority of law. The effect of this amendment is that for violation of one's right to property, a person is not entitled to invoke the writ jurisdiction of
the Supreme Court under article 32.The focus of policy is, however, changing since independence. [2]

In 1954, Parliament accepted the ideal of a "socialist pattern of society" as the goal of social and economic policy which concept, as expounded by the Planning Commission, means that the basic criterion for determining the lines of industrial advance must not be private profit but social gain, that the pattern of development should result not only in appreciable increases in national income and employment but also in greater equality in incomes and wealth

The policy of industrial regulation in this regard is to be found in the industrial policy resolution of the Government of India of 30 April 1956, laying down the guidelines, which

[1] .ART 39

[2] .ART 32

are to be followed by all governments in India.12 Under this resolution, all industries are grouped into three categories having regard to the role, which the state is envisaged to play in their promotion, management and control.[3]

The industrial policy of 1991 is considered as a catalyst in progressive liberalization of Indian economy. In order to encourage enhanced private entrepreneurship, development of indigenous technology through investment in research and development, bringing in new technology,
Dismantling of the regulatory system, development of the capital markets and increasing competitiveness for the benefit of the common man, the industrial policy of 1991 brought greater changes in the public private ownership. The industries reserved for public sector ownership are now limited to only six industries such as Arms and ammunition, defense, Atomic Energy, Coal and lignite, Mineral oils, Mining of iron ore, manganese ore, chrome ore, gypsum, sculpture, gold and diamond. Copper, lead, zinc, tin, molybdenum and wolfram, Minerals specified in the Schedule to the Atomic Energy (Control of Production and Use) Order,

1953 and Railway transport. In addition to that the policy dispensed with industrial licensing except in cases where the Industries reserved for the public sector or 16 industries of strategic, social or environmental concern and Industries reserved for the small-scale sector. All other industries are exempt from licensing, and only subject to the locational restrictions of metropolitan areas. Private enterprises, however, are not left entirely free and unregulated.

They are regulated with a view to ensuring that no great disparities of income and wealth arises, that there is a planned, and not a haphazard, industrial development, which means that the internal and external resources available to the community are properly marshaled and put to the best use from the point of view of maximization of wealth; setting up basic industries which would provide economic strength to the community in preference to mere consumer industries; that there is high levels of productivity; that concentration of economic power in a few hands and emergence of private monopolies are avoided; that disparities between income and wealth are lessened; that full scope is given to new entrepreneurs, co-operatives and small scale industries. There is also the angle of promoting uniform regional development. In setting up new enterprises, consideration has to be given to the need for developing a balanced economy for different parts of the country so that is does not happen that some parts of the country are over industrialized while other parts remain under developed; regional economic imbalances in the country must be lessened. To a great extent, government regulation has also been necessitated with a view to policing private enterprise in order to eliminate, or at least minimize, the anti-social activities of private entrepreneurs so that the interests of private investors are not

Jeopardized. Accordingly, for example, the Indian Companies Act has been amended many a time to discourage questionable activities of the company managements at the cost of the shareholders. Regulation of trade and commerce has thus become a leading tenet of the present-day economic planning in the country. A significant point to note, however, is that industrial regulation is undertaken not solely to promote industrialization but also to sub serve a few broad [4]preferred socio economic goals and objectives.
Therefore, the pillars on which industrial development is based in India are; promotion & improvement. Promotion of small-scale industries is necessary for encouraging new

[3] .INDIAN CONSTITUION

[4] .IMPORT & EXPORTS ACT, 1947

entrepreneurs for seeking to achieve distribution of wealth and avoid concentration of wealth and economic power in a few hands. Co-operatives also seek to achieve the same purpose with the additional advantage that the producers of raw materials or small artisans or workers can also share in the profits earned by the sale of finished product, which would otherwise have gone to the big entrepreneurs. Side by side the big industry has not stood still and has made great strides; hundreds of limited companies have been floated and innumerable new lines of production and manufacture have been developed in India.

Economic Laws

As already stated, government regulations and control of trade, commerce and industry has been undertaken on a broad scale to effectuate the above mentioned various objectives. Consequently, a whole mass of economic legislation has been adopted by the centre and a whole mechanism of state regulation of private enterprise has been created.

It is not possible within the compass of this paper to refer to all the mass of economic legislation, now extant in the country, or even to go deep into any of these laws. Only a bare reference can be made here to a few of the more important statutes.

Foreign trade is an exclusively central matter. The Imports and Exports (Control) Act, 1947,13 provided a mechanism for regulation of imports and exports of commodities to or from India till 1992. This Act was repealed and replaced by Foreign Trade (Development and Regulation) Act, 1992.The Act authorizes the Central Government to make provisions for the development and regulation of foreign trade by facilitating imports and increasing exports. In this regard, the Central Government may, from timeto time, formulate and announce the export and import policy and likewise amend the same.

A Director General of Foreign Trade may be appointed to

Advise the Central Government in the formulation of the export and import policy and to carry out that policy. Any person interested in making imports or exports has to obtain an Importer-Exporter Code Number granted by the Director General or the officer authorized by the Director General in this behalf. In addition to that, the Director General is authorized to grant license for import and export. The code number and the licenses can be suspended or cancelled under

Certain circumstances. The Act makes the contravention, abetment or attempt thereof, of any provision of the Act or the rules made there under, an offence punishable with a penalty not exceeding one thousand rupees orfive times the value of the goods, whichever is more. As already stated, government regulations and control of trade, commerce and industry has been undertaken on a broad scale to effectuate the abovementioned various objectives. Consequently, a whole mass of economic legislation has been adopted by the centre and a whole mechanism of state regulation of private enterprise has been created.

It is not possible within the compass of this paper to refer to all the mass of economic legislation, now extant in the country, or even to go deep into any of these laws. Only a bare reference can be made here to a few of the more important statutes.

Foreign trade is an exclusively central matter. The Imports and Exports (Control) Act, 1947,13 provided a mechanism for regulation of imports and exports of commodities to or from India till 1992. The Act makes the contravention, abetment or attempt thereof, of any provision of the Act or the rules made there under, an offence punishable with a penalty not exceeding one

CONCLUSION-

FEMA seeks to make offenses relating to foreign exchange as civil offenses. The onus of proof lies on the enforcement agency to prove the guilt whereas under FERA onus lied on

the accused to prove innocence. As far as domestic market is concerned, in 1980s and 1990s, it was increasingly realized that an efficient and well-developed securities market in essential for sustained economic growth and to bring the Indian market upto international standards. To further this objective, a number of reform measures have been initiated. The security market is made free from direct governmental control. The market, however, is not left unregulated. An

Autonomous and independent regulator has been established to ensure the transparency, fair play and to prevent unfair trade practices.14The issue of shares and debentures to the public by a company proposing to raise capital was earlier controlled by the Capital Issues

(Control) Act, 1947. Under the Act, no company incorporated in India

Could issue capital and offer public securities except with the consent of the central government.

The purpose was to check on investments, which were either wasteful or not in keeping with the objectives of the five years plans. This Act is now repealed and the government control over the issue of capital, pricing and fixing of premium and rates of interest on debentures *etc.* is ceased. The companies are now free to take decisions on such matters. In this free securities market, Securities and Exchange Board of India (SEBI)has been established under the Securities and Exchange Board of India Act1992, with the purpose to protect the interest of investors in securities and to promote, develop and regulate the securities market. It regulates the issuance and transfer of securities and all the parties involved in the process such as companies, intermediaries *etc.* To protect the investors from fraud or cheating by the companies, it has issued Disclosure and Investor Protection

.Through the machinery provided by the Securities Contract (Regulation)Act, 1956, a close supervision and control is maintained over the activities of stock exchanges and dealings in securities. It seeks to prevent undesirable transactions in securities and regulates business and dealings on stockexchanges. The working of the stock markets was thoroughly examined by

the Thomas Committee, which underlined the need for a central Act prescribing uniform by-laws and regulatory provisions for proper working of stock exchanges in the country. Very wide powers have been conferred on the central government and the Securities and Exchange Board of India.

(SEBI) 16 by the Act. Only government recognized stock exchanges can function. The recognition may be withdrawn by the government if it deems it necessary to do so in the interest of the trade or in the public interest.

It can supersede the governing body of a recognized exchange with any person or persons. To meet any emergency, government may suspend the business of a recognized stock exchange. Recognized stock exchanges have to submit periodic returns of their affairs to the SEBI.17 thus the affairs of stock exchanges have been brought under close surveillance of government.

भारताचे राष्ट्रीय डिजिटल ग्रंथालय (NDL) : माहितीचा एक उत्तम स्त्रोत

डॉ.सौ. कुलकर्णीअपर्णामकरंद
ग्रंथपाल,व्ही. पी. इस्टिट्यूटऑफमॅनॅजमेण्टस्टडीजअँड रिसर्च, सांगली

सारांश:

भारताचे राष्ट्रीय ग्रंथालय (NDL) हा प्रकल्प भारत सरकारच्या मनुष्यबळ विकास मंत्रालयाचा एक महत्वाचा प्रकल्प आहे, ज्याचा मुख्य उद्देश असा आहे की, भारतातील आणि परदेशातील सर्व प्रकारच्या डिजिटल ग्रंथालयांना तसेच तेथील ग्रंथ संग्रह एकत्रित आणून एकाच पोर्टल खाली आणणे. ज्याद्वारे इंग्रजीबरोबरच भारतीय इतर भाषातील विविध पुस्तके मोफत लोकांना पाहता किवा मिळवता येतील.**भारताचे** राष्ट्रीय ग्रंथालयाची (NDL) स्थापना आय आय टी, खारापूर येथे मे 2016 रोजी झाली आणि हा प्रकल्प एक पथदर्शी प्रकल्प म्हणून कार्यरत असून या मध्ये माहितीचे एक आभासी भांडार उपलब्ध आहे, ज्या अंतर्गत शोध प्रकल्प म्हणून याचे कार्य चालते.यामुळेच माहिती सेवा देणारा हा एक उत्तम स्त्रोत म्हणून ओळखला जातो. या माहिती भांडारामध्ये उपभोक्त्यास कमीत कमी वेळामध्ये हवा असलेला नवीनतम डिजिटल स्वरूपातील माहीतीसंग्रह उपलब्ध होऊ शकतो. मुख्य म्हणजे सदर प्रकल्पा मध्ये सर्व प्रकारच्या स्तरातील उपभोक्त्यासाठी लागणारे वैविध्यपूर्ण 10 मिलियन पेक्षा जास्त संदर्भ दिलेले आहेत. विज्ञान, तंत्रज्ञान, मानव्यविद्या, शेतीविषयक आणि इतर अनेक विषयांचे हे आभासी भांडार सर्वोपयोगी आहे.

प्रस्तावना :

NDL म्हणजेच भारताचे राष्ट्रीय ग्रंथालय हा प्रकल्प म्हणजे असा एक समूह आहे की. जो विनामुल्य उपलब्ध आहे. भारत सरकारच्या मनुष्यबळ विकास मंत्रालयाचा या महत्वाच्या प्रकल्पमध्येविविध संस्था किंवा प्रकाशक आपणाकडे उपल्ब्ध असणारे साहित्य/ माहिती/संदर्भ संग्रहित करतात. परंतु, हे साहित्य संग्रहित करत असताना ह्या संपूर्ण साहित्यासाठीची जी औपचारिक जबाबदारी असते ती मात्र संपूर्णतः त्या संस्थेची अगर प्रकाशकांचीच असते.संग्रहित माहितीचा खरेपणा, संदर्भांची सत्यता, अचूकता , विश्वसनीयता, सुलभता, या सर्वांसाठी संबंधित संस्था/प्रकाशन संस्था हीच जबाबदार असते. NDL यासाठी कोणतीही जबाबदारी घेत नाही. माहितीचा विवीध स्तरातून , विवीध संस्थानकडून सतत येणारा स्त्रोत आणि तो संग्रहित करण्याची मोठी जबाबदारी NDL कडे असल्यामुळे प्रत्येकाची सत्यता पडताळून पाहणे हे शक्य नसल्यामुळे NDL हि जबबदारी अस्वीकार केलेली आहे. परंतु या प्रकल्पासाठी भारत सरकार च्या मनुष्यबळ विकास मंत्रालयाकडून अनुदान मात्र मिळते.

NDL चे उपभोक्ते :

भारताचे राष्ट्रीय ग्रंथालय (NDL) चा हा प्रकल्प विविध स्तरातील लोकांसाठी उपयुक्त आहे. विविध प्रकारचे विद्यार्थी, शिक्षक, प्राध्यापक, संशोधक, लायब्ररीयन, लायब्ररी युजर्स, आणि अनेक प्रकारचे वाचक, माहितीचे उपभोक्ते जे आजीवन अध्ययन प्रक्रियेमध्ये सहभागी असतात असे लोक हि या माहितीच्या भांडारामधून आपणास हवी असलेली

माहिती ताना हव्या त्या वेळेमध्ये अगदी कमीत कमी वेळात मंजे त्वरित प्राप्त करू शोधू शकतात.

NDL अंतर्गत संग्रहित शैक्षणिक संसाधनाचे प्रकार :

NDL च्या या डिजिटल स्वरूपातील माहिती भांडारामध्ये शैक्षणिक संसाधांचे वैविध्यपूर्ण साहित्य संग्रहित आहे, त्या माहितीसंग्रहाचे खालीलप्रमाणे वर्गीकरण करण्यात आलेले आहे.

1. ग्रंथ ---सुमारे 70 भाषेतील 7 लाखपुस्तके व 3 लाख लेखकांचे ग्रंथ संग्रहित.
2. प्रबंध --- 95 हजार पेक्षा जास्त संशोधनपर प्रबंध संग्रहित केलेले आहेत.
3. ऑडीओ व्याखाने- 265 पेक्षा जास्त इंग्रजी व तमिळ भाषेतील ऑडीओ व्याखाने संग्रहित
4. व्हिडिओ व्याखाने- 18000 पेक्षा जास्त व्याखाने 11 विविध स्त्रोतांकडूनसंग्रहित केले आहेत
5. हस्तलिखिते- विद्या प्रसारक मंडळ ,सत्यजित रे सोसायटी कडून हस्तलिखिते संग्रहित.
6. हस्त पुस्तिका- विविध 4 प्रकारच्या स्त्रोतांकडून हस्त पुस्तिकांचे संग्रह जमा.
7. तांत्रिक हस्त पुस्तिका –2 प्रकारच्या स्त्रोतांकडून संग्रहित केलेले आहेत.
8. लेख - 3 लाख भाषेतील 2 लाख लेखकांचे लेख संग्रहित केलेले आहेत.
9. प्रश्नपत्रिका_ 33000 प्रश्नपत्रिका 23 विविध स्त्रोतांकडून संग्रह करून ठेवलेला आहे.
10. उत्तरे - वेगवेगळ्या स्कूल बोर्ड कडून प्रश्नपत्रिकांची उत्तरे जमा केलेली आहेत.
11. मोनोग्राफ- 8 विवीध संस्थांकडून म्हणजेच स्त्रोतांकडून संग्रहित केलेले आहेत.
12. तांत्रिक अहवाल - 17 विविध संस्थांचे तांत्रिक अहवाल संग्रहित केलेले आहेत.
13. वेब कोर्सेस- शेतकी विषयक, भौतिकशास्त्र या विषयातील वेब कोर्सेस संग्रहित.
14. डाटा सेट- OECD, iLibrary, साउथ एशिया अर्काईव्ह व इतर स्त्रोत संग्रहित.
15. लॉ अहवाल- 2 वेगवेगळ्या स्त्रोतांकडूनलॉ जजमेंट अहवाल स्वरूपामध्ये संग्रहित.
16. अल्बम- 6 विविध स्त्रोतांकडून संग्रहितकरण्यात आलेले आहेत.
17. वार्षिक अहवाल 12 स्त्रोतांकडून संग्रह करण्यात आलेला आहे.

मुख्य विषय शीर्षके :

NDL च्या सदर माहिती भांडारामध्ये विविध विषय शीर्षकेही माहिती संग्रहित करण्यासाठी दिलेली आहेत. ती पुढील प्रमाणे----

1. कॉम्पुटर सायन्स ,
2. इन्फोरमेशन & जनरल वर्क
3. विविध भाषा व साहित्य
4. सामाजिक शास्त्रे आणि धर्म,
5. इतिहास व भूगोल
6. तंत्रज्ञानतत्वज्ञान आणि मानसशास्त्र

7. नैसर्गिक शास्त्र आणि गणित
8. कला आणि सजावट

वैशिष्ट्यपूर्ण माहिती स्त्रोत :

राष्ट्रीय डिजिटल ग्रंथालयामध्ये काही वैशिष्ट्यपूर्ण असा माहितीसंग्रह संग्रहित केलेला आहे. त्यामध्ये विविध वेबसाईट आणि डेटाबेस त्याच्या मेटाडेटासह (म्हणजेच माहिती बद्दलची माहिती)संग्रहित केलेला आहे.उदा. INFLIBNET-shodhganga--- Inflibnet च्या या शोधगंगा या डिजिटल स्वरूपातील डेटाबेस मध्ये जवळजवळ 38000 पेक्षा जास्त प्रबंध आणि संशोधन आराखडे संग्रहित केलेले आहेत. तसेच Librivox – या डिजिटल डेटाबेस मध्ये 2 लाखापेक्षा जास्त ऑडीओ बुक्स संग्रहित केलेले आहेत.याचा उपयोग सर्व क्षेत्रातील संशोधक विद्यार्थ्यानबरोबरच प्राध्यापक, संशोधक याबरोबरच शास्त्रज्ञ यांना ही होऊ शकतो.

वैवीध्यपूर्ण कार्यक्रमांचे आयोजन :

या प्रकल्पा अंतर्गत विविध कार्यशाळा, चर्चासत्रे यांचे आयोजन केले जाते.उदा.

1. नवी दिल्ली येथे मेडिकल सायन्स साठी एका मोठ्या कार्यशाळेचे"मेडिकल डोमेन" या नावाने आयोजन केले जाते.
2. कोलकत्ता येथे वेस्ट बेंगोल विद्यापीठ ऑफ जुरीडीकॅल सायन्सेस मध्ये येथे भारत सरकारचे मि. श्यामल सेन (Ex- Governer) यांच्या उपस्थितीमध्ये NDLI लीगल डोमेन वर्क शॉप चे आयोजन.
3. 2017 मध्ये साउथएशिया मध्ये NDLI चे anroid app ने लर्निग इन एज्युकेशन अंतर्गत winner ऑफ mBillionth हा पुरस्कार जाहीर.
4. 2016 मध्ये टेरी, न्यू दिल्ली येथे आयोजित आंतरराष्ट्रीय चर्चासत्रामध्ये UNOSCO सोबत डिजिटल लायब्ररी या विषयी समूह चर्चा .
5. NDLI च्या मेटाडेटा बाबतची धोरणे ब्रेन स्टोर्मिंग सेशन मध्ये निश्चित.
6. प्रेस रिलीज हे प्रकाशन प्रसिद्ध.

या आणि अश्या प्रकारच्या विविध घटना व कार्यक्रममध्ये NDL हे अग्रेसर आहे.

भारतीय राष्ट्रीय डिजिटल ग्रंथालयाचे वेगळेपण:

माहितीच्या या युगामध्ये इतर अनेक डिजिटल ग्रंथालये पहायला मिळतील परंतु NDL चे विशिष्ट असे वैशिट्ये आहेत की ज्यामुळे त्याचे वेगळेपण पाहायला मिळते. ती विवीध वैशिट्ये खालीलप्रमाणे-----

1. एकाच ठिकाणी सर्व प्रकारचा माहितीचा संग्रह एकत्रित मिळण्याचे ठिकाण.
2. वैयक्तिक माहिती पुरवठा
3. शैक्षणिक पात्रतेनुसार
4. भाषेची निवड
5. सर्व सामान्य काठीण्य पातळी

या सर्व वैविद्यपूर्ण वैशिष्ट्यांमुळे NDLI हा एक उत्तम डिजिटल स्वरूपातील अद्ययावत असा माहितीचा स्त्रोत म्हणून भारत सरकारने मान्यता दिलेली आहे.

DIGITAL LIBRARIES: AN OVERVIEW

Pachange ,Pratibha .B
Librarian, Dattajirao kadam Arts,Science & Commerce College, Ichalkaranji
pachangepratibha@gmail.com

ABSTRACT

This paper focused on the overview of digital library. A digital library is nothing but the transformation from traditional library. The digital libraries concept comes into existence in the 21st century. Virtual library, electronic library, library without walls and digital library are synonymous to each other. In this study, we have to discuss about the definition of digital library, its challenges and issues, etc. Using digital library, access anyone, anytime, and in any form.

Key Words: Digital Library, Digital library benefits, Digital library need,

I. Introduction

With the advancement of science and technology, country has witnessed an unprecedented growth of information resulting in information explosion and the information being generated in different formats has further created havoc in providing cost-effective information services to the user community. As a result, libraries have been constantly facing the problems of space, escalation in cost of books & journals, budget shrinkage, inability to provide multiple copies and most important is retrieval efficiency of user being endangered for want of information. The urge to overcome these problems has called for adoption of technology in libraries.

II. Digital Library: Meaning and Definition

The term "Digital Library" has a variety of potential meanings, ranging from a digitized collection of material that one might find in a traditional library to the collection of all digital information along with the services that make that information useful to all possible users. In simple a digital library is a library having all its holding in the digital form or in a form that can be stored, processed by the computer system. It is nothing but a large database for the people who are working on hypertext environment. It is a system of organized collection of multimedia, data that are globally available directly or indirectly across a network.

Digital Library is a collection of information which is digitized, organized for a group of people or community, gives users power they had never with traditional libraries. There are terms used in various contexts for use of the digital library.

Stanford Digital Library research team defined digital libraries "as a coordinated collection of services, which are based on collections of materials, some of which may not be directly under the control of the organization providing a service in which they play a role."

According to Lesk “Digital libraries are organized collections of digital information. They combine the structuring and gathering of information, which libraries and archives have always done, with the digital representation that computers have made possible”.

According to the Digital Library Federation "Digital Libraries are organizations that provide the resources, including the specialized staff, to select, structure, offer intellectual access to, interpret, distribute, preserve the integrity of, and ensure the persistence over time of collections of digital works so that they are readily and economically available for use by a defined community or set of communities".

III. Need for a Digital Library:

1. Easy to Understand: The visual or graphical information system of digital libraries is more popular as compared to text based information system.

2. Shifting of the Environment: The new generation user becomes only happy when they will be able to read from the computer screen. The new generation whose demand for information is never met demands that traditional libraries should be developed as a well equipped and interconnected DL.

3. Multiple Function of Same Information: In case of digital libraries by using hypertext it is possible to structure and organize the same digital information in a variety of ways which serve multiple functions.

4. Information Explosion: Digital library is expected to be able to handle the problem of information explosion somehow. It will be able to handle and manage large amount of digital content by simply providing link, without actually procuring the document.

5. Searching Problem in Traditional Libraries: By using digital library one will be able to retrieve information specifically for e.g. a particular image, photo, a definition, etc.

6.Distance Learning: Time is a major factor for each modern user of the library which is otherwise spent in coming and going to the library, but digitization will facilitate learning from home, office or other places which are convenient to users.

7. To Provide Access to Online Publication: As more and more information are published over internet, digital library needs to procure and provide link to the online publication and other important sources of information.

8. Limited Buying Power of Libraries*:* The collection of every library is limited to only a fraction of the total. Introduction of digital library will help to enhance the collection considerably.

9. Storage Problem in Traditional Libraries: Libraries are spending much of its budget by way of maintaining the collection in a usable form that also demands a huge physical space. Digitization hopes to overcome this. Digital Medias comes with a huge storage capacity.

10. Low Cost of Technology: The cost of technologies is much more less than that of traditional libraries.

11. Environmental Factor: The use of digital libraries is one of the cleanest technologies to fulfill the slogan “Burn a CD-ROM save a tree”.

IV. Steps in Digitization & Developing Digital Collection

1. Selection of Materials Content is the most important component of a Digital Library. Making the right decision regarding the content is a must for the Digital Library. One must ascertain what items to digitize if they exist in print form, metadata describing content and other attributes of each item.

2. Coping Clearance Most times, the materials that one selects for digitization may not be owned by the one who is doing the digitization. Therefore, it important to know owns the copyright of each every material selected and take a formal permission to digitize. Otherwise one has to check, ascertain and ensure that selected item is out of copyright period. Under no circumstance, those involved in the process are expected to violate the copyright. 159

3. Digitization Digital documents may be bom-digital, created using digital publishing tools (e.g. Word, Latex, DTP), or created by converting from an analogue format to digital format or converted from one digital format to another to suite the requirements of a particular Digital Library. The process of capturing and converting from analogue to digital format is often called as 'digitization' or 'digitalization'. It offers number of benefits as given below; - Substantial Savings in administrative costs - Secured medium and easy back-up options of your critical data - Multiple user access to digital files - Accessing information as a value added services by providing keywords search facilities and links to the resources such as full text searching, browsing, etc. - Easy accessibility of data on your finger tips - Disaster management in case of loss of physical data - Zero wear and tear and deterioration - Life time preservation of physical documents

4. Scanners and Scanning The first step in converting paper documents into a digital library collection is to obtain images of all pages of all publications in digital format. Digital scanners are used to capture a digital image from an analogue media 160 such as printed page or a microfiche/microfilm at a predefined resolution and dynamic range (bit range).

These are of two types: -1. Vector Scanners - 2.Raster Scanners

• **Vector Scanners** It scans an image as a complex set of x,y coordinates. Vector images are generally used in geographical information system (GIS). The display software for the vector image interprets the image as function of coordinates and other included information to produce an electronic replica of the original drawing or a map. Maps, engineering drawings, and architectural blueprints are often scanned as vector images.

• **Raster Scanners** Raster images are captured by raster scanners by passing lights down the page and digitally encoded it row by row. The scanners used for digitizing analogue images into digital images come in a variety of shapes and sizes. Some of the common raster scanners are: - Low-cost flat-bed scanner: Low-cost flat-bed units are the cheapest and most widely available type of scanner. - Low-end scanner with sheet feeder: 161 - Professional duplex scanners: Professional scanners are reliable, heavy-duty machines capable of processing a large volume of pages.

• **OCR: Optical Character Recognition Software** The following steps are involved in converting paper document into digital text format which is exactly replica of the paper document. It has the following steps: - scanning; - page layout analysis; - reading; - scanning tables and images marked as image.

• **Document Preparation** A digital image of each page is scanned and transformed into a Bitmap or TIFF image using Image capturing software provided with the scanner or using commercial scanning software.

• **Image Capturing Software** Every scanner comes with its own software, which means that the program must be installed on the computer that manages the scanner. Some have a computer card that needs to be installed in the computer to speed up the scanning operation

5. Metadata Preparation and Tagging Metadata is stored in TIFF files in its header whereas other metadata schemes such as Dublin Core and Metadata Encoding and Transmission Standard (METS) hold information about the digital object in a separate independent file. Keywords should be assigned to each digital object using standard vocabulary. Similarly, in case of authors, proper name authority file should be maintained so that name of persons may be assigned in a standardized form.

6. Naming convention of Files File naming convention is very important in a digitization project as it helps in identifying the file for reference purpose. It should be applicable to the original TIFF files as well

V. Advantages of the Digital Library:

1. No physical boundary: The user of a digital library need not to go to the library physically, people from all over the world could gain access to the same information, as long as an Internet connection is available.

2. Round the clock availability: Digital libraries can be accessed at any time. 24 hours a day and 365 days of the year

3. Multiple accesses: The same resources can be used at the same time by a number of users.

4. Structured approach: Digital library provides access to much richer content in a more structured manner i.e. we can easily move from the catalog to the particular book then to a particular chapter and so on.

5. Information retrieval: The user is able to use any search term bellowing to the word or phrase of the entire collection. Digital library will provide very user friendly interfaces, giving click able access to its resources.

6. Preservation and conservation: An exact copy of the original can be made any number of times without any degradation in quality.

7. Space: Whereas traditional libraries are limited by storage space. digital libraries have the potential to store much more information, simply because digital information requires very little physical space to contain them. When the library had no space for extension digitization is the only solution.

8. Networking: A particular digital library can provide the link to any other resources of other digital library very easily thus a seamlessly integrated resource sharing can be achieved.

9. Cost: The cost of maintaining a digital library is much lower than that of a traditional library. A traditional library must spend large sums of money paying for staff, book maintains, rent, and additional books. Digital libraries do away with these fees.

VI. Disadvantages of the Digital Library:

1. Copyright: Digitization violates the copy right law as the thought content of one author can be freely transfer by other without his acknowledgement. So One difficulty to overcome for digital libraries is the way to distribute information. How does a digital library distribute information at will while protecting the copyright of the author?

2. Speed of access: As more and more computer are connected to the Internet its speed of access reasonably decreasing. If new technology will not evolve to solve the problem then in near future Internet will be full of error messages.

3. Initial cost is high: The infrastructure cost of digital library i.e. the cost of hardware, software; leasing communication circuit is generally very high.

4. Band width: Digital library will need high band for transfer of multimedia resources but the band width is decreasing day by day due to its over utilization.

5. Efficiency: With the much larger volume of digital information, finding the right material for a specific task becomes increasingly difficult.

6. Environment: Digital libraries cannot reproduce the environment of a traditional library. Many people also find reading printed material to be easier than reading material on a computer screen.

7. Preservation: Due to technological developments, a digital library can rapidly become out-of-date and its data may become inaccessible.

VII. Conclusion

As library and information professionals are well aware of the advantages of digital libraries over traditional libraries it is a matter of proactive decision to design and develop digital libraries to suit their parent organizations and their users for providing effective and efficient services. The concern is how to develop the digital libraries in a cost effective way and in an easy manner.

BEST PRACTICES IN ACADEMIC LIBRARIES WITH REFERENCE TO M. H. SHINDE MAHAVIDYALAYA LIBRARY, TISANGI, TAL. GAGANBAVDA, DIST. KOLHAPUR

Dr. B. S. Padval
Librarian, M. H. Shinde Mahavidyalaya,Tisangi,
Tal. Gaganbavda, Dist- Kolhapur.
E-mail- bspadval@gmail.com

1. Introduction

The international changes particularly the Information and Communication Technologies (ICT) have impact on the functioning of academic libraries. The developments in ICT have changed the users' expectation from the academic libraries in different ways. The ways to build collection and services to the end users vary from the recent past practices. To meet the end-users demands effectively, the academic libraries need to identify and adopt good practices and benchmarks. Thus, preparing guidelines in a standardized way based on the best practices employed by libraries is significant which will ultimately enhance the value based services of academic libraries.

Library and Information Services of Higher Education institutions play a central role in enhancing the quality of academic and research environment. The National Accreditation and Assessment Council (NAAC) strive for quality and excellence in higher education and advocates for enhancing the role of Library and Information Services in improving academic environment. Though, it is institutional accreditation that the NAAC does, the assessment of a library, a vital sub-unit, is a key step that integrates itself with the overall evaluation. Library is the fulcrum of support for the entire range of academic activities on an educational campus. In today's high-tech learning environment, the library as a learning resource is taking up increasingly more academic space and time in the life of a learner. In times ahead, this will be even more so. Thus NAAC has decided to identify the set of best practices in Library & Information Services, with the help of a few case presentations from few selected libraries of the accredited universities and colleges. This is a great initiative in promoting the libraries in identifying and sharing good or best practices that can be adopted in the Indian academic environment. Best Practice may be innovative and be a philosophy, policy, strategy, program, process or practice that solves a problem or create new opportunities and positively impact on organizations. Institutional excellence is the aggregate of the best practices followed in different areas of institutional activities. In general, the use of technology and innovative ideas lead to evolve best practices in library and information environment.

2. Definition

Best Practice in simple term known as the practices which have the way of enhancing the existing function and help in effective implementation or use of the process.

1. According to the Oxford Advanced Learners Dictionary, "Best practices as a quality of high standard, excellence, highly improved outstanding par excellence service. It means way of doing something that is usual or expected way in particular organization or situation, guidelines for good practices. In this process of developing best practices we taken action rather than good ideas & we improve our skills."
2. According to the online dictionary of Library and Information Science, " In the application of theory to real life situations, procedures that, when properly, applied consistently yield superior results and are therefore used as reference points in evaluation of the effectiveness of alternative methods of accomplishing the same task. Best practices are identified by examining empirical evidence of sources"
3. According to National Board of Accreditation and Assessment (NAAC). "Best

practice may be innovative and be a philosophy, policy, strategy, program, process or practice that solve a problem or create new opportunities and positively impact on organizations. Institutional excellence is the aggregate of the best practices followed in different areas of institutional activities."

From above definition, best practice means, it is a method or technique used to improve the current workflow of an organization to obtain its objectives effectively & with predetermined standards.

Best practices in the development of infrastructure and learning resources sustained practices leading to continuous improvement of infrastructure and learning resource development to create an optimum learning ambience.

In simple words the practice that is giving best results in terms of its usefulness and appreciation feedback from its user group.

3. Role of the Academic Libraries

The role of the library and information centre in a college is aimed at realizing the educational goals of the college or the parent organization. The college libraries not only provides stimulus to reading by procuring materials for study and research, by introducing open access system, by providing long hours of open, by organizing the library resources in a systematic way, but also feeds the intellect of the student, encourage the researches of the faculty and thus serve the teaching and research needs of the faculty. The college library and information resource centre acts as a vehicle for disseminating information and the related computer technologies through the best practices for utilization by its community of users and also for the exchange of information among its users.

'Best practice' in academic library in simple terms is known as that practice which makes the way for enhancing an existing function or an activity and helps in effective implementation or use of the process thereby leading to a continuous improvement and overall performance of the library NAAC (2006). With this information as background an attempt has been made to highlight the practices that are adopted in the academic libraries.

4. Best Practices in Academic Libraries

The best practices suggested by the NAAC in its quality indicators in Library and Information services to the uttiliated / constituent colleges listed below.

1. Computerization of Library with standard Software.
2. Inclusion of Sufficient information about the library in the college prospectus.
3. Compiling user statistics.
4. Displaying newspaper clipping on the notice board periodically.
5. Career/ Employment information services.
6. Internet facilities to different user groups.
7. Information Literacy programs.
8. Suggestion box and timely response.
9. Displaying new arrivals and circulating a list of those to academic departments.
10. Conducting book exhibitions on different occasions.
11. Organizing book talks.
12. Instituting Annual Best User Award for students.
13. Organizing competitions annually.
14. Conducting user surveys periodically.

5. Best practices adopted in M. H. Shinde Mahavidyalaya Library.

According to the four categories suggested by the NAAC, the M. H. Shinde Mahavidyalaya Library is following the best practices.

A) Management and Administration of M. H. Shinde Mahavidyalaya Library:

The M. H. Shinde Mahavidyalaya Library gives more importance to the management & administration of the library.

Effective management & administration library supports to the excellence in the students. It helps supports to divergent research needs on and off the campus. It adopts the changes the academic life of the college students and teachers. The best practice regarding the above criteria is as following.

1. **Automation of the Library:**
   The M. H. Shinde Mahavidyalaya has purchased the 'Vidyasagar' software which
   was developed by Easy and Useful Software, Kolhapur. The M. H. Shinde Mahavidyalaya Library is fully computerized by using the Vidyasaga software with bar-coding. The library has 5 computers connected with LAN. It has 2 Barcode Guns, 1 Scanner, 1 Printer, 1 Xerox machine.
2. **Library Advisory Committee:**
   The M. H. Shinde Mahavidyalaya Library has formed the library advisory committee.
   It includes the Principal as Chairman, Librarian as a Secretary and the five Asst. Professor in different subjects and one from the student's representative. This committee advises the Librarian regarding yearly planning of budget and the activities.
3. **Maintenance of Service Area**:
   The M. H. Shinde Mahavidyalaya Library provides clean and dust free environment in the reading room. The library staff maintained cleanliness in and outside the library.
4. **In Service Training:**
   The Librarian of the college gas given permission to join the Orientation and Refresher
   Courses and Short-term course also. The Librarian provides training to his staff about software and barcoding of books.

B)Collection and Services:

The The M. H. Shinde Mahavidyalaya Library has a balanced collection of books and they are providing the user oriented services.

1. **Collection development:**
   The Library has 8388 books, 192 CDs, 33 Periodicals and 6 newspapers are regularly subscribed. The library has nearly 142 bound volumes of periodicals. The requisition forms are taken from the subject teachers. After reviewing the demands, orders of books are placed. So the collection becomes the balanced and user oriented.
2. **Library Services:**
   The M. H. Shinde Mahavidyalaya Library provides all traditional library services and
   online services to its users.
3. **Library Books Exhibitions:**
   Every year the M. H. Shinde Mahavidyalaya Library organizes the Book Exhibitions to
   make students aware about the recent books.
4. **Extended Library Hours:**
   In the period of examinations the library working hours are extended. Every day library
   opening hours are from 7.00 am. To 5.00 pm.
5. **Newspaper Clipping Service:**
   The library important information cutting on the notice board for users. Previous
   Newspaper cutting has been maintained in the separate file for future use.
6. **Displaying New Arrivals:**
   The library displays not only new arrivals of books jacket in the notice board but the list
   of new arrival books also. It provides the information about the recent acquisitions of books.

C) Extent of User Services:

The library staff took more efforts for promotion of library services.

1. **Orientation Programs:**
   The M. H. Shinde Mahavidyalaya Library organize the orientation programs for the fresh
   students i.e. newly admitted students. The Orientation programs render the information about library timing, Book issuing policy, about access, Library services, OPAC etc. So the new users are attracted towards the library.
2. **Promotional Scheme of Books for Students:**
   The M. H. Shinde Mahavidyalaya Library declares various schemes of books to the
   students. These are as followings.

a. Book Bank Scheme

b. Two books for all students
c. Free Book Set for Physically Handicapped students

3. **User Feed Back in different format:**
The M. H. Shinde Mahavidyalaya Library collects the user's feedback printed from.
4. **Question Papers, Syllabus and Gagantara:**
The M. H. Shinde Mahavidyalaya Library the sets of university question papers, syllabus and Gagantara are made available to faculty and students from print and digital form.
5. **Inter Library Loan Facility**:
The M. H. Shinde Mahavidyalaya Library can barrow the books from other libraries or issues the books to other libraries on Inter Library Loan Basis for limited period of time. Some of the staff members are also the members of Shivaji University Library and make use of University Library according to their need.

D) Use of Technology:

Due to information flood and high expectation of readers, it is a need of a time to use Information and Communication Technology tools to fulfill the demands of the uses. The M. H. Shinde Mahavidyalaya Library uses the following technological services to satisfy the readers.

1. **Information Center:**
The M. H. Shinde Mahavidyalaya Library has developed information centre having 5 computers with LAN, Printer, Scanner and Xerox Machine with Internet Connectivity. It is open to all users for the get access to Internet.
2. **Free Browsing and Downloading:**
The M. H. Shinde Mahavidyalaya Library provides the free Internet access to the users. Readers are getting free browsing and downloading facility through Internet.
3. **N-LIST Database:**
The M. H. Shinde Mahavidyalaya Library is an active member of the INFLIBNET N-LIST consortium and obtains access E-resources & E-Journals more than 6000 and more than 313500 E-Books. The consortium approach is extremely beneficial as it allows using several E-Journals and E-Books.
4. **Online Services:**
The M. H. Shinde Mahavidyalaya Library provides the online services for free browsing and downloading.
5. **OPAC/Web OPAC:**
The M. H. Shinde Mahavidyalaya Library provides the OPAC/Web OPAC facility.
6. **E-resources from Barr. Balasaheb Khardekar Knowledge Resource Center, Shivaji University, Kolhapur.**

6. Conclusion:-

The best practices will help for improving quality of library services. This will create best image of the library & library profession in the society. The best practices adopted should bridge the gap between library & user for maximum utilization of the resources.
The web based services are essential for providing up-to-date information to all users. The development of any new research is based on the timely & accurate information given to the users, so the libraries must follow best practices.

USE AND AWARENESS OF WEB OPAC BY THE RESEARCH SCHOLARS OF SHIVAJI UNIVERSITY, KOLHAPUR

Dr. Yuvraj g. Jadhav
Assistant Professor, Deptt. of Lib. & info. Sc.,Shivaji University, Kolhapur
Email- ygj.lib@unishivaji.ac.in

ABSTRACT:

The objective of this study is to know the opinion of users with respect to the awareness and utilisation of, as well as their satisfaction level with the use of the online public access catalogue (OPAC). The paper deals with the applicability and utility of Web OPACs in the Shivaji University, Kolhapur. This paper examines Public Access catalogue usage by the research scholars.The paper discusses various aspects of web OPAC such as frequency of use, purpose, satisfaction level etc.

Keywords: *OPAC, Web OPAC, Online catalogue, Search Strategy, Boolean search*

1. Introduction:

The application of Information and communication Technology (ICT) in the area of library and information centre changed the library scenario. Better utilisation of the library sources and services are quite possible due the influence of ICT. ICT is the new modern science of collecting, storing, processing and transmitting information. It changed the traditional card catalogue system in the new system data can be spread within computer and then the required entry can be retrieved immediately through OPAC system in any format. Now user can search for information via OPAC and most recently the internet. Keywords searching and Boolean searching operators have made this feat even easier to find out relevant information according to our needs.

OPAC introduced in 1983, Dynix was one of the first and most popular commercial library automation systems. The first large scale online catalogue was developed at Ohio State University in 1975 and the Dallas Public Library in 1978.The Chen (1991) defined OPAC is a computerized catalogue is commonly referred to Online Public Access Catalogue. Norgard (1993) has stated that there is no clear definition of the online catalogue.

The concept of Web OPACs is recent origin and it is serving as a gateway to the resources not only held by the respective library but also to the holdings of other participating libraries without to local collection but going, beyond further to regional , national, international levels. It allows users to interact with documents stored on computers all over the world and makes easier access to catalogue data in the form of bibliographic records.

The Web OPAC is a very important service for any library system because this system has helped the users in their information seeking, as stated by the respondents. Whenever the users want to confirm the availability of a required document in the stock of the library, they can approach the OPAC with any of the search elements viz author, title, subject, call number.

2. Review of literature:

Wells (2007) explained under the title "What is a Library OPAC?" This paper aims to look at online Public Access Catalogue (OPAC) operations in the light of the philosophy of information, communication theory and semiotics, and to revisit fundamental questions about the nature of library OPACs and the ways in which they functions. This paper finds that for an OP AC to be publically usable the potential complexity of the information it contains must be reduced the manageable level of simplicity. OPACs purport to allow complete retrieval, even though data structures and index definitions are not transparent. They necessarily impose a framework of retrieval that conceals information at same time as it presents it and therefore to an extent they undermine the very concept of information literacy.

Aruna (1998) has discussed the meaning of OPAC, differences between OPAC and Information Retrieval and various types of OPAC. The study revealed that OPAC module of SUCHIKA falls under the second generation OPACs. Though it has some limitations, it is a fairly good OPAC package. Apart from routine operations, the libraries started developing bibliographic databases by inputting the bibliographic details of the books available in the particular library.

Jalaji, and Koovakkai, (2000) indicated in his article "Document Searching through OPAC" they studied that the OPAC system of modem period has changed the traditional concept of access drastically. It allows multidimensional searches providing as the catalogue records are computerized and made available online. The OPAC agree searches through the access points as author, title, subject, keyword, class no. etc. and combination of these. An additional provision of truncation search provide opportunity for a user to form search strategies using Boolean logic (AND, OR, NOT). This Boolean logic is easy to search and time saving search method.

Sridhar (2004) under the title "OPAC Vs Card Catalogue: A comparative Study of User Behaviours" he observe that the reports an attempt made to study use of the OPAC of ISRO satellite center (ISAC) library and compare the results with the findings of the study of the card catalogue of the same library conducted 17 years ago. The paper not only brings various aspect of the user behaviour about OPAC but also depicts the difference in user behaviour.

Ansari and Amita (2008) found that OPAC system had changed traditional concept of access to library resources. They have studied the opinion of users with respect to the awareness and utilization of, as well as their satisfaction level with, the use of the Online Public Access Catalogue (OPAC). They have concluded that users are satisfied with OPAC facilities but most of them unaware with expert searches.

Theimer, (2002) in this paper "When a 21 century user meets a 20century OPAC: now word choice impact search success". He studied that many cataloguing conventions current used in the automation MARC record were created for card production. Traditional access points moved into the complete age which was very helpful when most users were familiar with those cataloguing cards. Increasingly, libraries have converted from cards to computerized catalogue. Some of the problems commonly encountered when searching OPACs. Online catalogues are summarized, particularly from the points of the view of how such searches tend to differ from internet searches. The problem includes understanding the searches; phrasing the search; spelling & term usage conclude that library.

3. Objectives of the study

1. To know users' awareness about library Web OPAC.
2. To find out the purpose of use of library Web OPAC.
3. To know the different features of Web OPAC system.

4. Research methodology:

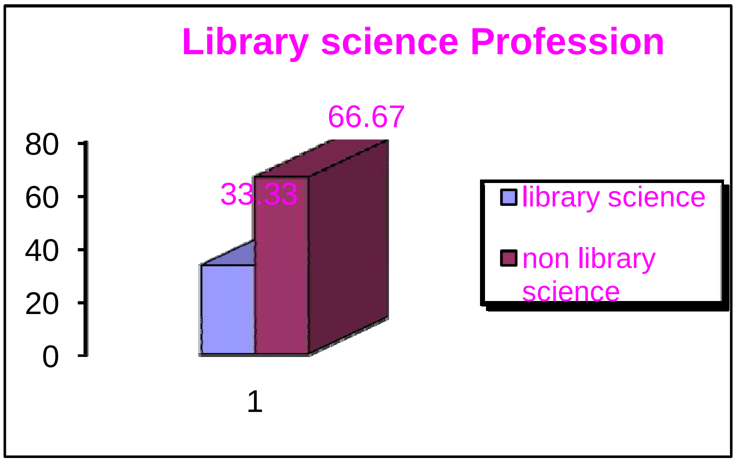
A survey method based on a structured questionnaire was used for the study. In preparing the questionnaire, similar studies and previously drafted questionnaires in this area were consulted. Well-structured questionnaires were distributed to research scholar in the different department of the Shivaji University, Kolhapur. The distribution of the questionnaires was done during their free time.

5. Results and Discussion:

i. Qualification of Respondents

Research scholars participated in performing the tasks for the study has different subject background. Two groups were made:

1. Respondents from the Department of Library and Information Science (14)
2. Respondents from other Departments of the University (28)



This chart shows that out of 42 respondent 33.33% (14) respondents from library science profession and remaining 66.67% (28) respondents have other professional background. Other professionals are from the departments of science (physics, chemistry, biology, etc,), arts, history, politics, etc.

ii. Computational Skills of the Respondent

It was essential to understand the computer handling skills of respondents. Computer savvy students have higher confidence level in searching Web OPACs. Table 1 shows the technical skills of the respondents.

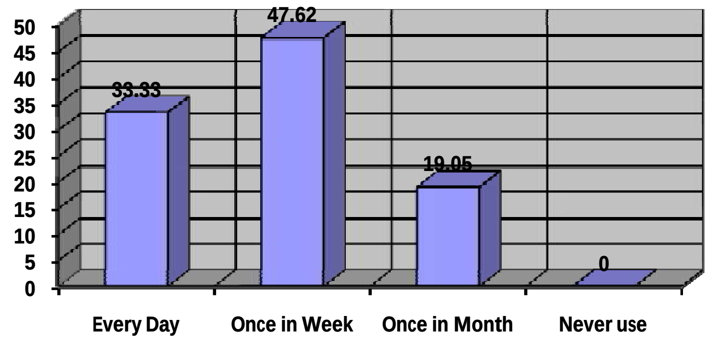
Table 1: Computer handling skills of respondents

Computational Skills	No. of Respondent	Percentages (%)
Yes	34	80.95
No	8	19.05
Total	**42**	**100**

Table No. 1 reveals that 80.95% (34) respondents have necessary computational skills. The reason may be the good infrastructure available in the University departments. Only 19.05% (8) respondents do not have that much of strong necessary computational skills.

iii. Frequency of Use of Web OPAC

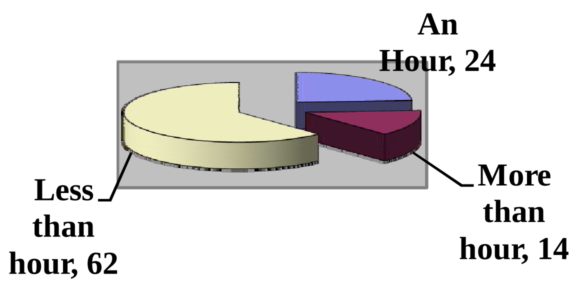
Next question was asked to know the frequency of use Web OPAC. The following graph shows that 47.62% (20) of the respondents use it once in week and 33.33% (14) respondents used it every day. Only 19.05% (08) respondents have used it once in month and there is no single user who mentioned the zero usage.



iv. Time spent to search of Web OPAC

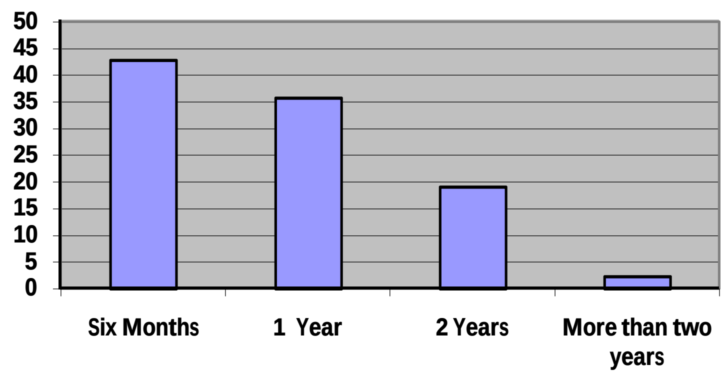
Further question was asked how much time they spent during one session of search. It is interesting to note that 62% (26) of the respondents spent less than an hour, 24% (10) of them spent an hour and only 14% (06) of them spent more than an hour for the use of Web OPAC

.



v. Experience of the Respondent about the Web OPAC search:

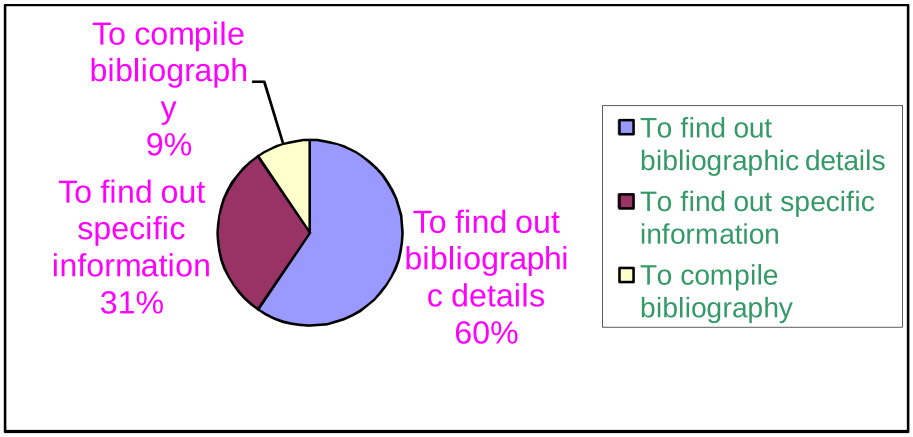
It was important to find out the experience of users in searching the Web OPAC.



This Chart shows that most of the user i.e.42.86% (18) search Web OPAC since last six months, 35.71% (15) respondents have 1-year experience while 19.05% (08) respondents have 2 years experience where as less no. of respondents i.e. 2.38% (01) have more than 2 years experience.

vi. Purpose of consulting Web OPAC

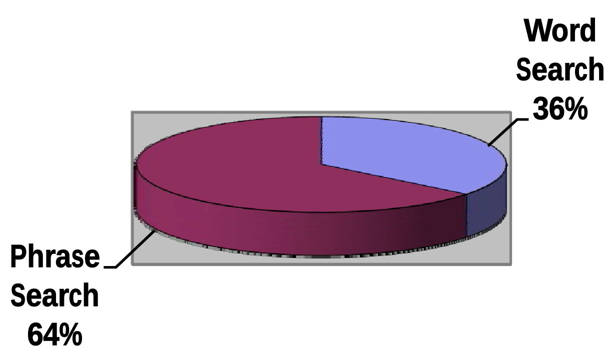
Another specific question was asked to know the purpose of consulting the Web OPAC.



Majority of the respondents i.e. 59% (25) consulted Web OPACs to find out the bibliographical details of library material for its location and availability, 31% (13) respondents consulted Web OPAC to find out specific information regarding the documents such as author, publishers, year, etc. and 10% (04) respondents consulted it to compile subject bibliographies.

vii. Search criteria

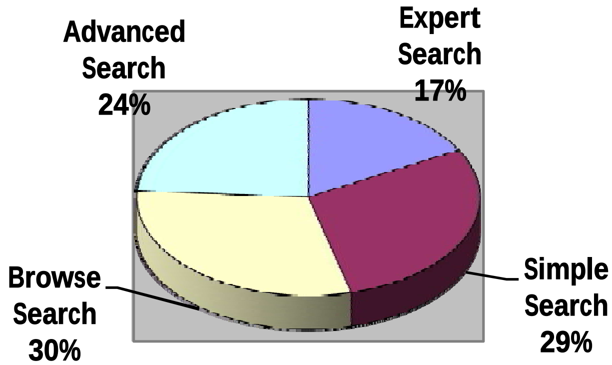
A question was asked to know that which search criteria they used.



64.29% (27) respondents preferred phrase search, 35.71% (15) respondents preferred word search and no respondents mentioned about the use of other search criteria such as class number, ISBN, etc.

viii. Search Types

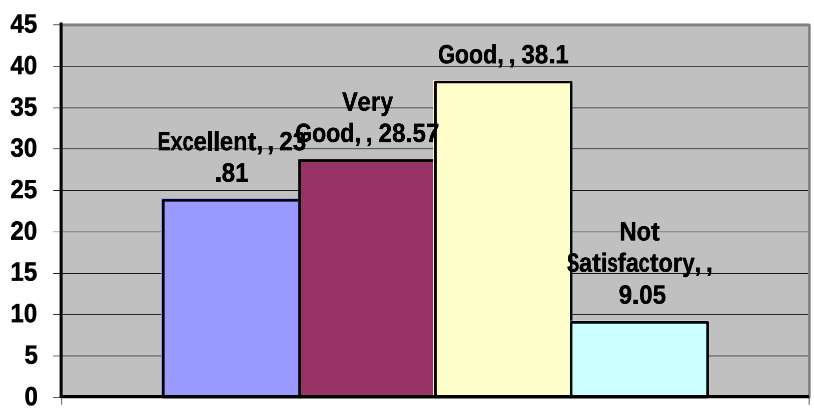
The last question was asked to find which types of search respondents use mostly.



Graph… shows that 30% (13) of respondents used browse facility, followed by 29% (12) users used simple search and 24% (10) respondents used advanced search facility. Only 17% (7) respondents used expert search.

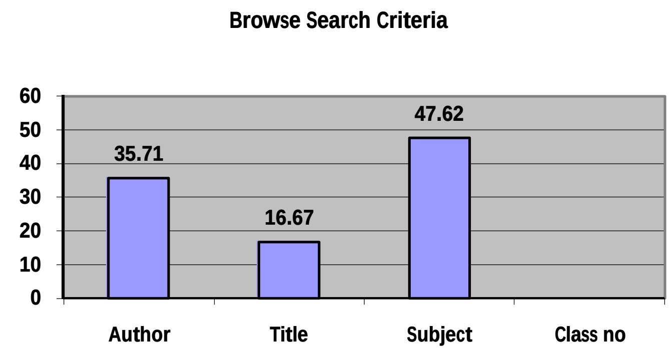
ix. Overall satisfaction on design part of the web OPACs

The question was asked to know the users overall remark on the design part of the web OPAC.



The bar chart shows that most of the respondents i.e. 38.1% (17) responded that OPACs design is good, followed by 28.57% (12) responded that design part is very good and 23.81% (10) responded that web OPACs has excellent design. Only 9.52% (03) respondents responded that web OPACs design is not satisfactory.

x. **Browse search criteria**

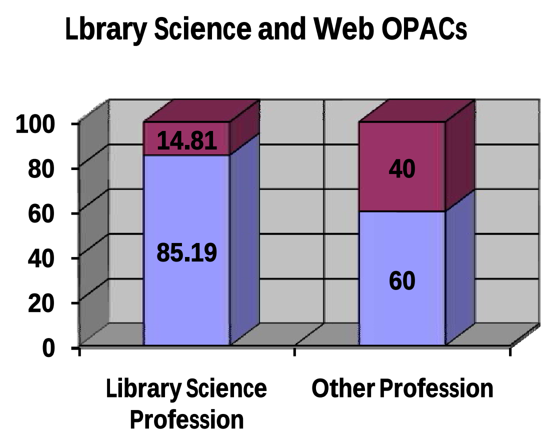


Whenever user want to know information about the required document in the stock of the library. They can browse the web OPAC through author, title, and subject and class no etc.

This chart shows that 47.62% (20) of the respondents browse the web OPAC by subject. 35.71% (15) respondents use author browse and remaining 16.67% (07) respondents use title browse. None of them use class no. browse

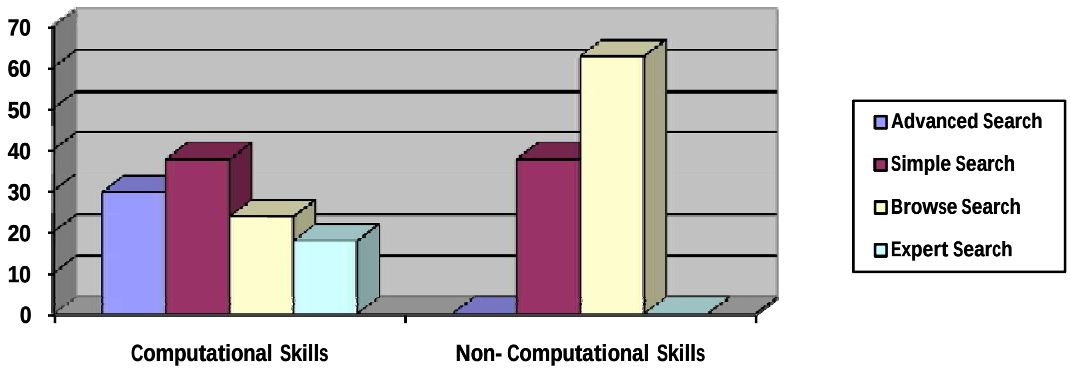
.

xi. Library Science Profession and Web OPAC



This chart shows the relation between library science professions and usefulness of web OPACs. In the library science profession 85.19% (23) respondents responded that web OPACs are easy to search them and only 14.81% (09) respondents fell that web OPACs are difficult to search. On the other hand 60% (06) respondents from the other profession feel that web OPACs are easy to search and remaining 40% (04) respondents responded feel difficulty while searching web OPACs

xii. Computational Skills and Use of Search Type:



This chart shows respondent's computational skills and its effect on use of various types of search. 80.95% (34) respondents have computational skill and remaining 19.05% (08) respondents does not have computational skills. Those respondents have computational skills, they use advanced search and expert search. 29.41% (11) respondents use advanced search, followed by 26.47% (09) respondents use simple search. Browse search use 23.53% (08) respondents and remaining 17.65% (06) respondents use expert search. On the other hand 62.50% (05) respondents use browse search and 37.50% (03) respondents use simple search. Remaining non-computational skill respondents do not use advanced search and expert search.

6. Conclusion:

The paper finds that the Web OPAC system has changed the traditional concept of access to library resources. It allows simple as well as complex searches. Document access is still one of the most important approaches of users to visit the library, and a study of the effectiveness of Web OPAC is useful in this respect. The library user wishes to locate Library materials through the OPAC. It is faster and easier than through manual catalogues. An OPAC (Online Public Access Catalogue) is an online bibliography of a library collection that is available to the public. OPACs developed as stand-alone online catalogues. It is very important to take initiative to start not only OPAC but also Web OPAC by every college as well as University library. Also, it is duty of Librarian to train the user that how to use Web OPAC.

Regarding results, sometimes users face problems of recall and precision. However, in some searches users are not able to find relevant documents on account of various factors. Data show that a high percentage of respondents are utilizing the Web OPAC as a search tool for retrieving documents. Also, most of the users handle the OPAC themselves. Significantly, the satisfaction level of users was high with the Web OPAC facilities. Nevertheless, not many users are aware of the expert searches provided by OPAC.

KNOWLEDGE MANAGEMENT AS AN IMPORTANT TOOL IN LIBRARY MANAGEMENT

Rupali N.Patil
Library Assistant, Sanjay Ghodawat Group of Institution
rupali97542@rediffmail.com

ABSTRACT

This article approaches as Knowledge Management as an important tool which can help libraries to better adapt to the new requirements of the digital age and meet users needs. Academic Institutions have significant opportunities to apply Knowledge Management practices to support every part of their mission.
Keywords: *Knowledge Management, Organizational culture, Academic libraries, KM, KMS*

Introduction

In recent years, the importance of KM has been widely recognized as the foundations of industrialized economies shifted from natural resources to intellectual assets. Since 1995 there has been an explosion in the literature surrounding the developing concept of KM. In library and information science, Ranganathan (2011) was the first to advocate that a universe of subjects is synonymous to a universe of knowledge and therefore proposed the concept of knowledge management in libraries. To prove their relevance and value, academic libraries must strive to provide the right amount of information to the right clientele at the right time with a right expense of financial and human resources. Academic Institutions have significant opportunities to apply knowledge management practices to support every part of their mission.

What is Knowledge and Its Types

Information is visible, independent from action and decision, different in format after processing, physical product, independent from existing environment, easily transferable, and duplicable. Knowledge is invisible, closely related to action and decision, different thought after processing, spiritual product, identified with existing environment, transferable through learning, and not duplicable.

Origin of Knowledge

As early as 1965, Peter Drucker already pointed out that „knowledge" would replace land, labour, capital, machines, etc. to become the chief source of production. His foresight did not get much attention back then. It was not untill 1991 when Ikujiro Nonaka raised the concept of "tacit knowledge and "explicit" knowledge as well as the theory of "spiral of Knowledge" in the Harward Business Review that the time of "knowledge-based competition" finally came. In the business world, two types of knowledge have been noted. They are explicit knowledge and tacit knowledge. Jan Duffy defines explicit knowledge as "knowledge that is documented and public; structured, fixed-content, externalized, and conscious" and tacit knowledge as "personal, undocumented knowledge; context-sensitive, dynamically-created and derived, internalized, and experience-based; often resides in the human mind, behavior, and perception. "This set of definitions can be applied to all other human endeavors and intellectual activities. Researchers have now come to agree that knowledge management is more than mere storage and manipulation of information, but a process that requires the commitment to create and disseminate knowledge through the organization (Marshall, Prusak, & Spielberg, 1996; Parikh, 2001). In today"s movement towards knowledge management, organizations are trying to best leverage their knowledge internally in the organization and externally to their customers and stakeholders. They are trying to capitalize on their organizational intelligence to maintain their competitive edge. "

Concepts of knowledge management

To create knowledge repositories, which store both knowledge and information, often in documentary form.

To improve knowledge access and transfer. Here the emphasis is on connectivity, access and transfer.

To enhance the knowledge environment so that the environment is conductive to more effective knowledge creation, transfer and use. This involves tackling organizational norms and values as they relate to knowledge.

To manage knowledge as an asset and to recognize the value of knowledge to an organization.

Importance of Organizational Culture in Knowledge Management

Knowledge is increasingly being viewed as a critical component for organizations. It is largely people based and the characteristics of groups of individuals, in the form of organizational cultures, may play a key role in the factors that lead to either the acceptance or rejection of Knowledge Management Systems (KMS). Organizational culture is unique for every organization. It is extremely difficult to change and is directly related to the leadership style. Organizational culture is primarily exhibited by the manager or head of the organization or department. Roman, Ribiere, and Stankosky (2004) found that knowledge management projects implemented in a hierarchy culture had a lower rate of success than knowledge management projects implemented in clan, market, and adhocracy cultures. The researchers also found that organizations having stronger cultural values at the organizational and department levels had greater success with knowledge management efforts. As knowledge is increasingly viewed as a critical activity for decision making (Markus, Majchrzak, & Gasser, 2002; Miranda & Saunders, 2003), organizations are becoming more receptive to using technologies to facilitate knowledge management (Schultze & Leidner, 2002). While it is widely recognized that information technologies have the potential to facilitate knowledge management, the management of knowledge-based systems is an intricate process that involves a complex interplay of technical and social factors. Knowledge, which is information that exists in the minds of individuals, is inextricably linked to knowledge management systems. The emphasis on this human component may not be as prominent in other information systems, and suggests that we incorporate constructs, such as organizational culture, to match the nature of this technology.

Knowledge Management & Academic libraries

Knowledge Management is a process aimed at creating, identifying, sharing and using knowledge at the level of an organization. Knowledge management in Academic Institutions can be applied in five key areas such as research, curriculum development, alumni services administrative services and strategic planning (Kidwell et al. 2000) According to Townley (2001), librarians have developed and applied many KM principles in the provision of library services. Reference, cataloging, and other library services are designed to encourage the use of scholarly information and thus increase the amount of academic knowledge used in higher education. Academic libraries are part of the university and its organizational culture. Whatever affects universities has an impact on academic libraries. As a result, role of academic libraries is voluminous to provide the competitive advantage for the parent organization. The success of academic libraries depends on their ability to utilize information and knowledge of their staff to better serve the needs of the academic community. Academic Libraries are pinched on both sides: reduced budget and increased demand from faculty and students. It is, therefore, paramount for academic libraries to operate more efficiently with reduced financial and human resources. Knowledge Management is considered as one of the most useful solutions for academic libraries that can be adopted in order to improve their services to become relevant for their parent institutions in the present competitive and challenging environment (Wen, 2005; Thanuskodi, 2010). This is especially true of countries like India with a rapidly developing economy. Knowledge Management is a viable means in which academic libraries could improve their services in the knowledge economy.

Knowledge Management Tools For Academic Libraries

The continuing education through professional training courses or workshops plays a significant role in the implementation of knowledge management in all contemporary organizations (Sanchez, 2001). Libraries are no exception, especially as in their case the pace and the volume of changes which they have to deal with is doubled by the complexity which satisfying the information needs and requests of users through up to date products and services (Octavia-Luciana Porumbeanu 2010). A community of practice was defined by Stewart (1997) as a „group of professionals within a corporation who are informally bound to one another through their exposure to a common class of problems and common pursuit of solutions. Members within the community of practice freely exchange knowledge which creates an even greater resource base of knowledge. Information Technology (IT) serves as a powerful enabler and provides effective and efficient tools for all facets of knowledge management including capturing, sharing, and applying knowledge (Gandhi, 2004). New technologies have dramatically transformed the library world too. It can also support knowledge sharing by facilitating people to locate as well as communicate each other (Roknuzzaman et al. 2009). Knowledge Management in an academic library therefore is to ensure an all-round improvement of library staff"s capacity; promotion of relationships between libraries and library users; it promotes knowledge innovation, strengthening knowledge inter-networking and quickens knowledge flow. Other objectives are highlighted below.

Implementations of Knowledge Management in Academic Libraries

A knowledge management initiative in libraries becomes imperative in order to harness the wealth, wisdom, expertise, and experiences embedded in the heads of such employees before they leave the library. This can be achieved through brainstorming, open discussions, and provision of fertile ground for creativity, sharing of ideas, organizing workshops, conferences, mentoring, web archiving, digitization, and identification and collectively addressing problems and finding solution. Therefore there are a number of approaches that academic librarians should follow and harvest the tacit and explicit knowledge of workers to the full advantage of the library. These include acquisition of modern tools, updating skills and standardization, knowledge creation, knowledge capturing, knowledge sharing, and skills in ICT.

Conclusion

Library professionals believe that professional education and training programs, Community of practices, information technology and knowledge sharing are the important tools of knowledge management for academic libraries. Lack of knowledge sharing culture, top management commitment, incentives and rewards, financial resources and IT infrastructure are the major constraints for the implementation of knowledge management in academic libraries. Libraries, with limited budget and human resources, should utilize the current management structure and technology to implement Knowledge Management, either bottom-up or top-down. With a concerted effort, Knowledge Management will help to increase libraries" operational efficiency and cater to the ever-increasing needs of our clientele. As knowledge workers, they must extend their expertise beyond collection management to knowledge acquisition and management. They have to extend their expertise in selecting, organizing, and preserving information. They must be willing to move outside the walls of the traditional library and work assiduously with technologists, faculty, and students. This means that librarians are no longer merely custodians of information; rather, they will act as knowledge managers who will work with users in collecting and analyzing strategic intelligence, act as trainers and consultants to transfer knowledge throughout the organization. It is therefore essential for management in organizations to look for means to gain, maintain, and leverage knowledge to achieve a lead to higher levels of success for organizations.

ल्यांकित स्वरूपाच्या वाचनसाहित्याचा संग्रह हा कोणत्याही ग्रंथालयाच्या सेवांचा पाया असतो. अर्थात ग्रंथालयाचा संग्रह उत्कृष्ठ असण्यासाठी सर्वच प्रकारच्या ग्रंथालयांनी ग्रंथसंग्रह विकास धोरण निश्चित करणे खूप गरजेचे आहे. ग्रंथसंग्रह विकास धोरणामध्ये ग्रंथनिवड ते ग्रंथरद्दबातल करण्याच्या सर्व प्रकियांचा समावेश होत असून ग्रंथसंग्रह विकास धोरणावर विविध घटकांचा (अंतर्गत व बाह्य) परिणाम होत असतो. असे असले तरी समतोल ग्रंथसंग्रह विकासाकरीता ग्रंथपालांनी विविध कौशल्यांचा वापर करून ग्रंथसंग्रह विकास धोरण निश्चित करणे आवश्यक आहे. सदर लेखामध्ये ग्रंथसंग्रह विकास धोरण व त्यावर परिणाम करणारे घटक यांची चर्चा केली असून ती ग्रंथपालांना उपयुक्त ठरणारी आहे.

की वर्डस्: *ग्रंथसंग्रह विकास, ग्रंथसंग्रह विकास धोरण, संकलन, मूल्यमापन, ग्रंथ रद्दबातल, अंदाजपत्रक विभागणी,*

IMPACT OF INFORMATION TECHNOLOGY AND ROLE OF LIBRARIES IN THE KNOWLEDGE SOCIETIES

Ravindra R. Mangale
Librarian ,Yashwantrao Chavan (KMC) College, Kolhapur
ravi_libmmec@rediffmail.com

ABSTRACT:

Information technology is currently taking center stage and transformed the whole world into a global village with a global economy, which is increasingly dependant on the creative management and distribution of information. The enormous advantages it has in easing the delivery of information around the world. The paper discusses the impact of information technology and role of libraries in the age of knowledge and information societies. It also highlights the problems faced by the Library & Information Service (LIS) sector in India and achievements over the years using modern information technologies.

Keywords: *ICT, Information Technology, Library Services, Knowledge Management*

Introduction:

Information technology has transformed the whole world into a global village with a global economy, which is increasingly dependant on the creative management and distribution of information. Over the past decades the world has been experiencing significant changes in which the need to acquire, utilize and share knowledge has become increasingly essential. Now, in the 21st century, the age of knowledge and information is in its higher gear. This is an age when invisible knowledge and information take the role of prime movers leading all sector. The World Bank has used metaphor “knowledge is development”. Lack of knowledge is largely responsible for underdevelopment. In a knowledge and information-oriented society, creative brains become leaders of economy and knowledge workers are in great demand. If knowledge can be equated with development, then the wider the knowledge gap, the broader the development gap.

Some 10,000 year ago the early ancestor of mankind, subsisted by hunting and gathering, started to building agrarian societies. The old agrarian societies began their transitions to industrial societies in mid-18th centuries. Expansion of intellectual activities in industrial societies, such as industrial production, international trade and transactions, and technological advancement, stimulated mass distribution of education and creation of libraries. Industrial societies continued their enormous material development throughout the 20th century. The information society has passed through four transformational stages of development, the most radical stage starting at the tail end of the 20th century. This stage has brought a never-ending revolution, particularly with the introduction of information and communication technologies. During this period, there have been unprecedented developments, profoundly affecting the social structure – the decline of manufacturing sector as compared to the prospering information-rich service sector is one example of such developments. The concept of knowledge societies is often used to denote a development in or second generation of information society. Whereas the information society aims to make information available and provide the necessary technology, the knowledge society aims to generate knowledge, create culture of sharing and develop applications that operate mainly via the Internet. The goal of knowledge society is to fill social needs, create wealth and enhance the quality of life in a sustainable manner.

India is moving fast towards becoming an information society as the Government of India is paying due attention to the use of information technology (IT). The Prime Minister of India constituted a National Task Force on IT and Software Development in May 1998 with the purpose of formulating a long-term National IT Policy to convert India into an IT software superpower. These steps are helping India to shift from an "economy of goods" to a "knowledge economy" or "knowledge driven economy". The beginning of the knowledge society has been made through creation of parks and corridors, and the Prime Minister has given a mission of converting India into a "knowledge society" by the year 2008. Today, India is one of the largest exporters of knowledge workers.

Role of Libraries

In the modern knowledge society libraries have a new role and there are various types of library models. In the modern society, where the use of electronic services and Web-based information sources constantly increases, libraries are managed in a more democratic way, have more flexible communication system and work organization, and their service development is based on the quality and user-orientation of services. In the modern knowledge society libraries have a new role and there are various types of library models. These are as follows:

- ♦ traditional library as a memory institution
- ♦ library as a learning and research centre
- ♦ library as a cultural and communication centre
- ♦ electronic library
- ♦ digital library
- ♦ virtual library as library without walls

Libraries had been performed many important roles in the past agrarian and industrial societies. But those roles were limited in scope. In the 21st century, libraries have to perform pivotal roles in disseminating and sharing the culture of knowledge. In this age of knowledge libraries should be repositories of all of the knowledge and information accumulated by human kind. They will have to store all kinds and forms of material and information and disseminate beyond the geographical boundaries. Today's advanced information technology is enabling libraries to accomplish this immense task.

Exchange of knowledge has always been the most important objectives of libraries. Various systems have been developed to share and exchange the records of human knowledge. Universal Bibliographic Control and Universal Availability of Publications are two major programs of IFLA (International Federation of Library Associations and Institutions) to exchange knowledge world over. OCLC is the world leading library network in USA for sharing intellectual knowledge among academic community in all over the world. But libraries in the 21st century should fulfill more dynamic role. They should exchange knowledge and information with users inside and outside their country, thus going beyond their traditional reference and lending services. This would possible when libraries agreed to expand their roles beyond the geographical boundaries by using sate of art technologies.

The modern libraries certainly cannot be passive repository for books and other printed materials. The opposite requirements of storing increasing collection in various forms and of maintaining easy access to most part of it can only be balanced by deploying information and communication technologies. Libraries should upgrade their services by digitizing their resources for online use. These services should be accessible to anyone, regardless of time or location, through digital communication devices.

Libraries can play significant role in providing a good education and knowledge of high quality. Individuals around the world, no matter how poor they may be, can access whatever knowledge and information they need by visiting libraries via the internet, such as the library of congress.

Problems and Opportunities Facing Libraries in India

Library and information services are fundamental to the goals of creating, disseminating, optimally utilizing and preserving knowledge. They are instrumental in transforming an unequal society into an egalitarian, progressive knowledge-based society. It is well known that in India most of the libraries function in the government sector. These are in academic and research institutions and under the public library system, which is again under the state and central governments. At present, education being a state subject and coming under the purview of different apex agencies, there is no common direction or coordination among them. It is imperative that all libraries (public, academic, research and special) change gear and develop at an accelerated pace. Developments in information communication technology (ICT) have enabled libraries to provide access to all, and also bridge the gap between the local, the national and the global. Yet the Library and Information Services (LIS) sector in India has not kept pace with the paradigmatic changes taking place in society. There are a few libraries which are using state of art technologies to disseminate knowledge to their respective user community. There is lack of cooperation among the libraries of different organizations and which cause the lack of union catalogues at national level. The national library failed even to do this immense task. One of the major problems faced by LIS sector in India is lack of bibliographic control at national level which causes duplication in research. A considerable number of libraries had not been developed bibliographic databases of their documents for putting them on network.

To summarize, the major constraints faced by the libraries which militate against effective dissemination and use of information are:

♦ A considerable percentage of the population is illiterate or functionally literate making libraries of minimal use to them.

♦ Poor resource allocation for infrastructure improvement and collection development for public libraries.

♦ Lack of sufficient sanctioned posts, forcing most services to be operated by voluntary nonprofessional staff, which damages information organization and services.

♦ Lack of national policies promoting ICT as a tool for development of library systems and services.

♦ Lack of adequate trained manpower in the use of IT.

♦ Lack of funds for acquiring necessary hardware and software facilities.

♦ Resistance on the part of library staff to change from their traditional practices to the use of IT. Despite the above problems, Library and Information Services (LIS) sector in India has got remarkable achievements. Efforts had been made to set up networks at local, regional and national level to deploy information and communication technologies and to build electronic information sources. Besides INFLIBNET at the national level to support university and college libraries , a number of other national networks and various library networks have also been developed including NICNET (National Informatics Centers Network), ERNET (Education and Research Network), CALIBNET (Calcutta Library Network), DELNET (Developing Library Network), etc. A number of educational institutions are members of such networks. These networks, especially INFLIBNET and DELNET, are engaged in compiling union catalogs, creating various databases of experts, providing training to library staff, ILL, online facilities, reference service, assistance in retrospective conversion, etc.

To overcome the problem of financial crunch and the rising costs of journals, librarians have formed consortia to subscribe all the required journals and databases. Some special libraries and research organizations have established consortia known as FORSA (Forum for Resource Sharing in Astronomy) to share electronic access to journal literature. NISCAIR (National Institutes of Science Communication & Information Resources), one of CSIR labs, has formed a consortium for CSIR labs for accessing e-journals and databases. In order to solve the problem of universities and college libraries, UGC launched a major initiative called UGC-

INFONET that provides high speed Internet connections so as to have electronic access to professional literature including research journals, abstracts, review publications, and databases from all areas in science and technology, as well as in social sciences and humanities. The Ministry of Human Resource Development (MHRD) has set up the “Indian National Digital Library in Science and Technology (INDEST) Consortium” for the subscription to electronic resources for 38 academic institutions, including the Indian Institute of Sciences, Indian Institute of Technology, Regional Engineering Colleges, Indian Institute of Managements, and about 60 centrally-funded/aided government institutions through the consortium.

For the improvement of quality of library and information services through the systematic acquisition, organization and dissemination of knowledge, various library associations have been set up at national and state level. They annually organized conferences, seminars and training programs to trained and update library professionals with latest development in LIS.

Recently libraries and research organizations realize the importance of digital libraries and they started the work of digitization of important documents. NISCAIR and the Department of Indian Systems of Medicine and Homoeopathy (ISM&H) have entered into an agreement for establishing a Traditional Knowledge Digital Library (TKDL) on Ayurveda. TKDL will be available in English, German, French, Spanish and Japanese since these languages account for more than 98% of the international patent applications. TKDL in the first phase targets Ayurveda. But as a whole it would encompass, in addition to Ayurveda, Siddha, Unani, Yoga, Naturopathy and Folklore medicine.

The Indian Institute of Science (IISc), Carnegie Mellon University (CMU), the International Institute of Information Technology, Hyderabad (IIITH) and many other academic, religious and government organizations, totaling about 21 “Content Creation Centers”, have become partners in the Digital Library of India (DLI) initiative for the digitization and preservation of Indian heritage present in the form of books, manuscripts, art and music. Each centre brings its own unique collection of literature into the digital library. DLI has a vision to build a universal digital library of world knowledge. One million books have already been available through this project. India perhaps has one of the oldest and largest collections of Manuscripts in the world. These manuscripts are in different languages and scripts; written on different materials such as birch bark, palm leaf, cloth, paper etc. They are in the custody of libraries, museums, monasteries, mutts and individuals. A significant proportion is not preserved scientifically. Experts estimate that almost all palm leaf manuscripts may perish due to wear and tear over next 50 to 100 years. In this regard the National Mission for Manuscripts has taken a step to save the most valuable, intellectual property of our cultural inheritance. The missions has started a pilot project for digitizing the manuscripts in five states across India covering five caches of manuscripts and for the same four digitizing agencies have been selected.

Importance of open access archives, institutional repositories and open access journals has been realized by the library and information professionals in India. This movement has been accelerated by the availability of open source software namely DSpace EPrints, Greenstone, etc. Indian Institute of Science, Bangalore, INFLIBNET Centre, Ahmedabad and Documentation Research and Training Centre (DRTC), Bangalore are the leading institutions who made this movement a great success. Among the top 25 publishing countries, India ranks 12th for the overall number of journals, but drops to 18th for journals with online content. At present there are more than 150 open access journals in India. The open access journals in India are mainly initiated by six journal publishers, namely, Indian Academy of Sciences, Indian National Science Academy, Indian Medlars Centre of National Informatics Centre, Medknow Publications, indianjournals.com and Kamla-Raj Enterprises (9). The Indian Institute of Science was the first in the country to set up and interoperable institutional archive (ePrints@IIScr. The archive now has more than 7000 records, with over 90 percent having full text. Presently there are 25 institutional archives in India which are registered in the Registry of Open Access Repositories (ROAR).

An open access statement is likely to be ready by this year. The CSIR also has a plan to setup a national digital repository of research literature. NISCAIR has already started to work on the project known as National Science Digital Library. National knowledge Commission is also formulating similar open access policies and guidelines for the higher education and R & D sectors to improve access to research literature and disseminate research literature to the global communities. The National Knowledge Commission has submitted its report to the government on how to redefine the information services sector. The report of Knowledge Commission on library sector suggests that "Every state should establish a registry and archives of knowledge based digital resources which should be made accessible to all".

Conclusion:

The acquisition of knowledge has therefore been the thrust area throughout the world. The economy of present times depends no longer on visible resources and capital goods but on invisible knowledge and information. Therefore, poor nations as well as poor individuals can create wealth through active contacts and use of knowledge and information. Libraries of the 21st century can help fight poverty and narrow the gap between rich and poor. For the first time in history poor are getting opportunity to enhance their wealth through the creation and use of knowledge and libraries are taking a central role in this notable movement.

MANAGEMENT OF DIGITAL RESOURCES

Dr. Lad Ashok Tukaram
Librarian, TKIET, Warananagar

ABSTRACT

In this paper emphasis is given to study the to cope up with changing environment and to meet the users' demand, the LICs have no other option but to include digital resources in their collection. In this changed over situation, Library & Information Science (LIS) professionals have faced immense challenge while managing these resources. The LICs and the promoters of digital resources are facing problem in building and maintaining the technology infrastructure necessary to deliver digital resources due to continuous changes in hardware, software, and network technology.

Keywords – *Management, Digital resources, (LIS) professionals*

Selection and acquisition of digital resources have become complex due to various reasons including complex pricing policy, ignorance about the new digital resources due to rapid growth of digital resources. The publishers, aggregators and the other vendors offer endless variation in their digital resources subscription packages. Though the emergence of consortia and its implementation have assisted the LICs with collection building of digital resources, this system also has problems like turn down to deal with individual library requirement.

The emergence of Open Access (OA) digital resources has made tremendous impact to the users and the LICs. No doubt users have benefited from the use of the OA digital resources but the management of these resources makes things more challenging to the LIS professionals. Organization of digital resources is another area to be taken care of by the LIS professionals for the proper use. Besides the description of the digital object, categorization, indexing, the issues like storage, managing databases of the resources, searching, browsing and retrieval have to be taken care of. The LIS professionals have to administer various issues of access management like access control, content security, object identification, license issue, user id and password management, proxy/IP authentication management, etc. Management of the digital resources does not come to an end here. For continuous and future use, easy and timely access and protecting the original digital resources digital preservation is important. Digital preservation is a tough job for the LIS professional because of the use of new storage devices, standards and protocols of file formats, compression techniques, etc. The major problem is the continuous change over from one stage to another in both hardware and software. Discussion has been made here covering various issues of digital resources management.

Preservation of Digital Resources

Digital resources have several advantages over the printed form but their storage media are prone to decay and the hardware and software on which they run become obsolete rapidly. Digital preservation deals with the issues that help to manage the risk of inaccessibility of the digital resources due to technological obsolescence. There are two facets of digital preservation – the first one is digital preservation of the storage media and the second one is the hardware and software required to run the digital resources. We have to consider the digital preservation of both digitized and born-digital resources. Taking concern only about the storage media but ignoring the future accessibility will lead only to a store house of digital resources with of no use (Lahkar, 2012). Digital preservation has become difficult due to the following factors –

Diverse Forms: Digital resources have several forms. Some digital resources can be converted to printed form and vice versa. But there are some resources like web pages for which the case is different. So, the nature of digital objects creates problems in digital preservation. **Hardware/ Software obsolescence:** Digital resources need specific hardware and software to access them. But the rapid change in hardware and software technology is a threat to digital preservation.

Fragility of storage media: The storage media like optical and magnetic media deteriorates quickly due to heat, dust, humidity, etc. This fragile nature creates problem in digital preservation.

Strategies of Digital Preservation

The preservation strategies for digital resources may be long-term or medium-term or short-term. To preserve digital resources, a single strategy will not work for all types of digital resources and conditions. Arora (2001) referred to the following 13 strategies for digital preservation given by Claire Tristram.

i) Bit-stream copying: Taking the back-up of digital resources is bit-stream copying. It is not a long-term strategy of digital preservation.

ii) Refreshing: To face the problem of decay of storage media it is applied. It is simply copying digital resources from one storage media to another same type media.

iii) Technology preservation: In technological preservation, the technological environment required to access the digital resources which include operating system, application software, media drives, etc. are preserved.

iv) Digital Archaeology: In this strategy, specialized techniques are used to recover the content of the digital resources from damaged storage media or from obsolete hardware and software environment.

v) Analogue backups: Analogue backup in durable media like taking good quality printout or creation of microfilm of the digital resources can help to preserve it without losing the quality of the digital resources.

vi) Migration: In this strategy, the digital resources are transferred periodically from one hardware/software configuration system to another system. This process is applied to preserve the integrity of the digital resources and to keep the resources accessible in the changing hardware/software system.

vii) Replication: Multiple preservation strategies are represented by replication. For example, LOCKSS (Lots of Copies Keeps Stuff Safe) supports a system which allows libraries to collect, preserve and provide their users with access to material published on the Web. The system applies the replication process. Another process called peer-to-peer data trading comprising archiving sites is used to handle data for reliable replication.

viii) Reliance on standards: To rely on a well recognized format and reject proprietary and less used standards will help to upgrade the standards to work it on changingenvironment. This strategy is called reliance on standards.

ix) Normalization: In this strategy, digital resources of same type are preserved in a particular selected format, which is believed to be the best for the longevity and preservation of the resources.

x) Canonicalization: It is a method which is proposed to verify that the converted form of a digital resource from its original form has or has not lost its fundamental properties.

xi) Emulation: Here, a special kind of software called emulator is used to translate instructions from the original software to run the digital resource in a new platform of hardware/software.

xii) Encapsulation: A digital resource combined with its metadata like reference, provenance, fixity, context information reduces the possibility of running the resource in different environment. This is what is done in encapsulation.

xiii) Universal virtual computer: It is imagined that a type of programme will imitatethe computer environment for any digital resources called universal virtual computer.

Storage Management for Digital Preservation

The preservation of digital resources depends upon the storage media used for preservation. Storage media are vulnerable to technological obsolescence and natural decay, etc. Three main types of storage media used are hard disk, optical media and magnetic tape. We should always go for the latest available in the market when we select the storage media. The optical media such as CD-ROM, DVD-ROM, etc are low cost affordable storage media for digital preservation. Incorrect storage, handling and use can reduce the lifespan of these types of storage media.

The following factors should be taken care of for optical storage media like CD-ROM and DVD-ROM –

Temperature: Optimum temperature should be maintained in the storage environment. High or low or fluctuating temperature is not suitable for storage. The storage temperature should be 0-230 C. The copies which are used for access should be stored at temperature similar to the access environment.

Relative Humidity (RH): High or low or fluctuating RH can cause damage to optical storage media. The optimum RH should be maintained between 30% to 50% for storage of optical disc.

Air Quality: The air pollution agents like particulate and gaseous pollutants should be controlled in the storage environment of the optical storage media.

Light: Direct sunlight should be avoided and should be stored in dark environment.

Handling: Poor handling like touching the bottom surface by hand, bend disc, leaving the disc in the optical drive etc. can cause damage to the optical storage media. Wearing close-fitting vinyl gloves, avoiding archival copies for user access, preparing written handling guidelines to users for these storage media will help to preserve them.

Labelling: Avoid applying labels or writing on the disc. When labeling is must use a xylene-free, soft felt-tipped pen with water-based ink and only write on the clear inner hub on the label side of the disc.

These are some precautions to be looked into for preservation of optical storage media.

But the optical storage media are the secondary storage media and we should concentrate on Hierarchy Storage Mechanism (HSM) and redundancy for the primary storage device like hard disc. The digital resources can be stored in an HSM where most frequently used data are kept in the first disc and the less used data are kept in an automated tape library.

An HSM system can automatically migrate data from disc to tape and vice versa.

Multiple storage location can be used for digital preservation for the digital resources of a distributed network.

A system where different types of hardware and software are completely dependent on each other for storage of digital resources has a drawback. The system may breakdown if any one of the subsystem fails. Redundant Array of Inexpensive Discs (RAID) technology models can help in this regard which can give greater security and performance. In this system, the data are stored across a number of discs in such a way that even if some disc fails the system functions while the failed component is replaced.

Conclusion-

Due to rapid developments in ICT and its application in creation and management of digital resources, the management of digital resources the LIS professionals should also update their knowledge and practical skills of management of digital resources to cope up in the changing environment. The issue of digital preservation should be given due importance to avoid the inaccessibility of the digital resources in near future.

ROLE OF LIBRARIES IN GROWTH THROUGH KNOWLEDGE MANAGEMENT

Sandeep Rajaram Kurade

Librarian,Shivraj Arts, Commerce and D. S. Kadam Science College, Gadhinglaj.

ABSTRACT

Growth of organization is related to the economical and technological growth. In 21st century knowledge is commodity. Relevant and appropriate knowledge affects the growth of organization. Hence knowledge management has got importance. Now, Libraries role is learning centric it should be turn to knowledge centric. This paper deals with the role of library in the growth of organization through knowledge management.

Key words – *Growth, Knowledge, knowledge Management*

1. Introduction

Growth means positive change in size over a period of time. Growth can occur as a stage of maturation or a process toward fullness or fulfillment. In other words it is development from lower to higher or simple to complex form. While considering business it is increase in size, number, value, strength and expansion. It can also be growth of the new responsibilities.

Growth may be in terms of Social, Economic, Technological, etc. Social Growth is nothing but qualitative change in structure of society. The parameter of social growth is improving the wellbeing of every individual of society. Hunger, Unemployment, Bad Housing is the problems or hurdles of Social Growth.

Economic growth is an increase in the capacity to produce goods and services, compared from one period of time to another. It can be measured in nominal or real terms, the latter of which is adjusted for inflation. Traditionally, aggregate economic growth is measured in terms of gross national product (GNP) or gross domestic product (GDP).

Technological Growth is an increase in technology that increases the efficiency of a process that results in an increase in output, without an increase in input. In other words, it is improvement of process or other mechanical instrumentation that improves a product or process, which is then gives maximum returns for the same amount of work. Technological growth Creates new products and processes, Increases efficiency, lower costs, Helps economies evolve, Decreases self-reliance.

Thus while considering Human Growth all the Social, Economical and Technological growth are important factors. Even though more often business or economical growth is considered as growth. The role of library is to manage the information. Librarians and information professionals are experts in managing information. They search, acquire, preserve and disseminate the information. By Knowledge Management libraries can support or improves the rate of growth.

- **What is Knowledge**

Data, Information, Knowledge and Wisdom are all same terms with different meaning in different context.

Data: Scattered, unrelated facts, writings, numbers, or symbols.

Information: structured, organized and analyzed data.

Knowledge: Information combined with user's ability and experience that is used to solve a problem or to create new knowledge.

Wisdom: Forward looking and thinking based on one's values and commitment.

In the business world, two types of knowledge have been noted. They are **explicit knowledge** and **tacit knowledge**.

Jan Duffy defines **explicit knowledge** as "knowledge that is documented and public; structured, fixed-content, externalized, and conscious"

Tacit knowledge as "personal, undocumented knowledge; context-sensitive, dynamically-created and derived, internalized, and experience-based; often resides in the human mind, behavior, and perception." This set of definitions can be applied to all other human endeavors and intellectual activities. Tacit knowledge is also regarded as being the most valuable source of knowledge.

- **Knowledge Management**

Knowledge Management is a collection of systematic approaches to help information and knowledge flow to and between the right people at the right time (in the right format at the right cost) so they can act more efficiently and effectively to create value for the organization.

In Business Knowledge Management involves a range of strategies and practices used in an enterprise to create and represent the implementation of insights and experiences. It consists of the initiatives, processes, strategies, and systems that sustain and enhance the storage, assessment, sharing and creation of knowledge. In another word, knowledge management system of an organization is the collection of information and technologies used to facilitate the organization, and distribution of knowledge of employees.

- **Need of Knowledge Management**

Knowledge is an actual asset. For improving efficiency and productivity it is essential to manage knowledge effectively. It enables the system or organization, improves and focuses its knowledge development efforts to match its needs. Knowledge Management in every organization is essential for following purpose.

1. **Speedy access to information -** Managed knowledge makes easier to find the information or the people who hold the information you need. It increases efficiency and productivity and allows you to work better.
2. **Decision-making – Decision** Making process of Stakeholders of organization can be improved through accessing the knowledge. Due to knowledge management there is strong possibility to avoid duplication in the system it results into saving the time.
3. **Promote innovation and cultural change – Through k**nowledge management sharing of ideas, collaboration and access to the latest information happens easily. It promotes

everyone for innovation and the cultural changes needed to develop or to grow the organization and meet the target needs.

- **Improve the efficiency of an organization's operating units and business processes – Due to Knowledge Management faster access to information or knowledge can happen and it results into better business process.**
- **Role of Libraries in Knowledge Management**

As we seen above what is knowledge management, how it is essential now we will discuss how libraries can take role in the knowledge management in helps the organizations growth. Mostly libraries are learning centric. Now it is need to change libraries to knowledge centric. Role of libraries in Knowledge Management is as follows:

a) **Knowledge Resources Acquisition –**
Invention of technology has made the rate of knowledge creation exponentially. It is in various formats and can be found in different places. And this knowledge is running continuously in the circle of Data, information, knowledge and wisdom. Now it is libraries responsibility to acquire appropriate resources for organization. By making proper strategy library has to reach access point of knowledge.

b) **Knowledge Processing –**
The next step in knowledge management in library is to process the knowledge resources which may in the form of explicit or tacit. Librarians should have skills of analyzing and processing the resources. Processed knowledge becomes organizational knowledge. The main work in this step is to convert the tacit knowledge to explicit. Here information get evolved to knowledge and get ready to disseminate.

c) **Knowledge Dissemination –**
Libraries should develop Knowledge dissemination network or technology because gathered knowledge should reach to proper user is very important as it affects the decision making process. It can done by computer networks, making channels, digital technology, etc. The success of knowledge management is depend on knowledge dissemination in right time to right user.

d) **Knowledge Feedback –**
Once we disseminate or provide the knowledge or information to the user of organization or stakeholders of organization library should take feedback regarding the usefulness of the knowledge. It will guide or give direction for acquiring relevant information.

A new culture will develop in library by Knowledge Management. Role of library in an organization is of various dimensions. In other words once can say that library can act as leader, analyst, consultant. With these different roles library can be a catalyst for the growth of any organization.

- **Conclusion**

This age is of information age and in this age knowledge is commodity. In library knowledge management library professionals have certain skills like analysis, processing, ICT skills etc. Librarians should adopt new techniques, methods to develop Knowledge Management System. As the knowledge disseminates affects the growth of organization there should proper strategies for developing Knowledge Management system. In other words, Libraries should turn to knowledge centric than learning centric.

WEB-BASED ELECTRONIC RESOURCES MANAGEMENT IN COLLEGE LIBRARIES

S. S. Bidare
Librarian, KLE's SCP Arts, Science and DDS Commerce College, Mahalingapur
Y B Koradur
Librarian, STC College,Library and Information Center, Banahatti
Mail ID: koradur.yallappa779@gmail.com

Introduction:

The e-Resources available in a library play a prominent role in facilitating access to required information to the users in an easy and expeditious manner. The digital resources available in a library play prominent role in facilitating accessto the required information to the user are an expediency manner. Further oneneed not go to the library to make use of print formats as the digital resources can be made use of by any user through On-line access via networks or authentication methods at any time by comfortably Now web-based electronic resources havebecome most popular tools in academic research.

At present the online databases, web-based E-resources facilitate formation of the colleges at resource sharing among the libraries.Library functions a very important role in this fast changing go green of publishing. Their role includes identification of selection of information, its organization of management, storage retrieval and dissemination to right users at the right time at right place at right price and in right format. The goal of any academic libraries is to meet the teaching, research and other information needs of the user.

The aim of this study is to identify how electronic information resources are utilized by academic library users and specific trends that can be seen among faculties and students. Further the study also examine the use pattern, acceptance, perceived importance and satisfaction on electronic resources over print resources.

College Library:

The library is a comfortable place to study, to investigate a topic of interest, or to enjoy reading a current book, periodical, or magazine. Please feel free to ask for assistance in using the library; a reference librarian is available to help you with your research questions.

Concept of e-Resource:

Web-based E-Resources is nothing but electronic resources which is one of the emerging environment in libraries & Information communication in the competitive service. In these days, there are digital resources available in a library play prominent role in facilitating access to the required information to the user are an expediency manner.

E-Resources usually consist of e-books, e-Journals, articles, newspaper, thesis, dissertation, databases and CD-ROMs, which are likely to be the alternative to the print media. All updated information is published in these e-resources.

Some of the most important Web-based e-Resources contain the following -

- **E-book collection:**
  This electronic library is a searchable collection of eBooks. Sources include reference books, scholarly monographs, fiction, and non-fiction. Searches can be done within a particular title or performed across hundreds of titles.

- **Academic Search Complete:**
  A scholarly, multi-disciplinary full-text database of full-text periodicals, including peer-reviewed journals. In addition to full text, this database offers indexing and abstracts of journals and publications

including monographs, reports, conference proceedings, etc.

- **Book Index with Reviews:**

Use this extensive database when looking for trustworthy and reliable book reviews. It contains access to only limited scholarly, peer reviewed book reviews.

- **Newspaper Source Plus:**

This database provides access of full text news papers. This includes television and radio news transcripts.

- **Religion and Philosophy Collection:**

This database is the one to use when researching topics such as eschatology, "world religions, major denominations, biblical studies, religious history, epistemology, political philosophy, philosophy of language, moral philosophy and the history of philosophy."

- **e-Library:**

This broad-based database is comprised of articles from hundreds of popular magazines and scholarly journals, dozens of current newspapers and newswires, thousands of television and radio transcripts, photographs and maps, and numerous reference books. The database can be searched by subject and all articles may be printed from the computer screen or e-mailed.

- **e- Journal:**

Journals are a vital source of information for the scientific research and development in college Libraries and information centers. Getting access to E-journals involves various modalities viz. identification of journals, corresponding with the publishers/aggregators, signing the agreements etc. Electronic journals offering tremendous possibilities and advantages over print journals; ease of use, “anywhere-any time”, accessibility, share ability, hyperlink to related text or multimedia content. E-Journals also offering solution to other major logistic problems faced by libraries such as follow up of missing issues, binding, shelving etc.

e-Resource Management in College Library:

The-resource management is the rapid growth of electronic resources. Because of this growth libraries are experiencing issues related to time management, staffing, and the time-honored task of deliberating the set-up of logical workflow systems for such resources.

.

The e-resource management can be considered from the perspectives of planning, policy, and workflow issues experienced by libraries. Many libraries attempt to transfer and incorporate the print workflow onto electronic resource management.

The challenges, methods, and impacts on electronic resource management perceived by libraries are described. The authors suggest methods and ideas to address these topics that may help libraries create a sense of order for electronic resource management.

Following are the important methods used for web-based e-Resource Management in College Library

- **ERM System:**

In recent years, many libraries have created or purchased Electronic Resource Management (ERM) systems to keep track of their online subscriptions and license agreements. The ability to view all information related to a particular resource without having to consult multiple files and spreadsheets is perhaps the greatest benefit of using an ERM system.

- **ERM Processes**

The steps required for managing e-resources are more complex than those for print resources. A process that consisted of selecting, ordering, cataloging and binding now includes selecting, evaluating, approving, licensing, billing and registering access and is accompanied by a series of technical aspects, such as usability, performance, access technologies, public interfaces, troubleshooting and usage statistics. E-resource management is a time-intensive and iterative process, often requiring more staff with a greater skill set at each stage. As demand for e-resources grew, storing and managing administrative information in spreadsheets, paper files or email folders became increasingly cumbersome, and a more integrated solution was called for.

➢ Home-grown ERM Systems

At first, several libraries began to develop their own e-resource management systems to integrate such elements as the relationships between packages and their constituent parts, use permissions and constraints, authentication and contact information, as well as workflows for trialing, licensing, ordering, implementing access and notifying relevant staff.

➢ DLF ERMI Report

It helps to develop common specifications and tools for managing the license agreements, related administrative information and internal processes associated with collections of licensed electronic resources".

➢ ERD, Data Element Dictionary, Data Structure

The entity-relationship diagram (ERD) is a visual representation of the major entities needed for managing electronic resources and the relationships between them. It is the basis for the database structure of an ERM system.

➢ ERTS

The electronic resources tracking system (ERTS) to serve as a central repository for administrative metadata such as license restrictions, technical contacts, statistics availability and payment information. The ultimate goal was to merge ERTS and the trials database into a single system that would hold data from the trial phase through purchasing and renewal.

➢ ERM System Technology

At the center of any ERM system is a knowledge base, containing bibliographic, URL and holdings information.

➢ Future Releases of ERM Systems

In future releases, vendors plan to incorporate overlap analysis and cost per- use analysis into their ERM systems to help with collection development. Integration with content modules, such as e resource registration processes, incident report mechanisms and license descriptions, is also on the agenda. Standardizing usage data collection is a major objective of the ERM industry, as represented by the Standardized

Conclusion:

With the help of emerging trends in web-based e-Resources, now the college libraries are more digitally resourceful & also have started collecting information in the electronic modes likely in Online Journals, Online books, CD-ROM, DVD-ROM, e-journals, audio cassettes, video cassettes and internet. Now they have slowly started replacing the importance and usage of print media. And, because of e-resources availability there is easy access to valuable information in an expeditious manner.

RELIABILITYESTIMATIONFOR THEGENERALISED INVERTED HALF-LOGISTIC DISTRIBUTION

K. G. Potdar
Department of Statistics, Ajara Mahavidyalaya, Ajara, Dist -Kolhapur, Maharashtra, India-416505
e-mail: *potdarkiran.stat@gmail.com*

ABSTRACT

In this article, we consider a generalized inverted half- logistic distribution. The maximum likelihood estimators (MLEs) o f scale and shape parameters are used to estimate reliability function. Asymptotic confidence interval for the reliability function is constructed. Simulation study is conducted to investigate performance of estimates and confidence intervals.

***Mathematics Subject Classification**- 62F10, 62F25, 62N05.*

***Keywords**-Generalizedinverted half-logisticdistribution, MLE, Reliability, Confidence interval.*

Introduction

A Scale family of distributions more widely used to analyse lifetime data. Exponential distribution, Rayleigh distribution, half-logistic dis- tribution etc. are some of the distributions belongs to scale family. Potdar and Shirke (2014) studied inference for the scale family of lifetime distributions based on progressively censored data. Lin et. al.(1989) and Dey (2007) considered inverted exponential distribution (IED) to analyse lifetime data. Singh et al.(2013) studied Bayes esti- mators of the parameters and reliability function of IED using Type-I and Type-II censored samples.

Abouammoh and Alshingiti(2009) discussed generalized inverted exponential distribution (GIED). They studied statistical and reli - ability properties of GIED. They discussed inference of both scale and shape parameters. Krishna and Kumar (2013) estimated reliabil- ity characteristics of GIED using type-II censored data. Potdar and Shirke (2013) introduced generalized inverted scale family of distributions. Potdar and Shirke (2016) discussed reliability estimation for the generalized inverted Rayleigh distribution.

In this article, the generalised inverted half-logistic distribution is considered. Inferential procedures are considered for parameters and reliability function. In Section 2, we introduce the model and obtain maximum likelihood estimator (MLE) of reliability function. Asymp- totic confidence intervals (CIs) for reliability function are discussed in Section 3. In Section 4, the performance of the MLE and CIs are investigated through simulation study. Conclusions are reported in Section 5.

Model and maximum likelihood esti- mation

Consider half-logistic distribution with scale parameter λ. The cdf and pdf of half-logistic distribution with scale parameter λ are respectively given by

$$G(y) = \frac{1 - e^{-y/\lambda}}{1 + e^{-y/\lambda}} \qquad y \geq 0, \lambda > 0, \qquad (2.1)$$

and

$$g(y) = \frac{2e^{-y/\lambda}}{\lambda(1 + e^{-y/\lambda})^2} \qquad y \geq 0, \lambda > 0, \qquad (2.2)$$

We consider generalized inverted half-logistic distribution (GIHD)on the line of Potdar and Shirke (2013). The cdf and pdf of generalized inverted half-logistic distribution with shape parameter α and scale parameter λ are respectively given by

$$F(x) = 1 - \left(\frac{1 - e^{-1/(\lambda x)}}{1 + e^{-1/(\lambda x)}}\right)^{\alpha} \qquad x \geq 0,\ \alpha, \lambda > 0, \qquad (2.3)$$

and

$$f(x) = \frac{2\alpha}{\lambda x^2}\, e^{-1/(\lambda x)}\, \frac{\left(1 - e^{-1/(\lambda x)}\right)^{\alpha-1}}{\left(1+e^{-1/(\lambda x)}\right)^{\alpha+1}} \qquad x \geq 0,\ \alpha, \lambda > 0. \qquad (2.4)$$

The log-likelihood function is

$$L = n\log(2) + n\log(\alpha) - n\log(\lambda) - 2\sum_{i=1}^{n} \log(x_i) - \frac{1}{\lambda}\sum_{i=1}^{n}\frac{1}{x_i}$$
$$+(\alpha-1)\sum_{i=1}^{n} \log\left(1 - e^{-1/(\lambda x_i)}\right) - (\alpha+1)\sum_{i=1}^{n} \log\left(1 + e^{-1/(\lambda x_i)}\right). \qquad (2.5)$$

Take derivative with respective to α, we get

$$\frac{dL}{d\alpha} = \frac{n}{\alpha} + \sum_{i=1}^{n} \log\left(1 - e^{-1/(\lambda x_i)}\right) - \sum_{i=1}^{n} \log\left(1 + e^{-1/(\lambda x_i)}\right) = 0. \quad (2.6)$$

When λ is known, the MLE of α is

$$\hat{\alpha} = \frac{n}{\sum_{i=1}^{n} \log\left(1 + e^{-1/(\lambda x_i)}\right) - \sum_{i=1}^{n} \log\left(1 - e^{-1/(\lambda x_i)}\right)}. \qquad (2.7)$$

Consider derivative of log-likelihood function L with respective to λ, we get

$$\frac{dL}{d\lambda} = -\frac{n}{\lambda} + \frac{1}{\lambda^2}\sum_{i=1}^{n}\frac{1}{x_i} - \frac{(\alpha-1)}{\lambda^2}\sum_{i=1}^{n}\frac{e^{-1/(\lambda x_i)}}{x_i\left(1 - e^{-1/(\lambda x_i)}\right)}$$
$$-\frac{(\alpha+1)}{\lambda^2}\sum_{i=1}^{n}\frac{e^{-1/(\lambda x_i)}}{x_i\left(1 + e^{-1/(\lambda x_i)}\right)} = 0. \qquad (2.8)$$

When α is known, solution of the equation (2.8) gives the MLE of λ. When both parameters α and λ are unknown, the solutions of the two simultaneous equations (2.6) and (2.8) gives MLEs of α and λ. We substitute $\hat{\alpha}$ obtained from equation (2.7) into equation (2.8), we get

$$-\frac{n}{\lambda}+\frac{1}{\lambda^2}\sum_{i=1}^{n}\frac{1}{x_i}-\frac{1}{\lambda^2}\left[\sum_{i=1}^{n} log\left(1+e^{-1/(\lambda x_i)}\right)-\sum_{i=1}^{n} log\left(1-e^{-1/(\lambda x_i)}\right)\right]+\frac{1}{\lambda}\left[\sum_{i=1}^{n}\frac{e^{-1/(\lambda x_i)}}{x_i\left(1-e^{-1/(\lambda x_i)}\right)}-\sum_{i=1}^{n}\frac{e^{-1/(\lambda x_i)}}{x_i\left(1+e^{-1/(\lambda x_i)}\right)}\right]=0. \qquad (2.9)$$

Equation (2.9) does not have closed form solution. Therefore, we use Newton-Raphson method to compute $\hat{\lambda}$. We replace λ by MLE $\hat{\lambda}$ in equation (2.7), we obtain MLE of α.

The probability that a system survives until time t is called the reliability of the system at time t and it is denoted by $R(t)$. Thus, reliability function at time t is

$$R(t) = P(X > t) = 1 - F(t). \qquad (2.10)$$

For GIHD, the reliability function is

$$R(t) = \left(\frac{1 - e^{-1/(\lambda t)}}{1 + e^{-1/(\lambda t)}}\right)^{\alpha} \qquad t \geq 0,\ \alpha > 0,\ \lambda > 0.$$

Let $\hat{\alpha}$ and $\hat{\lambda}$ are MLEs of α and λ respectively. The MLE of reliability function $R(t)$ is given by

$$\hat{R}(t) = \left(\frac{1 - e^{-1/(\hat{\lambda} t)}}{1 + e^{-1/(\hat{\lambda} t)}}\right)^{\hat{\alpha}} \qquad t \geq 0. \qquad (2.11)$$

Interval estimation

Now we compute observed Fisher information in the following.

- **Fisher information matrix**

Log-likelihood function L is described by equation (2.5). Now, Fisher information matrix of $\underline{\theta} = (\alpha, \lambda)'$ is

$$I(\underline{\theta}) = -E\begin{bmatrix} \frac{d^2L}{d\alpha^2} & \frac{d^2L}{d\alpha d\lambda} \\ \frac{d^2L}{d\lambda d\alpha} & \frac{d^2L}{d\lambda^2} \end{bmatrix}, \qquad (3.1)$$

where

$$\frac{d^2L}{d\alpha^2} = -\frac{n}{\alpha^2},$$

$$\frac{d^2L}{d\alpha d\lambda} = \frac{d^2L}{d\lambda d\alpha} = -\frac{1}{\lambda^2}\sum_{i=1}^{n}\frac{e^{-1/(\lambda x_i)}}{x_i\left(1 - e^{-1/(\lambda x_i)}\right)} - \frac{1}{\lambda^2}\sum_{i=1}^{n}\frac{e^{-1/(\lambda x_i)}}{x_i\left(1 + e^{-1/(\lambda x_i)}\right)},$$

$$\frac{d^2L}{d\lambda^2} = \frac{n}{\lambda^2} - \frac{2}{\lambda^3}\sum_{i=1}^{n}\frac{1}{x_i} - \frac{(\alpha - 1)}{\lambda^4}\sum_{i=1}^{n}\frac{e^{-1/(\lambda x_i)}\left[1 - 2\lambda x_i\left(1 - e^{-1/(\lambda x_i)}\right)\right]}{x_i^2\left(1 - e^{-1/(\lambda x_i)}\right)^2}$$

$$- \frac{(\alpha + 1)}{\lambda^4}\sum_{i=1}^{n}\frac{e^{-1/(\lambda x_i)}\left[1 - 2\lambda x_i\left(1 + e^{-1/(\lambda x_i)}\right)\right]}{x_i^2\left(1 + e^{-1/(\lambda x_i)}\right)^2}. \qquad (3.2)$$

To obtain expectation of the above expression is a tedious job. There- fore, we use the observed Fisher information matrix, It is given by

$$I(\hat{\theta}) = \begin{bmatrix} -\frac{d^2L}{d\alpha^2} & -\frac{d^2L}{d\alpha d\lambda} \\ -\frac{d^2L}{d\lambda d\alpha} & -\frac{d^2L}{d\lambda^2} \end{bmatrix}_{\alpha=\hat{\alpha},\lambda=\hat{\lambda}} \tag{3.3}$$

The inverse of $I(\hat{\theta})$ gives the asymptotic variance-covariance matrix of the MLEs. After obtaining inverse matrix, we get variance of $\hat{\alpha}$, variance of $\hat{\lambda}$ and covariance term. We use these terms to obtain confidence intervals for reliability function $R(t)$.

- **Confidence interval for R(t)**

Let $\hat{\alpha}$ and $\hat{\lambda}$ are the MLEs of α and λ respectively and $\hat{R}(t)$ is the MLE of reliability function $R(t)$. Let $\sigma^2(\hat{R}(t))$ is the variance of $\hat{R}(t)$. Assuming asymptotic normal distribution of the MLE, confidence in- terval (CI) for $R(t)$ is constructed. To construct CI for $R(t)$ based on MLE $\hat{R}(t)$, we have to compute variance of $\hat{R}(t)$. It is obtained by using the following lemma.

Lemma (3.1) : Let X_1, X_2, ..., X_k be the random variables with mean θ_1, θ_2, ..., θ_k, and define $X = (X_1, X_2, ..., X_k)$ and $\theta = (\theta_1, \theta_2, ..., \theta_k)$. Suppose $h(X)$ is differentiable function then variance of $h(X)$ is approximated as

$$V[h(X)] \approx \sum_{i=1}^{k} [h_i^j(\theta)]^2\, V(X_i) + 2 \sum_{i=1, i>j}^{k} \sum_{j=1}^{k} h_i^j(\theta) h_j^j(\theta)\, COV(X_i, X_j)$$

$$\text{where } h_i^j(\theta) = \frac{d}{dx_i} h(x)|_{x_1=\theta_1,\ldots,x_k=\theta_k}.$$

Proof : Please refer to Casella and Berger (2002) pp.241-242.

Q

Using the above lemma, we obtain $\sigma^2(\hat{R}(t))$. Hence, $100(1-\xi)\%$ asymptotic CI for $R(t)$ is

$$\left(\hat{R}(t) - \tau_{\xi/2}\sqrt{\hat{\sigma}^2(\hat{R}(t))},\quad \hat{R}(t) + \tau_{\xi/2}\sqrt{\hat{\sigma}^2(\hat{R}(t))}\right) \tag{3.4}$$

where $\hat{\sigma}^2(\hat{R}(t))$ is maximum likelihood estimate of $\sigma^2(\hat{R}(t))$.

Performance Study

A simulation study is carried out to study the performance of MLE and CI of reliability function. We consider bias and mean square error (MSE) to compare MLEs. Simulation is carried out for (α, λ)=(0.5, 0.5), (0.5, 1), (1, 0.5), (1, 1) with sample size n= 20, 30, ..., 100.

For each sample size, 10,000 sets of samples are generated. The bias, MSE of reliability estimator $\hat{R}(t)$ are displayed in the Tables 1 to 4 for various values of α and λ. Further, the confidence levels and lengths of the CIs of R(t) based on MLE are given in Tables 5 to 8.

Table 1 : *MLE, Bias, MSE of* $\hat{R}(t)$ *when* α*=0.5 and* λ*=0.5, t=1, R(t)=0.8727.*

n	MLE of R(t)	Bias	MSE

100	0.8744	0.0017	0.0007

Table 2 : *MLE, Bias, MSE of* $\hat{R}(t)$ *when* α*=0.5 and* λ*=1, t=1, R(t)=0.6798.*

n	MLE of R(t)	Bias	MSE
20	0.6859	0.0061	0.0070
30	0.6836	0.0038	0.0045
40	0.6845	0.0047	0.0033
50	0.6830	0.0032	0.0027
60	0.6838	0.0040	0.0022
80	0.6813	0.0016	0.0016
100	0.6822	0.0024	0.0013

Table 3 : *MLE, Bias, MSE of* $\hat{R}(t)$ *when* α*=1 and* λ*=0.5, t=1, R(t)=0.7616.*

n	MLE of R(t)	Bias	MSE
20	0.7683	0.0067	0.0061
30	0.7657	0.0041	0.0041
40	0.7645	0.0029	0.0031
50	0.7633	0.0017	0.0026
60	0.7637	0.0021	0.0020
80	0.7639	0.0023	0.0015
100	0.7632	0.0016	0.0012

Table 4 : *MLE, Bias, MSE of* $\hat{R}(t)$ *when* α*=1 and* λ*=1, t=1, R(t)=0.4621.*

n	MLE of R(t)	Bias	MSE
20	0.4632	0.0011	0.0081
30	0.4613	-0.0009	0.0053
40	0.4619	-0.0003	0.0038
50	0.4615	-0.0007	0.0031
60	0.4619	-0.0002	0.0025
80	0.4613	-0.0008	0.0019
100	0.4623	0.0002	0.0015

Bias, MSE of R(t) for various values of α and λ are reported in Tables 1 to 4. For small value of α and λ, MSE of $\hat{R}(t)$ show better performance, whereas for α=1 and λ=1 bias is smaller. The bias and MSE of the $\hat{R}(t)$ decrease with increase in sample size *n*.

100	0.8951	0.1258	0.9484	0.1499

Confidence levels and lengths of CIs of reliability function R(t) for various values of α and λ are reported in Tables 5 to 8. When sample size is small, lengths of CIs are moderately large. Increase in sample size reduces the lengths of CIs and confidence levels approach to nominal levels. Length of CIs are small for smaller values of α and λ, whereas level of CIs are better for large value of α and λ.

Conclusion

In this article, point and interval estimation procedures for the relia- bility function of the GIHD are discussed. Through simulation study, performance of estimators are studied. In this study, both MLE and CI of reliability function give better performance.

#ME TOO MOVEMENT: A LEGAL PERCEPTION

Mrs.Jyoti Mahesh Shete
Shahaji Law College, Kolhapur
E.MAIL- JMSHETE27@YAHOO.COM
Dr.M.C.Sheikh
Asst. Prof. (Research Guide), Shahaji Law College, Kolhapur

Abstract -

 # Me Too Movement became famous day by day. The central issue laid down by it is 'Sexual Harassment'. The recent worldwide social media campaign #Me Too which was started in response to the Harvey Weinstein scandal. The movement gave many Indian women the space and encouragement to come out with their own experiences of sexual harassment. This is very correct time to discuss origin, objects, achievements as well as limitations of # Me Too movement at international as well as national level.

This paper is a bonafide effort to bring the legal perspective in "#Me Too Movement". Also this paper provides certain legal remedies for it.

ME TOO MOVEMENT : ALEGAL PERCEPTION

Introduction:-

Sexual Harassment at workplace is universal problem. It is widespread throughout the world. Although the #Me Too movement started around 12 years ago, it became famous only two years ago. This movement is historic and has had impact all over the world. Hollywood actor Harvey Weinstein , a powerful person who could not be touched earlier, have had to get down from his position because the woman dared to speak up at last.

Origin of Me Too Movement :-

TaranaBruke, a social worker, started the # Me Too campaign in 2006 on My space which has now gone viral on the internet when it was used by the actress , Alyssa Milano. It was the condemn the several acts of Sexual Harassment done by Harvey Weinstein.

Since then people across the globe have come forward and shared their experiences with this hash tag. It is considered as empowering through empathy. The magnitude of the problem exhibited overall.[1]

#Me Too Movement at International Level:-

According to World Health Organization (WHO), about one in three women worldwide has experienced physical and sexual violence[2]. By 2016 over two dozen countries has taken steps through their own laws to eradicate sexual harassment, thus the Me Too movement is gaining traction in jurisprudence overseas. Impacts of Me Too movement are in following countries…

United Kingdom:-

The UK # Me Too headlines included accusations of sexual assault against politicians and actors such as Kevin Spacey, who was very prominent in the London theater world.

[1] https://www.indiatoday.in/education-today/gk-current-affairs/story/MeetTarana Burke, the women who founded the #Me Too Movement , 24/01/2019,11.17pm

[2] https://www.usnews.com/news/best-countries/articles/2017-10-25/How #Me Too Has Awoken Woman Around The World, SintiaRadu, 25/10/19 12.14 am.

Equality Act 2010,Protection from Harassment Act,1997, these laws are provided to deter stalkers but applies also to workplace harassment. But apparently these protections have not been very effective as a means to limit occurrences of sexual harassment in the workplace. While new laws have not yet been created in reaction to the # Me Too Movement recommendations by the Trade Union Congress (TUC) and The Equality and Human Rights Commission (EHRC).

California:-

Even prior to the # Me Too movement California was labeled by many employers as the most employee friendly jurisdiction in the United States. The # Me Too Movement has resulted in the proposal of additional legislation. One proposal Assembly Bill 2770 was signed into law on July 9, 2018.

Even the # Me Too Movement and response thereto has impacted the United State workplace. For example, all of Latin America has signed the United Nation convention on the elimination of discrimination against women.[3]

#Me Too Movement in India:-

In 2017, when # Me Too movement was raging in the US, Law student Raya Sarkar posted a crowd sourced list that named and accused 60 professors in India of sexual harassment. The list included names from prominent institutes like FTII in Pune and Jadavpur University in Kolkata. The victims remained anonymous. The list attracted criticism from certain quarters for not following due process. But many who had been victim of sexual harassment were equally vocal in saying they had no other recourse, and the list was intended to warn others. Either way it started the ball rolling on publicly naming and accusing powerful men of sexual harassment and eventually laying the ground for the current wave.[4]

Evolution of Legislation of Sexual Harassment at Workplace in India:-

Before 1997:-

For women experiencing sexual harassment at workplace, only option was to lodge a complaint under the Indian Penal Code(IPC):

~ Section 354: that deals with the criminal assault of women to outrage women's modesty

~ Section 509: that punishes an individual for using a word, gesture or act intended to insult the modesty of women

13th August 1997:-

The supreme Court in Vishakhav.State of Rajasthan passed a judgement laying down guidelines to be followed by the establishments while dealing with complaints about sexual harassment. According to these guidelines, sexual harassment results in violation of the:

~ Fundamental rights of women to equality under Article 14 and 15 of the constitution of India

~ Right to life and live with dignity under Article 21 of the Constitution India

~ Right to practice any profession or to carry on any occupation, trade or business which includes a right to safe environment free from sexual harassment

The judgment was applicable till an appropriate Act was enacted by Government of India.

9th December 2013:-

In the aftermath of the Nirbhaya incident of 2012, Government of Indi

[3] https://www.tlnt.com/A look at the #Me Too Movement's Impact in the US, Brazil and the UK, Mishellparreno Taylor and others, 25/01/2019, 12.17 am.

[4] https://economictimes.indiatimes.com/news/#Me Too movement : Women call out their past tormentors on social media, IndulkarArvind, 25/10/2019, 1.35AM.

a promulgated The Sexual Harassment of Women at Workplace (Prevention, Prohibition, and Redressal) Act, 2013 and The Sexual Harassment of Women at Workplace (Prevention, Prohibition, and Redressal) Rules, 2013.The Government also passed the Criminal Law (Amendment) Act,2013, making sexual harassment a criminal offence w.e.f.3rd February 2013 by inserting section 354A in the IPC.

2nd May 2016:-

In March 1999, a booklet related to apex court judgment was prepared by MHRD and a letter was sent to all Vice Chancellors and Principals to set up anti sexual harassment committees.

Post which a decade passed by and in 2012 a survey was conducted and a Task Force was set up to formulate a set of guiding principles that must govern the composition, functioning and redressal mechanisms of internal complaints committees in Universities resulting in Saksham Report

As derived from its understanding of the relevance of the Vishakha judgment, the aforesaid Act of 2013 to Universities as workplace and the Saksham Report.

As derived from its understanding of the relevance of the Vishakha judgment, the aforesaid Act of 2013 to Universities as workplaces and the Saksham Report, the UGC propagated University Grants Commission(Prevention, Prohibition, and Redressal of sexual harassment of women employees and students in higher educational institution) Regulations,2015.

Even the Ministry of Women and Child Development has launched "SHe –Box", an online platform for reporting complaints of sexual harassment arising at the workplace.

Sexual Harassment:-

Sexual Harassment means-

a)any unwelcome physical verbal ,or non verbal conduct of sexual nature;

b)demand or request for sexual favours;

c)making sexually coloured remarks;

d)physical contact and advances; or

e)showing pornography[5]

Liabilities for Sexual Harassment:-

In India , there are civil as well as criminal liabilities for sexual harassment. The following legal remedies are available to survivors of sexual harassment-

a)the survivor can make complaint to Internal Committee (IC) or Local Committee (LC) as the case may be, created under Sexual Harassment of Women at Workplace(Prevention, Prohibition, and Redressal) Act,2013

b)for those who have been sexually harassed verbally, there's recourse under section 509 of Indian Penal Code- under which a person can be arrested without a court order if necessary.

c) Section 354A of Indian Penal Code relates to sexually explicit remarks, showing pornography without consent, etc.

d) If there is sexual harassment online, even if through an exchange of messages over the phone, then section 67 and 67A of the Information Technology Act.

e) Section 354 of Indian Penal Code and Section 375 of Indian Penal Code which deal with sexual assault and rape.

Achievements:-

a) It's a movement that encourages women to speak up when the entire system around them has push them into silence.

b) #Me Too movement is historic and has had impact all over the world. It matters because the existing system don't work and we need fresh ideas. These are unprecedented times when technology has enabled women across the globe to connect and speak freely.

[5] Definition under Sexual Harassment of Women at Workplace (Prevention ,prohibition, redressal) Act,2013.

c) #Me Too movement has given a reason to create #Times Up Movement which has a similar vision but it has some different and specific goals.

d)# Times Up Movement can be thought of as a solution based, action- oriented and next step into #Me Too campaign.

e) Even since Information Technology Act passed by the parliament in 2000, social media has also come under the realm of electronic evidence. That evidence found on social media sites is admissible in court.

Limitations:-

Apart from achievements of #Me too movement, there are certain limitations.

a) #Me Too movement is not the substitute to the legal process.

b) The #Me Too movement is neither perfect nor organized by any institutions. Its offen an organic process where a survivors start speaking, triggeing and outpouring from others. There is certainly a possibility that false allegation can be made.

c) Attitudes to harassment may be changing, but there are still huge hurdles for women around the world wanting to take cases to court.

d) The success of #Me Too movement is more or less depend on how media frames it because role of media is very important in this journey.

e) Evidence found on social media sites is admissiable in court. But it has to be attested bysomeone who is seeking to present it as evidence.

Suggestions:-

- Given the litigational and reputational risks associated with non-compliance of the sexual harassment Law, it is high time that employers take affirmative steps in implementing zero-tolerance policies towards sexual harassment at their workplaces and ensure that the complaint is investigated swiftly, comprehensively and confidentially.
- There should be regular awareness program relating to sexual harassment through conferences, workshop or seminars in all institutions, colleges, factories etc.
- There can be the possibility to suppress the incidents relating to sexual harassment instead of investing the matter for the goodwill of institution. But the employer should provide comfortable environment for working conditions to women employees.
- There should be active Executive body to observe actual working of Internal Committee and Local Committee.
- During #Me Too campaign, social media has played vital role. There should be strict restrictions levied on social media. Even media should handle such situations with more responsibly and only for the welfare of society.

Conclusion:-

Speaking at TED women event in Palm Springs, California,Tarana Burke has said the #Me Too Movement has “unrecognizable” to her and risks losing its original purpose.[6] So it is time to think over the statement made by founder of #Me Too Movement.

Actually #Me Too Movement in India has started with aligations made by actress TanushreeDatta against actor Nana Patekar. There after each victim of sexual harassment come with their plight through media. That was very shocking and miserable for everybody. During this journey social media played a vital role. But this is need of time, that not only media

[6] https://www.telegraph.co.uk/news/2018/11/30/,#MeToo founder says the movement has became unrecognizable,24/01/2019,11.29pm.

but also everyperson should handle such situation responsibly and for the welfare of women. #Me Too Movement tried to lessen the hurdles for women around the world. Let's try to convert #Me Too Movement into #We Too Movement to show togetherness against devil of "Sexual Harassment".

ANALYSIS OF THE CONCEPT OF PUBLIC GOVERNANCE AND GOVERNANCE REFORMS IN INDIA

Dr.D.G.Ghodake
Asst.Prof.of English,DKASC College, Ichalkaranji,Dist-Kolhapur,Maharashtra,India
Mail ID :*dgghodake@ yahoo.com*

ABSTRACT

Running the Government in most efficient manner is termed as 'Good' or 'Public' Governance. This concept has opennss, accountability, and effectiveness. The stable and legally representative of the majority of the citizen's government, which assures the complete wellbeing of all sections of the state is also called Public Governance. Governance refers to government, rule or administration. It should be transperant,non –corrupt, competent, efficient, legally correct in day to day administration and implementation and inclined towards the interests and rights of its citizens.In this paper, an attempt is made to study the concept of 'Public Governance' and for its achivements provisions made in Indian Constitution and by judiciary and others related provisions. The remedies are being suggested to bring effective public goveranance in Indian Governmental administration.

Key Words :*Public Governance, transperancy, openness, accountability effectiveness, coherance, dream of the dawn, reforms.*

Introduction :

The efforts of running the Government for the public in most effective manner is often called as 'Public Governance' or 'Good Governance.' The stable and legally representative of the majority of the citizens' government which assures the complete wellbeing of all sections of the state can give good 'Public Governance.' Governance refers to government, rule or administration. It should be tranperant, non-corrupt, competent, legally correct, efficient in day to day administation and implementation and inclined towards the interests and rights of its citizens.

The concept of 'Public Governance', eventhough became popular after second world war, is not new in India. It has long back tradition on the soil of our motherland. The classical tradition of statecraft, is perfectly documented in Koutilya's 'Arthashastra' (321-300 B.C.). State is an institution necessary for human advancement. The state should be managed for the maximun happiness of its people. In the reign of Emperor Ashoka (273-232 B.C.) administration was based on Dhamma (Dharma). It means moral order, common code of conduct or an 'Ehtical Order'. Ashoka appointed 'DhammaMahamatyas(Ministers)'. During Mughal period, King Akabar (1556-1605 A.D.) as quoted in Fazl's Ain-i-Akabari, has also made his administration of 'Public Governance. 'During the British rule, rulers left their marks in terms of political integration and administrative unification, rule of law and equality before law. In sum, since antiquity, Indian people were aspiring of public governance or good governance.In this paper the researcher is trying to explain the concept of 'Public Governance' and its application in state and Government of India along with governance reforms.

Objectives of the study :

- to define the concept of public governance.
- to fine out the characteristics, features, and principles of 'Public Governance.'
- to find out the statutory provisions of Public Governance through Indian Constitution and other legislations.
- to evaluate its implementations and application in India; and
- to study reforms in public governance.

Definition of Public Governance -

Good or public Governance signifies a participative manner of governing those functions in a responsible, accountable and transperant manner based on the principles of efficiency, legitimacy and concensus for the purpose of promoting rights of the citizens and the public interest.

Public governance refers to administation which is non-corrupt, aompetant, transperant, legally perfect and efficient in its application and implementation.

Aspects of Public Governance :-

Governance has two distinct but interconnected aspects :-

Content of policies and strategies that difine the priorities for action; and

The quality of the institutions of governance, the rules and processes through which the policies are being formed and implemented.

Attributes of Public Governance :-

Following are the five major attributes of public governance. They are :

- Transparency.
- Openness.
- Chance for public participation.
- Effectiveness.

Transparency : Effective and responsive government must be crystal clear transperant in its day to day administration right to information must be available to every citizen.

Openness : The administration must be open to all and there must be wide contacts of the government with the public.

Chance for public participation : Improving civil society participation in policy making, matching this with strong representative institutions, increasing openness.

Accountability : Accountability means administrative accountability.Red apism must be cut out and government is answerable to the public.

Effectiveness : Efficiency and effectiveness increases the quality of good government. The formulation of policy by increasing consultation and participation will increase efficiency and effectiveness on the bureaucracy.

Issures of openness, participation and accountability are at the core of notions of democracy and lack of effectiveness and coherence are identified among the threats to the creadibility and stability of democratic instituions.

Anna Hajare's Contribution to Public Governance :

Anna Hajare a social reformer and freedom fighter fought for Right to Information Act 2005 and persued for it. His main intention was to eliminate corruption, to bring transperancy in public governance and to know every administrative policy to public. Every citizen has got right to information and ask for every step taken by the bureaucrats. This Act became an effective tool to tackle curruption. For many, particularly India's poor and disadvantaged , the simple act of filing an RTI application is empowering, and often leads to tangible results. It has become a powerful tool to control public governance.

Why the Public Governance is required? :

The necessity of the public governance must be tapped out. People are not only subjects on whom only to rule and to reign in whatever way government like with total disregard of their own obligation. People have their legal rights and their government have corresponding duty towards them for securing and promoting their social, economic and political welfare. Not only legal rights of the individuals are being protected but there is a need of establishment of that social order in which social, economic and political justice is being provided. The concept of public governance would be futile unless it is well included in the functioning of various organs of state and government.We have to fine out the ideas of good public governance contained in India's Constitution and invarious laws.

The following is the discussion about Preamble and related articles of our Constitution.

'Good / public Governance' concept as found in Indian constitution :-

Preamble of Indian Constitution :

"WE, the people …. Justice, ….. Liberty …… Equality ….. fraternity ……" The makers of our constitution placed 'Justice' at the highest pedestal and notice 'justice' highter than other principles i.e.'Liberty' 'Equality' and 'Fraternity'. Even in justice-'Social justice' is at higher level following 'economic justice; and then 'political justice.' It ensures the liberty of throught, expresession, faith and worship and equality of status and opportunity, and lastly it promotes the unity and integrity of the Nation.

These provision in preamble envisage good public governance for India.

Indian Judiciary :

The fundamental rights (Art.12 to 35) and other rights gnaranteed are made enforcebale by the higher courts; such as High Court and Supreme Court. Indian judiciary is primarily responsible for providing weightage and strength to these rights. This obligation of the Superior Courts is basically responsible for having public governance inside indian territory. Inspite of heavy criticism by other wings i.e. Legislative and Executive bodies on "Over judicial Activism" of the superior courts; these courts have tried their level best to maintain 'public governance in Indian administration.'

Other Provisions :

Art.51 (Promotion of International peace and security; Art. 48A (Protection of ….. forests and wild life); Art.51A (Fundamental Duties) are some of the few articles which speaks about public governance.

"Public governance,citizen's rights and rule of law" principles are well reflected through many case laws of supreme court. Academia and intellectuals, the corporate sector, representative association, NGOs and other social activists and the media are other equal contributors of ideas and provide pressure for administative reforms which will make our administration public governance.

9. Implementation and application of public governance :

It is true that there is a need of "Action Plan for Effective and Responsive Government." The National Confernce occurred in Nov.1996 in which the chief secretaries of different states of India discussed the main themes in the action plan as follows :

Accountable and citizen-friendly government;

Trasparency and right to information;

Improving the performance and integrity of public services;

Following recommendations were made in the conference :

Preparation of citizen's charters strengthening of machinery for redressal of public grievances, review of administrative laws, people' participation, decentralisation of powers, e-governance, granting statutory status to the Central Vigilance Commission, Lokpal Bill, preparation of a professional code of Ethics for Civil Servises and some more.

For public governance in India, we want certain reforms.All reforms can be classified into 4 groups : i) Reforms pertaining to the legal basis of government action, ii) Comprehensive or specific reforms of administrative structure size or design. iii) Reforms for an improved 'Work Culture' within the bureaucrative machine, and iv) Reforms for a more mature relationship between government and civil society.

The judiciary is as essential source of reforms even as it deliberates and decided on the rising numbers and range of PIL applications being moved before it. Judical orders have led to change in many areas; environmental inprovements, social and individula rights are same examoples of the role played by Senior Courts with regards to Public governance.

Of course, the implemention of the action plan for effective and responsive government in the central government has been slow and in several cases unidimensional. There is absence of awareness about the principles of public governance among the citizens and employees.

It seems that there is a big gap between the expectation of the people and the effectiveness of the delivery mechanism. If we have to go in the direction of public governance in India, we have to strictly follow some suggestion. They are i) strengthening of accountability of executive, ii) assurance of welfare of citizens through policies and programmes, iii) harmonious relationship among the organs of the state, iv) employment of the weaker section and more specially or women. v) guarantee of free press and media.

Conclusion:

The concept of 'public Governance' is better in theory but miserable and pitiable in reality. If we want to achieve this goal, all must unite together and then success will not be for away. To achieve 'effective public governance' is not the 'utopian dream' which is perfect but impracticable. It is not a fantasy but it is the 'dream of the dawn', which will become true in reality. Let us march in that direction right from today, no right from this moment.

SOCIAL INJUSTICE AGAINST DALIT WOMEN IN INDIAN SOCIETY

Vijay B.Musai
T. K. Kolekar Arts andCommerce College, Nesari, Dist: Kolhapur, Maharashtra

Introduction

There are various constitution provision for preventing social injustice against Dalit women, such as the Untouchability (offences) Act 1955 as well as Prevention of Atrocities Act 1989 (Indian Backward class women particularly SC, ST). However, social injustice are faced to Dalit women . social injustice is being occurred mostly in rural area by the upper class/caste. Her Social, Economic, Political, Religious and Educational exploitations have become most thinkable issues for her existence and identity as human being. The social injustice against Dalit women have become the foci of study by the social scientists.

The fact of social injustice against Dalit women is one of the vital obstacles in the way of social development of Dalit Women. The preamble of Constitution of India inspires the Dalits to gain fundamental rights but still the fundamental rights are denied to the them because of hanging over to the reactionary forces of traditional life. The social injustice against Dalit women have deeply social injustice against Dalit women the researcher to take up the investigation. The aim of the present study is to find out the nature and causes of atrocities on Dalit women

The research problem

The present study attempts to know the atrocities on Dalit women as well as their awareness, attitude regarding atrocities on them in the rural areas. Rural dalit women's identity is changing. Eradication of atrocity gives her inspiration to live satisfactorily. But the Dalit women are facing the adverse situations, that is why By reviewing some literature,the study attempts to find out the situation of atrocities and nature of atrocities on Dalit Women in Indian society

Objective of the study

The present study focused on the following objectives

To understand the some reviews regarding the violence against Dalit women.

To observe and discussion regarding the violence against Dalit women.

Methodology

The present study is deals with in connection atrocity and dalit. With development .It is followed on the basis of secondary data source as various published and unpublished sources of data available through article, book, news paper, internet, journal etc. For this study analysis is analyzed descriptively. The study is used descriptive method and is known to be qualitative study.

Conclusion

In the light of reviewed literature, it seems that after post independence of Indian society, Dalit women are not safe in various level, hence she is not developed her social achievement.

ASSESSMENT OF INDIAN JUDICIAL ACTIVISM ON ENVIRONMENTAL DEGRADATION AND ITS IMPACT ON SOCIETY AND HEALTH

Dr. R. G. Panhalkar
Shahaji Law College, Kolapur
E-mail: *rameshpanhalkar0@gmail.com*

ABSTRACT

Besides, existing central state laws in India, the H.C and S.C. have given number of judgments through PIL to protect our environment from its degradation, there is a large impact of environmental degradation on the society and the health of public and private people. In this paper, the attempt is made to study the judgements given by constitutional judiciary thereby giving guidelines to protect, preserve and conserve our environment The environmental sensitivity, awareness, knowledge, understanding attitudes, skills, etc.is needed for understanding protection and improvement in environment quality.

1. Introduction

The famous English poet, William Wordsworth has quoted, " Nature never did betray the heart that loved her." Our ancestors were also great admirers of nature and also they worshipped nature. The world known Marathi saint Tukaram also said " Trees and herbs are kith and kin to us", but with the passage of time, coupled with our greed for speedy economic growth, we have been very unkind to nature and we have disturbed the balance between the man and the various components of nature which we call environment.The degradation of natural environment has now become the global problem. Through case laws, the Indian judiciary has given many judgements since 1986 through public interest litigations to protect, preserve and conserve our environment.

2. Objectives

The following objectives are being decided:

1. To study rights of clean healthy environment.
2. To study judgements given by Indian judiciary through PIL.
3. To study major doctrines of Indian environment jurisprudence.
4. To study environmental degradation and its impact on society.
5. To study environmental degradation and impact on health.
6. To study the concept of environmental education.

3. Right of environment

The quality of life of Indian people mainly depends on environmental health of the country. The environmental deterioration is the result of the modern living, technological advancement, industrialization and urbanisation. In our country, there is uninterrupted interference in the 'right of environment'. The third generation human rights are groups and peoples oriented rights and thus the environmental human rights are the third generation rights and they are of course, related with society and people rather than individual. The Stockholm conference of 1972 was the landmark in the history of environmental protection. In its first principle, -- "Man has a fundamental right to freedom, equality and adequate conditions of life in an environment of a quality that permits a life of dignity and well being and he bears a solemn responsibility to protect and improve the environment for present and future generations." The words protect and improve be analysed on the point of 'right-duty discourse.' Indian perspective on right to environment is thus right-duty discourse.

Indian constitution, too, casts a fundamental duty on the state and in every citizen to maintain, improve and protect the quality of environment. The main related articles are 21, 47, 48A and 51A(g) of our constitution.

4. The role of Indian Judiciary

The Indian higher judiciary has thought it necessary, imperative and appropriate to assume the role of policy maker, law giver, monitoring authority and educator to ensure Indian citizenry an adequate justice. In Olenm gas leak case, AIR 1987 SC 1086, the Supreme Court said that----- "we have to evolve the new principles and lay down new norms which would deal with the new problems which arise in highly industrialized economy." Through Supreme Court, the Indian Environmental jurisprudence had adopted following seven principles. They are :-

1. Precautionary principle.
2. Polluter pays principle.
3. Strict or absolute liability principle.
4. Exemplary damages principle.
5. Trusteeship principle.
6. Inter generation equity principle.
7. Sustainable development principle.

Precautionary principle is based on the responsibility of state government to the effective measures as uttered in Vallore citizens forum case, AIR 1996 SC 2715; The polluter is responsible for compensating and repairing the damage done to the natural environment. In polluter pays principle (M.C. Mehta vsKamalnath AIR 2000 S C 1997, S C said that the absolute liability for harm to the environment extends not only to compensate the victim of the pollution but also to the cost of restoring the degradation. The ruleof Ryland vs Fletcher of absolute liability is announced in Olenm gas leakage case pollution fine i.e exemplary damages principle is declared by supreme court in accordance with Article 32 and the petition under public interest litigation. The doctrine of public trust imposes a duty upon a government to protect the resources for the enjoyment of the general public rather than to permit their use for private purposes. State is a trustee of all natural resources which are meant for public use and enjoyment. Supreme Court declared " Inter generation equity principle in Bombay dying and manufacturing co.Ltdvs Bombay Environmental Action group case of 2006. In Goa Foundation vsDiksha holding pvt. Ltd. AIR 2000 bom 318 (DB) pronounced sustainable development principle. Every aspect of development should be based upon the principle of sustainability. It is development that meets the needs of the present without compromising the ability of the future generation to meet their own needs.

All these principles have been incorporated in the fundamental law of the land. This is vast Indian judicial activism which can be summarized as---"If water is polluted, air is abnoxious and food stuffs are poisoned and the survival of humanity is at stake, what would be the use of economic prosperity and even of all human rights?"

5. Environmental degradation and health

The main consequences of environmental degradation are found on the health of the person and public. Water pollution, its scarcity including marine pollution invite over 3 million deaths and bilions of illnesses annually. Global atmospheric changes increase the risk from climatic natural disasters, possible shifts in vector-borne diseases ,more skin cancers and eyes damages even from ozone depletion. Congestion and noise in urban cities invite infectious diseases, traffic accidents, hearing impairment etc. there are two ways in which the environment affects human health---the first is directly through pollutants discharged by industries in air, in water and by automobiles too. In urban areas, the current disease pattern is directly linked with deterioration in the quality of air and water.

For most people in the world, the greatest environmental health threat continues to be pathogenic organisms. Although much of our attention is focused on toxic synthetic chemicals, we should also be aware of the biological hazards to which we are exposed. In sum, there five major categories of health hazards—i) communicable diseases, ii) non communicable diseases, iii) malnutrition, iv) Injuries and, v) mental disorders.

i.e. stress."If our body must be healthy, we have to keep our environment healthy". Keep environment clean and safe than your body will be safe and longevity i.e. expectation of life at birth will definitely increase".

6. Environmentdegradationand society

The agenda 21 of the (Earth, Summit) of the Rio Declaration on environment and development 1992 of Brazil has given danger singles of environment threats such as Global Warming, Green House effect, Global, Ozone depletion, Acid Rains, Global, Co_2 changes in the atmosphere, atmospheric turbidity and unclear winter, Radiation Hazards and many more.

Climatologists believe that increasing atmospheric concentrations of co_2 other green house gases released by human activities such as consuming fossil fuels and deforestation are warming the earth. This is green house effect. These gasses in the atmosphere act like the glass of green home. The heat trapping property of these gases is undisprited although uncertainties exist about exactly how earth's climate responds to them. CO_2CH_4 $O_3$and N_2O are the green home gases. The acid rain is a broad term used to describe in various ways the acids fall from the atmosphere. Acid rain and its deposition have the long lasting effects on flora. Fanna and land and soil. Acid rain causes acidification of lakes and streams and contributes to damage of trees and other sensitive forest soils. The ozone layer of the atmosphere is deplated. The main cause of O_3 depletion is the increased stratopheric concentration of chlorine from industrially produced chlorofuro Carbons (CFCs)

The main question of today is- i) Is society aware about this? Ii) Is there a systematic environmental education to the public at large? Iii) Is there knowledge about humanity and environment relationship? Iv) Is the knowledge being imparted to the society at large about solutions and prevention of environmental problems?

7) Environmental education and awareness

There is an urgent need for humanity to understand the environment and its governing principles as well as its close relationship with and dependence upon it. Environmental education is a necessary tool for making appropriate decisions concerning the solution and prevention of environmental problems. These problems range from local to global level global environmental problems call for world wide action and management based on international conventions such as – Stockholm conference on human environment, 1972 United Nations environment programme (UNEP), U.N. conference on Human settlement (Habital,1976); Bonn convention 1979; Nairobi Declaration 1982, earth summit 1992, Action plan –Agenda 21, Rio Declaration 1992, convention on Biological diversity 1992, U.N. commission on sustainable development, Kyoto protocol 1997, Earth Summit plus 5, Johansburg Declaration on Sustainable development 1972, World Summit on sustainable development 2002, Delhi Declaration 2002 and many more.

But the regional level problems require the agreement of the affected countries on a plan of action in solving the problems of common concern. In case of local problems, the local people need to be educated and be made aware of Environment problems exist at local , National, regional and global level. What is needed to understand the causes and effects of these problems and devise ways and means for their solution and prevention in the context of the totality of the environment.

8.Epilogue

The Environmental education is the answer to the Environmental threats mentioned above. Environmental education in the educational process through which knowledge is being imparted to its target groups in schools, homes, factories etc. the environmental sensitivity, awareness, knowledge of understanding altitudes, skills, commitments etc. needed for understanding protection and improvement of the Environment and prevention and solutions of its allied problems. Foster Environmental literacy among all citizens.

As envisaged in the Kautilya'sArthashastra, each individual is under a duty to protect the nature. The trees, animals, water, air and land inspired greater significance in the ancient way of life for a variety of reasons which have later on resulted in the deep rooted religion faiths and beliefs. 'Save the nature and save the Earth and save the whole mankind must be the slogan of the twenty first century.'

COPYRIGHT LAW IN INDIA: AN OVERVIEW

Mrs.Sonali J. Gaikwad
Asst. Prof. in Law, D. G. B. Dayanand Law College, Solapur

ABSTRACT

Intellectual Property pertains to any original creation of the human intellect such as artistic, literary, technical, or scientific creation. India is now a signatory to various Intellectual Property treaties and conventions. India has already taken steps to comply with the obligations under TRIPS, and the Indian Intellectual Property law regime is almost at par with the regimes of many developed nations. The Copyright (Amendment) Act, 2012 introduced amendments to harmonize the Copyright Act, 1957 with WIPO Copyright Treaty (WCT) and WIPO Performances and Phonograms Treaty (WPPT). This article explains the law pertaining to Copyright law in India.
Key Words: *Intellectual Property, Development of Copy Rights, Remedies for Infringement of Copyright.*

Introduction

Intellectual Property is an intangible property or proprietary asset, which applies to any product of the human intellect that has commercial value. Intellectual Property has been traditionally categorized into Industrial property and Copyright. The term Industrial property includes patents, trademarks, industrial designs, and geographic indications of source. Copyright protection is granted to protect literary, artistic and musical works. Intellectual property rights are generally said to be a bundle of exclusive rights granted to the lawful owner.[7]

Origin of Intellectual Property Rights

The origin of intellectual property rights can be traced back to the ancient days when monopolies existed in the Byzantine Empire. Ancient Greece in the 7th century BC granted monopoly to cooks to exploit new recipes for one year. But a few centuries later, Emperor Zeno in Rome rejected the concept of monopoly. Through a proclamation in 480 AD, Emperor Zeno ordered that no one should exercise monopoly upon any garment or fish or any kind of thing. By 1432, the Senate of Venice enacted a statute providing exclusive privileges to those inventing any machine or any process to speed up the making of silk. This protection was soon extended to other devices. Any new idea thus introduced started obtaining protection. Thus, the origin of the intellectual property rights has a link with European enlightenment.[8]

The importance of intellectual property in India is well established at all levels statutory, administrative and judicial. India ratified the agreement establishing the World Trade Organization. (WTO). This Agreement, inter - alia, contains an Agreement on Trade Related Aspects of Intellectual Property Rights (TRIPS) which came into force on 1st January 1995. The obligations under the TRIPS Agreement relate to provision of minimum standard of protection within the member countries legal systems and practices[9].Every nation has framed its own intellectual property laws. But on international level it is governed by the World Intellectual Property Organization (WIPO). The Paris Convention for the protection of Industrial Property in 1883 and the 'Berne Convention for the Protection of Literary and Artistic Works' in 1886 were first conventions which have recognised the importance of safeguarding

[9] http://www.simplynotes.in/e-notes/mbabba/international-business-management/ipr-intellectual-property-rights/

intellectual property. Both the treaties are under the direct administration of the WIPO.[10]

The Convention Establishing the World Intellectual Property Organization (WIPO), concluded in Stockholm on July 14, 1967 (Article 2 (viii)) provides that "intellectual property shall include rights relating to:

- Literary, artistic and scientific works,
- Performances of performing artists, phonograms and broadcasts,
- Inventions in all fields of human endeavor,
- Scientific discoveries,
- Industrial designs,
- Trademark, service marks and commercial names and designations,
- Protection against unfair competition, and all other rights resulting from intellectual activity in the industrial, scientific, literary or artistic fields."[11]

Development of Copyright Law in India

The Copyright Act, 1957 (as amended by the Copyright Amendment Act 2012) is the oldest extant intellectual property right legislation in India and it governs the subject of copyright law in India. This Act is applicable from 21st January 1958. The law of copyright was introduced in India only when the British East India Company was established in 1847. Thus the history of copyright law in India can be traced back to its colonial era under the British Empire. India is a member of most of the important international conventions governing the area of copyright law, including the Berne Convention of 1886 (as modified at Paris in 1971), the Universal Copyright Convention of 1951, the Rome Convention of 1961 and the Agreement on Trade Related Aspects of Intellectual Property Rights (TRIPS). But India is not a member of the WIPO Copyright Treaty (WCT) and the WIPO Performances and Phonograms Treaty (WPPT).[12]

The amendments introduced by the Copyright Amendment Act, 2012, are significant in terms of range as they address the challenges posed by the Internet and go beyond these challenges in their scope.[13] The 1980s and 1990s saw the digital revolution sweeping the world and the advent of Internet over the World Wide Web. The global community responded to the challenges posed to the copyright system by the Internet through two treaties framed in 1996, called WIPO Copyright Treaty (WCT) and WIPO Performances and Phonograms Treaty (WPPT), together known as the 'Internet treaties'.[14] The Copyright (Amendments) Act 2012 introduced amendments to harmonize the Copyright Act 1957 with WCT and WPPT. The amendments Act goes much beyond the internet treaties and has introduced many changes in the Copyright Act 1957. The amendments can be categorized into:

1. Amendment to rights in artistic works, cinematograph films and sound recordings.
2. WCT and WPPT related amendments to rights
3. Authors friendly amendments on mode of assignments and licenses to streamline business practices
4. Amendments to facilitate access to works further sub-classified into;
   a. Grant of Compulsory licenses
   b. Grant of Statutory licenses
   c. Administration of copyright societies.
   d. Access to copyrighted works by the disabled
   e. Relinquishment of copyright

5. Strengthening enforcement and protecting against internet piracy including WCT and WPPT related provision
6. Reforms of Copyright Board and other minor amendments[15]

Copyright

According to the Indian Copyright Act, "the object of copyright law is to encourage authors, composers, artists and designers to create original works by rewarding them with the exclusive rights for a limited period to exploit the work for monetary gain".[16]

Works covered by copyright

Copyright is a legal term describing rights given to creators for their literary and artistic works. The kinds of works covered by copyright include: literary works such as novels, poems, plays, reference work, newspapers and computer programs; databases; films, musical compositions, and choreography; artistic works such as paintings, drawings, photographs and sculpture; architecture; and advertisements, maps and technical drawings.[17]

Registration of Copyright

Acquisition of Copyright in a work is automatic and it does not require any formality. However, certificate of registration of copyright and the entries made therein serve as prima facie evidence in a court of law with reference to dispute relating to ownership of copyright.

Copyright comes into existence as soon as a work is created and no formality is required to be completed for acquiring copyright. Facilities exist for having the work registered in the Register of Copyrights maintained in the Copyright Office of the Department of Education. The Copyright Office has been set up to provide registration facilities to all types of works and is headed by a Registrar of Copyrights and is located at New Delhi.[18]

Who can apply for Registration?

Person who can apply for copyright in a work include the author, the publisher, the owner of or any person interested in the copyright in the work. Generally, the author is the first owner of the copyright in the work.

The term "author" has been defined under Section 2(d)[19] of the Copyright as:

- In relation to a literary or dramatic work, the author of the work;
- In relation to a musical work, the composer;
- In relation to an artistic work other than a photograph, the artist;
- In relation to a photograph, the person taking the photograph;
- In relation to a cinematograph film or sound recording, the producer; and
- In relation to any literary, dramatic, musical or artistic work which is computer-generated, the person who causes the work to be created;

Term for Copyright Protection

Copyright is protected for a limited time. The rule is that copyright lasts for 60 years. In the case of original literary, dramatic, musical and artistic works the 60 year period is counted from the year following the death of the author. In the case of cinematograph films, sound recording, photographs, posthumous publications, anonymous and pseudonymous publications, works of government and works of international organizations, the 60 year period is counted from the date of publication.

Civil Remedies against infringement of Copyright

Injunction

[15] Supra note 2
[16] Dr. S. R. Myneni, (2011), Law of Intellectual Property, Asia Law House, Hyderabad, 5th Ed.p.45.
[17] R. Anita Rao& V. BhanojiRao,(2008), Intellectual Property Rights-A Primer, Eastern Book Company, p.32.
[18] Hand Book of Copyright Law- available at, http://copyright.gov.in/documents/handbook.html
[19] https://indiankanoon.org

Section 54 to 62 of the Copyright Act provides civil remedies. As per section 55 of the Act in the case of infringement of the copyright the owner of the copyright shall, except as otherwise provided by this Act, be entitled to all such remedies by way of injunction, damages accounts and otherwise as are may be conferred by law for the infringement of a right. Thus, an owner, of copyright is entitled for all such civil remedies like injunction, damages and other remedies conferred by law. The main remedy sought in most Copyright suits is an injunction to restrain the defendant from continuing to do acts which constitute infringement.[20] It is the only remedy available against a defendant who proves that at the date of the infringement he was not aware and had no reasonable grounds for believing that copyright subsisted in the work (the innocent infringer). The law relating to injunction is contained in the Specific Relief Act, 1963. Interlocutory Injunctions is the main civil remedy which is awarded in disputes related to copyright infringement. An interlocutory injunction is a court order to compel or prevent a party from doing certain acts pending the final determination of the case. It is an order made at an interim stage during the trial, and is usually issued to maintain the status quo until judgment can be made.[21]

Besides the injunction, Section 55 of the Copyright Act, 1957 provides remedies of damages and accounts. However, the remedy of injunction can be joined either with that of damages or accounts, but the remedies of accounts and damages can in no case be joined.[22]

Damages

The damage is an important remedy for a copyright owner. The damages are provided in order to put the victim back in a position in which he would have been had his copyright not been infringed. It also includes violation in cases of published and unpublished work though the level of damages in both the cases may be different. Generally, there are three kinds of damages by the court, nominal, compensatory and **punitive damages.**

Account of Profits

The defendant may be asked to account to plaintiff the profits earned by him on account of infringing the copyright of plaintiff. For this purpose, there has to be an investigation of actual accounts of defendant.[23]

Criminal Remediesagainst infringement of Copyright

The Indian Copyright Act 1957 also provides for criminal liability to offenders of Copyright Infringement. Section 63 to 70 of the Act deal with offences relating to copyright. Section 63 mentions that when someone intentionally infringes or abets infringement of Copyright Infringement he/she is liable for an imprisonment of 6 months which may extend to three years and fine of fifty thousand but which may extend to two lakhs. Section 63A further talks about enhanced punishment for habitual offender’s according to which the minimum imprisonment term is 1 years and minimum fine is 1 Lakh Rupees. The highest punishment that can be awarded is same as that of first time offender’s.[24] The offence under section 63 of the Copyright Act, 1957 is a non-bailable offence. The provisions of section 438 of the Criminal Procedure Code, can, thereof, be applied in respect of offence punishable under section 63 of the Act.[25]

Administrative Remedies

An application can be made by the owner of copyright in any work or by his duly

authorized agent, to the Registrar of Copyrights to ban the import of infringing copies into India and the delivery of infringing copies of copyrighted article, which were earlier confiscated from infringer to the owner of the copyright.

- Copyright Board

There are no special courts for the purpose of dealing with copyright cases. The regular courts try these cases. There is a Copyright Board to adjudicate certain cases pertaining to copyright.

- Copyright Society

A copyright society is a registered collective administration society. Such society is formed by copyright owners as a group.[26]

Conclusion

The main motivation for the protection of Intellectual Property is to encourage the creative activities and Inventions. Foe last few centuries the efficacy of Intellectual Property has been realized by all developed nations. Traditionally the concern of copyright law was limited to books, music, paintings or films, now it extents to even computer software and compilations of data. In recent past, due to advancement in scientific technology the shape of IP[27] has changed dramatically throughout the world. Though India is one of the members to TRIPS Agreement, yet India has not acceded to WCT and WPPT though the amendments in Indian Copyright Act in 2012 were made according to WCT and WPPT to address and solve some of the digital challenges.

[27] Intellectual Property

ROLE OF ARTICLE 21 OF CONSTITUTION OF INDIA IN EVOLVING ENVIRONMENTAL POLICIES-A CRITIQUE

Dr. Hanchate Rama Mohan Rao
Asst. Professor, D.G.B. Dayanand Law College, Solapur

ABSTRACT

The wide interpretation of word life in Article 21 of the Constitution of India paved the way to the development of all environmental policies in India. The judiciary has played an important role for the improvement of environment by looking into various environmental problems in number of cases and providing ample scope for formulation of policies in India. The Supreme Court through its various decisions has promoted and expanded the new horizons of the word life in the context of environment. The State is bound to maintain pollution free environment and ecological balance in order to fulfil the mandates envisaged in Indian Constitution. Article 21 of the Indian Constitution protects right to life as a fundamental right and it embraces within its domain right to healthy environment.

Introduction

The special law to protect and promote natural environment in India was made in 1974 through enactment of the Water (Prevention and Control of Pollution) Act by the Parliament.Again in a landmark year 1976 it amended the Constitution to add *inter alia* articles 48-A in the Directive Principles of the State Policy and article 51-A(g) in the fundamental duties of every citizen of India. Parliament enacted the Air (Prevention and Control of Pollution) Act in 1981 and the Environment (Protection) Act, 1986.Apart from these, numerous ecological protection legislations have been enacted such as Wild Life Protection Act, 1972; the Forest (Conservation) Act, 1980; Biological Diversity Act, 2002, and the like. After the first Declaration of the United Nations Conference on the Human Environment in 1972 there was increasing concern in many nations to provide constitutional status to environmental protection.[i]

Emergence of Right to Live in a Healthy Environment in India

In modern India the Supreme Court has interpreted the "the right to life" guaranteed in Article 21 to include the right to live in a healthy environment. The Court have interfered by public interest litigation, writs, orders and directions in appropriate cases and recognized the constitutional right to a healthy environment in*Municipal Council, Ratlam*[ii] that arose out of a problem daily faced in our country. A residential locality was subjected to extreme filth and stench, partly due to the discharge of foul-smelling fluids from an alcohol plant into public streets and partly due to the complete callousness of the municipal body in maintaining basic public sanitation. A few public-spirited citizens lodged acomplaint under the provisions of Section 133 of the Criminal Procedure Code requiring the municipal corporation to carry out its statutory duties under Section 123 of the M.P. Municipalities Act, 1961. A Sub-Divisional Magistrate issued necessary mandatory orders,but the Sessions Court held them as unjustified. The High Court, however, upheld the views of the Sub-Divisional Magistrate. The Municipal Council approached the Supreme Court which observed that the officers-in-charge and even the elected representatives will have to face the penalty of the law if when the Constitution and follow-up legislation direct them to do are challenge or denied wrongfully.

The Supreme Court for the first time in *Rural Litigation and Entitlement Kendra v. State of Uttar Pradesh*[iii] recognized fundamental right of people to live in healthy environment while deciding on closure of certain limestone quarries in the Doon Valley due to soil erosion.

deforestation and river silting. In this case though the Supreme Court evolved a new right to environment right of people to live in a healthy environment, however it did not mention or discuss the source of the right.

In 1985, in the first *M.C. Mehta Case*[iv] which was filed against the illegal leakage of oleum gas from a factory by public-spirited environment conscious lawyer, the Supreme Court found that the case raised some important questions concerning the scope and ambit of Articles 21 and 32 of the Constitution. The importance of this case lies in the conclusion arrived by the Supreme Court that an enterprise engaged in a hazardous or inherently dangerous industry which poses a threat to the health and safety of its workmen and the residents of nearby areas owes an absolute and non-delegable duty to the community to ensure that no harm results to anyone on account of its activity. If any harm does result, then the enterprise is absolutely liable to compensate for such harm and it is no answer to say that it had taken all reasonable care or that the harm occurred without any negligence on its part. In other words, the Supreme Court evolved a principle of absolute liability and did not accept any of the exceptions in such a case as mentioned in *Rylands v. Fletcher*.[v]

The second *M.C. Mehta Case*[vi] was relating to the modification of some of the conditions which were laid down by the Supreme Court in the M.C. Mehta Case I for the restarting of the industries, which were earlier ordered to be closed.

The third *M.C. Mehta Case*[vii]as filed to determine the amount of compensationpayable to the victims affected by the leakage of oleum gas from a factory. This case is considered to be one of the land mark case as it evolved a new principle of liability to be one of victims of pollution caused by an industry engaged in hazardous and inherently dangerous activity.

The fourth *M.C. Mehta Case*[viii]was filed against the leather tanneries, which were polluting the holy river Ganga by letting the effluents into the river. In this case, the Court held that the pollution of river Ganga is affecting the life and health of the people and also the ecology of the Indo-Gangetic Plain. The Court issued directions to the tanneries to set up effluent treatment plants within six months, failing which the Court held that the tanneries would be closed. It concluded that although the closure of tanneries might result in unemployment and loss of revenue, life, health and ecology had greater importance.

The fifth *M.C. Mehta Case*[ix]was filed against the failure of the Kanpur Nagar Mahapalika to fulfill its statutory duties which caused the water in the river Ganga at Kanpur becoming so much polluted that it can no longer be used by the people either for drinking or for bathing. In this case, the Court directed the Mahaplika to get the dairies shifted to a place outside the city, to lay sewerage line where the same is not constructed as also to increase the size of the existing sewers in labour colonies, to construct public latrines and urinals for use of poor people free of charge, to ensure with the help of police that dead bodies or half-burnt bodies are not thrown into the Ganga and to take action against the industries responsible for the pollution. The directions were also extended *mutatis mutandis* to all other Mahapalikas and Municipalities which have jurisdiction over the areas through which the river Ganga flows.

The Andhra Pradesh High Court in *DamodharRao v. Municipal Corporation Hyderabad*[x]held that environmental law has succeeded in unshackling man's right to life and personal liberty from the clutches of common law theory of individual ownership. Examining the matter from the constitutional point of view, it would be reason- able to hold the enjoyment of life and its attainments and fulfilment guaranteed by Articled 21 of the Constitution embraces the protection and preservation of nature's gifts without which life cannot be enjoyed. There can be no reason why practice of violent extinguishment of lifealone would be regarded as violative of Art. 21 of the Constitution. The slow poisoning by the polluted atmosphere caused by environment pollution and spoliation should also be regarded as amounting to violation of Article. 21 of the Constitution. This case was filed against the building of residential quarters for LICin an area earmarked in the development plan as open space for recreational purpose.

The Rajasthan High Court in *L. K. Koolwal v. State of Rajasthan*[xi], held that though termed as duty under Article.51-A(g), the provision gives citizens a right to approach the Court for a direction to the Municipal authorities to clean the city. It further held that maintenance of health, sanitation and environment falls within Article. 21 thus rendering the citizens the fundamental right to ask for affinitive action. This case was filed seeking a direction to clean the city of Jaipur and save it from its unhygienic conditions.The Kerala High Court in *AttakoyaThangal v. Union of India*[xii]observed that administrative agencies cannot be permitted to function in such a manner as to make inroads into the fundamental right under An. 21. The light to life is much more than the right to animal existence and its attributes are manifold. as life itself. A prioritization of human needs and new value system has been recognized in these areas. The right to sweet water and the right to free air are attributes of the right to life, for these are basic elements, which sustain life itself.. This case was filed to question the environmental impact of a scheme for pumping ground water for supplying potable water to Laccadives because of the apprehension that excessive drawal of groundwater will result in salt water intrusion into the aquifers.

The Karnataka High Court in *Lakshmipathy v, State of Karnataka*[xiii] pointed out that entitlement to clean environment is one of the recognized basic human rights and it cannot be permitted to be thwarted by *status quoism* on the basis of unfounded apprehension. This case was filed challenging the establishment of industries in residential areas contrary to the running of land use in a development plan prepared in accordance with planning laws.The Delhi High Court in *Free Legal Aid Cell v. Government of NCT of Delhi*[xiv] Court opined that the effect of noise on health has not yet received full attention of our judiciary, which it deserves. Pollution being wrongful contamination of the environment which causes material injury to the right of an individual. Noise can well be regarded as pollutant because it contaminates environment, causes nuisance and affects the health of a person and would therefore offend Article. 21 if it exceeds reasonable limits This public interest petition was filed against the adverse effects of display of fireworks and use of high-sounding explosive fireworks on the health of adults and children.

The Madhya Pradesh High Court in *SayeedMasood Ali v. State of Madhya Pradesh*[xv], observed that life is a glorious gift from God. Great achievements and accomplishments in life are possible only if one is permitted to lead an acceptably healthy life. The term 'life' as employed under Article. 21 of the Constitution does never mean a basic animal existence but conveys living of life with utmost nobleness and human dignity which is an ideal worth fighting for and worth dying for Right to live in its ambit includes right to health and health gives a serene and halcyon signification to life.. This writ petition was filed by a cardiac patient against noise pollution caused by Loudspeaker in Dharmshala run by the respondent.

In *Vijay Singh Puniya v. State of Rajasthan,*[xvi]the Rajasthan High Court held that "any
person who disturbs the ecological balance or degrades, pollutes and tinkers with the gifts of nature such as air, water, river, sea and other elements of Nature, be not only violates the fundamental right guaranteed under, Art. 21 of

the Constitution, but also breaches the fundamental duty to protect the environment under Art. 51 A(g)".

Conclusion

The Supreme Court in various cases has established a nexus between the protection of the environment and Article 21 of the Constitution. The Court also has reiterated that any interference of the basic environmental elements i.e. air, water and soil, would be hazardous to "life" within the meaning of Article. 21 of the Constitution. For the purpose of maintaining ecological balance the Court has evolved various Principles and Doctrines for Protection of Environment such as public trust doctrine, polluter pays principle, precautionary principle of absolute liability and the like reflected in various environmental policies in India.

Notes and References

[i] Art.24 of the Swiss Constitution, adopted on June 6, 1976 provides that "the Federal Legislature shall enact laws concerning the protection of man and his natural environment against burdensome influences. Art. 24 of the Greek Constitution, 1975 provides that "the protection of the natural and cultural environment constitutes a duty of the State." The 1976 Constitution of Portugal (as revised in 1982) contains both a fundamental right and a statement of public policy relating to the environment. Art. 45 of the Spanish Constitution (1978) provides that "everyone has the right to enjoy an environment suitable for the development of the person as well as the duty to preserve it." The Netherlands amended its Constitution in 1983 to include Art. 21, which provides that "it shall be the concern of the authorities to keep the country habitable and to protect and improve the environment". Art. 225 of the Constitution of the Federal Republic of Brazil (1988) declares that "everyone is entitled to an ecologically balance environment."

HACKING AND CYBER LAW: INDIAN PERSPECTIVE

Mrs Deepashri S. Choudhari
Research Scholar, D.G.B. Dayanand Law College, Solapur
Email id: anushka512@gmail.com

ABSTRACT

There are several types of crimes committed all over the world. The expression crime is defined as an act, which subjects the doer to legal punishment or any offence against morality, social order or any unjust or shameful act. The "offence" is defined under Section 40 of the Indian Penal Code to mean as an act or omission made punishable by any law for the time being in force. Offences relating to body and property are punishable in all countries. These are the conducts which can be physically identified and proved easily. But there are certain offences which are difficult to prove as the offender is not physically present where the offence is committed. They are 'Cyber Crimes'. This term is related to computer and internet. Without internet these crimes cannot be committed. Internet is a vast concept and so cyber-crimes. To deal with such crimes, cyber law came into existence. Amongst various cyber-crimes hacking is one which affects majority people. This article aims at explaining conceptual basis of cyber law, its historical development, and hacking and cyber law in India.

INTRODUCTION

The law governing and regulating cyberspace is termed as cyber law. Cyber-crimes are the unlawful activities relating to computer and internet. In modern techno-world the use of internet has become a necessity. It is used for several purposes such as education, e-commerce, e-governance, social media, sending messages and mails, travel guidance, online bookings and so on. The list is unending. With the expanding use, the crimes relating to computer and internet also took shape. These crimes affect the security of personal data, banking transactions, safety of national data etc. It interrupts the normal computer functions and also is responsible for the collapse of big companies or entities. It was felt necessary to stop these criminal activities worldwide. So the Law relating to cyberspace i.e. cyber-law developed.

In India, it is the Information and Technology Act, 2000 which deals with regulation of internet activities and controlling cyber-crimes. The Act defines various types of cyber-crimes. Out of these Hacking is that which affects majority of online activities.

OBJECTIVES

It is very important to know the various concepts relating to cyber law which helps in understanding the nature of cyber-crimes. Creating awareness in society regarding cyber-crimes is essential to for its reduction. The object of this article is to give a detailed idea regarding hacking as on type of cyber-crime. Further it is aimed at giving comprehensive notion of Indian Cyber Law regarding Hacking.

METHODOLOGY

The author has used Doctrinal method for preparing the Article. For this purpose various online articles, provisions relating to cyber-crimes in India, some cases on the topic and other relevant material has been reviewed.

CONCEPTUAL BASIS OF CYBER LAW

The term 'Cyberspace' is a popular descriptor of the virtual environment in which activity of internet takes place. The word was first coined by William Gibson in his 1984 novel 'Neuromancer'. The term cyberspace has become so common that it seems to dominate the thinking of people who consciously or subconsciously feel that they are entering a place which has new meanings, dimensions and purposes.

Internet has created new public spaces and communities. These spaces and communities are known as virtual because they are no longer linked with place or time. However, they have common interests in social, cultural and psychological realms. They are based on 'Computer-mediated Communication' (CMC) and 'Human –Computer Interaction' (HCI).This has led to the emergence of Network Society. The Primary condition to be a part of virtual community is a network connection and a desire to be a part of a wider community called as Virtual Community.

Cyber-crime, in simple terms, is a crime that is facilitated or committed using a computer, network or hardware device. Cyberspace makes possible near and instant interactions between individuals who are spatially distant, which creates possibility for new forms of association which in turn gives rise to cyber-crime and cyber deviance.

The computer or device may be the agent of the crime, the facilitator of the crime, or the target of the crime. It can take place on the computer alone, or in other virtual or non-virtual locations.

TYPES OF CYBER-CRIMES

It is recognized that current legal definition of cyber-crime varies drastically between jurisdictions. A practical definition of a cyber-crime is offered by Kshetri,(2010).According to him, "Cyber Crime is defined as a criminal activity in which computers or computer networks are the principal means of committing an offence or violating laws, rules or regulations". Examples of cyber-crime include denial of service attacks, cyber-theft, cyber trespass, cyber obscenity, critical infrastructure attacks, online fraud, online money laundering, ID fraud, cyber terrorism, and cyber extortions.

(A) Violent Cyber Crimes

Violent Cyber Crimes are those crimes that pose a physical danger to some person or persons. They are further classified as follows:

(i) Cyber Terrorism

The upsurge in internet activities has also given rise to a new type of cybercrime known as 'Cyber Terrorism'. As the word suggests, "Cyber Terrorism" is basically a convergence between cyberspace and terrorism.

(ii) Cyber Stalking

It is a type of cyber-crime in which an attacker harasses a victim by using electronic communication. In some cases, cyber stalking originates from a real world stalking and is carried over to the internet. This problem that occurs through the medium of internet is known as 'Cyber Stalking' or 'On-line Harassment'. Cyber stalking includes harassment, embarrassment and humiliation of the victim.

(iii) Pornography

Internet is easily accessed on computer, pocket PC, wireless, mobile phone, etc. In the late 1970s and early 1980s, programmers were zealously developing software enabling images that are transmitted, recomposed and viewed through Usenet systems.Toa much surprise pornography is the first successful e-commerce product. Another important issue which has raised public concern is the fear of minors being exposed (either wittingly or unwittingly) to sexually explicit, adult oriented content online. Not only this is a matter of concern, but the circulation of sexual images of minors on the internet is provoking revulsion among the overwhelming majority in society.

(iv)Cyber Bullying

Cyber bullying is an extension of physical bullying. It has two forms; Overt and Covert. Overt bullying is physical aggression and includes beating, kicking and sexual touching. Overt bullying is often accompanied by covert bullying in which victims are excluded from friends group, stalked, gossiped about, verbally harassed and threatened. Cyber bullying is carried by adolescents through Internet.

(B) Non Violent Cyber Crimes

Non-violent cyber-crimes do not cause any physical damage to persons; instead they cause financial loss, psychological disorders and social harm. They are further classified as follows:

(i) Cyber Theft

Cyber Theft is a way of using a computer and Internet to steal money or information. This is also the most popular cyber-crime because the ability to steal from a distance reduces the risk of detection. Cyber Theft includes:

• Cyber Embezzlement- Online embezzlement means misuse or alteration of data by an employee of a company who has legitimate access to the company's computerized system and network.

• Unlawful Appropriation wherein an individual gains access from outside the organization to transfer funds and modify documents in such a manner that it gives him legitimate right to property he doesn't own.

• Corporate Espionage- In this crime, an individual from inside/outside the company uses the network and steals marketing strategies, trade secrets, financial data, client lists etc. in order to gain a competitive advantage.

• Plagiarism is to steal someone else's original writing and call it as its own. This form of crime is increasing everywhere as more and more people have access to computers and internet.

• Piracy is an unauthorized copying of copyrighted software, video, music, books, etc. which causes loss of revenue to the owner. Cyber piracy is the appropriation of new forms of intellectual property,in which the computer programme, expressed in the form of a digital code, generates through a computer system 'virtual products' such as images, music, office aids or interactive experiences.

• Identity Theft- In this victim's personal information is stolen by the criminal to commit financial frauds.

(ii) Cyber Fraud

Another form of cybercrime which has a firm grip on society is cyber fraud and scams online. But, the problem with this is the lack of systematic and official data. A growing number of internet auction sites provide thieves a global market through which they sell stolen items to unsuspecting customers. Another form of reported fraud is non-delivery of items for which the victims have already paid. It can also include product in authenticity and misrepresentation of the condition of the item. In cases of shill hiding, the seller places false bids by either using multiple fake identities or aliases to place bids on their own items or by arranging for associates to place bids for the items with no intention of actually purchasing them. Thereafter it becomes impossible for the legitimate bidders to detect whether or not others are genuine buyers or shills. In recent years Phishing and Spoofing frauds have increased. Phishing proceeds through the mass distribution of emails that purport to originate from banks, credit card companies and e-sellers. These mails request for providing personal and other details in order to update their account. The fraudsters thus gain access to the password and other security and authentication information of users, which can then be used to hack bank accounts or steal through credit cards.

(iii) Cyber Trespass (Hacking)

In the case of cyber trespass a computer or network is accessed by the offender without authorization, but may not misuse it. For example, a teenage hacker hacks a network just to prove himself to peers or takes it as a challenge. These trespassers enjoy reading emails of others but they don't use any information they find. However, cyber trespass is a crime in majority of countries. Cyber-crime causes more harm to society than traditional crimes.

(iv) Destructive Cyber crimes

In destructive cybercrimes, network services are disrupted or data is damaged or destroyed, rather than stolen or misused. They are classified as:

• Cyber vandalism is a form of vandalism that includes defacement of a website and denial of service attacks.

• Spread of New viruses has seen an upsurge in recent years. Many viruses are linked to notable dates, such as Christmas, Valentines Day or April Fool's day, as by doing so, virus writers and distributors feel that they have better chance of success.

(v) Other non-violent Cyber Crimes

Many non-violent cyber-crimes include Online Prostitution, Gambling, illegal drug sales on Internet and Cyber laundering.

• Cyber Prostitution: It involves carrying out prostitution online through various advertisements on sites.

• Internet Gambling: It denotes customers who use credit cards online to place bets in virtual casinos.

• Internet drug sales: Online pharmacies sale drugs to customers who are unable to purchase it from public or private dealers.

• Cyber laundering: It means using the net to hide the illegal money. Online banking offers opportunity to criminals who open accounts in an offshore bank and transfers funds electronically. Having given the conceptual framework and classification of cyber-crimes, it becomes imperative to understand the factors and motivations behind the cyber-crime.

HISTORICAL DEVELOPMENT OF CYBER LAW

The Internet is a global system of interconnected computer networks that use the standardized Internet Protocol Suite (TCP/IP). It is a network of networks that consists of millions of private and public, academic, business, and government networks of local to global scope that are linked by copper wires, fiber-optic cables, wireless connections, and other technologies. The Internet carries a vast array of information resources and services, most notably the inter-linked hypertext documents of the World Wide Web (WWW) and the infrastructure to support electronic mail, in addition to popular services such as online chat, file transfer and file sharing, online gaming, and Voice over Internet Protocol (VoIP) person-to-person communication via voice and video. The origins of the Internet dates back to the 1960s when the United States funded research projects of its military agencies to build robust, fault-tolerant and distributed computer networks. This research and a period of civilian funding of a new U.S. backbone by the National Science Foundation spawned worldwide participation in the development of new networking technologies and led to the commercialization of an international network in the mid-1990s, and resulted in the following popularization of countless applications in virtually every aspect of modern human life.

The terms Internet and World Wide Web are often used in everyday speech without much distinction. However, the Internet and the World Wide Web are not one and the same. The Internet is a global data communications system. It is a hardware and software infrastructure that provides connectivity between computers. In contrast, the Web is one of the services communicated via the Internet. It is a collection of interconnected documents and other resources, linked by hyperlinks and Uniform Resource Locator [URLs].

The World Wide Web was invented in 1989 by the English physicist Tim Berners-Lee, now the Director of the World Wide Web Consortium, and later assisted by Robert Cailliau, a Belgian computer scientist, while both were working at CERN in Geneva, Switzerland. In 1990, they proposed building a "web of nodes" storing "hypertext pages" viewed by "browsers" on a network and released that web in December.

In today's techno-savvy environment, the world is becoming more and more digitally sophisticated and so are the crimes. Internet was initially developed as a research and information sharing tool and was in an unregulated manner. As the time passed by it became more transactional with e-business, e-commerce, e-governance and e-procurement etc. All legal issues related to internet crime are dealt with through cyber laws. As the number of internet users is on the rise, the need for cyber laws and their application has also gathered great momentum.

The information Technology Act is an outcome of the resolution dated 30th January 1997 of the General Assembly of the United Nations, which adopted the Model Law on Electronic Commerce, adopted the Model Law on ElectronicCommerce on International Trade Law. This resolution recommended, inter alia, that all states give favourable consideration to the said Model Law while revising enacting new law, so that uniformity may be observed in the laws, of the various cyber-nations, applicable to alternatives to paper based methods of communication and storage of information.

The Department of Electronics (DoE) in July 1998 drafted the bill. However, it could only be introduced in the House on December 16, 1999 (after a gap of almost one and a half years) when the new IT Ministry was formed. It underwent substantial alteration, with the Commerce Ministry making suggestions related to e-commerce and matters pertaining to World Trade Organization (WTO) obligations. The Ministry of Law and Company Affairs then vetted this joint draft.

The Bill received the assent of the President on 9th June 2000 and came to be known as the Information Technology Act, 2000. The Act came into force on 17th October 2000. With the passage of time, as technology developed further and new methods of committing crime using Internet & computers surfaced, the need was felt to amend the IT Act, 2000 to insert new kinds of cyber offences and plug in other loopholes that posed hurdles in the effective enforcement of the IT Act, 2000.This led to the passage of the Information Technology (Amendment) Act, 2008 which was made effective from 27 October 2009. The IT (Amendment) Act, 2008 has brought marked changes in the IT Act, 2000 on several counts.

Cyber law is important because it touches almost all aspects of transactionsand activities on and involving the internet, World Wide Web and cyberspace.Every action and reaction in cyberspace has some legal and cyber legalperspectives.Cyber law encompasses laws relating to –

- Cyber crimes
- Electronic and digital signatures
- Intellectual property
- Data protection and privacy

Technology per se is never a disputed issue but for whom and at what cost hasbeen the issue in the ambit of governance. The cyber revolution holds thepromise of quickly reaching the masses as opposed to the earlier technologies,which had a trickledown effect. Such a promise and potential can only berealized with an appropriate legal regime based on a given socio-economicmatrix.

HACKING

Hacking earlier used to refer to a crime under section 43 of the IT Act but at the same time, ethical hacking or better known as white collar hacking was considered legal. Ethical hacking is also being taught by various professionals at schools and colleges. So a need was felt to differentiate between good and bad hacking. Under the amendment IT Act in 2008, the word 'hacker was removed from the act. The reason for the same was that ethical hacking is taught by a lot of professionals at various schools and colleges, and colleges cannot teach anything illegal. So the same word should not be used. The amendment rephrased section 66 and section 43 by removing the word hacking from the Act.

Computer hacking refers to the practice of modifying or altering computer software and hardware to accomplish a goal that is considered to be outside of the creator's original objective. Those individuals who engage in computer hacking activities are typically referred to as "hackers."

The majority of hackers possess an advanced understanding of computer technology. The typical computer hacker will possess an expert level in a particular computer program and will have advanced abilities in regards to computer programming.

Unlike the majority of computer crimes which are regarded as clear cut in terms of legality issues, computer hacking is somewhat ambiguous and difficult to define. In all forms, however, computer hacking will involve some degree of infringement on the privacy of others or the damaging of a computer-based property such as web pages, software, or files. As a result of this loaded definition, the impact of computer hacking will vary from a simple invasive procedure to an illegal extraction of confidential or personal information.

Definitions of Hacking

The New Hacker's Dictionary, a resource used to elucidate upon the art of computer hacking, has defined the practice through an assortment of definitions:

A hacker may be defined as any person who enjoys exploring the intricacies of programmable systems and how to stretch their capabilities. This definition is held in contrast to a generic computer user, who prefers to access a computer's minimal functions;

One who programs or who enjoys programming, as opposed to those individuals who simply theorize about programming;

An individual who possesses exceptional skill regarding computer programming;

A malicious meddler is a person who attempts to discover and subsequently tamper with sensitive information through poking around computer-based technologies. These individuals are commonly referred to as "network hackers" or "password hackers."

Regardless of the definition, there are unwritten rules or principles that a hacker will ultimately live by. The belief that information sharing is a powerful exercise and that is the ethical duty of hackers to share their expertise through the creation of free software and through facilitating access to information and to computing resources is a fundamental code for which the majority of hackers follow. In addition, computer hacking as a practice revolves around the belief that system-cracking as a hobby or for fun is ethically okay so long as the hacker commits no vandalism, theft, or a breach of confidentiality.

Issues of Computer Hacking

Computer hacking possesses a mixed perception. Due to our reliance on computer technologies and the critical information shared on networks, the art of computer hacking has been sceptically viewed. That being said, there is also a "Robin Hood" mentality attached to the practice, where free programs or facilitated measures have been awarded to the average computer user.

The primary issue attached to computer hacking stems from an individual's ability to access crucial or personal information that is found on a computer network. The ability to retrieve and subsequently tamper with such information will give way to the potential to commit heinous criminal acts.

Ways to Prevent Computer Hacking

Educational institutions must clearly establish use policies and delineate appropriate and inappropriate actions to all individuals who access information via a computer. The use of filters or firewalls may be considered to reduce access to unauthorized software serial numbers and other hacking-related materials.

Hacking and Cracking

The term hacker is used to mean 'a clear programmer' and also 'someone who tries to break into computer systems'. Programmers who use their skills to cause trouble, crash machines, release computer viruses, steal credit card numbers, make free long distance calls, remove copy-protection, and distribute pirated software may also call themselves 'hackers', leading to more confusion. Hackers in the original sense of the term, however, look down on thesesorts of activities. Hackers generally explore cracking. Among the programming community, and to a large extent even amongst the illegal programming community, these people are called 'crackers' and their activities known as 'cracking' to distinguish it from hacking. A cracker is generally someone who breaks into someone else's computer system, often on a network, bypasses passwords of licenses in computer programs or in other ways intentionally breaches computer security. A cracker can be doing this for profit, maliciously, for some altruistic purpose or cause, or because the challenge is there. Some breaking-and-entering has done ostensibly to point out weaknesses in a site's security system.

CASE:State of Tamil Nadu VsSuhasKatti

The Case of SuhasKatti is notable for the fact that the conviction was achieved successfully within a relatively quick time of 7 months from the filing of the FIR. Considering that similar cases have been pending in other states for a much longer time, the efficient handling of the case which happened to be the first case of the Chennai Cyber Crime Cell going to trial deserves a special mention. The case related to posting of obscene, defamatory and annoying message about a divorcee woman in the yahoo message group. E-Mails were also forwarded to the victim for information by the accused through a false e-mail account opened by him in the name of the victim. The posting of the message resulted in annoying phone calls to the lady in the belief that she was soliciting.

The court relied upon the expert witnesses and other evidence produced before it, including the witnesses of the Cyber Cafe owners and came to the conclusion that the crime was conclusively proved. Ld. Additional Chief Metropolitan Magistrate, Egmore, delivered the judgement on 5-11-04 as follows: " The accused is found guilty of offences under section 469, 509 IPC and 67 of IT Act 2000 and the accused is convicted and is sentenced for the offence to undergo RI for 2 years under 469 IPC and to pay fine of Rs.500/- and for the offence u/s 509 IPC sentenced to undergo 1 year Simple imprisonment and to pay fine of Rs.500/- and for the offence u/s 67 of IT Act 2000 to undergo RI for 2 years and to pay fine of Rs.4000/- All sentences to run concurrently." This is considered as the first case convicted under Section 67 of Information Technology Act 2000 in India.

CONCLUSION

To conclude with it can be said that 'Hacking' has become the most common crime todays to which about all netizens fall easy prey. To remain safe from such types of cyber-crimes, it is necessary to spread awareness among people. Although there exists Law for the purpose of punishing the cyber-criminals, but punishments can be awarded after commission of crime. It is better not to be victim of such crimes by knowing the basics of cyber-crimes.

IMPACTING STUDENT LEARNING USING CASE STUDY METHOD IN MANAGEMENT EDUCATION

Seema S. Desai

Associate Professor – Marketing Management,Department of Management Studies (MBA)
Rajarambapu Institute of Technology, Islampur, Sangli - Maharashtra – 414415.
Email: *seema.desai@ritindia.edu*

ABSTRACT

The teaching method of using case studies is becoming gradually more common strategy in Management education. Most of the students still presume that solving cases in management classes is a tough task. As well as most of them think that case study is an unexciting task. All these aspects make the student incapable to specialize a particular course very well, as well as they feel reading all those long pages of a case study becomes very complex task. Taking all these aspects into consideration this research was carried out to think of a better situation of teaching and learning the case studies through the application of the Think-Pair-Share model. The research applied for this experiment was classroom action research. The most essential factor of this research was to make students actively involved in the teaching-learning process when conversing with their fellow mates. Information required for this research was obtained from the answers to each question through test given after every phase. This research tested that case study is more effective than lecture method to promote learning of key Management concepts like, developing oral and written communication skills, and understanding the importance of Decision making concepts in corporate life.

After the implementation of the Think-Pair-Share model in the experiment, it was found that the student's capability and interest to solve cases enhanced. This was observed by the progress of the mean marks for each test, the improvement of the marks was like 76 marks in phase I which raised 87 marks in phase II. Also, the student number who exceeded the Minimum Levels of Learning Standard improved to 51 students in phase III from 35 students in phase II. The results presented here suggest that case studies using TPS (Think-Pair-Share) are significantly more effective than other methods of content delivery in increasing performance and can provide a rich basis for developing students' problem solving and decision making skills. Based on these findings, T-P-S should be considered as a preferred method for teaching Cases in the Management courses.

Keywords: *Think-Pair-Share, Reading, Active Research in the classroom.*

INTRODUCTION:

Importance of Using Case study in teaching Management Course:

Many students learn better from examples or demonstrations than from logical development with basic principles. Case studies can therefore be a very effective classroom technique to teach a management class. Case studies are often used for teaching a course in business schools, law schools, medical schools and social sciences, but they can be used in any discipline when faculty want students to investigate how they apply the theories they have learned to the real world situations.

There are many methods applied by experts to support the teaching - learning events. Many of the researchers in their study explain that there are a lot of beliefs associated to teaching and learning events. The faculty's opinion should also be considered in the teaching procedure, and this turn out to be the necessary groundwork in the plan of policy and technique.

The case study approach for teaching a particular unit has become most important method in the teaching learning. This approach is termed as the student centric approach which is carried out by the faculty through experiential learning. In experiential learning, the role played by the student is very much important rather than the faculty member. Experiential learning method has been proved to be successful because the faculty can make use of multiple designs to get the idea clarified to the students. The learning done by the students in this method is fast and speedy; they learn in groups and teach each other the content from the course. Basically here the faculty does not play the major role in teaching but is only the facilitator to teaching learning.

Think-Pair-Share Technique helps the students to be more active in the learning process by conversing with their fellow mates. Students enjoy through this TPS methodology and have fun while learning the concepts. This activity gives positive results while the students understand the concept well in class. T-P-S activity is carried through following the five steps, the first step is to arrange the students in pairs, make available the case to the students, allotting them some time to think individually, then inviting students to discuss with their respective allotted pairs and share their thinking, and then asking few of them to share their thoughts with the class.

Many of the explorations related to Think-Pair-Share activity have been carried out by researchers. Some researches point out that TPS (Think-Pair-Share) has been doing well in improving the student achievement. On the other hand, few say that TPS has assisted in improving student's enthusiasm as well as student's progress in studying management concepts.

Many B-school students still think that solving case study is the most difficult and boring lecture. Hence, students are unable to specialize well in the management concepts due to all these aspects.

The advantage of teaching with case studies is that the students are actively engaged in outlining out the principles by abstracting from the examples. This develops their skills in: Problem solving, Analytical tools, quantitative and qualitative, depending on the case, Decision making in complex situations, & Coping with uncertainty.

Many students assume that all the basic skills are difficult, but in many cases, Solving Management Cases becomes the most difficult skill. Case study is used to identify a problem in a firm. In addition, it is also used to understand the main idea and the message in an Organization. Case studies are a text that contains a story in the past, and can be a fiction or a non-fiction. The purpose of this case study is actually to gain knowledge by the reader. In addition, there are many messages implicitly expressed in the case. To understand the message in the case, students must identify it in the right way. In fact, many students had difficulty identifying and understanding them because the method used by the faculty member is inappropriate and boring. Hence, the faculty member has to find a method that can motivate students to solve this problem, and as per this study Think-Pair-Share model may be one of the response.

The presentation of the case study establishes a framework for analysis. It becomes supportive if the declaration of the case provides sufficient information for the students to outline clarification and then to recognize how to relate those solutions in other alike circumstances. Faculty may choose to use several cases so that students can identify both the similarities and differences among the cases. Faculty members must also find a method that can motivate students to solve the case study, and the Think-Pair-Share model may be one of the answers.

Rajarambapu Institute of Technology, Department of Management Studies (MBA) is one of the many business schools that apply and develop Case studies for Teaching Management Concepts. The teaching-learning process in some management institutes still continues to be dominated by the Faculty and not by the students. Faculty members were the main performers in the teaching-learning process, from the observation of researcher in August 2018. Faculty was not only motivating the students to learn, but also providing and explaining all the resources. And as such the students became inactive learners and their knowledge did not increase noticeably. Hence, 45% of students scored lower than the Minimum Levels of Learning Standard.

In Management teaching, mainly during case teaching skill faculty members usually implement the same method and the media from time to time. The focus of this method is typically to have students read the case study and does the SWOC analysis of the firm – Strengths, Weaknesses, Opportunities and Challenges / Threats. The other aspects such as the understanding of the purpose of the Case and the identification of the existing problems in the case study will be explained by the faculty member. This makes students struggle if they try to understand and identify the message about the firm by themselves, especially in long cases such as in descriptive cases of more than 15 to 20 pages.

For the students of First Year MBA Semester One, the main problem they in general face in solving a case study is, making decisions, giving a concrete solution, and identifying alternative suggestions. Students many times make mistakes when interpreting the main idea of the case study and as such, they are not able to answer questions related to these topics.

The researcher understood that the Think-Pair-Share technique is suitable to apply in teaching solving cases to students of First Year MBA Semester One, Rajarambapu Institute of Technology, Department of Management Studies (DMS). This technique was selected mainly to inculcate Decision Making Skills in the students. This can help students solve the problems of the Firm and also gain some skills like Problem solving, Analytical tools, quantitative and/or qualitative, depending on the case, Decision making in complex situations, and Coping with ambiguities. Researcher thinks that by using this type of technique, the teaching-learning procedure will be more attractive, and thus the students will gain the required knowledge rapidly.

Teaching Technique:

To prove this approach the faculty member needs a technique. Technique is a system used as a guide for the faculty member in teaching. When working out the cooperative learning method, there are some models that can be used as Jigsaw, Think-Pair-Share, and fish bowl. Think-Pair-Share technique is one such method that has been implemented by many faculties. Think-Pair-Share model was first proposed by Professor Frank Lyman, and is being developed by many scientists in recent years. The foundation of this technique is to make students active in the teaching-learning process while discussing with their fellow mates.

Think-Pair-Share Technique: It consists of a five steps:

1. To organize students in pairs:

In the Think-Pair-Share technique students are divided into random pairs. Random selection is to avoid the gap between slow learners and fast learners. There is a greater chance of getting to know each other very closely and thus will increase the respect with each other.

2. Hand over the Case study:

The next step is to hand over the case study and pose a question to students. This question should be general and can have many types of answers. Like "what do you know about the Organization?", "what is the problem in the Case study?" This makes the students think deeper, and they can pose their ideas in many ways.

3. Give the students time to think:

The faculty member should give the students some time to ponder upon the case study and response to the question. Students are expected to analyze the matter and use their critical thinking to answer the questions.

4. Invite students to talk to their pairs and share their opinion:

Now, each student shares his/her own opinion to their pairs. They will share their thinking and discuss with each other to find the best solution. This activity can be developed at a higher level by merging one pair into another pair, so that there will be some groups consisting of four students in each group. It means there will be many ideas that will be shared to find the best solution, and help students to improve their critical thinking and analysis. This technique helps students develop not only their concepts, but also their communicative ability and confidence.

5. Invite some students to share their ideas with the rest of the class:

The last step of this model is to invite some students to share their ideas with rest of the class. Some students share their ideas, and others can give their opinion on these ideas. This improves the student's ability to take decisions and boosts their confidence.

There are many benefits of the Think-Pair-Share model. This type of model can help students improve their communicative ability by discussing with their classmates. In addition, they can share their knowledge with each other, and make their affective aspect improve quickly.

As per Kagan (2009) some benefits of the Think-Pair-Share technique are:

1. When students have enough time to think, the quality of their answers improves.
2. Students actively participate in thinking.
3. Thinking becomes more focused when discussing with a partner.
4. More critical thinking is maintained after a lesson in which students have the opportunity to discuss and reflect on the topic.
5. Many students find it easier to have a discussion with another classmate, rather than with a large group of students.
6. This technique can be easily incorporated into the teaching as no specific materials are needed for this technique.
7. the most important skill for students to learn is Building on the ideas of others.

Research Methodology:

The applied research methodology was Research Action in Class (RCA), since it was intended to improve the quality of the teaching-learning process. It consisted of two phases, and each phase as divided into four steps, planning, action, observation and reflection.

The subject of the research is students of First Year MBA Semester One, Rajarambapu Institute of Technology, Department of Management Studies (DMS). The number of students is 60, consisting of 35 male students and 25 female students. The instrument used in this research is a test. The purpose of using the test as an instrument is to obtain the marks after solving a case study. It will interpret student’s understanding of case problems in border way. The test will be given at the end of each phase, and will measure the student's understanding of the cases they solved earlier.

The student's understanding is analyzed by using the analysis-evaluation technique. This step is to know if these students are successful or not in gathering the material that has been learned before. To know the student's marks, the students' response is measured by the formula as follows:

$\sum X/n$

X = Marks obtained by Student.

n = Number of Students.

The Minimum Levels of Learning Standard is 70, so students can be declared successful when they marks 70 or higher.

Recommendations:

After analyzing the data, the results were as follows:

PRE-PHASE:

i. The teaching-learning process is still dominated by the faculty members at Rajarambapu Institute of Technology, Department of Management Studies (DMS) as they still implemented a faculty-centered approach.

ii. The students did not know any type of teaching technique, mainly in the cooperative learning.

iii. The average marks of the students were 73. Although their average marks already exceeded the Minimum Levels of Learning Standard (70), which was not satisfactory.

PHASE I:

i. Students were not familiar with the new technique applied in the teaching-learning process, so they sometimes had difficulty interpreting the instructions given by researchers. As well as, they were still unable to show teamwork. The researcher went out of his way to

facilitate and encourage the students to improve their enthusiasm.
ii. Only a few students actively gave their opinion in the sharing step, while others just listened to the explanation of their friends.
iii. The number of students who passed the Minimum Levels of Learning Standard had improved than in the pre-phase. The percentage was 58% of the total number of students. In addition, his average marks improved from 73 in phase I to 76 in phase II.

PHASE II:

i. In this phase the students were familiar with the teaching technique, and made them better able to interpret instructions and work as a team.
ii. The stages of paring and sharing were more attractive because students were more active in sharing their opinions and ideas.
iii. As compared to phase I, the number of students who passed the Minimum Levels of Learning Standard was improved, the percentage was 85% of the total number of students. Students average marks improved from 76 in phase I to 87 in phase II. Hence we can conclude that Think-Pair-Share as the teaching technique implemented by researcher was successful.

Table No 1. Table Showing Student progress

Number of students	Pre-Phase 60 students		Phase I 60 students		Phase II 60 students		Progress
Students who pass the Minimum Levels of Learning Standard	26 students	43.33%	35 students	58.33%	51 students	85 %	41.67 %
Average rating	**73**		**76**		**87**		**14**

Observation:

There were few facts that could be considered for further discussion from the above examination of data, such as limitation to the study, how to overcome these limitations and make the activity more conducive to achieve the outcome of the course, and make the TPS activity more fun oriented and interesting to the students by its successful implementation.

Initially students were very much confused with the TPS technique as they were unfamiliar with this method which was implemented by the faculty member.

Even though the faculty member had briefed about the technique, few students still had problem in understanding few steps of the activity. As such the students were unable to conclude the discussions in pairs of the case study, as well as they were unable to answer the questions given at the end of the case study. The faculty members went out of their way and assisted the students to solve the case study and helped them in answering the questions posed. This helped the students a lot and the conversation was working well with this technique.

The other difficulty the students were facing was that of conveying their idea and the outlook. The discussion was dominated only by few students who were good in communication skills and would express their views. Some students were not opening up because they were scared of making an error by sharing their point of view. The faculty member assisted the students to analyze the case through group discussion, motivating them, and encouraging their ideas. The faculty member also helped the students to boost their self-confidence to come and speak in front of the class during the presentation.

This technique also helped in bring all the class together and understand the value of team work. Male and female students were also talking to each other freely, without any gender bias. There were few conflict groups in the class who worked separately, but they were brought together and made to discuss the case in this TPS activity. They were counseled about the significance of having a good relation with fellow mates, the importance of having colleagues at the place of work and the benefits of cooperation, collaboration and team work. This way it was luckily a helpful clarification to solve the dilemma.

Although there were some troubles faced by the students and the faculty member, it can be concluded that the research was successful. This can be represented by the progress of the student's marks and the number of students who exceeded the Minimum Levels of Learning Standard. The complexity of the problem was the main feature that made this Think-Pair-Share activity successful in improving student performance. All the students took efforts in solving the case study in groups, as a team. They read the case study thoroughly in the first step, then analyzed the case and attempted individually to answer the questions given to them. They assembled with their pairs and made small groups in the next step to share their ideas to find the best response to the questions they had been asked.

This method helped them to gain enough information which benefitted to answer the questions which were asked at the end of the case study related to the concerned unit. The student's capability to make decisions regarding the problems in the case study improved speedily.

Here we can say that the Think-Pair-Share technique has helped students to actively participate in making a decision, Focus of thinking increases when discussed in a team, thinking becomes more critical and focused after a unit is discussed, in which students get the chance to discuss and reflect on the course, Students find it uncomplicated to enter into an disagreement with their fellow mates, rather than with a large group, and thus, when students have to revisit the questions and make decisions, the quality of their answers improve and as such their communication skills also developed well.

It was identified of the improvement of student activities in the discussion before, and after the Think-Pair-Share model implemented. In addition, in a group discussion, there is a possibility that students will progress with their communication skills. Sharing the opinion and exchanging ideas with others will automatically improve the communication skills of the students in a group.

All the steps proved that there is progress in terms of the capability of students. The steps of pairing and sharing were the most critical steps that gave a significant improvement to the students. The students helped each other by sharing the idea in pairs, the opinion and the thought to answer the questions that were asked to them. This method was much effective than if the faculty had explained the case study and then they answered the questions asked by the faculty.

In pairs students have the opportunity to think focused with his classmate about their answers before they are asked to share their ideas openly. This strategy provides an opportunity for all students to share their thinking with at least one other student, which increases their sense of participation in classroom learning. The students try to give respect to each other's views which is important for their psychological development.

Some students shared their ideas with the class, while the others gave their judgment in the sharing part. Through sharing of views students gained more knowledge that had not been exposed before. This was beneficial for all types of students the slow learners as well as the fast learners. By implementing this Think-Pair-Share technique it proved advantageous to students and faculty members also. Students spent more time on the task assigned and heard more when they participated in Think-Pair-Share method. The faculty just had to focus on facilitating and encouraging the students. Although the class strength is quite large, i.e. capacity of 60 students, the faculty can handle it in a better manner. The method of Think-Pair-Share technique is almost same as cooperative learning. In cooperative learning students work together to achieve a common goal in circumstances that include some fundamentals such as optimistic interdependence, individual responsibility, face-to-face promotional communication, suitable use of mutual skills and group dispensation.

Conclusion:

The main intention behind this research was Using Think-Pair-Share model to enhance the student's ability to understand the proper method to solve case study and understand the management concepts. This experiment has shown a considerable progress in the ability of student to make correct decisions after using the TPS activity. This can be said so, by observing the achievement of the student which has increased from 73 to 87 after using the TPS method. In this activity a faculty member should be patient enough and deal with the slow learning students in a caring manner and pay more attention towards them. The MBA classrooms with large capacity of students (usually consisting of 60-65 students in each class) can actively use this Think-pair-share activity. The main feature of TPS (Think-Pair-Share) method is that this activity provides an equal chance for every student to think and share their thoughts with their fellow mates. TPS activity is found to be beneficial because it does not take much time and fewer efforts are required of the faculty member. TPS highlights the application of cooperative or collaborative learning in the class room.

Suggestions:

With the previous discussions held and the findings of the study, following suggestions can be given:

A. Faculty member involved in practicing the Think-Pair-Share activity may consider some points before implementing the technique - Faculty member should construct a good planning before coming to the class. Identify a good case study, brief reading has to be done by the student prior to solving the case, Faculty has to give clear information and clarification of the activities that the student is supposed to do in the class. Faculty must inspire and give confidence to the students to remain energetic during the teaching learning practice. Faculty must go round in the class and approach every student to supervise the actions they are involved in and provide them some help if they get stuck up somewhere or are having any complexity. Proper guidance and assistance is expected from the faculty to the students during the teaching-learning method.

B. Those faculty members who are interested in executing the Think-Pair-Share technique in their classroom teaching can also use the TPS activity for teaching other skills like Reading skills, writing skills, listening skills and speaking skills.

Hence we can conclude that Think-Pair-Share (TPS) activity support a high amount of classroom involvement which helps the student in developing a clear conceptual understanding of a particular topic.

A CASE STUDY OF CO-GENERATION PROJECT OF RAJARAMBAPU CO-OPERATIVE SUGAR FACTORY RAJARAMNAGAR, DIST- SANGLI

Dr.Shinde Ashok Ramchandra
Head, Dept. of Accountancy, Y.C.College,Rajaramnagar,
Email- shindeashok369@gmail.com

ABSTRACT

This paper present "A Study of Cogeneration Project of Rajarambapu Sugar Industry Islampur".Cogeneration plants provide both process heat and electrical power from common fuel. State government of Maharashtra support sugar for starting and developing cogeneration project. Government provides 5% of the capital expenditure on cogeneration project while the factory concerned puts in an equal amount. Rajarambapu sugar industry consume their bagass to run their mills during season and generate steam to run the boilers and turbines, they generate power to run their plants. In 2017-18 Rajarambapu Sugar Industry get 5768 lakh amount from electricity. Expenses of cogeneration production was 5 cror rupees for per MW .They have produce more electricity through high pressure turbine and steam.

Keywords:*bagasse,cogeneration, turbines, electricity*

Introduction:-

Co-generation of bagasse is one of the most attractive and successful energy projects that have already been demonstrated in many sugarcane producing countries such as Mauritius, Reunion Island,India and Brazil. Combines heat and power from sugarcane in form of power generation offers renewable energy options that promote sustainable development, take advantage of domestic resources, increase profitability in the Factory, and cost-effectively address climate mitigation and other environmental goals. State government of Maharashtra support sugar for starting and developing cogeneration project. Government provides 5% of the capital expenditure on cogeneration project while the factory concerned puts in an equal amount.

According to World Alliance for Decentralized Energy (WADE) report on Bagasse cogeneration, bagasse-based cogeneration could deliver up to 25% of current power demand requirement in the world's main cane producing countries.

State government of Maharashtra support sugar for starting and developing cogeneration project. Government provides 5% of the capital expenditure on cogeneration project while the factory concerned puts in an equal amount. This paper present study of cogeneration project of Rajarambapu co-operative sugar factory, Rajaramnagar (Tal-Walwa, Dist- sangli, State – Maharashtra, India) and their success of electricity production. Rajarambapu sugar Factory consume their bagasse to run their mills during season and generate steam to run the boilers and turbines, they generate power to run their plants. In 2017-18 Rajarambapu Sugar Factory get 5768 lakh amount from electricity. Expenses of cogeneration production was 5 cror rupees for per MW .They have produce more electricity through high pressure turbine and steam.

Objective of Study:

- To Study concept of cogeneration
- To study cogeneration project ofRajarambapu sugar factory,Rajaramnagar.
- To find out electricity production by cogeneration project of Rajarambapu sugar factory, Rajaramnagar.

Research Methodology:-

Researcher use secondary data for his study.i.e.books,annual reports and different websites.

Cogeneration:-

Cogeneration or Combined Heat and Power(CHP) is the use of a heat engine or power station to generate electricity and useful heat at the same time. Cogeneration is more efficient use of fuel because otherwise wasted heat from electricity generation is put to some productive use. Combined heat and power recover otherwise wasted thermal energy for heating. This is also called combined heat and power district heating. Small CHP plant are an example of decentralized energy. The supply of high-temperature heat first drives a gas or steam turbine powered generator. The resulting low-temperature waste heat is then used for water or space heating. At smaller scales typically below 1MW a gas engine or diesel engine may be used.

Need for Cogeneration

- Cogeneration helps to improve the efficiency of the plant.
- Cogeneration reduce air emissions of particulate matter, nitrous oxides, sulphur dioxide, mercury and carbon dioxide which would otherwise leads to greenhouse effect.
- It reduces cost of production and improve productivity.
- Cogeneration system helps to save water consumption and water costs.
- Cogeneration system is more economical as compared to conventional power plant.
- optimizes ecological and economical benefits in the empower generation

Advantages of combined Heat & Power:- CHP is an integrated system that harnesses wasted energy in traditional power generation. It offers a wide range of advantages including financial, efficiency, ecological and legislative.

1)FinancialBenefitsReduces energy costs: A single system can offer energy savings of up to 40% offering a permanent reduction in energy costs.

Zero cost outlay options available: For larger scale systems zero capital funding options are available so that you can finance the system cost effectively.

Enhanced Capital Allowances Eligible: Tax can be claimed back on procurement of large and small-scale CHP systems for use in commercial buildings or district heating schemes.

Renewable Obligation Certificate Compliant: Biomass and other sustainably fuelled CHP systems may qualify for Renewable Obligation Certificates which function in a similar fashion to the feed in tariff – providing an income from your system dependant on run hours (metered)

Renewable Heat Incentives

Heat pumps (Ground Source & Air Source), Solar Thermal and biomass CHP systems are eligible for renewable heat incentives – financial incentives designed to increase the uptake of renewable technologies.

2)Environmental BenefitsReduced CO2 and S02 Emissions

CHP systems reduce CO2 emissions with biomass and biogas CHP being essentially carbon neutral.

Helps New Construction Meet Carbon Legislation Compliance.

Carbon legislation compliance in construction is greatly helped by CHP systems thanks to the energy savings and environmental benefits of the systems.

Reduces Transmission Losses from the Grid

CHP systems help to reduce loss from the grid by providing a regular and consistent supply of energy.

3)EfficiencyBenefitsIncreases Energy Security.

CHP systems can operate entirely off grid or supplement larger energy demands. This provides exceptional energy security.

Fuel Choice Benefits

CHP systems can work on a wide variety of fuels including biomass pellets, biogas, natural gas and other fuel types.

4) Legislative and New Building Benefits

Helps with Part L Compliance

Helps meet CRCEES targets

CHP systems help you meet the CRC Energy Efficiency Scheme targets.

Helps new buildings avoid the Climate Change Levy. The climate change levy applies to industrial, commercial, agricultural and public service sectors and applies to electricity, gas and solid fuel consumption.

CHP can use the thermal heat which is traditionally wasted in power stations enabling energy savings of up to 40%.

CHP is a recognised sustainable way of generating electricity which can be sold back to the National Grid or used within a private wire network to supply homes and businesses.

CHP used in community energy schemes can assist with planning applications and consent, as well as assisting to meet regional carbon emission targets and support energy reduction strategies.

CHP generation also contributes towards reducing CO2 emissions against standard plant room boiler use and obtaining electricity from conventional coal fired power stations.

Disadvantages of Combined Heat and Power

The main disadvantages of combined heat and power are that it is capital intensive and that it is not a sustainable energy source unless used with renewable fuels.

Disadvantages

1) Not Suitable for All Sites :-CHP systems are only suitable for sites where there is a need for heating and hot water systems. For larger scale systems heat and power demand need to remain fairly consistent for maximum efficiency. This particularly applies to heating which is powered continuously on larger systems.

2) **Financially Intensive**:-The initial costs for a CHP system can be high without funding. Which can make it prohibitive for smaller scale (non-domestic) installations.

3) **Not Necessarily Environmentally Friendly**:-Not all CHP systems run on environmentally friendly fuels. Though at Helec we always recommend systems run on environmentally friendly or sustainable fuels.

Cogeneration Project of Rajarambapu Sugar Factory Rajaramnagar :-

From last three year Rajarambapu Sugar Factory running cogeneration project. Their target is creation of 1000 MW electricity production. For this purpose they sanctioned 56 lakh share capital from government. They achieved their target. Rajarambapu Sugar Factory have create 9 cror 87 lakh 61 thousand KWH unit electricity.

Advantages of cogeneration through adoption of new technology:- Under unit 1 they establish cogeneration project.They selected high pressure boiler with working pressure for this project.The capacity of this boiler has 140 tonne for per hour and 110 K.G working pressure. 28 MG blidcome backpressure turbine of high pressure has also selected.

1) 140 tonnepeer hour capacity and 110 KG/C.M2 high pressure boiler:- This boiler produce high pressure steam for 28 MG turbine.High temperature and high pressure steam produce more than old low pressure boiler.Following table shows the comparison between ratio of Low and High pressure.

Sr.No	**Boiler**	**Steam to Fuel Ratio**	**Tempreature**
1	Low pressure Boiler(32KG/CM2)	1.85	385 degree C
2	High Pressure Boiler (110KG/CM2)	4.86	540 degree C

2)28 MW Turbine Set:- High pressure and High temperature steam use for 28 MW turbine in 140 tonnepeer hour capacity and 110 KG/C.M2 high pressure boiler.

The following table shows that,high pressure turbine get high temperature than low pressure turbine.

Sr.No	Turbine	Steam to Power Ratio	Temperature
1	Low pressure Turbine (32KG/CM2)	10.00	385 degree C
2	High Pressure Turbine (110KG/CM2)	4.86	535 degree C

3)E.S..P(ElectroStaticPresipitetor):-

This system has used for high pressure boiler. In this system flied ash of high pressure boiler has collected. This ash collecting in ash silo through ash handling system and it used for compost fertilizer for farming.

4)V.F.D.Drive:-

V.F.D Drive used for boiler,i.e.for all fans, boiler feed water pump. Cooling water pumps ,cooling water fans, air compressors etc.

Income from Cogeneration Project of Rajarambapu SugarFactory Rajaramnagar:-

In last two year Rajarambapu SugarFactory run cogeneration project successfully.They have used modern technique machinery and also up gradation of staff and get memorable success through cogeneration project. Following table shows income from cogeneration project from last two years.

Sr.No	Particular	2016-2017	2017-2018
1	Production of Electricity per tonne	79.57	96.2
2	Electricity used by sugar factory in per tonne	7.53	6.88
3	Electricity export in per tonne	44.30	61.84
4	Total electricity produced by sugar factory (Unit)	45385045	98761673
5	Total Export of electricity (Unit)	25269000	63601308.75
6	Plant load factor	91.18	85.59
7	Total Income from export of Electricity (amount in Lakh)	4075.643	1693.023
	Total income from Electricity(amount in Lakh)	5768.666	

Conclusion:-

Rajarambapu Sugar Factory get various advantages of cogeneration .They operate automatically all machinery and using less manpower through cogeneration project. High pressure turbine is grater than low pressure turbine in the department of electricity production.Indusry control air pollution through ESP system. ESP system destroyed fly ash.300 Kg steam made inhigh pressure boiler in per tonne bagasse. In last two year Rajarambapu Sugar Factory get 5768 lakh rupees income from their cogeneration project.

Abbreviations

Wade = World Alliance for Decentralized Energy,

MW = Mega watt

CHP = combined Heat & power

Co – 2 = Carbon dioxide

SO-2 = Sulphar dioxide

KG = kilo gram

ESP = Electro static presipitetor

KWH = kilo watt per hour

CONTRIBUTION OF WOMEN ENTREPRENEURS IN INDIAN ECONOMY

Dr.Mahadeo B. Deokar
Head, Dept. of Commerce,VidyaPratishthan's,Arts,Science and Commerce College,Baramati
Email id:-mahadeodevkar@gmail.com

ABSTRACT

Women entrepreneurs, as opposed to men peers, make significant contribution towards the well-being of the family. "Women entrepreneurs put 90 per cent of their earnings into education, healthcare and nutrition of their family as opposed to 30 to 40 per cent done by male entrepreneurs. Be it a mother, sister, wife or daughter; once they step in the business world, they are willing to give back to the society and economy. So that is the power of women entrepreneurship.

There are many aspects in which women are one step ahead of men – women are believed to be good listener, substantial, emotional, build long term relationships, have the ability to prioritise and are detail oriented in nature. They can manage family, elders, home and businesses single-handedly without failure.

Keywords:*Women Entrepreneurs, Economic Freedom, Economic Contribution*

INTRODUCTION

Entrepreneurship is gaining significance in the modern era. It is a global phenomenon. The developed countries are already enjoying the fruits of the entrepreneurship development. On the contrary, in the developing economies like India, entrepreneurship has gained importance in the recent past. In developing countries it is considered as method of promoting self-employment. But one has to see far beyond this to improve and sustain the economic growth of the country. But in the modern times the situation has changed and women have become the most innovative and inspirational entrepreneurs. Women entrepreneurship is a recent phenomenon which has come into existence in 1970. But this concept became prominent in the year 1991, when the new industrial policy came into existence. This policy promoted globalization, liberalization and privatization which created maximum self-employment opportunities to both men as well as women. The urge of women to be economically self-dependent and the spread of education also encouraged the entry of women in the entrepreneurship. Earlier people looked strangely at the woman who was running a Xerox centre or STD booth. But today the scenario has changed totally and we see women entrepreneurs in almost every type of industry – a manufacturing or service industry or any trading business. The reasons behind this may the

favourable response shown by the women towards the changing conditions and also the awareness among the women regarding the financial stability and independence. The Government schemes and incentives are indeed major factors influencing the increasing number of women entrepreneurs. Today the role of women in the economic development cannot be ignored, rather their contributions in the economic development is quite significant. But still there is lot of scope in development of women entrepreneurship. Women entrepreneurs need to be properly trained to acquire the entrepreneurial skills and traits to face the challenges in the changing global scenario. In India we have a long list of women entrepreneurs. The reasons these women have entered into entrepreneurship may be different. Some might have entered to develop their family business, some of them to be financially independent. There are certain women who have started enterprise to bring out their family out of financial crisis. As the reasons are varied, the problems faced by the women entrepreneurs are also multi-faced. But irrespective of the problems the women entrepreneurs are efficient risk bearers, innovators and organizers. The fast moving global scenario has brought about major changes in our economy. The competition in the environment is going to limit the employment opportunities thus creating a necessity of self-employment. The self-employment and the entrepreneurship development opportunities will have to be extended to both the male and female entrepreneurs without any gender discrimination. Thus entrepreneurship development will be a powerful tool in fighting the problems of unemployment. Entrepreneurship is one of the major factors which contribute to the development of the nation. The enterprising spirit of the people accelerates the economic development. The discussion of significance of entrepreneurship will be incomplete if the significance of women entrepreneurs is ignored. Women entrepreneurs can be termed as new engines for the growth or the rising stars of the economic development of the developing economies.

As per Census 2011, workers constituted 39.79 per cent of total population whereas the ratio of female workers was 25.51 per cent. At All-India level the percentage share of females as cultivators, Agricultural labourers, workers in the household industry and other workers stood at 24.92, 18.56, 2.95 & 47.20 respectively. The percentage of female main workers to total female population stood at 25.5 which shows an increase as compared to 14.68 reported in the 2001 Census.

- **Contribution of women entrepreneurs in India**

In India, women dominate the micro enterprise sector both in rural and urban areas. According to the central statistical authority women account for close to 70 per cent of the micro enterprises in India are run by women. However, their participation in small, medium and large enterprises diminishes. Beyond the participating in productive activities such as agriculture, trade and industry, women have multiple roles in society. They participate in productive activities such as agriculture; they are responsible for caring for the family including the preparation of food, health care and education. Women need to balance this different role and therefore they are multitasked, managing their businesses alongside all other roles they are expected to perform. Women account for a larger share of the informal economy operators, as well as those running micro and small enterprises in India .MSME‘s make a significant contribution to the socio-economic development of the country by way of supporting the people to earn money and make a contribution to family income, and by supplying basic goods and services for local consumption. However this contribution is not fully recognise or understand, and there is little in the way research or statistics to provide a broader understanding of women's experience as business owners, their contribution to economic development or the challenges they face in setting up, managing and growing their enterprise.

Women entrepreneurs are often described as'survivalist' and dominate the low skill, low capital intensive and often informal and micro business. Women tend to focus on business that is a continuation of their domestic roles, such as the service sector. The potential for the growth of women's enterprises is said to below and is driven less by entrepreneurial drive than the need for survival. Women comprise 74 per cent of those employed in the micro enterprises sector. More than 65 per cent of all women in cottage\handicraft industries (micro enterprise) were engaged in processing food products and beverages.

- **Economic contribution:**

Women's economic activities contribute directly to growth and efficiency in dealing with informal business problems and poverty reduction is one of the main issues for policy makers

i) Capital formation:

Entrepreneurs mobilise the idle savings of the public through the issue of industrial securities. Investment of public savings in industry results in productive utilisation of national resources.

The rate of capital formation increases, which is essential for rapid economic growth.

ii) Improvement in Per capita Income:

Women entrepreneurs in India have also been exploiting the opportunities the opportunities. They convert the latent and idle resources like land, labour and capital in to national income and wealth in the form of goods and services. They help increase the country's net national product and per capita which are important yardsticks for measuring the economic growth.

iii) Generation of employment:

Women entrepreneur in India are playing an important role in generating employment both directly and indirectly. By setting up small scale industries, they offer jobs to people.

- **Social Contribution:**

Women entrepreneurs are also contributing towards improving the balanced regional development and improvement of living standards in the country.

i) Balanced Regional Development:

Women entrepreneurs in India to remove regional disparities in economic development. They set up industries in backward areas to avail of the resources concessions and subsidies offered by government.

ii) Improvement in living standards:

With the setting up of small scale industries, reduction of scarcity of essential commodities and introducing new products can be achieved. Women entrepreneurs in this country are producing variety of goods on a large scale and offering them at low rates, as a result, achieving improvement in the standard of life.

iii) Innovation:

Innovation is the key to entrepreneurship. It implies the commercial application of an invention. As an innovator, the entrepreneur assumes the role of a pioneer and an industrial leader. Entrepreneurs have contributed many innovations in the developing new products and in the existing products and services. All these have resulted in economic development by way of generating employment, more income etc.

- **Other contributions:**

Women entrepreneurs are the main actresses in charging the culture of the society. In our country, women are workaholics and participate outside the house and develop the sense of independence and the like.

Thus women entrepreneurs in our country are directly or indirectly playing an important role in environmental protection, back ward and forward integration and are acting as charge agents, thus contributing to the economic growth of the country.

- **CONCLUSION**

The above discussion reveals that though women entrepreneurs are gaining recognition recently, still there is a long way they have to go. The transition from homemaker to women entrepreneur is not so easy and in the same way it is also difficult for a woman to succeed and sustain in her business. She has to learn from her experiences, adapt herself and overcome the challenges in her field. She has to creatively utilize her strengths to overcome the threats and grab all the opportunities to minimize her weaknesses. This will be certainly be a mantra for her to develop and grow her business successfully.

A STUDY OF QWL OF POLICE EMPLOYEES: DEMOGRAPHIC OVERVEIW

Dr. S. B. Tiruke

Assist. Professor, Commerce Department, DKASC College,Ichalkarnji

Prof. V. S. Wandre

HOD &Associate Professor, Commerce Department, DKASC College, Ichalkarnji

ABSTRACT

Police employees are 24x7 available for providing services to the society. However, their QWL in consideration of present working condition as well as present life is in poor situation. There are majority of respondents are form rural area with having ancestral agricultural land as a income source with supports the employees for financial balancing, but due to continuous workload police employees are unable to concentrate on agriculture land and it affects adversely on financial situation.

Keywords:*police employees, QWL, land holdings, earning members, family type and size.*

1. Introduction:

The Police Department plays a vital role in providing services to the society. They are the most important aspect in day to day life of the society. Any crisis, problems are occurred or human is in need, Police is the best answer for it. The Police have a constituted body of persons which enforced the law, who protects the property and limits the disorder which occurs in the society. The Police Station is the main theatre of the actual activities of the Police Department. It is the service station which never closes. The Police Employees are 24X7 available for providing services to the society. The society cannot disregard the availability of the Police because the human being can take sound sleep only because of the availability of the Police[1]. The Police play an important role in the social justice of the society. The researcher has selected Kolhapur District to study the Quality of Work Life of the Police Employees.

The present Police force has the branch of Ministry of Home Affairs. The Police force has categorized under two sub heads i.e. Central security Force which has headed by Additional Secretary and Internal Security Force which is headed by Special Secretary. Under these two sub heads the Police Department has distributed as Police I and Police II which has separately headed by Joint Secretary. Through these sub heads the overall structure of Police has administered and run for the protecting law and order.[4] The Police Department has plays a vital role in the society. To provide the services to the society is the main aim of the Police Department. The slogan of the Police Department is *'sadrxaNaayaKlainaga`hNaaya'*, it means protection of the just and distraction of the wicked. The department has square- shaped flag with white coloured five points star against dark blue background. The star has a human palm at its centre, symbolizing protection and rests on a flag carrying this motto; *'sadrxaNaayaKlainaga`hNaaya'*. This flag and the slogan motivate the Police Employees to work with extra energy. The Police are responsible for performing multifaceted such as the prevention of crime, maintenance of law and order, conduct of investigation of crimes, production under trials before the Courts and post sentence surveillance over the criminals etc. The researcher has considered these all factors and criteria while selecting the samples. The functions of Police are within the legal framework of Constitutional and Municipal Laws. The Police Department, society and Government expect form them extra.[14]

The study, Quality of Work Life (QWL) among Police Employees in Kolhapur District has used scientific and statistical based research methodology. The researcher has considered various aspects like work environment, workers participation, career opportunities, facilities offered, Government policies, legal aspects etc to study the QWL of Police Employees in Kolhapur District. The responsibilities of the society over the Police Employees are high and the work procedure is multifaceted. The QWL has the important aspect of Human Resource Management which helps to hold the people and attract the people in the organization.

2. Objectives of the Study:

In the present researcher, the researcher has attempted the QWL of Police Employees and explores the relevant dimensions of QWL.

1. To know the present situation of Police Departmental Employees regarding services rendered by Policeman in the sample area.
2. To draw appropriate conclusion and suggest acceptable and practicable suggestions to the authority, if necessary.

3. Research Methodology:

The researcher has studied the QWL of Police Employees in selected sample area i.e. Kolhapur District, Maharashtra, India. The researcher has used appropriate methodology for the sample selection, data collection, data analysis and interpretation. The researcher has interacted with Police Officers, Police Employees and members of the society. It means that the researcher has made three strata's for data collection. These strata's have made on the basis of categories of the sample respondents. One stratum is Police Officers; a second stratum is Police Employees and a third stratum is Members of the society.

Chart No. 1.2 Number of Sample Respondents

The researcher has selected the sample size and sample respondents from each stratum as follows...

Table No. 1.5: Distribution of Sample Data:

Sr No	Particulars	Total Population	Sampling Method used	No. of Respondents
1	Police Officers	39 *	Purposive sampling method	29
2	Police Fellow Employees	2336 *	Stratified Random Sampling Method	357
3	Members of the society	Infinite population	Convenient sampling method	384
4	Total	-	-	770

Source: District Police Administrative Office, Kolhapur

4. **Tools and techniques of analysis and interpretation of data:**

The researcher has used statistical formulas for the selection of the samples for the present research work. The researcher has collected data from the Police Officers, employees and members of the society. The researcher has interviewed **770** respondents out of which **29** are officers, **357** are fellow employees and **384** are members of the society. The researcher has used separate questionnaires for collecting information. The researcher has prepared three questionnaires, one for employees, second for respected officers and third for members of the society. The researcher has asked **90** questions which include 4 open ended questions to the Police Employees and **64** questions including 6 open ended questions to the Police Officers. The third questionnaire has prepared for the members of the society which includes **44** questions out of which 4 are open ended. The researcher has conducted face to face personal interview of sample respondents and asked sub questions to collect reliable data. The collected data has tabulated and analyzed with percentage as well as appropriate statistical tools, techniques and parameters. The researcher has interpreted the collected date vertically, horizontally and cross sectional interpretation has made. Beside this the researcher has used descriptive and standard statistical tools i.e. percentage, mean, SD, CV, and simple t-test etc., for data analysis and interpretation.

5. **Data analysis and interpretation:**

Table No.3.7 Land Holding

Sr. No.	Particulars	Officers		Employees	
		Respondents	%	Respondents	%
1	Yes	18	**62**	173	48
2	No	11	38	184	**52**
3	Total	29	100	357	100

Sources: Field Work

Table No. 3.7 shows land holding of sample respondents *for assessing the present situation of the employee because having a land helps to provide financial support to the*

employee and causes to improve the life style. It has reveals that 62% respondents have land and 38% respondents are haven’t land. There are 48% respondents are having land and 52% respondents are not having land. Majority of respondents are having support from their land and less burden on their monthly salary. Income from the land supports the respondents to fulfil their regular needs.

It has interpreted that the majority of respondents have their own land. The majority of respondents are from rural area and having land also. There is a one of the important source of financial support to the respondent and his family members. Having land is a supplementary or supportive aspect for the respondent. Due to the support of land and its earnings, respondents can financially get relaxed. Having a land can support every time or not is another part but farmers are always happy with his farm. So the respondents can minimise the burden on his monthly compensation which gets from the department. Rural people are very much attached with the farm and farm also supports for earnings. The employed person in Police Department is unable to attend in the farm. So the responsibility of the farm belongs to the other family members but respondents are happy with their farm. The financial support helps to improve the habit of the saving and standard of living of the sample respondents. This affects on the quality of life as well as present working condition.

Table No.3.8: Number of Acres Land

Sr. No.	Particulars	Officers		Employees	
		Respondents	%	Respondents	%
1	Up to 1 acre	4	22	56	32
2	2 to 3 acres	6	**33**	64	**37**
3	4 to 5 acres	4	22	36	21
4	6 acres and Above	4	22	17	10
5	Total	18	100	173	100

Sources: Field Work

Table No. 3.8 reveals the number of acres of land having the respondents. It has found that out of the total officer respondents there are 62% respondents are having land and 48% employee respondents are having land. There are 22% officer respondents are having land only up to 1 acre, 33% respondents are having land up to 2 to 3 acres. There are 22% respondents are lies between 4 to 5 acres land and 22% respondents are having land above 6 acres. Whereas the 32% employee respondents having land below 1acre, 37% respondents having 2 to 3 acres land. There are 4 to 5 acres land owned by the 21% respondents and only 10% respondents owned 6 and above acres of land. The higher percentage respondents i.e. 37% have an own land is of 2 to 3 acres. There is an average classification of having land and the earnings from that land. There is a supportive factor of the earnings to the Police Officers.

It has interpreted that there are average respondents having sufficient land so the officers having financial support for their family. The supportive income helps to develop the saving habit of the person. Today's small saving converts into large capital for tomorrow. The Police respondents are having less amount of compensation so the respondents have some sort of financial support from the land. At the time of marriage of boy and girl, parents ask firstly about job and secondly about having a land. The same thing can be consider for the Police respondent. The land holding in sufficient number of acres helps to improve the financial stability and also helps to improve the level of satisfaction. The satisfaction at family helps to perform well at work which supports to the positive present working condition. It has noted that the majority of respondents having their own land. There is a financial support due to which employees are able to survive themselves. It has supposes to less burden on the monthly payment of the employee.

Table No.3.9 Family Type

Sr. No.	Particulars	Officers		Employees		Society	
		Respondents	%	Respondents	%	Respondents	%
1	Joint	13	45	180	**50**	252	**66**
2	Nuclear	15	**52**	153	43	93	24
3	Single	01	03	24	07	39	10
4	Total	29	100	357	100	384	100

Sources: Field Work

Table No. 3.9 reveals the classification of all three respondents as per the type of the family. The researcher has made three criteria's i.e. joint, nuclear and single. The researcher has found that the first respondent i.e. officers are out of the total respondents 45% respondents are living in joint family, 52% respondents are living in nuclear family and only 3% respondents are living single. The researcher has found in case of employee respondent that 50% respondents are belongs to joint family, 43% respondents are belongs to nuclear family and only 7% respondents are living single. It has found in case of society respondents that out of the total respondents there are 66% respondents having joint family, 24% respondents having nuclear family and remaining 10% respondents are having single. The researcher has found that the majority of officers are belongs to nuclear family whereas majority of employees and society members are belongs to joint family. It means that majority of sample respondents giving responses who belongs to joint and nuclear family.

It has interpreted that the average superior respondents are from joint family type. There are two sides of one coin in case of joint family and nuclear family. There are positive as well as negative aspects of each family type. The joint family having an average responsibilities and have more expenditure. The members of the family have to be financially strong and stable. Again there are more than one familiar's who can look after the problems occurred if any in the family. As compare to the joint family the rate of expenditure may be less but the responsibilities cannot be minimized in nuclear family. The researcher has interpreted that there is a need to consider the family of that employee which has to make the balance between family and the work. The work life balance leads to the positive effects of the present working condition. It has observed that the Police Employees have to do balancing between family and the work. The social justice depends on nature of the family and size of the family. The family may be responsible for minor disputes, whichsuppose to converts in crime. The Police Employees have to handle every critical situation with due care. They must have to protect the human rights and to maintain social justice.

Table No.3.10 Family Size

Sr. No.	Particulars	Officers		Employees		Society	
		Respondents	%	Respondents	%	Respondents	%
1	Up to 5	23	**79**	247	**69**	278	**72**
2	6-10	2	7	86	24	106	28
3	11-15	4	14	14	4	0	0
4	16and Above	0	0	10	3	0	0
5	Total	29	100	357	100	384	100

Sources: Field Work

Table No. 3.10 reveals the classification of respondents as per size of the family. The researcher has found that out of the total officer respondents, there are 79% respondents are the family members up to the 5, 7% are having the family size from 6 to 10 and 14% respondents are having the family members from 11 to 15. Majority of respondents are having small family size i.e. up to the 5. Whereas 69% employee respondents are having family size up to 5 and 24% respondents are having 6 to 10 family members. There are only 4% respondents are having 11 to 15 family members and remaining 3% respondents are having 16 and above number of family members and in case of society respondents there are 72% families which having the members in the family up to 5 and remaining 28% respondents which having the familiars up to 6 to 10. There are less number of respondents who are living in joint family where the size of family above 5 and up to 10. There are majority of respondents who are having less number of familiars in their family i.e. up to 5.

The researcher has interpreted that the size of family has a slight influence of the work. The above table shows that the majority of family size is up to the five. Though there is family size is less, the quantity of the responsibilities cannot be minimized. There is a less number of respondents have big family size i.e. above 10. The size of family includes the number of dependents in that family. The size of the dependency affects on the behaviour of the respondent and his concentration at work. There is an initial stage that human works for his family to fulfil all their requirements.

Table No.3.11 Earning members in the Family

Sr. No.	Particulars	Officers		Employees		Society	
		Respondents	%	Respondents	%	Respondents	%
1	Upto 1	18	**62**	231	**65**	159	41
2	2 to 3	09	31	108	30	199	**52**
3	4 to 5	02	07	18	05	00	00
4	6and Above	00	00	00	00	26	07
5	Total	29	100	357	100	384	100
6	**Mean**		1.40		1.31		1.94
7	**SD**		1.24		1.17		1.56
8	**CV**		88.89		89.44		80.22

Sources: Field Work

Table No. 3.11 reveals the classification of earning members in the family of selected sample respondents. There are 62% officer respondents who earns by himself, 31% respondents who having the 2 to 3 earning members in the family and 7% respondents are of 4 to 5 earning members in the family. ***As the calculated value i.e. mean value is 1.40, SD 1.24 and CV 88.99 which shows the high variation in the opinion of the selected sample officer respondents.*** In case of employee, 65% respondents are alone in earning income. Only 30% respondents are having more than 2 to 3 earning members in the family. Rest of the 5% employees are majority of number of familiars are earning from 4 to 5 sources ***and mean value 1.31, SD 1.17 and CV 89.44 shows that there is a high variation in opinion of the selected employee respondents.*** The third respondent i.e. society are 52% are having2 to 3 earning members whereas 41% respondents are having only one earning member and remaining 7% respondents are having 6 and more earning members in the family. There are majority of respondent i.e.52% which are having 2 to 3 members are employed in the family. ***The mean value 1.94, SD 1.56 and CV 80.22 shows the high variation in the opinion of the selected society respondents in relation of earning members in the family which shows the majority of families are surviving only because of one member in the family.***

It has interpreted that the majority of respondents are of alone to make earnings for his family. It is financial burden on respondent himself and it has observed that the compensations become limited. Earning of the individual affects on standard of living of that individual and his family. Overall life style develops with the proper earnings of the individual. The researcher has observed that due to changing definition of life style the present compensation seems to be limited. The income from individual person and more than one person affects on the total earnings of the family. It has observed that majority of Police respondents have to manage his family by himself. This pushes the family satisfaction towards negative and affects the present working condition. It is found that majority of the sample respondents are very less those who earns the money in the family.

It is noted that in the family few persons are earned money and others are dependent members so that main earning/responsible person is facing more financial problems due to increasing cost of living and other increasing expenses. It has depicted that the majority of respondents are having only one earning member in the family. Total family burden is on that member only. The over burden of family responsibilities adversely affect on present working**.**

Table No.3.12 Monthly Income of the Family

Sr. No.	Particulars	Officers		Employees		Society	
		N	%	N	%	N	%
1	Up to Rs.50,000/-	20	**69**	315	**88**	345	**91**
2	Rs.50,001/- to Rs.1,00,000/-	4	14	22	6	13	3
3	Rs. 1,00,001/- to Rs.1,50,000/-	0	0	6	2	13	3
4	Rs. 1,50,001/- to Rs. 2,00,000/-	0	0	6	2	0	0
5	Rs. 2,00,000/- and Above	5	17	8	2	13	3
6	Total	29	100	357	100	384	100
		Mean	66,386.36		36,773.58		36,857.99
8		SD	74354.49		38,184.20		40,456.69
9		CV	112.00		103.84		109.76

Sources: Field Work, Note: N = Number of Respondents

Table No. 3.12 reveals the classification of respondents as per criteria of their monthly family income. The researcher has found that out of the total officer respondents there are 69% respondents are up to 50,000/- monthly income and 14% respondents are of 50,001/- to 1,00,000/- monthly income. The remaining 17% respondents are having income above 2,00,000/-. Majority of respondents are having monthly income below 50,000/-.***The calculated values shows that the mean value has 66,386.36; SD is 74354.49 and CV 112.00 which shows the high variation in opinion of selected officer respondents.*** In case of employee respondent 88% respondents are below the category of income up to 50,000 though it may be 5000 or it may be 50000. The respondents are become adjusting from their life, from their job and from their situation. Only remaining 12% respondents are above 50,000 earning income. Among them 6% from 50,001 to 1,00,000, 2% from 1,00,001 to 1,50,000 , 1,50,001 to 2,00,000, above 2,00,000 respectively. ***The mean value is 36773.58, SD 38,184.20 and CV 103.84 which shows the high variation in the opinion of selected employee respondents*** There is a society respondents which having 91% respondents' total monthly income is below 50,000/- and remaining 9% respondents having the monthly income above 50,000/-. It found that the majority of respondents are below the 50,000 income level ***and mean value36,857.99, SD 40456.69 and CV 109.76 which shows the high variation in opinion of selected society respondents.***

It has interpreted that the majority respondents are having average monthly income. The researcher has found that majority of respondents have to make proper arrangements to fulfil the needs of the family. The majority of respondents are belongs to middle level family. Due to the high rates of every usable product, the respondents have to adjust the monthly income as per priority of the family requirements. This situation increases the stress and adversely affects on performance. The poor performance leads to poor present working condition. The members of the society observe the Police life and Police work life. It has found that Police Employees having expectations from their job which fulfils all the family requirements.

6. Findings:

The majority of respondents are having their own land. There is a financial support due to which employees are able to survive themselves. It has supposes to less burden on the monthly payment of the employee. The researcher has concluded that the financial support from land helps to improve the life condition of the police respondents. It has also found that the residence is rural and having a land helps to maintain the work and family smoothly (Table 3.7).

The family type affects on the performance of the employee. The joint and nuclear families are having positive and negative aspects which affects positively or negatively on the performance of the employee. The police employee wants to make adjustments to keep smoothness in the work and family. The balancing between work and family helps to improve present working condition. The researcher has found that the officers positively make balancing as compared fellow employees. The researcher has concluded that, to carry the family at every transfer may create problematic situation to the employee and if the family members are more, the situation became more critical. The majority of respondents are having average family size. This helps to maintain the satisfaction at family as well as at work (table 3.9, 3.10).

The majority of respondents are having only one earning member in the family. There are majority of respondents replied that he is alone earning member in his family. Total family burden is on that member only. The over burden of family responsibilities adversely affect on present working condition. It has concluded that, the majority of employees' monthly income is below 50,000/- and majority of respondents are having only one earning member (Table No. 3.11, 3.12).

7. Observation:

1. The researcher has observed that the majority of respondents are from rural area with having ancestral land causes to give some time for it. Due to this reason majority of employees give preference for doing up and down from the residential area. There is less number of employees give preference to shift the family and continue their work. As the rural people are satisfied with less availability of facilities and there is a supportive land for the satisfaction. However, the employee unable to attend 24X7 for work as per the requirement.

2. The police employee gives first preference to the work and second preference to the family. The employees are always ready to attend for detection of crime in time. They work with full of efficiency for the society and it also observed that having family is the destination of taking relief from the work; but there is a requirement of smoothness in family. The type of family and size of family both considerable factors of the performance at work.

3. The Government taking initiative to provide the accommodation facilities to their employees but there having some lacking points. There is a slight negligence done by the Government. However, the researcher has observed that, there are some lacking in maintenance of available accommodations and Department having depended on other organisation such as MC, PWD, MSEB, etc. for the availability of accommodation and basic facilities. It takes long period of time with heavy paper work and due to this time of need passes back and problems remains as it is. However, researcher has observed that the Army, Navy are not depended on these organisation instead of this there is a provision has made independently by these organisation. There is a requirement of availability of proper accommodations for the employees which helps to improve the working life of the employee.

8. Suggestions:

1. The researcher has suggested that ancestral land is another part of the employee's income source; instead of this the Government should try to fulfil the employees' requirement within the compensation. The Government should provide the welfare facilities for the survival of employees' family.(educational facilities to children, education with concession, etc). It is also suggested that, to cultivate ancestral land of Police Employee. Government should provide loan with concessional rate with interest, high yield seeds, modern technology for agriculture etc.., which will help to get agriculture income, stress relief by way of cultivation of ancestral land and also, it helps for the improving standard of living of Police

Employee. In short, it is suggested that, Government should support for cultivation of agricultural land of Police Employees.

2. Government should take care and also motivate for increasing income of the family members of Police Employees. The Government can start or support home based business activities for the family members of the Police Employees e.g. preparation of papad, production of pickles, non confidential office work doing through family members e.g. running a Police Canteen, Gift item production, which will use for the Police Department Functions etc.. Financial position of Police Employee and QWL has partial positive co-relation. It means financial well being helps for maintaining of QWL. In short Government should directly or indirectly increasing family income, which will help for maintaining QWL.

9. Conclusion:

The researcher has concluded that land holding as one of the supplementary income source of Police respondents. Having a land is the supportive factor as income source which helps to develop saving habit of the respondents. Though land is having as income source their number of acres also necessary aspect however the size of the family represents the number of dependents of an employee and the number of dependents affects his spending and saving habit. The earning members in the family provide the supportive hands to the main member of the family. It supports the Karta member for making financial balancing. However, the researcher has made suggestions on the basis of findings and observation made by him.

STRENGTH WEAKNESS OPPORTUNITIES AND CHALLENGES BEFORE HOTEL UNITS IN SHAHUWADI TALUKA IN KOLHAPUR DISTRICT STATE: MAHARASHTRA.

Mr.Rajendra Shivaji Sutar

Prof. Dr. N. D. PatilMahavidyalaya, Malkapur, Tal. - Shahuwadi, Dist. - Kolhapur

Introduction:

Hotel business is an important part of the life style of all the society people in upper income class ,middle income class and lower income class always in contact with hireling In every part of Nation, State and even in urban and rural area hotels and its services provided in hotel is matter of discussion. Hotels units provided employment opportunities in urban as well as in rural area, provided market for different types of goods and services. development of hotel units depends on inter-related development of industries and services in rural area and urban area .there is remarkable changes in living standard of society celebration of birthday, promotion party,etc are arranges in hotel.

Objectives:

I) What are the strength of hotel units in ShahuwadiTalukain Kolhapur district

II) What are the Weakness of Hotel units in ShahuwadiTaluka.

III) What are the opportunities before hotel units in ShahuwadiTaluka

IV) What are the challenges before hotel units in study are.

V) Find out role of hotels in ShahuwadiTalukato provdeemloyments opportunities

VI) Find out competency of hotels in study are to survive in competition with big hotel units

Methodology:

Survey method Survey of the number of hotel in Shahuwaditaluka has been taken by providing questionnaire to hotel businessman and data collected analysed in different way.

Strength:

Kolhapur district is popular for different type of customers and traditions.

Therefore there has been increasing tourism business and hotels play an important role to develop tourism business by providing best services to their customers. As the Location of ShahuwadiTalukais comparatively superior to other talukas in Kolhapur district in respect of healthy environment .there is no pollution problem in sense of water and air. AmbaGhat and Fort of Vishalgad is remarkable gift of nature toShahuwaditaluka lifestyle of the people in this area is also attracted to the tourist from different area.it is the gateway of Ratnagiri, Ganpatipule and Marleshwer. Availability of land water and access of transport facilities at moderate rate to the hotel industry in this area.As there is no scope to absorbed the manpower in other field than agriculture. Hotel industry has scope to absorbe this manpower. These are the point of strength in hotel business in ShahuwadiTaluka.Therefore is continuously increasing the number of these hotel business in short physical and human resources are available at low cost compare to other place.

Weaknesses:

Strength and weakness are the two sides of one coin. Hotel business in ShahuwadiTalukaalso suffer from different types of weakness its business as follows

I) Professionalism: professionalism is an important for the running business successfully. It seem that there is no professional idea and vision before some hotel businessman in this area because of lack of professional training in hotel management

II) Skilled workers/Servants :Services providedin hotel is the key factor for success. As these are located in rural and hilly area there is scarcity of skilled and professional servants

III) Publicity: Advertising and publicity is common thing to popularise the business hotel

Units in this area has not been aware of this important factor.

Opportunities:

Due to globalisation tourism has become important part of people therefore there is scope to develop hotel industry in the study area of ShahuwadiTaluka. Because of its location that is gateway of Ratnagiri, GanpatipuleandMarleshwar to the tourist of upper section of Ambaghat and its gateway of Kolhapur and sangli to the tourist of lower section of Ambaghat. Gradually there has been developing connectivity of the people in rural and hilly area to theimportant market places in taluka like Bambavde and Malkapur. because of transport facilitythere is opportunity to develop this industry in shahuwaditaluka.

Increasing number of school and colleges provide opportunity to maximise the sale Services in hotel industry in this area.

Challenges:

I) Use of information and technology is challenge before the hotel units in shahuwaditaluka,E-booking ,E advt are the challenges

II) Huge capital investment: hotel units in ShahuwadiTalukaare facing problem of huge Capital investment to compete with big hotel units in corporate sector.

II) Multifacility Services: requirement of multifacility services of the customers and its provision is the challenge before hotel units in Shahuwaditaluka. these services include tourist vehicle facility guide facility lodging facility

Conclusion:

I) existing educational institution in the study area should provide diploma and degree courses in hotel management

II) Government should design the policy to provide self-employment opportunities by providing financial assistances at concessional interest.

III) organisation of small hotel units is to be established to place their problems before government

IV) Government should frame particular policy of tourism development in this study area by providing special financial package for renovation and maintenance of historical places.

THE EFFECTIVENESS OF STORES MANAGEMENT & GST

Prof. Shetye Prashant Hanamant
Assistant Professor, Mudhoji College, Phaltan.Dist, Satara.
Email:-*prashantnet36@gmail.com*

ABSTRACT

GST seeks to unify the entire country into a single market with only one value- added tax levy on all the goods and services across states at the point of consumption, subsuming up to 16 different taxes and levies that are imposed at present. This is expected to make the movement goods across the state borders smoother, faster and easier. GST council has raised the limit on input tax credit against excise duty payment to 60% from 40% of GST liability on items with tax rate above 18%, bringing some respite on sale of inventories stocked up before the implementation of new tax regime on July 1.

Key words: Single Indirect Tax, One Country one Tax, Integrated taxation
Keywords:*Stores Management, Discrepancies, Opportunities,, Relations of stores, Financial, Warehousing, Service consideration*

INTRODUCTION

In enterprises with a small quantity of stock, one person might be placed in charge of it, if the owner/manager does not look after it himself. Where the volume of stock is too large to be handled on a part-time basis, one or more storekeepers will be required. Enterprise with large quantities of stock must employ trained stores personnel (storekeeper, clerks, etc.) under the control of a Stores manager who might go by the designation of Head or Chief Storekeeper, Stock Controller, Stores Administrators or a similar title. It is impossible to state at what stage a Stores Manager will be appointed by a particular enterprise, as circumstances and sizes vary so greatly. But whatever its size and the volume of it’s the stocks, the success of the enterprise can depend to a large extent on the efficient management of its store and stocks.

Inventory management is concerned with keeping enough product on hand to avoid running out while at the same time maintaining a small enough inventory balance to allow for a reasonable return on investment. Inventory is used for stock of goods kept in organization and meant either for sale or for being consumed in production process. Organization has to maintain an adequate stock of goods or inventory in order to provide continuous production and sale of goods and services. Goods and service tax (GST) is an indirect tax throughout India to replace taxes levied by the central and state governments. It was introduced as the constitution (one hundred twenty second amendment) act 2017, tax slab of GST are 0% to 28%.

GST collected during the sale or purchase of goods is independent of the state where the purchase or sales taxes place. Some of the best GST, system across the world like Singapore and New Zealand use single GST, but India has adopted a dual GST model. The change in tax structure is expected to have a huge impact in supply chain in India

Store administration deals with various aspects like the cleanliness of the store premises, maintenance of the stores façade and the display window etc. Administration is also be responsible for utilizing the store personnel effectively. Time keeping for the stores staff is important. It is also necessary to keep track of holidays and the shifts that the staff may be required to work for. The premises of the stores need to be maintained as per the standards decided upon by the management.

OBJECTIVES OF STORES MANAGEMENT

1) Minimizing funds loaded up in stock of goods.

2) To account for all the materials received and issued, proper storage to avoid deterioration and loss of materials, economical material handling, stock verification and reconciliation of discrepancies.
3) To receive scrap and other discarded materials and arrange prompt and most economical disposal.
4) To maintain proper coordinate and cordial relationship with departments
5) Ensuring regular and continuous sale of finished goods
6) To provide services to operating functions by balanced flow of raw materials, components, tools and tackles and other consumable materials.

RESEARCH METHODOLOGY

This paper is conceptual in nature. Secondary data is used. Researcher has referred books, journals & websites.GST: Input tax credit limit on existing stock raised to support transition period sales

In a major relief to traders and businessman across the country, the GST council has increased the limit on input tax credit to 60% against excise payments from 40% earlier on items with tax rates at 18% and above without excise payment receipts, bringing some respite on sale of inventories stocked up implementation of the new tax regime on July 1. The input tax credit refund against excise on items with tax rates below 18% would remind at 40% of the total GST liability. Further, the council also ruled that entire 100% input tax credit against excise can be availed on high-value items above Rs.25000 with a chassis number. It must be noted that the input tax credit refund against is already at the full value in cases where the excise payment receipt is available. Distributors and dealer had begun cutting down on the stock of goods lying with theme ahead of the implementation of GST, as the earlier proposed rules provided for theme to claim tax credit for only up to 40% of their total GST liability against the excise duty already paid on the goods purchased before July 1 without furnishing the original excise payment receipt.

Some of the best GST, system across the world like Singapore and New Zealand use single GST, but India has adopted a dual GST model. The change in tax structure is expected to have a huge impact in supply chain in India.

A comparison of GST rates of some countries with the proposed India GST rates is given below:

S.No. Name of Countries Rate of GST
1. Australia 10%
2. Canada 5%
3. New Zealand 15%
4. Singapore 7%
5. Malaysia 6%
6. Sweden 25%
7. India 28%

FUNCTIONS OF STORES

Received and Dispatch-

All the incoming material from the suppliers and other units of the organization shall be received at stores. Arrangement need to be made for transportation, unloading and receiving of materials, and handing over the same to custody group checking up of packages, checking up material with details of invoices and purchase order.

Inspection of Materials

It has to be ensured that every item received in stores is checked from quality angle. Any failure of poor quality materials may put the organization to heavy losses, especially, those of components of vital equipment. Quality plans need to be developed for critical and high consumption value items.

Issue of materials & maintenance of records

Stores department, on receipt of requisition from user departments shall identify requirement and issue materials without any delay. Proper records need to be made of issue and receipt documents.

Warehousing and preservation:

All material received from Receipt section shall be stacked properly and bin location recorded to facilitate issues. Necessary steps need to be taken for preservation of martials especially those, which are to be stored for longer period. Preservation methods need to be developed in consultation with suppliers\user departments. Steps also need to be taken for security and safety of materials and also safety to personnel from various hazards by taking precautions in handling the materials.

Stock control records:

Day to day receipts and issues shall be posted in stock ledgers or computer master so that the current balances of each item are known without physical counting or checking.

DISCREPANCIES NOTICED IN STORES MANAGEMENT

1) Human error of omission- wrong issue of material, wrong codification, wrongs posting in stock-records
2) Improper documentation
3) Confusion of unit of measurement
4) Wrong stock-taking
5) Deterioration due to inherent characteristics of item
6) Weight differences-when items are received in bulk and issued on piece-meal weighting
7) Measurement difference- when different person carry out measurement of piece-meal issue

SUGGESTION AND CONSIDERATION FOR PROPER STORE MANAGEMENT

1) Financial Consideration

a) Minimize the working capital tied up in stock by keeping the range of materials and stock level of optimum.

b) To keep down stores operating cost including expenditure on manpower, storage. accommodation and over-head.

c) Minimize obsolescence and avoid deterioration losses.

2) Warehousing Consideration

a) Optimum utilization of storage space.

b) Keep down handling to a minimum

c) Proper Storage and preservation of stocks

Impact on supply chain management

The structure of the supply chain in influenced by differential taxes based on geographical location. To remove multiple state

taxes, the logistics companies are encouraged consolidate their warehouses instead of maintained one in each state to avoid central tax. This effect brings down the overall cost of product as the inventory cost and inventory carrying cost down. It affects the final cost of product and during selling price down. The cost saved by the companies as a result of GST can be used to invest further to improve serviceability. After implementing GST, the design of the supply chain will be based on customer service and logistic cost. It also

offers flexibility into demand and supply watching. Firms would also enable by GST to increase the accuracy of the forecast. Bigger warehouse and smaller warehouses can be merged into one and space optimisation will be achieved.

Impact on warehousing

The location of warehouse is generally chosen to minimize the cost of delivery for both the company and the customer. Other factory considered are access arterial highways, access to highways, ports etc. for shipment and labour availability. The local state taxes are also a factor considered by companies before locating a warehouse. Some companies prefer to have

warehouse in every state of the country to avoid local taxation while transporting from one location to another. With the implementation of GST, logistics companies can have restructure their warehouse locations and can have one central warehouse or can go for warehouse at specific locations or can adopt a hub and spoke model. With GST the local state taxes are eliminated and there will be only one goods and service tax across the entire country. This enables the companies to achieve cost efficiency in their operations and thereby transferring this cost benefit to the end consumer in the supply chain.

Advantages

On warehousing with respect to GST is that companies can consolidate stock at their warehouses. Demand variation at a particular warehouse can also be reduced. This in turn improves demand planning and improved inventory management.

3) Service Consideration

a) Avoid stock-out especially of critical material.

b) Respond promptly to request/emergency situations.

c) Ensure goods issued are in good conditions.

d) Issues are made to users without undue formalities.

e) Respond immediately to changing requirements.

GST- IMPACT IN INVENTORY MANAGEMENT

Planning before transition

There is a need to plan time of purchase during transition phase considering the factors such as credit eligibility, entry tax levy, days of delivery etc. presently, the interstate purchases suffer 2% CST against form C with is non-creditable. During transition phase, such purchases could be delayed by maintaining appropriate stock levels. In case entity has more interstate sales, then customers could also reduce purchase volume to save on CST cost. Therefore, stock requirementsto be studied well in advanced to plan for stock levels. The absence of check post would reduce the transit times also.

Despatch of rejected inventory

Rejected inventory needs to be returned to suppliers especially when the VAT input credit/ CENVAT credit has been availed on such inventory. Otherwise the benefit of tax deduction or re-credit may not be eligible for the suppliers which ultimately urder the person returning the goods. Therefore, identification of inventory due for return to the suppliers is critical during transitional phase.

Demand for discount

There could arise a situation where there is a need to procure more goods before implementation of GST if such a scenario arises, quantity/trade discounts could be demanded from the suppliers which would reduce the procurement cost of supplies.

Comparing the tax rates as per the present rates in indirect taxes and tax rate in GST could be necessary to decide on such purchases.

Stock transfer of goods

It is usual practise for most of the manufactures to open branches in different places either within the state or outside the tate for transport convenience or to avoid charging of CST which is non-creditable. Presently, transfer of excisable goods to other places including branches would be liable for applicable excise duties but not subject to VAT. In GST regime, all supplies including branch transfers would be subject to GST. This would have impact on cash flow. Therefore, the need for branches and level of inventory to be maintained at branches to be relooked during transitional phase.

CONCLUSION

GST is a win-win solution for all stakeholders. It is a key enables for increased prosperity. As the next level of logistics are the evolving in India and the corresponding regulatory policies has to be taken care well ahead of the GST introduction to have a positive and expected impact. Further, on account of the delay in implementation of GST, it is critical to gauge the opportunity loss for the various stakeholders. Store management is concerned with ensuring that all the activities involved in storekeeping and stock control are carried out efficiently and economically by those employed in the store. In many cases it will also encompass the recruitment, selection, induction and the training of stores personnel and much more. The work of any manager comprises different aspects. The technical aspect,which is concerned with the work to performed in the section, department or enterprise concerned and the human aspect, which is concerned directly with the people who are employed to perform that work.

The technical work of different managers might vary considerably; thus the technical work of a factory manager will be very different from the technical work of a sales manager or an office manager etc. Even the technical work of two stores managers working for two different enterprises might differ in many areas. However, the human aspect of the work of all managers must be similar because it involves managing the activities of other people.

RECENT DEVELOPMENTS OF TEXTILE INDUSTRY IN ICHALKARANJI

Mrs. Rita S. Rodriques
Research Student, Department of Commerce, Shivaji University, Kolhapur
Dr. N. B. Bhagwat
Research Guide & Associate Professor, Department of Commerce, D. R. Mane College, Kagal

ABSTRACT

Government of India, Ministry of Textiles, is moving towards increasing productivity for increasing export growth of textile industry. In the modern era purchasing new machinery or enhancing the quality of the existing machinery, introducing new technology and providing infrastructural facilities are very useful in increasing the research and development (R and D) related activities. It is very important for increasing the industrial growth of a country. Ichalkaranji is one of the most prominent decentralized Textile centers of the India, having good number of spinning mills, sizing units, power looms, processing units and Industrial Estates situated is about 29 Km away from Kolhapur. Government of India has sanctioned scheme of Textile Cluster for Ichalkaranji city and Industrial Area at outskirts, under Industrial Infrastructure Upgradation Scheme (IIUS) and Power loom Mega Cluster scheme for the development of textile industry. Some of the recent trends and developments of Textiles business in Ichalkaranji are discussed in this article.

Keywords:*Textiles, ITDC, Development*

Introduction:

The Textile Industry occupies a vital place in the Indian economy and contributes substantially to its exports earnings. Textiles exports represent nearly 30 per cent of the country's total exports. It has a high weight age of over 20 per cent in the National production. It provides direct employment to over 15 million persons in the mill, power loom and handloom sectors. India is the world's second largest producer of textiles after China. It is the world's third largest producer of cotton-after China and the USA-and the second largest cotton consumer after China. The textile industry in India is one of the oldest manufacturing sectors in the country and is currently its largest one. The Textile industry occupies an important place in the Economy of the country because of its contribution to the industrial output, employment generation and foreign exchange earnings. The textile industry encompasses a range of industrial units, which use a wide variety of natural and synthetic fibres to produce fabrics. The textile industry can be broadly classified into two categories, the organized mill sector and the unorganized mill sector. Considering the significance and contribution of textile sector in national economy, initiative and efforts are being made to take urgent and adequate steps to attract investment and encourage wide spread development and growth in this sector.

Textile industry in India:

Textile industry in India occupies an important place in the economy of country. After China, India is the world's second largest producer of textiles. It is the world's second largest cotton consumer after China and third largest producer of cotton-after China and the USA. The textile industry in India is one of the oldest manufacturing sectors in the country. It accounts for 14 % of the total industrial production, contributes to nearly 30% of the total exports and is the second largest employment generator after agriculture. Around eight per cent of the total excise revenue collection is contributed by the textile industry. The textile industry accounts for as large as 21 per cent total employment generated in the economy. Around 35 million people are directly employed in the textile manufacturing activities. Indirect employment including the manpower engaged in agricultural based raw material production like cotton and related trade and handling can be stated to be around another 60 million. The recent measures taken by the state and central Government of India to reduce interest rates and liberalize labour laws, integrated and cluster textile development schemes help to augment investment in the manufacturing sector including in the textiles industry. As a result, growth and all round development of this industry has a direct bearing on the improvement of the India's economy.

Objectives of the study:

1. To understand the textile industry in India and Ichalkaranji.
2. To study the problems and challenges for rapid growth of textile industry.
3. To study the recent developments of textile industry in Ichalkaranji**.**

Research methodology:

This study is based on primary data and secondary data. Primary data is collected by conducting interviews with the manager of ITDC and Power Loom Mega Cluster. Secondary data is taken from annual reports of Ministry of Textiles and from the reputed Published Sources like various Books, magazines, research articles and Websites on Internet.

Problems and challenges for rapid growth:

The textile industry has obsolete equipment and machinery. The inability to timely modernize the equipment and machinery and lack of research and development (R and D) has led to the decline of India textile competitiveness. Due to obsolete technology the cost of production is higher in India as compared to china. Introduction of minimum tax on domestic sales would invite unavoidable liquidity problem, which is already reached to the alarming level. Also the textile industry was facing negative generation of funds due to unaffordable mark up rate on the one hand and acute shortage of energy supply and unimaginable power tariff for industry. The cost of production of textile rises due to many reasons like increasing interest rate, double digit inflation and decreasing value of Indian rupee. High cost of doing business is because of intensive increase in the rate of interest which has increased the problems of the industry. The load-shedding of electricity cause a rapid decrease in production which also reduced the export order. The cost of production has risen due to instant increase in electricity tariff. Due to load shedding some mill owner uses alternative source of energy like generator which increase their cost of production further. Due to such dramatic situation the capability of competitiveness of this industry in international market effected badly. Indian textile industry is facing problem of Low productivity due to its obsolete textile machineries. The above all reason increased the cost of production of textile industry which create problem for a textile industry to compete in international market.

Textile Industry in Ichalkaranji

Ichalkaranji is one of the famous textile centers in India. In and around Ichalkaranji there are about 35 spinning mills, covering wide range of counts, ply yarns, ring & open and yarns, and fancy yarns. There are about 180 sizing units, which includes conventional to modern machines and more than 1 lakh power looms in decentralized sector. These include plain loom, dobby, drop box, auto & semi auto looms such wide range of machines. More than 35 power process and about 80 hand processing units are fulfilling the need of the sector. From last 2 decades, there is significant change in this sector, reflected into product diversification, quality improvement, productivity which is a result of more than 10000 shuttle-less looms are in operation.

Growth of Power Looms in Ichalkaranji city and their Workers (1904 to 2011)

Sr. No.	Year	No. of Power looms	Growth Rate of Power looms	No. of Power loom Workers	Growth Rate of Power loom Workers
1	1904	01	--	N.A.	--
2	1908	02	--	N.A.	--
3	1945	1500	--	N.A.	--
4	1951	2000	33.33	500	--
5	1961	8000	300	12000	2300
6	1971	15000	87.50	13750	14.58
7	1981	33000	120.00	27500	100
8	1991	90000	172.72	49000	78.18
9	2001	128000	42.22	70000	42.86
10	2011	145000	13.28	125000	78.57

Source: *Computed by the Researcher*

Recent Textile Industry Developments in Ichalkaranji:

Ichalkaranji is one of the more prominent and progressive textile activity centers in southern part of Maharashtra. It has been identified as a sector most likely to respond positively to stimulus for technology up gradation. Power loom Industry is a house hold activity in the city as well as surrounding villages. There are about 35 Spinning Mills which produces wide range of excellent quality yarns. Here, very coarse to super fine fabrics are produced on 1.2 lakh Power looms, 20000 auto and semi auto looms and 6000 shuttle-less looms. Fabric processing and garmenting units are also fulfilling the needs of the sector. This Textile activity is being carried out in many small scale units, Co-operative Industrial Estates and Textile Parks. The cluster has huge dedicated work force, however, it lacks basic training facilities, skill development, adequate infrastructure support, modern technology, modern looms and other need based facilities like marketing facilities, etc**.**

The Government of India, through the Department of Industrial Policy and Promotion (DIPP), Ministry of Commerce and Industry, New Delhi has sanctioned the scheme of Textile Cluster for Ichalkaranji city and Industrial Area at outskirts, under Industrial Infrastructure Upgradation Scheme (IIUS). To enhance and improve the infrastructure facilities, The Ichalkaranji Municipal Council, Ichalkaranji Industrial Co-op Estate, DKTE’s Textile and Engineering Institute, The Laxmi Co-op Industrial Estate and Parvati Co-op Industrial Estate have jointly come together and formed a Special Purpose Vehicle (SPV) company viz. “Ichalkaranji Textile Development Cluster Limited (ITDC) which has been registered under companies act l956 and it was implemented the project. The individual members had contributed to the extent of about 50% of the project cost and the balance amount was collected in from the grant in aid from Department of Industrial Promotion and Policy, Government of India. In order to provide impetus to the Power loom Sector by creating state of the art infrastructure, it has been decided to develop Ichalkaranji in Maharashtra as Power loom Mega Cluster. The scheme of Power loom Mega Cluster has been commissioned to scale up the infrastructural facilities and production chain at traditional textiles clusters, which have remained unorganized and have not kept pace with the modernization and development that have been taking place so far. The prospects of the textile sector in this segment lie in infrastructure up gradation, modernization of the machinery, products diversification, innovative manufacturing as well as designing know-how, skill up gradation etc.

Conclusion:

The Government of India changed its direction from increasing export growth to increase production to educational institution strengthening and increasing employment opportunities. The Government of India and the Textile products manufacturing industry should collaborate each other and should create a plan for addressing the key parameter issues and promote the export of textile products from India with good strategies. Finally, this paper reflects that wholehearted joint efforts from manufacturers, buyers, suppliers, government, and other stockholders are highly expected to accomplish the development of potential and sustainable textile industries growth in Ichalkaranji

RURAL ENTREPRENEURS: CHALLENGES AND REMEDIES

Dr.Jamge Santosh D.
B. P. Sulakhe Commerce College, Barshi
Email Id: *santoshjamge@gmail.com*

ABSTRACT

In India nearly 70% of the total population lives in rural areas. Agriculture and allied activities are the main source of income. So the economic development of India majorly depends on the development of rural areas and the standard of living of the rural mass. Rural entrepreneur is one of the most essential inputs in the economic development of India. Rural entrepreneur uses the scarce and scattered resources in the most efficient manner hence increasing profits and decreasing costs. Due to lack of facilities of education, majority of rural people are not aware of technological development, marketing etc. Scarcity of finance and raw materials are major problems in front of rural entrepreneurs. Most of the rural entrepreneurs face particular problems like lack of literacy, fear of risk, lack of training facility and experience, less purchasing power and steep competition from urban entrepreneurs. Promotion and support of rural entrepreneurship is important step to develop rural areas. This research paper focuses on the identification of various problems associated with rural entrepreneurship. Appropriate remedies have also been discussed to overcome these problems.

Key words:*Economic development, Lack of training, Purchasing power, Rural entrepreneur, Rural mass.*

INTRODUCTION

After over 7 decades of Independence and Industrialization India, still large part of population lives under poverty line. Agriculture sector continues to be the back bone of rural areas. As per study, 70 per cent of holdings are held by small and marginal farmers which results in overcrowding on the agricultural sector and less farm produce. This also results in migration of farm worker in large numbers to the urban areas. In both the cases the population remains under poverty line. Entrepreneurship can play an important role in rural development. "Entrepreneur means one who creates a product on his own account, who ever undertakes on his own an industrial/trading enterprise in which work men are employed". If entrepreneurships really encouraged in rural area it would, of course, be instrumental in changing the face of rural areas by solving the problems of unemployment, poverty, economic disparity, poor utilization of rural capacity ,low level of standard of living .Majority of the population still lives in rural India and the large chunk of population in urban areas still live through the learning of a village life. For the strength of the country there is a necessity to develop the villages. Development of a country is a choice loaded on its people, whether urban or rural. It is individuals who shape up a society and decide its progress and performance. Urban and rural are two sides of the same coin of economic development. While the urban sector has witnessed phenomenal growth and development, fuelled by the post independence era of industrialization, the rural sector saw little corporate growth. Rural development is more than ever before linked to entrepreneurship. Institutions and individuals promoting rural development now see entrepreneurship as a strategic development intervention that could accelerate the rural development process. Furthermore, institutions and individuals seem to agree on urgent need to promote rural enterprises.

Objective of Study

- To study the problems faced by rural entrepreneurs in India.
- To provide the remedies to solve the problems of rural entrepreneurs.

Problems in Rural Entrepreneurship:

Entrepreneurs are playing very important role in the development of economy. They face various problems in day to day work. As the thorns are part of roses, similarly every flourishing business has its own kind of problems. Some of the major problems faced by rural entrepreneurs are as under.

FINANCIAL PROBLEMS

1. **Scarcity of funds**

Most of the rural entrepreneurs fail to get external funds due to absence of tangible security and credit in the market. The procedure to avail the loan facility is too time-consuming that its delay often disappoints the rural entrepreneurs. Lack of finance available to rural entrepreneurs is one of the biggest problems which rural entrepreneur is bearing now days especially due to global recession. Major difficulties faced by rural entrepreneurs include low level of purchasing power of rural consumer so sales volume is insufficient, lack of finance to start business, reduced profits due to competition, pricing of goods and services, Financial statements are difficult to be maintained by rural entrepreneur, stringent tax laws, lack of guarantees for raising up of loans, difficulty in raising capital through equity, dependence on small money lenders for loans for which they charge discriminating interest rates and huge rent and property cost. These all problems create a difficulty in raising money through loans. landlords in Punjab proved to be major source of finance for rural entrepreneurs but the rates of land are reduced due to global recession so they also lack hard cash now a days. Some banks have not ventured out to serve rural customers because banks are expensive to be reached by rural customers and, once reached, are often too poor to afford bank products. Poor people often have insufficient established forms of collateral (such as physical assets) to offer, so they are often excluded from traditional financial market. Government is providing subsidies to rural areas but due to high cost of finance, these subsidies are not giving fruitful results. Major sources of finance in rural areas are loans from regional rural banks or from zamindars but their rate of interest are usually very high.

2. **lack of availability of infrastructural facilities:**

The growth of rural entrepreneurs is not very healthy in spite of efforts made by government due to lack of proper and adequate infrastructural facilities.

3. **Risk element:**

Rural entrepreneurs have less risk bearing capacity due to lack of financial resources and external support.

4. **Marketing Problems:**

Rural entrepreneurs face severe competition from large sized organizations and urban entrepreneurs. They incur high cost of production due to high input cost. Major problems faced by marketers are the problem of non-standardization and competition from large scale business units. They face the problem in maintaining the standards. Competition from large scale units also creates problems for the survival of new startups. Startups have limited financial resources and hence cannot afford to spend more on sales promotion and marketing. These units are non brand name and non standard under which they can sale their products. Startups have to come up with new and unique advertisement strategies those rural people can easily understand. The literacy rate among the rural consumer is very low. That’s why printed media have limited scope in the rural context. The traditionally attached nature, cultural backwardness and cultural barriers create more difficulty of communication..

Middlemen exploit rural entrepreneurs. The rural entrepreneurs are heavily dependent on middlemen for marketing of their products who pocket large amount of profit. Storage facilities and poor means of transport are other marketing problems in rural areas. In most of the villages, farmers store the produce in open space, in bags or earthier vessels etc. So these indigenous methods of storage are not capable of protecting the produce from dampness, weevils etc. The agricultural goods are not standardized and graded.

MANAGEMENT PROBLEMS

Lake Of Knowledge: of I.T Information technology is not very common in rural areas. Entrepreneurs rely on internal linkages that encourage the flow of goods, services, information and ideas. The intensity of family and personal relationships in rural communities can sometime be helpful but they may also present obstacles to effective business relationships. Business deals may receive less than rigorous objectivity and intercommunity rivalries may reduce the scope for regional cooperation. Decision making process and lines of authority are mostly blurred by local politics in rural areas.

Legal Formalities: Rural entrepreneurs find it extremely difficult in complying with various legal formalities in obtaining licenses due to illiteracy and ignorance.

Procurement Of Raw Materials: Procurement of raw materials is really a tough task for rural entrepreneur. They may end up with poor quality raw materials, may also face the problem of storage and warehousing.

Lack Of Technical Knowledge: Rural entrepreneurs suffer a severe problem of lack of technical knowledge. Lack of training facilities and extension services crate a hurdle for the development of rural entrepreneurship.

Poor Quality Of Products: Another important problem is growth of rural entrepreneurship is the inferior quality of products produced due to lack of availability of standard tools and equipment and poor quality of raw materials.

Human Resources Problems

Low Skill Level Of Workers: Most of the entrepreneurs of rural areas are unable to find workers with high skills. Turnover rates are also high in this case. They have to be provided with on the job training and their training is generally a serious problem for entrepreneur as they are mostly uneducated and they have to be taught in local language which they understand easily. The industries in rural areas are not only established just to take advantage of cheap labour but also to bring about an integrated rural development. So rural entrepreneurs should not look at rural area as their market, they should also see the challenges existing in urban areas and be prepared for them. Rural entrepreneurs are generally less innovative in their thinking. Youths in rural areas have little options “this is what they are given to believe”. This is the reason that many of them either work at farm or migrate to urban land.

NEGATIVE ATTITUDE: The environment in the family, society and support system is not conducive to encourage rural people to take up entrepreneurship as a career. It may be due to lack of awareness and knowledge of entrepreneurial opportunities. The young and well educated mostly tend to leave. As per circumstances, rural people by force may be more self sufficient than their urban counterparts, but the culture of entrepreneurship tends to be weak. Continuous motivation is needed in case of rural employee, which is sometime difficult for an entrepreneur to impart with.

RemediesTo Solve These Problems:

Different organization like IFCI, ICICI, SIDBI, NABARD etc. are trying to sort these problems. Marketing problems are related with distribution channels, pricing, product promotion etc. In order to make the rural entrepreneurs to stat the business venture, the following measures may be adopted:

Creation of finance cells: The financial institutions and banks which provide finances to entrepreneurs must create special cells for providing easy finance to rural entrepreneurs.

Concessional rates if interest: The rural entrepreneurs should be provided finance at concessional rates of interest and on easy repayment basils. The cumbersome formalities should be avoided in sanctioning the loans to rural entrepreneurs.

Proper supply of raw materials: Rural entrepreneurs should be ensured of proper supply of scarce raw materials on priority basis. A subsidy may also be offered to make the products manufactured by rural entrepreneurs cost competitive and reasonable.

Offering training facilities: Training is essential for the development of entrepreneurships. It enables the rural entrepreneurs to undertake the venture successfully as it imparts required skills to run the enterprise. Presently the economically weaker entrepreneurs of the society are offered such training facility under Prime Minister's RozgarYojna. (PMRY) Programmed FICCI, (NGOs) Lions Clubs, Rotary Clubs and voluntary organizations can also arrange such training programmers for rural entrepreneurs to provide them stimulation counseling and assistance .For rural entrepreneurs, individual based EDI' approach is highly relevant where the motivation and familiarization processes coupled with promise of bank credit and support by way of escort services could persuade rural youth with certain basic skills of- hands on technology to start small enterprises.

Setting up marketing co-operatives: Proper encouragement and assistance should be provided to rural entrepreneurs for setting up marketing co-operatives. These co-operatives shall help in getting the inputs at reasonable rate and they are helpful in selling their products at remuneration prices. Hence, middlemen can be avoided and rural entrepreneurs derive the benefits of enterprise. Common production-cum-marketing centers should be set up with modern infrastructural facilities. Thus, proper education, comprehensive training, setting up of separate financial institutions, development of marketing co-operatives to a large extent help to flourish the rural entrepreneurs in India. Further, both government and non-government agencies should play an important role.

Suggestions

1. Govt. should provide separate financial fund of rural entrepreneur.
2. We should provide special infrastructure facilities whatever they deed.
3. Govt. should arrange special training programmes of rural entrepreneurship
4. Govt. should felicitate top ranker rural's entrepreneur.
5. Rural entrepreneur should more competitive and efficient in the local & international market.
6. Use should invite successful rural entrepreneurs from other states of country.

Conclusion

Rural entrepreneur is a key figure in economic progress of India. Rural entrepreneurship is the way of converting developing country into developed nation. Rural entrepreneurship is the answer to removal of rural poverty in India. Therefore, there should be more stress on integrated rural development programs. The problem is that most of the rural youth do not think of entrepreneurship as the career option. Therefore, the rural youth need to be motivated to take up entrepreneurship as a career, with training and sustaining support systems providing all necessary assistance. There should be efficient regulated market and government should also lend its helping hand in this context. Grading and standardization should be promoted and promotional activities should be enhanced. NGO's should be provided full support by government.

RECENT TRENDS IN COMMERCE AND MANAGEMENT

Sanyogita S. Patil
Assistant Professor, Balwant College Vita
Email –: *patil.gitu10@gmail.com*

ABSTRACT

The growing phenomenon of globalization, liberalization and privatization has been immensely influencing the commerce education. This paper is conceptual research paper. Alvin Toffler in his book "Future Shock" says that, "To help avert future shock, we must search for our objectives, method in the future rather than past. We must create a super industrial rather than past. Education must shift into future tense the higher education sector in India is very vast. The role of higher education in national development is well established. The objectives of higher education can be achieved only through qualitative change in the system. The output of commerce education should be multidimensional and with full global competitiveness. But we have to realize that the commerce graduate have lack of practical knowledge. The practical knowledge. The practical oriented commerce Education is need of the age. Learning is part of any systematic knowledge. Teaching learning are important two sides of commerce education system. Learning process is also depends upon the teaching aids like library facilities, academic activities such as classroom seminars, fieldwork as well as study tours and non academic activities of the college. This research paper will focus on the recent trend in commerce education. Commerce area covers various branches of education i.e. accounting, marketing business law, taxation, economics, communicating, H.R. Management, Financing, auditing and so on. Commerce education is nothing but one of the skill management system Considering the constant changes under the effects of globalization on education the objectives of this paper is to emphasize requirement of revitalization in commerce education.

Keywords: - *Commerce education, problem in commerce education.*

Introduction:-

Commerce education has played important role in Indian industry and Indian economy .there is number of challenges before the commerce education. Nation income employment opportunities are depends upon the quality commerce education system. Learning is part of any systematic knowledge. Teaching learning are important two sides of commerce education system.

Commerce and management education is considered as one of the most popular career option in India. Commerce and management education is the backbone of business. This education stresses on developing the people and making effective use of available resources,

The quality of commerce and management education depends upon the role of teacher students participation in learning process .learning process is also depends upon the teaching aids like library facilities, academic activities such as classroom seminars ,fieldwork as well as study tours and non academic activities of the college.

Objectives:-

- The education system is developing very fast both qualitively and quantitavely
- The present paper is for to study the current status in commerce and management
- To study recent trend in commerce and management.
- To know the knowledge in the field of commerce industry

Methodology:-

The research article is depending upon secondary data as our college (*Balwant College Vita)*

Commerce Education:-

Commerce education is area of education which develops the require knowledge skill attitude for the successful handling of trade, commerce and industry. Commerce education is business education but in tune with the needs of the business and society.

Importance of commerce education:-

- To up lift young personnel into intellectually competent, morally upright, economically rational, socially committed and entrepreneurially desirous at the service of Nation for today and tomorrow, Commerce Education is prime requirement.
- Today's business world cannot run without commerce education.
- To realize the actual entity between the product and demand, there is an urgent need to overcome education to cope up with the fast changing global scenario.
- Commerce is a dynamic education system which can help handling the resources of a country rationally
- To bring economic prosperity in the field of tourism, agriculture, industry and commerce

Branches of commerce education:-

Business Economics: Economic is the central them of commerce education that teaches the laws of demand and supply, law of returns to scale, elasticity of demand, theory of pricing under different markets situation and cost benefit analysis in selection of investment proposal etc.

Cost Accounting: this deals in determination of overheads costing, standard and variance costing and budgetary control and cost control

Taxation: Taxation is the major accounting branch for all the heads of income calculation, taxation, deduction and estimation

Human Resource Management: Commerce Education is a combination of system and process that unitize human resources involve in an organization, lessons to take care how to reduce manual workloads in an organization in various level of payrolls, database for employee information, job design, attendance records etc.

Auditing: To deal with different organization in vouching valuation and verification of transaction take place both in government and private sector.

Entrepreneurship: The present world claims entrepreneurship as an extended housing of a business in the society applying social and economic activity. Commerce education begets an entrepreneur to develop a business plan.

Business Finance: Finance is the lifeblood of every business concern similar to the circulation of blood in human body for maintenance of life. There are number of ways of raising finance for a business from national and international sources.

Business Law: This subject discusses the different laws in business like sales of goods company law, banking laws, partnership law, contract of sale etc.

Marketing Mix: Commerce education deals with product design, pricing methods, promotion, channels of distribution logistics selection etc this can be expressed with the help of four C's-Commodity,Cost, Communication & Channel, through which a business concern can establish its social entity

Maximization of wealth: While trace back to the history of commerce education there is a saying we are traders not for steel making not for sheep building ……our basic aim is to earn profit through our commercial activities (**F.G.Moors)**. in past owners of business believed that there activity is carried only for profit earning.

Result and Discussion:-

1) **Activity based Learning:-**

Class room teaching is the old and tradition method for learning we have to change our teaching method and have to improve our teaching skill with following activities

- Class room seminar
- Project work
- Field work and student tours
- Guest lecture

2) **Problem in learning proces**s:-

Today information technology plays very important role in learning system. Traditional teaching method is become out of use today, so we have to accept new activity best education system for development of student's knowledge and skill.

3) **Elements of Education system:-**

Quality of education system is depends upon various element of education system. Which are very important today in education process our drop out ratio is very high as compare to world.

We have to improve the following factors for the improvement of existing systems.

- Teaching
- Learning
- Syllabus
- Teachers
- Students
- Management

Problems of Commerce Education:-

Commerce is considered as one of the most popular career option in India. Commerce education is the backbone of business and serial development of the nation. This education stresses on developing the people and making effective use of available resources. Commerce education develops the relationship of people with one another. It covers wide area of business and society. That how to use it for the betterment of self and oneself. It provides skill oriented education to student society. Even through skill the streams face following challenges.

Challenges of Commerce Education:-

- Many students come from poor family are financially helped by the teachers in pursuing commerce education.
- Students of commerce are offered major in Accountancy, Management and Finance.
- They jointly engage in bringing awareness of commerce education among the guardians.
- Teachers of commerce stream sacrificing their valuable lives to establish commerce wing.

Suggestions:-

- To bring the awareness in the society regarding Commerce education guardians and parents meeting should be held frequently.
- To collaborate with social organization to communicate job opportunity for commerce graduates and self employment.
- Close communication should be made with the feeder institutions and orientation lecture to be distributed for motivating students toward commerce education at their grassroots level.
- Computer education should be equally provided to the students of commerce considering the needs of their capacity development in field of accounting.

Conclusion:-

When we teach our students with various activities the learning become powerful and useful for the student to get employment and for the development their own business. The present economy requires the type of skill and knowledge that our courses offer. I hope that our main aim should be for quality education through the activity based education system.

CORPORATE SOCIAL RESPONSIBILITY AND CLEAN INDIA CAMPAIGN IN CORPORATE SECTOR

Mr. Chile Sarjerao Sadashiv
Assistant Professor, Department of Commerce and Management,Balwant College, Vita (Maharashtra)
E-mail- *saistat3@gamail.com*

ABSTRACT

It is a conceptual paper. In this paper we tried to connect CSR (Corporate Social Responsibility) with SBA (Swachh Bharat Abhiyan) because it is found that 70% dirt is came from industrial area. We have tried to thrown lights on SBA which will be beneficial to whole corporate sector and to whole country. If corporate sector contributes towards SBA in terms of money there will be Rs 3515.52 crores (Only top 100 Companies contribution). Hon. PM of India has nominated 9 personalities for this SBA. SBA is now need of time because dirt and garbage many of the tourists and investors are diverting to other countries instead of India. India is losing its goodwill because of uncleanness. If 78 crores peoples contribute their 1 hour daily then India will become clean country and more than Rs 562320 crores will be saved annually. Corporate sector can make expenses through their one year CSR fund on SBA, this will be more beneficial. First of all people of country have to be realized the importance of SBA. 70% dirt or garbage is coming from corporate sector. SBA will help to corporate sector to become more sustainable. India has 13 lakhs companies registered with Ministry of Corporate Affairs. Top 100 companies are gaining Rs. 351552.99 crores profit per year. Their CSR fund is approximately Rs3515 crores. In Delhi TATA Power DDL has taken initiative for SBA. This paper is suggesting combining CSR with SBA. This will definitely come out with greater results. There are also some other effective and applicable suggestions given by the researchers. This combination will definitely lead to Dr. APJ Abdul Kalam's dream of 'Super Power India'.

Keywords: *CSR, Clean India Campaign*

1. Introduction:

It is a conceptual paper. We student tried our level best to focus on 'Corporate Social Responsibility' (CSR) activities with combination of 'Swachh Bharat Abhiyan' (SBA). What is Corporate Social Responsibility (CSR)? In simple words it is ethical liability towards society. Now-a-days CSR has been commercialized in huge manner. Organization runs when society supports it. If society or people of society oppose the firm then no one can save that firm. Every business is liable to pay something to the society, surrounding, stakeholders and competitors also. Chairman and CEO, Nestle, Peter Brabeck-Letmathe has said that "We believe that the true test of a business is whether it creates value for society over the long term." Although CSR has been an uprising issue for last two decades, it had practiced from long-long ago. Out of all the companies across Europe and the Americas, approximately 70 percentreport about the Corporate Social Responsibility initiatives taken by them.CSR means how one makes money rather than how one spends their money. ISO (International Standard Organization) had produced ISO-26000 on corporate responsibilities, launched in 2008. On 2nd October Hon. PM of India has declared 'Clean India Campaign' for clean country. Mahatma Gandhi had seen dream of 'cleanliest India' that dream is now started to come true. We hope, by 2019 India become clean country. From long ago Indian society has one community for cleaning the society, for collecting the shit. That community is called as 'untouchable' but they were doing the greatest work on the earth. For Gnadhiji's dream we all have to contribute. Hon. PM of India has also nominated 9 eminent personalities to contribute for 'Clean India Campaign'. As a citizen of India it is our prior duty to follow this campaign and take active part in 'Clean India Campaign'. As a part of this society every business has responsibility to make our country clean. Most of the garbage is come out from the industrial sector. If you take look on dirt of industries, you may shock because industries are responsible to about 70 % dirt or garbage in the society. Society is stakeholder of any firm and you are paying to society in the form of garbage? No, you cannot do that. It is your prime duty to pay the society in right manner. Whatever you are now is all because of society. There is a core part between industry and society that is CSR. Clean India campaign gives you an opportunity to contribute from your side. You have to participate in a campaign like 'Swachh Bharat Abhiyan' (SBA).

2. Objectives of the study:

1 To know the concept of CSR.

2 To know the role of CSR in 'Clean India Campaign'.

3. Research Methodology:

1. Data Collection:

A) Secondary data:

Present researchers have been collected data from magazines, newspapers, websites, books, articles and research papers etc.

4. Review of Literature:

Present researchers referred different reviews and on the basis of review of literature we contributed our views for this research paper. Following reviews are referred.

AnshikaAgarwal (2013) has studied on corporate Social Responsibility and sustainability for development of organization hence; it needs to be accepted as an organizational objective. According to New Company Law, 2012 corporate must contribute 2% of their net profits towards CSR which made Indian companies to consciously work towards CSR, as it required a prescribed class of companies to spend a portion of their profits on CSR activities.

GahlotSushmita (2012) has studied on the evolution of CSR in India. Apart from gauging the changes in the CSR scenario after the introduction of the Companies Act 2013, it throws light on the guiding principles laid down by the Draft Corporate Social Responsibility Rules (prepared by the Ministry of Corporate Affairs) and analyses the industry's reaction to the mandate.

Moon Urmila(2012) the importance of CSR emerged significantly in the last decade. Over the time, CSR expanded to include both economic and social interests. Companies have become more transparent in accounting and display 'public reporting' due to pressures from various stakeholders. It is possible for companies to behave in the 'desired' ethical and responsible manner towards consumers, employees, communities, stakeholders and environment.

VikramKaur(2012) He has studied that how CSR has become the linchpin for development of any corporate organizations. His paper tries to bring out CSR initiatives taken by various organizations in India. An exploratory research design was chosen in order to develop a profound understanding of the research topic and to obtain in-depth data about the research objectives. All main elements of the research paper, comprising theory, findings and analysis were incorporated in a lucid and cohesive manner and structured in order to address and evaluate the central research objectives appropriately.

5. Conceptual Framework:

1. Concept of CSR:

While there is no universal definition of corporate social responsibility, it generally refers to transparent business practices that are based on ethical values, compliance with legal requirements, and respect for people, communities, and the environment. Thus, beyond making profits, companies are responsible for the totality of their impact on people and the planet. "People" constitute the company's stakeholders: its employees, customers, business partners, investors, suppliers and vendors, the government, and the community. Increasingly, stakeholders expect that companies should be more environmentally and socially responsible in conducting their business. In the business community, CSR is alternatively referred to as "corporate citizenship," which essentially means that a company should be a "good neighbor" within its host community**.**

Definition: - "Corporate Social Responsibility is the way companies manage their businesses to produce an overall positive impact on society through economic, environmental and social actions."

Definition

It is said that CSR is a tool or technique for increase in goodwill and pay its liability towards society.

6. Problems of the study:

1. It is found than over 75 % firms are not interested in CSR.
2. Most of the pollution is because of industries.
3. Importance of cleanliness is not spread in peoples.
4. Industry is not realizing their social Responsibility.
5. Application of Clean India Campaign has to be done.

7. Significance of the study:

1. This study is significantly useful to Industries for improve their performance about CSR.
2. This study is useful to government for improve their strategies about Clean India Campaign.
3. This research is also useful to Society to aware about CSR and 'Swachh Bharat Abhiyan'.
4. This study is useful for further research in CSR and Clean India Campaign.

8. Results and Discussion:

- CSR Policy in India:

Under the Companies Act, 2013, that replaces the nearly six-decade old legislation governing the way corporate function and are regulated in India, profitable companies with a sizeable business would have to spend every year at least 2 per cent of three-year average profit on CSR works. This would apply to the companies with a turnover of Rs 1,000 crores and or more or net worth of Rs 500 crores and more or net profit of Rs 5 crores and more. As per new proposals, from the beginning of 2013-14, Top earning PSUs like ONGC, BHEL and NTPC may have to double their expenditure on CSR as per the new draft guidelines being finalized by the Department of Public Enterprises (DPE). PSUs with net profit between Rs 100-500 crores are required to earmark 2-3% of their income. They have to ensure that they spend full amount earmarked for, otherwise, they have to disclose why they have not spent these fund. Public sector companies with a profit of less than Rs 100 crores are required to contribute 3% of their income for undertaking such activities.

As companies are following CSR very effectively, even small-small companies are also following CSR and playing very vital role in society. But they are not only liable to pay society but also to the nature and country too. Before two month PM of India Hon. NarendraModi has declared 'Swachh Bharat Abhiyan' (clean India campaign).according to us it is very important that all corporate sectors also have to take participation in Clean India Campaign. Most of the dirt is because of corporate sector and if companies are following CSR then is their prime duty to make their country clean. If companies are following CSR by building hospitals, schools and schemes for employees, campaigns etc and on the other hand making garbage and leaving it irresponsibly then there is no need of any CSR and not useful too

- Action Plan For 'Swachh Bharat Abhiyan'(SBA):-

Under 'Swachh Bharat Abhiyan' (SBA), the Goal is now to make India Open Defecation Free (ODF) India by 2019 by construction of individual, cluster and community toilets; and villages will be kept clean, including through solid and liquid waste management through Gram Panchayats. Water pipelines have to be laid to all villages enabling tap connection into households on demand by 2019. In this matter, co-operation and convergence of all Ministries, Central and State schemes CSR and bilateral/multilateral assistance may become necessary as well as new and innovative ways of funding such interventions. In a federal set-up like ours, where sanitation and water are state subjects, it is all the more important that states take the initiative to complete all activities to achieve Swachh Bharat by 2019 by dove-tailing all schemes - Central or State.

9. Findings:

1. Hon. PM NarendraModi has nominated following 9 people from various sectors of Indian Society.
   1. Goa Governor MridulaSinha
   2. Cricket legend Sachin Tendulkar
   3. Yoga guru Baba Ramdev
   4. Congress lawmaker and former union minister ShashiTharoor
   5. Actor Kamal Hasan
   6. Actress Priyanka Chopra
   7. Actor Salman Khan
   8. Industrialist Anil Ambani
   9. Team of popular TV serial Tarak Mehta KaOoltaChashma.

These 9 personalities are initiating the mission of cleaning and then it will spread over the India. These 9 will encourage another nine and those nine will encourage more nine and these nine will became 120 crores in recent future. In 2019 we will see that India in cleanliest country in the world.

2. In India there are 13.25 Lakh companies are registered with Ministry of Corporate Affairs.
3. India's top 100 companies are having 351552.99 crores of net profit per year. From that profit they contribute 3515.52 crores for CSR.
4. India is having 78.12 crores (62.5%) people under the age group of 15-59 years.
5. It is found that in Delhi TATA Power DDL has taken initiative towards 'Swachh Bharat Abhiyan'. They have made an action plan for 'Clean India Campaign' that how they will become a part of that campaign. The detailed action plan is ready. They are now working on that action plan.
6. Industries are making so much dirt and garbage. Most of the garbage spread over India is because of Industrial sector and from corporate sector.
7. It is also found that cleaning campaign is need of time. Because of uncleanness India is losing its goodwill and foreign investors are not coming here.
8. India has more beauty but it is hidden behind the depot of garbage. Foreigners are not looking to India as a tourist place because of dirtiness of India and lots of revenue is not coming to our country.
9. India is traditional, devotional country. In various religions it is told that to celebrate various festivals but not to disturb the environment. Now-a-days it is wrongly celebrated by crackers and lots of fireworks. It is not good for environment. It is good to have traditional culture but it is wrongly taken by our people and just harming the environment. Lots of garbage is made while Diwali festival. It has to stop.

10. Suggestions:

The present researchers have suggested the following 'Action Plan' and some other suggestions for corporate sector and society to become a part of 'Clean India Campaign'.

1. Corporate sector or firms have to spend minimum 100 hours/year or 2 hours/week as PM of India Hon. NarendraModi said.
2. Firms have to raise fund for 'Clean India Campaign' from CSR funds.
3. Fund should be in following manner
   a. 2 % of Total net profit per year as per CSR provisions.
   b. Minimum 10% of total CSR funds should be expended on 'Clean India Campaign'.
   c. Funds should be maintained separately or with CSR fund.
4. If company is following 12 months on CSR then 7 days/ month separately has to give for cleaning or eradicating garbage.
5. Government has to help the companies to become a part of 'Clean India Campaign'.

6. State government should take initiative in Clean India Campaign with local corporate. Government has to encourage them for become a part of Clean India.
7. Government has to take some strict action against fireworks companies. It is the most dangerous part of our society. In Diwali or any other festival there is huge garbage creation takes place. This can stop by following ways.

a) Price of the fireworks should be high. This will lead to not purchasing of fireworks and it will be avoided.
b) As per the alcohol or driving is required license, playing with fireworks must have license.
c) Fireworks business must not grown and not to be supported by government.

8. Employees have to take active part in Clean India Campaign.
9. Retired military officers should appoint on remuneration for supervising the society whether they are making dirt or garbage, if it is found officers should charge fine on them. From that fine remuneration of officers will be paid.
10. Strict amendment of laws regarding to dirt or garbage should be done.
   11. Every Sunday there must be rite campaign about cleaning for the age group 5 to 18 years old
11. Students from 3rd standard must be aware about SBA.
12. Employees also have to contribute their daily 1 hour for SBA in office.
13. If 78.12 crores people (Under age group 15-59) will spend their 1 hour daily and if it assumed minimum wages are Rs 20/hr. then Rs.1562 crores/day will be saved. Monthly Rs. 46860 crores will be saved. Annually Rs. 562320 crores will be saved.
14. Companies have to spend 1 year's CSR fund for SBA then there will be Rs 3515.52 crores fund available for SBA (Calculation for top 100 Companies).
15. In the schools, colleges there should be 1 period (Lecture and practical) for SBA.
16. If CSR+SBA applied in Corporate Sector result will be as follows.

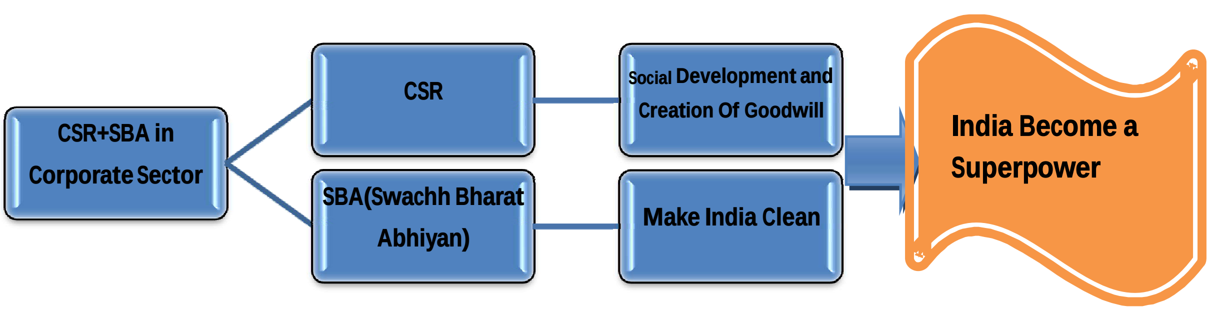

Figure No. 1

In the above figure it shown that if CSR and SBA (Swachh Bharat Abhiyan) comes together it will lead to India become a Superpower. CSR is important but if it collectively works together with SBA it will be more effective. Above diagram shows, there is a need of simultaneous efforts on both CSR and SBA in corporate sector.

11. Conclusion:

CSR is raising star from last 2 decades for corporate sector. CSR is playing very significant role in Indian economy. Under the CSR most of the companies become socio- commercial. It is not sufficient to only pay attention to other activities. Corporate should pay attention to make their country clean. It will very helpful to government to actively participate in CSR. 'Swachh Bharat Abhiyan' is also having much importance in corporate world. Initiatives have started towards SBA. If corporate sector has followed SBA then only it will be successful.

USE OF ACCOUNTING SYSTEM IN A AGRICULTURE SECTOR BY INDIAN FARMERS: A STUDY OF CHANDGAD TALUKA DIST: KOLHAPUR

Dr. Goral Sonappa Dajiba

Head, Commerce & Management Dept.,R.B.MadkholkarMahavidyalaya, Chandgad

ABSTRACT

In agro-based India, farmers play a major role in overall development of the nation. Agriculture and allied sector is the largest production endeavor in India, but this sector remains uncertain to get expected return / output. It is depends on various factors like rainfall of mansoon, variations in geo-environment, climate, soil, weather etc. Indian agro-based sector is unorganized and dominated by small farmers. Most agricultural farms are family oriented. The education levels of average farmers are not good to adopt the agricultural accounting system. They are unaware to apply accounting data in their agro-based occupation. The family members participate into management only by providing the labor. So our farmers are need aware the concept of farm accounting and management. Hence, in this context, a paper emphasizes to understand the importance and use of farm accounting in agriculture sector by farmers and verify that, the farmers of ChandgadTaluka of Kolhapur districts financially profitable or not. It also focus to assess the problems with necessary measures thereon.

Keywords:*Farmers, Agricultural sector, Accounting system, rural development.*

I. Introduction:

In a predominantly agricultural country, farmers play a major role in socio-economic and overall development of the nation. Farmers are the most important productive workforce in the economy of the developing nations including India. Agriculture sector is the largest production endeavor in India, but Indian agricultural sector is depends on the variations in geo-environment, climate, soil, weather etc. The economy of our country is agro-based. About 70% of Indian peoples are engaged in agricultural and allied occupation. 2/3 population is living in the rural India and almost half of national income is generated from it.

Agricultural sector in India is unorganized and dominated by small farmers. Most agricultural farms are family oriented and part of the farm-produce is consumed by the family members. The education of the average farmers is not sufficient to adopt the agricultural accounting system. They are also not aware of the techniques of using accounting data, for the purpose of proper decisions. The educated farmers are always turning from the farming and only illiterate and least-educated farmers are remaining in this occupation. So they are not keeping the accounting record of agricultural activities. Some of them try to keep it, but the proper way or method is not followed by them. Other reasons are also related with the farm management. It includes from the planning of the crops up to its marketing. In short, our farmers are aware the concept of farm management and farm accounting. The family members participate into management only by providing the labor. The farmers cannot afford the additional expenditure to hire the persons to maintain the accounts. Hence, in this context, the researcher focuses the importance and use of farm accounting in agriculture sector by farmers and confirms that, the farmers of ChandgadTaluka of Kolhapur districts financially profitable /viable or not.

II. Concept:

(a) Farmer/Agriculturer: A farmer is a person engaged in agriculture, raising living organisms for food or raw materials. The term usually applies to people who do some combination of raising field crops, orchards, vineyards, poultry, or other livestock.

(b) Farm accounting: Farm accounting is keeping a record of incomes, expenses and capital expenses. The primary objective of farm accounting, like any other business, is to develop an accurate income statement to fix the amount of every crop. But the farmers keep that heard record separately from the accounting records and they keep crop records separately from accounting records. Calvino defines, "*Accounting for agriculture, farming and rural business is known as farm accounting"* In simple terms farm accounting is measuring and recording in systematic way, all farm resources and all business transactions having financial consequences.

However, the term farmer means those person having age from 15 to 65 years and who are engaging in agricultural and allied activities directly or indirectly for the purpose of earning maximum income for their family.

III. (a) Objectives:

1. To understand the concept and significance of farm accounting system.
2. To assess the application of accounting system in agriculture sector of study area.
3. To understand the problems of applying accounting system in agriculture sector of study area.
4. To suggest necessary measures as may be appropriate.

(b) Hypothesis:

"***There is not properly use of accounting system in agriculture and allied occupation by farmers of study area***"

IV. Review of Literature:

Milton E. Bliss's,(2007) in his articles entitle "Farm management." It helps in making and implementing of the decision involved an organizing and operating a farm for maximum production and profit. Farm management draws on agricultural economics for information on prices, markets and agriculture policies. It also draws on crops for information on soils, seeds and fertilizers on control of weeds. The author states here importance of management in the farming, from the point of view of the profitability. But he hasn't suggested the proper methods of management in his literature.

Karl Franklin(2012): In his book entitle "Farm Accounting: Principles and Problems" He stated that records / accounting are kept for the information they give to various decision makers in any business. Much of the information contained in financial records is used to generate standard reports useful for gauging the health of that business over time and at single points in time.

Mr.McMurry has pointed out here the importance of accounting / records in the decision making of any business and problems in it. But, still, in the rural area the farming is the means of existence and he hasn't focused that view here.

James Hartsfield's (2012) The Importance of Keeping Good Farm Records- In his views that the key to becoming a successful farmer today is being a good producer as well as good financial manager. The first step in being a successful farm manager is keeping good accurate records and establishing a sound record keeping system. However, records-keeping place a much larger role in any business. Farming is a business and records can be helpful in planning improvements for that business and making proper management decisions. Here author points out the importance of accounting and management in the faming. But his view is related with the developed/ western countries, where farming has been treated as the profession. But in our country, farming is still considered as the means of existence by the majority of farmers, who are the owners of fragmented pieces of land.

V. Profile of ChandgadTaluka:

Chandgadtaluka of Kolhapur district is situated in the south part of district at head quarters and is located on the border of Karnataka and Goa state. This taluka is completely rural taluka, lies in tropical zone climate. Agriculture and allied activities are the main occupation of people. There are four rivers and three forts in talukahas a unique feature. As regard to the position of export-import rural resources in Chandgadtaluka. The most important three commodities exported from the taluka i.e., rice, sugar cane and fire wood. And three important commodities imported in the taluka i.e., cloths, china clay and non edible oil. The following table shows population size and agriculture workers or farmers

Table No. 1: Size of Population and Workers in ChandgadTaluka

Particulars	Total	Male	Female
Population	187220	92736	94484
Total workers	101445	54618	46827
Agricultural labors	14804	5718	9086
Sample size	**286** *(5%)*		

Source: Govt. census report- 2011

Table shows that total workers are slightly more than half (54.19%) proportion of total population. Considering the gender composition of total workers, male workers were more than female, but in agriculture labor female workers were more than male. In total male agricultural labor includes farmers (marginal, small and big farmers). Considering the size of agriculture labour / farmers 286 (5%) are taken in to account as sample farmers for study.

VI. Methodology:

Table No.2: Research Methodology

S.N	*Research Design*	*Description*
1	Research Type	Exploratory research
2	Source of Data Collection	Primary and Secondary
3	Research Approach	Survey Study Method
4	Research instrument	Discussion, Interview Schedule & Observation
5	Sampling Units	All (6) revenue circle of ChandgadTaluka.
6	Sample Size	286 Respondents (5%)

VII. Sampling Design:

This study is focuses only on farmers who engaged in agriculture and allied sector of rural Chandgad in Kolhapur District. The researcher has considered various parameters like age, religion, marital status, education, location, size of land holding, production crops etc while selecting the 286 sample population.

VIII. Data Analysis:

Table No. 3: Age wise Classification of Farmers

Age group in years	No. of Respondents	Percent
16-25 years	03	01.00
26-35 years	14	04.95
36-45 years	112	39.00
46-55 years	143	50.00
56-65 years	14	04.95
Total	***286***	**100.00**

Source: Field work

The above Table No. 3 shows majority of (½) farmers belong to middle age group i.e., 46-55 and 39% farmers are found from 36-45 years age group. They are regularly engaged in agriculture and allied field along with their family responsibility. Next about 5% farmers from 56-65 years age group and they are handling household responsibility as a family head with farming role. Whereas remaining about 6% farmers are below 35 years age. They are not full time farmer or they unable spend more time in agriculture work, due to more uncertainty on the output from agricultural and allied sector. It is clear that, majority of middle age farmers are found as fulltime agriculturer in the study area and they work for family livelihood and rural development.

Table No. 4: Marital Status, Religion, Education& Land Holding of Farmers

Particulars		No. of Respondents	Percent
Marital Status	Married	257	89.86
	Un-married & Divorce	29	10.14
	Total	**286**	**100**
Religion	Hindu	255	89.16
	Muslims	28	09.79
	Christians	03	01.05
	Total	**286**	**100**
Educational Level	Illiterate	138	48.25
	Primary	111	38.81
	Secondary	14	04.90
	Higher secondary	20	06.99
	Graduation	03	01.05
	Total	**286**	**100**
Size of Land holding	Marginal farmers	227	79.37
	Small farmers	40	13.99
	Big farmers	19	06.64
	Total	**286**	**100**

Table No. 4 shows that 90% farmers were married and very few of 10% respondents were found unmarried, divorce, widower etc. It clear that, married men are providing necessary source of income to their family livelihood by agricultural income. Majority of 89% farmers belongs to Hindu community, which is a dominant religion in the Taluka, whereas a merely 10% and 1% respondents from Muslims and Christians respectively. It means for the fulfillment of basic family needs and their development, farmers of Hindu community have main source to work in agriculture and allied field. The table further shows that, majority of 48% farmers are found remain illiterate and 40% of them have primary level education, whereas, very less proportion about 5% and 7% farmers have secondary and higher secondary education level only. It means although in the expansion and extension of education sector in this LPG era, but the literacy rate of farmers in study area is very low. It means highly qualified people are never prefer to work in agriculture and allied sector. Only residual workforce/ manpower kept in agriculture sector by their family. The above tables also reflect that, most of respondents accounting to 79% of total are found as marginal farmers, (agricultural land up to 1 hectare /2.5 acres), 14% respondents are treated as small farmers (agricultural land of more than 1 hectare and up to 2 hectares / 5 acres). and remaining 7% farmers are coming under big farming (agricultural land of more than 2 hectares /5 acres) category. Hence, majority of farmers in the study area are marginal farmers

Table No. 5: Farmers Engaged in Agriculture & Allied Sectors

Sectors and Activity	*Rate of Respondents Involvement (N=286)*
Agriculture	100%
Horticulture	1%
Animal Husbandry (Livestock, goat & sheep rearing)	4%
Poultry farming	3%
Dairy	14%
Sericulture	0%
Nurseries	**0%**

Table No. 5 shows that, 100% respondents are involved in agriculture sectors of land cultivation, preparation, sowing, transplanting, weeding, irrigation, fertilizer application, plant protection; harvesting, winnowing, storing etc. Their major working and income source is agriculture occupation. 14% farmers are found in engaging dairy occupation (i.e cattle management, fodder collection, milking etc.) along with agriculture sector. Whereas very few farmers are found in dealing horticulture, poultry and animal husbandry along with their agriculture occupation.

Table No. 6: Farmers Maintain Types of Farm Records

Sectors and Activity	*Rate of Respondents (N=286)*
Resource inventories	8.00%
Production accounts of crop operations & livestock	6.50%
Income and expenses records.	14.95%

Source: Field work

As a farmer, they use resources such as land, labor, machinery, breeding stock, manure, management and financial capital. There are three basic types of farm records: (1) resource inventories, (2) production accounts of livestock and crop operations, and (3) income and expense records. The table gives picture of maintaining types of farm records by farmers in study area. It is shocking to know that, only 15% farmers are maintaining records of income and expenses on agriculture cropping production with rough / unscientific manner in the study area. Whereas very few i.e., 6 to 8% farmers are keeping record of inventory resource and crop operation in terms of quantity only. It creates the problem of valuation in terms of money.

Table No.7: Farmers Opinions on Farm Accounting System

SN	*Statement*	*Yes*	*Can't Say*	*No*	Total
1	Do you know farm accounting procedure?	16 (5.60)	50 (17.48)	220 (76.92)	286 (100)
2	Have you writing farm transaction in a book daily?	22 (7.60)	07 (2.45)	257 (89.95)	286 (100)
3	Are you prepare journal entries in a book	07 (2.45)	16 (5.60)	263 (91.95)	286 (100)
4	Have you prepare ledgers of various part of farm accounting?	05 (1.75)	10 (3.50)	271 (94.75)	286 (100)
5	Are you prepared final accounts on farming transaction annually?	05 (1.75)	12 (4.20)	269 (94.05)	286 (100)
6	Have you maintain at least cash book of agriculture activities?	52 (18.18)	26 (9.09)	208 (72.73)	286 (100)
7	Do you applying mobile apps for agricultural record keeping?	03 (1.05)	10 (3.50)	273 (95.45)	286 (100)
8	Do you know internet banking?	10 (3.50)	10 (3.50)	266 (93.00)	286 (100)
9	Do ascertain the profitability of agriculture occupation?	40 (13.99)	30 (10.49)	216 (75.52)	286 (100)
10	Are there any problems in farm accounting?	243 (84.97)	14 (4.90)	29 (10.13)	286 (100)

Source: Field work. (Figures in bracket indicates percentages)

Discussion:

1. More than ¾ respondents are does not have idea about concept and procedure of farm accounting system. Whereas 5% respondents have know that the significance of farm accounting and application.
2. It is significant to note that about 90% farmers are never writing any farm transaction in a book regularly. It indicates these people are far away from controlling of cost to get maximum output from minimum inputs in agriculture sector.
3. It is shocking to know that, majority of 92% respondents do not prepare journal entries in a book for remembering various transactions over a period of time to ascertaining the profitability of agriculture sector. Whereas only 2% respondents reply positively about preparing entries of agriculture transactions.
4. It is interesting to note that hardly 2% respondents are prepared leadger of farm accounting. Whereas majority of 95% farmers are not prepare ledgers of various part of farm accounting in study area.
5. Except five, all most all respondents are not preparing and using final accounts on farming transaction monthly, half yearly or annually. Farmers are maintaining account record roughly and orally for few days only, not longer term.
6. It is interested to found that, about 20% farmers are writing and keeping rough cash book of agriculture activities to ascertaining gross profit or

loss. However majority of them (73%) are unable to maintain cash book for their farm accounting.

7. More than 93% of farmers are neither using mobile apps nor internet banking for agriculture records and accounts to fulfilling need of family and controlling over costs of agriculture activities
8. It is important to know that, merely 13% farmers are trying to ascertaining profitability on agriculture occupation with the help of rough or single entry accounting system by unscientific manner. Whereas more than ¾ farmers are not considering any accounting procedure for ascertaining profitability. They are always thanking and remembering on their intellectual level.
9. It is significance to know that, about 85% farmers are facing different problems in various stage or section of agriculture and allied occupation. These problems of farm accounting are given below:

- Illiteracy and unawareness of farmers about farm accounting
- Small and fragmented land-holdings
- Unavailability inputs in right time and place.
- Converting issue of physical quantity into monetary value
- Consumption of products by the owner or his members
- Family members' contribution in farm income is not taken in to account.
- Priority giving to barter system.
- Use of single bank accounts for personal and farm transactions.
- Problem of inter-activity transfer
- Issues of valuation of stocks, seeds, manure etc
- Problem of self-made assets and standing crops

IX. Measures to Improve Role of farmers and its accounting System:

1. Farmers requires a major change in traditional attitudes and mind sets of people in society rather than being limited to only creation of family livelihood.
2. Develop and infuse the rural entrepreneurship culture among farmers through periodical orientation, workshop and training at village or Taluka level.
3. Diversified use of new devices and techniques which, helpsincome generating steps in farm as well as home made products, dairy product, goat / buffalo rearing, vermin composting etc
4. Motivate to the rural farmers by giving examples of successful agro-preneurswhich have tried to change the way of thinking.
5. Measures should be taken to enhance farmer's literacy rates. Need to develop a separate farm accounting cum education policy for farmers and rural development with interactive learning modules.
6. Impart the information to farmers about government schemes and facilitiesthrough KrishiVigyan Kendra.
7. Need to appreciate of farmers with good reward and bring some changes in agro-social relationship.
8. Financial and non-financial facilities should be provided to farmers for land, agricultural and livestock extension services for sustainable, self reliant and people centered development with farmers' empowerment.

Hypothesis: *It is clear that, farmers are not properly use of accounting system in agriculture and allied occupation in study area"*

X. Conclusion:

In nutshell, the main occupation is farming and has lot of opportunities for the development in this occupation and makes it more profitable. So the farmers are not keeping accounting properly. It is the main hurdle. If the accounting and management is properly applied in farming, surely, it will help the small as well as marginal /big landlord farmers to yield maximum agro-products, with the help of available limited resources. Consequently, the per capita income of this area will be increased significantly. Hence, it is clear that, rural farming is fragmentary and small-scaled. It is not large scale or group farming. Majority of farmers are remaining illiterate or less educated, and unaware to use and implement accounting system in Indian agriculture and allied occupation in general and rural Chandgad in particular. On the other hand, educated and young people's are not much involvement in agriculture activities for contribution of rural development with use of systematic farm accounting. A farm record is a document that is used to keep account of different activities, events, materials etc. regarding the farm operations.Farm records are different from farm accounts, in the sense that farm accounts deal only with the financial aspects of all farm operations. There is ample scope of farm accounting system for crop, livestock, cottage industry, household and family maintenance activities, to transporting, marketing etc. Thus, farming is the backbone of the economy of our nation. But the traditional methods are still applied in it. It lacks the professional point of view. Consequently, the modern ways of keeping accounting and proper management systems are not followed in the farming. In this regard government should formulate proper policy for increasing farm accounting education with practical training, for imparting multi-dimension skills among rural farmers.

EMERGING AREAS OF RESEARCH IN MANAGEMENT

Dr. M. A. Koli

Department of Accountancy, SadashivraoMandlikMahavidyalaya,Murgud, Dist. Kolhapur

E-mail: *kolimahadevo@yahoo.com*

Introduction

In modern time, there has been considerable increase in research activity throughout the world, and methods researches in the field of business and industry have become more rigorous and well-developed. A research work may occasioned simply by need for administrative facts on some aspects of public life, or be designed to investigate a cause-effect relationship or to throw fresh light on some aspect of business theory. Business research in its widest sense has been a feature of commerce and industry for decades. Whether through its executives, salesmen or professional advisers, ever business organizations try to study its market and its marketing methods. Research methodology in its modern from is enjoying a great vogue in all the developing countries, and no doubt, with modern mass-production of consumer goods and the increasing competition between brands, its importance will grow rather than decrease.

What is research?

Research is a logical and systematic search for new and useful information on a particular topic. It is an investigation of finding solutions to scientific and social problems through objective and systematic analysis. It is a research of knowledge that is a discovery of hidden truths. Here knowledge means information about matters. The information might be collected from different sources like experience, human beings, books journals etc. A research can lead to new contributions to the existing knowledge. Only through research it is possible to make progress in a field. Research is indeed civilization and determines the economic, social and political development of a nation.

Research is not confined to science and technology only. There are vast areas of research in other disciplines such as languages, literature, history and sociology. Whatever might be the subject research has to be an active, diligent and systematic process of inquiry in order to discover, interpret or revise facts, events, behaviours and theories. Research is done with the help of study, experiment, observation, analysis comparison and reasoning.

Objective of the Study

1. To study the emerging areas in management
2. To study the various stages in research.

Methodology of the study

Present paper is based on secondary sources of data. Secondary data has been collected from various sources like books, journals, websites etc.

What are the objectives of research?

The prime objectives of research are-

1. To discover new facts
2. To verify and test important facts
3. To analyse an event or process or phenomenon to indentify the causes and effect relationship.
4. To find solutions to scientific nonscientific and social problems and
5. To overcome or solve the problems occurring in our everyday life.

Various stages of a research

A general set of sequential components of research is the following-

1. Selection of a research topic
2. Definition of a research problem
3. Literature survey and reference collection
4. Assessment of current status of the topic chosen

5. Formulation of hypotheses
6. Research design
7. Actual investigation
8. Data analysis
9. Interpretation of result
10. Report

Research in Management

Management in general is said to encompass the aspects like planning, organization, staffing, directing and controlling, the discipline has spread itself to the specialised areas now. Thus we have management concepts as applied to finance, production, personnel and marketing. A brief explanation would help us to know the issues involved in each of these areas

Financial Management

Financial management is one of the most pivotal functional areas of management, as the effectiveness of a business enterprise significantly depends on the efficient utilisation of its financial resources. Shareholders provide capital to a company with the expectation of earning a competitive rate of return from their investment and if this expectation is not fulfilled, they may sell their shares which may push down the market price of the company's stock. This will tend to jeopardize its ability to raise additional financial resources in the capital market.

Financial management now is concerned with:

i) Determination of financial needs of the enterprise;

ii) Raising funds at minimum cost,

iii) Making of optimum allocation of funds to specific aspects,

iv) Development of tools of control for evaluating the financial performance of the enterprise; and

v) Development of financial dada for decision making.

Production Management

Production is concerned with the conversion of material and human inputs into outputs of goods and service. The production system creates utilities through this process of conversion. All the things which we consume and services that we utilized during the courses of our daily lives are the result of performance of production functions. With the advent of industrial revolution during the 1770s, machines were invented and high growth in production was achieved. This also led to the need of systematic analysis of production problems. Fedrick W. Taylor was considered to be the pioneer in the development of modern production management thought. He found that the manufacturing methods were largely determined by workers who held them as trade secrets. He advocated that methods of production should be determined by management on the basis of scientific investigation**.**

Personnel Management

Personnel management has great relevance to organisations, as organization are congregations of people. Of the four factors of production- land, capital, labour and organisation- the latter two assume significance, as they are involved with the human element. Event the term management is defined as the art of getting things done through and with the help of people. In this context, dynamic personnel management aims at obtaining and maintaining a capable and effective workforce, motivating the employees individually and in groups to contribute their optimum to the fufilment of organizational goals, while advancing towards their own individual and group goals. Personnel management is, thus, the development and administration of programmes, policies and procedures which aim at motivating the employees to work cooperatively and willingly.

Marketing Management

Marketing has assumed such a great significance in these days that most corporate managements consider customer satisfaction as the only source of profitable operations. Companies are now adopting the marketing management concept and are continually adjusting their organisation design to suit the market policies and practices. Marketing, in fact, is the principal revenue generating activity. All other activities of the firm are revenue consuming. If marketing fails to generate sufficient revenues for meeting all expenses and producing profits, the firm will be unable to survive and grow. Marketing is the means through which a firm matches its total effort with the market. Marketing creates various kinds of utilities. It creates place utility by making the goods and services available wherever they are in demand. Time utility is created by supplying the goods as and when they are needed. Thus marketing covers the issues like product, planning and development. Pricing, promotion and distribution.

Conclusion

This study is mainly focus on financial, production, personnel and marketing management. Each of these areas now has grown to be a major discipline for teaching and research. In fact, there are separate institutes like the Institute of Marketing and Management, National Institute of Personnel management, Institute for Financial Management and Research specialising in these disciplines.

THE EMERGING NEW CONCEPTS OF HUMAN RESOURCE MANAGEMENT

Mujawar. M. I.
Department of Commerce, AjaraMahavidyalaya, Ajara
Email: *mumtajmujawar25@gmail.com*

ABSTRACT

This paper attempts to explain the emerging new concepts in human resource management. These new concepts are help to maintain relations of employee and organization. Some concepts are improve efficiency of organizations such as TQM are help to continuous improvement in products and services, Assessment Centres for selection, promotion, training and development of employees. QC are develop tools and techniques for solving problem related to the work. ISO develop some standards for improvement quality and management. humans are the most valuable assets. We develop relations and these relations are the outcome of our actions but it depends upon our ability to manage our actions .The primary focus of the paper to understanding concepts which are helpful for managing relations. It is necessary to HR Manager to learn, understand and develop such new methods and implement these concepts.

***Keywords**: emerging new concepts, total quality management, ISO updates, assessment centres, quality circle.*

Introduction:

The human resource industries undergoing a major innovative change from last few years like workforce diversity, changes in political and legal environment, changing in IT trends. A number of new concepts have emerged in the management field, such as Total Quality Management , ISO updates Quality Circles, Assessment Centers etc. These concepts help to improve the overall effectiveness of the organizations. All these new concepts are responsible for maintaining and retaining relationship between organization and employees. The significant impact of HR Managers leadership style, supervision policies, plans and procedures on an individuals performance. The HR manager not only has to know them well but has to prepare himself to implement some of these new concepts.

Objectives of the study:

1) To understand the role of HR Manager.
2) To study the emerging new concepts in HRM.
3) To study the impact of new concepts on organization.

Significance of the study:

1) To improve efficiency of the organizations
2) To implement new ideas in the organization

Research methodology:

Following method will be followed:

Secondary data:

The secondary information will be collected from the various management journals, management books, articles and ICT sources.

Limitations of the study:

The study suffers from the some limitations like, all new concepts are not included in these study and secondly these study is purely based on only secondary data.

Review of literature:

Some of the reviews on the related literature are taken. They are as under:

Several best practices that a HR manager can adopt in ensuring effective management of workplace diversity in order to attain organization goals.(**Thomas 1992 and Cox 1993**)

ISO updates provide guidance to ensure that their products and services and that quality is consistently improved. (**Sarathkhanna. D. And Dr.AUmesh Samuel, Dec.2014**)

The recent quality management standard ISO 9001and ISO 9004 of 2000 focus more on people centric organizations.(**Dr.Prabhat Kumar Pani**)

HRM is a strategic tool for value creation so as to gain competitive advantage through superior organizational performance. (**Merudi, 2016**)

Emerging New concepts of HRM:

Human resource management refers to that part of management which manage the people at work. The benefits of improved employer- employee relationships and recognition given to employee laid the foundation stone for the emergence of human resource management as a separate field of study. Manpower is the most important resource of an organization, without employee organization cannot exist. HRM is the process which co-ordinate people with organization to achieve each other goal.

We always develop and manage our relations. These relations are the outcome of our actions and it depends upon our ability to manage our actions. HRM is responsible for the relationship between organization and employees.(Dr.PrabhatPani)

According to Edwin Flippo:

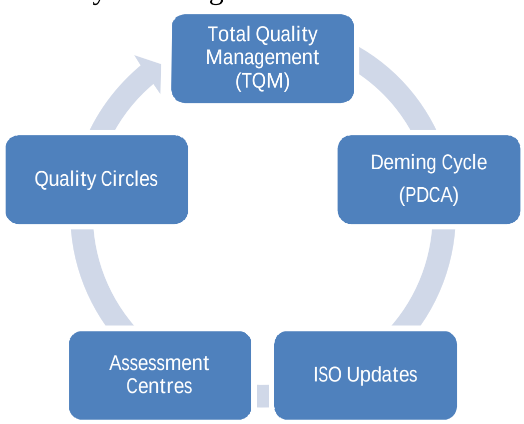
" Planning, organizing, directing, controlling, procurement, development, compensation, integration, maintenance and separation of human resources to the end that individual, organizational and social objectives are achieved."

"HRM is a process of which is responsible for people, bringing people into the organization, helping them to do their work ,compensating to their work and solving problems when it is arises."

"HRM means getting the work done through others people in an organization".

The main objective of this paper is to focus on emerging new concepts in HRM. So, in this section present the some concepts in the field of HRM.

Some new concepts are as follows:



1) Total Quality Management (TQM):

TQM is an integrated organizational approach in delighting customers(both internal and external) by meeting their expectations on a continuous basis through everyone involved with an organization working on continuous improvement in all product, services and processing along with proper problem solving methodology,(by Indian statistical institute)

As per Deming's 14 principles such as reliability of products, adopting philosophy, minimize total cost, improve planning process, training, leadership, break down barriers, self improvement ,eliminate slogans, work accomplishment etc. these set of management policies to help companies increase their quality and productivity. TQM is a culture based on the realization that the high quality of products and services and associated customer satisfaction are the keys to organisational survival. (Dr.PrabhatPani)

Deming's develop PDSA cycle in TQM. According to the Deming's its interacting four steps management method used in business for the contol and continuous improvement of processes and products.

PDSA cycle made for that:

P- Plan- choose a process and set objectives.

D-do- implementation and collection of data.

S- study- analyse the results using statistical methods.

A- Act- decide the changes and improve the process.

2) Assessment centres:

In these concept, several trained observers and techniques are used. Judgments about behavior are made by these especially trained observers. At the end of assessment the assessors get together to share their data which is scientifically recorded on a set of evaluation forms. assessment techniques evaluate complex behavior with special focus on leadership. the assessment method is best method. It is research oriented and it has subjective manner.

These concept has been applied to individuals being considered for selection, promotion, placement of special training and development in management.

3) **Quality Circles**:

In these concept the members of a particular team should be from the same work area or who do similar work so that the problems they select will be familiar of all of them. Quality circles are concept to identify, define, analyze and solve work related problems. It involve seven to eight members.

As per reference of these concept it helps to promoting job involvement, problem solving, improve communication, leadership quality, personal development, develop a greater awareness for cleanliness, awareness for safety, more effective team work etc.

Quality circle concept use for problem solving. Some tools and techniques used for solving problems in quality circle. these are the called QC tools, such as follows-

Histograms, scatter diagram, stratification, Check sheet, pareto analysis control charts and graphs diagrams, Brainstorming etc.

But recently new tools emerged in quality circle for solving problems. such as follows:-

Relations diagram, affinity diagram, Systematic diagram, tree diagram

Matrix diagram, process decision program chart (PDPC) ,Arrow diagram etc.

4) **ISO updates**:

The International Organization for Standardization is an international standard-setting body composed of representatives from various national standards organizations. It is the world's largest developer of voluntary international standards and facilitates world trade by providing common standards between nations.

The various ISO updates in HRM. Some of as follows:

ISO 9000 (Quality Management) it ensure that their products and services consistently meet customers requirements.

ISO 9001(human capital management) these standard help to manage human capital customer focus, leadership, engagement of people, improvement, relationship management.

ISO 14000 (Environmental Management):looking to identify and control their environmental impact.

ISO 30408:2016 provides guidelines on tools, processes and practices to be put in place in order to establish, maintain and continually improve effective human governance within organizations.

ISO 30401:2018 This provides guidelines for establishing, implementing, maintaining, reviewing and improving an effective management system for knowledge management in organizations.

ISO 30405:2016 provides guidance on how to attract, source, assess and recruit people. It focuses on key processes and practices, including recruitment policy development; the flow from the sourcing of potential applicants to the boarding of new recruits; evaluation and measurement, such as so many ISO updated impact emerging in HRM.

Impact of concepts on organization:

So many concepts develop in management it helps to improve processes and productivity. It increases efficiency of organization.Humans are the great assets of any organization without them every day functions could not be completed. So these new concepts helps to retain employees. New selection procedure, training method, leadership styles are follows in organization according to these new concepts.

Findings and conclusions:

To conclude , it can be said that so many new concepts emerging of HRM. These new concepts helps to improve efficiency making suitable for selection process. Identify the strengths and weaknesses of an individual for development purposes.ISO standards are also develop in HRM. Therefore. It is necessary to HR Manager to implement new ideas with emerging new concepts.

STUDY ON CONSUMER BEHAVIOUR WITH RESPECT TO OTC MEDICINE

Rohit Ravindra Landge
Asst. Professor, Sanjay Ghodawat University, Kolhapur
Meenal Surdarshan Chougule
Researcher Scholar, Sanjay Ghodawat University, Kolhapur

ABSTRACT

In current scenario, due to convenient accessibility of number of over the counter (OTC) drugs, patients are able to treat minor sickness by themselves. The self-medicated schedule has directed to assured health problems irrespective of their professions in all age groups. The purpose of this paper is to find the consumer buying behavior regarding OTC medicine. Data is collected from the120 respondents of Jaysingpur. The descriptive & inferential statistics analysis of the study reveals that people prefer OTC allopathic medicine to cure common diseases and Curative time, Reasonable Price, Own Recommendation, Easy availability are also highly influenced on the decision of the respondents while purchasing OTC medicine.

Keywords: *Consumer Behaviour, OTC Medicine*

Introduction:

Over-the-counter (OTC) drugsare medicines sold straight a way to a consumer without a prescription from a healthcare professional, as opposed to prescription drugs, which may be sold only to consumers possessing a valid prescription. In November 2016, India's drug consultative committee declares that it was board on establishing a definition of drugs which could be give out without a prescription. Prior to this, the general assumption was that any drug which did not fall into a prescription schedule could be purchased without a prescription. However, the needed definition had not been enacted by early 2018. The lack of legal definition for OTC drugs has led to this US$4 billion market segment being effectively unregulated. (Wikipedia)

India currently represents just U.S. $6 billion of the $550 billion global pharmaceutical industry but its share is increasing at 10 % a year, compared to 7% annual growth for the world market overall. Also, while the Indian sector represents just 8 % of the global industry total by volume, putting it in fourth place worldwide, it accounts for 13% by value, and its drug exports have been growing 30 % annually. The Indian market for over-the-counter medicine is worth about $940 million and is growing 20 % a year, or double the rate for prescription medicine. The researcher has focused on determining the factors that influencing on purchasing of OTC medicine, he also interested to find the how different demographic factors are impacting on purchasing of OTC medicine. (sho)

Objectives of The Study:

1. To Study the Demographics of OTC medicine Users.
2. To Study the Most preferred OTC medicine to cure common diseases.
3. To Study the Factors influencing while purchasing OTC medicine.

Hypothesis of the Study:

1. H0 : Opinion about Factors influencing in purchasing OTC medicine is in dependent to respondents Income level.
2. H0 : Opinion about Factors influencing in purchasing OTC medicine is in dependent to respondents Income level respondents education level.

Literature Review:

1. (Patel & Prajapati, Dec 2013) Said In Research That The Consumer Buying Behaviour Regarding Otc Product And Study Revels That The Criteria On Which The Consumers Rely For Making Their

Purchase Decision Regarding Otc Products. The Study Is Very Important For Marketer, To Know About Consumer Buying Behaviour Regarding Otc Product. In India, Most Residents Are Aware That Otc Medicines Could Be Purchased In Convenience Stores, Although Most Still Showed Preference For Making Purchases In Pharmacies.

2. (Cinziapanero & Persico, 2016) Said In Research That Use Of Otcs By Teenagers And The Factors That Influence Their Consumption. The Research Revealed That Teenagers Seem To Be Familiar With Otc Medicines. Four Factors Influencing The Attitude Of Teenagers Toward Otc Medicines Were Identified And Used To Segment Them. This Is A Valuable Contribution Of The Paper, Since It May Be Argued That Different Groups Of Teenagers Need Different Educational Approaches, Which Should Be Designed In Accordance With Their Different Attitudes And Behaviours As Well As Their Level Of Knowledge.
3. (Dixit & dadhich, 2017) In This Paper The Researcher Aims To Investigate The Consumer Perception And Behaviour Towards Selection Of Otc Medicine And Impact Of Various Marketing Strategies Adopted By Major Pharmaceutical Company's.TheStudyalso Aimed To Investigate The Various Influencing Factors Contributing To An Individual's Brand Of Choice Decision Within The Over-The-Counter (Otc) Medicine Available In Pharmaceutical Market. The Present Study Revealed That Consumer Preferred To Use Otc Medicine For Treating Common Ailments Which Also Presented That People Are Aware Regarding Use Of Otc Medicine. The Pharmacist Play An Important Role In Pushing And Providing Information About New Otc Brand Product.The Study Also Presents That Consumer Buy Same Branded Drug Because They Believe That Branded Otc Medicines Are Effective And Hence The Pharmaceutical Companies Has To Also Work On Quality Of Otc Product To Retained the loyal customer with their branded otc medicine.
4. (Helen, August 2006) The Thesis Explained That Self-Care Has Been Promoted In Many Countries (United States, Canada, Britain, Australia, Japan Etc) As Part Of A Public Policy Agenda.According To This Study, 96 Percent Of The Study Population Believed The Otc Medicines Really Did Help. Another British Study Reported That 66 Percent Of The Respondents Had Taken Otc Medicines During A One-Month Study Period, In Contrast To The 25 Percent Who Had Taken Prescription Medicines During The Same Period. The Present Study Revealed That Location Of Sale Does Not Appear To Influence Consumers' Expectations Of Otc Medicines Along Clinical Attributes. This Finding May Prove Useful To Legislators Involved In The Deregulation Of Medicines.
5. (Prinsloo, March 2016) The Thesis Explained That the Provision Of And Access To Consumer Health Information In England, Specifically With Reference To Over The Counter Medicines To Promote Understanding Of The Consumers' Attitudes And Opinions To This Type Of Medicine And Their Health Information Seeking Behaviours. The Study Told Us That Over The Counter Medicines Are A Widely Used Commodity But Respondents Continue To Have A Heavy Reliance On The General Practitioner For Prescription Medicines, Especially For Minor Ailments. Evidence Exists That Individuals Utilise Information Seeking

Behaviour For Self Treatment And The Use Of Over The Counter Medicines. However, Adoption Of Self Care Models Need To Be Increased Through Educating Health Care Consumers To Maximise The Potential Benefits Of These Frameworks For The Stakeholders.

6. (Srivastava & wagh, 2017) The Study Intends To Study Consumers' Perception Towards Over-The-Counter (Otc) Products And Factors That Influences Otc Products In India. It Also Aims To Study The Impact Of Demographic Variables On Consumers' Purchase Behaviour Towards OtcProducts.Proposed Study Shows That There Is A Significant Difference In Perception For Over-The-Counter Pharmaceutical Products; This Fact Must Be Considered While Creating Advertisements For The Products Which Are Either Female- Centric Or Male-Centric.
7. (Woźniak-Holecka, Grajek, Czech, & Epidemiol, 2012) The Goal Of The Paper Was To Evaluate The Awareness In The Studied Group Of People Concerning Purchasing And Usage Of The Otc Drugs And Paper Reveals That Pharmacies Are The Most Popular Place To Buy Drugs Without Prescription And Pharmacist's Opinions Are Mostuseful For The Consumer. Income Is Positively Correlated With The Number Of Purchased Otc Drugs.
8. (Yousif, Apr 2016)In This Paper The Researcher Identify The Factors That Affects On The Decision To Buy Drugs Without A Prescription, The Impact Of Medical Examination Price On The Individuals Decision To Purchase Medications Without A Prescription, The Impact Of The Trust In Pharmacist On The Individuals Decision To Purchase Medications Without A Prescription, The Impact Of Family Members And Friends On Decision To Purchase Medications Without A Prescription, The Impact Of The Information On Decision To Purchase Medications Without Prescription, The Impact Of The Past Experiences On Decision To Purchase Medications Without A Prescription. And The Study Told Us There Is No Existimpact For The Information Published By The Media On The Decision To Purchase Medications.
9. (R & Dr.Hamsalakshmi, March 2017) The Study Indicated Thatfactors Influencing The Brand Preferences On Purchase Of Ayurvedic Healthcare Products And The Study Reveals That Most Of The Customers Are Prefer The Ayurvedic Healthcare Products For The Reason Of No Chemical Product And Quality Of The Products.
10. (Arya, Thakur, & Kumar, 2012) The Study Indicated Thatthe Consumer Behavior In Consuming/Purchasing Ayurvedic Medicines/Products And Their Attitudes Toward Herbal Medicines In Joginder Nagar Region Of Himachal Pradesh, India. The Study Concluded That The People Of Joginder Nagar Are More Interested In The AyurvedicOtc Products As Compared To The Product/Medicine Recommended By Physicians. Hence, Scientific Knowledge Of The Ayurvedic/Herbal Drugs Has To Be Transmitted Out In A Systematic Manner To Compete The International Market And Provide Consumer Satisfaction. The People Of Joginder Nagar Had Not Responded As Per Our Estimation And Hence The Results Are Little Bit Deviated From Exact Situation Prevailing In India For Ayurveda.

Research Methodology:

Data Collection: Descriptive research methodology was selected to discover the factors influencing while purchasing the OTC medicine. To accomplish the stated objective primary data was collected through self-designed structured questionnaire. The questionnaire comprises of scales to assess the factors in terms of respondents prefer. To unfold the significant factors which influencing while purchasing OTC medicine, list of 12 different factors were identified and respondents were requested to grade the items at five-point category scale, where 1 represents not at all influenced and 5 highly influenced.

Sampling Design and Sample Size: All the items under consideration in any field of inquiry constitute a "Universe" or "Population". The researcher must decide the way of selecting a sample or what is popularly known as the sample design. A sample design is a definite plan determined before any data are actually collected for obtaining a sample from a given population. **Sample Size** in the present study a sample of 120 people was considered as a sample size. **Sampling Technique** In this study, simple random sampling method was adopted for selecting the respondents.

Data Analysis: For analysis MS office Excel and SPSS 20.0 was used. To understand the factors influencing while purchasing the OTC medicine Descriptive analysis of the data was done through SPSS with frequency & percentage.

Statistical Tools:

In this study researcher has done the descriptive analysis. Frequency tables are created to understand the variation of the sample data. Relatively percentage is calculated to interpret the data in a suitable manner.

Data Analysis and Interpretation:

The primary objective of this research was to discover the factors influencing while purchasing the OTC medicine. Descriptive analysis of the data was done through SPSS with frequency & percentage prepared to identify the influencing factors while purchasing the OTC medicine.

Demographic Analysis:

This of the analysis contains general information about the respondents and helps to understand the demographics of the respondents. The questions aim to find out respondents Gender, Age, Occupation, Monthly Income and Education of the respondents in from Jaysingpur.

Table No. 1: Demographic analysis

Sr. No.	Factor	Option	No. of Respondent	Percentage %
1	**Gender**	Male	59	49.2
		Female	61	50.8
2	**Age**	20 – 29	40	33.3
		30 – 39	43	35.8
		40 – 49	20	16.7
		Above50	17	14.2
3	**Occupation**	Student	23	19.2
		Working Class	32	26.7
		Self Employed	60	50.0
		House Wife	5	4.2
4	**Place of Residence**	Developed	27	22.5
		Developing	58	48.3
		Underdeveloped	35	29.2

5	**Monthly Income**	10000 - 19000	34	28.3
		20000 – 29000	52	43.3
		30000 – 39000	19	15.8
		Above 40000	15	12.5
6	**Education**	Below HSC	22	18.3
		Graduate	62	51.7
		Post Graduate	27	22.5
		Doctorate	9	7.5

The above frequency table reveals that there is almost equality in terms of the gender from the selected respondents from the Jaysingpur, as per age of the respondents almost 80% of the respondents are above 20 years of the age then according to the occupation of the selected respondents it shows that maximum respondents are self-employed with 50% from the total, in terms of the place of the residence almost 70% respondents are living in developed and developing area from the city, according to the income level of the respondents it is found that almost 70% respondents income level is up to 30,000 Rs. and at the last the education status of the respondents reveals that 80% respondents education level is graduate or above graduate.

OTC Medicine Purpose & Type

Here the researcher has categorized common diseases and tried to find out the most preferred OTC medicine type respondents were uses to cure the common diseases.

Table No. 2: OTC Medicine Purpose

Common Deceases	Yes		No		F Total	P Total
	F	P	F	P		
Cold	82	68.3	38	37.7	120	100
Cough	59	49.2	61	50.8	120	100
Fever	71	59.2	49	40.8	120	100
Body Pains	53	44.2	67	55.8	120	100

Table No. 3: Most Preferred OTC Medicine Type

Option	No. of Respondent	Percentage
Ayurvedic	10	8.3
Allopathic	77	64.2
Homeopathic	32	26.7
Other	1	8

Table number 2 and table number 3 reveals that respondents were using OTC medicine mostly for cold & fever with 68% and 59% than the cough and body pains with 49% and 44%. Table number 3 reveals that maximum number of respondents was using Allopathic medicine with 64 % from the total than remaining type of Ayurvedic, Homeopathic & other.

Factors Influencing While Purchasing OTC Medicine

Here the researcher wants to find the influencing factors while purchasing the OTC medicine from the Jaysingpur. For that researcher has framed 12 different factors and descriptive analysis was done to understand the impact of factors while purchasing.

Table No. 4: Factors Influencing While Purchasing OTC Medicine

Factor	Mean	S.D.
Own Recommendation	4.21	1.0363
Other's Recommendation	2.78	1.0057
Reasonable Price	4.30	0.8362
Curative time	4.40	0.7029
Best value for Money	2.91	0.8579
Quality of Product	3.13	0.7885
Convenience of Usage	4.15	0.8163
Product safety	3.90	0.8195
Advertisement	2.54	1.0764
Easy availability	4.11	0.8075
Company Reputation	3.68	1.0859
Less Side effects	3.79	1.0656

The above descriptive table reveals that Curative time is the most influencing factor with highest 4.4 mean while purchasing OTC medicine while Reasonable Price, Convenience of Usage,Own Recommendation, Easy availability are also highly influenced on the decision of the respondents with the mean above 4, then Company Reputation, Less Side effects, Quality of Product & Product safety are the moderately influenced on the purchasing decision of OTC medicine and Best value for Money, Other's Recommendation and Advertisement are the least influencing factors while purchasing decision of OTC medicine. From the above analysis it is been clear that people were mostly going with their own thinking ability, knowledge and convenience while purchasing OTC medicine.

Hypothesis Testing:

Before Testing the Hypothesis researcher has to test the normality of the data which decides the appropriate test to test the hypothesis.

Normality Testing

Tests of Normality

	Kolmogorov-Smirnov[a]			Shapiro-Wilk		
	Statistic	df	Sig.	Statistic	df	Sig.
Opinion about factors influencing	0.117	120	0.000	0.979	120	0.022

a. Lilliefors Significance Correction

Above result shows that Shapio-Wilk test statistics value 0.979 with P-value 0.024. It indicates that the test results are significant, normality assumption is violated. Hence to test the hypothesis we have to use non-parametric tests.

Hypothesis 1

H0: Opinion about Factors influencing in purchasing OTC medicine is independent to respondents Income level.

Test Statistics[a,b]	
	Opinion about Problems & Challenges
Chi-Square	0.672
df	4
Asymp. Sig.	0.024
a. Kruskal Wallis Test	
b. Grouping Variable: Income Level	

Above table gives the test statistic value and corresponding P-value. The test statistics value is 0.672 and P-value is 0.024 as the P-value is less than 0.05, the null hypothesis is Rejected and hence it is concluded that Opinion about Factors influencing in purchasing OTC medicine is dependent to respondents Income level.

Hypothesis 2

H0: Opinion about Factors influencing in purchasing OTC medicine is independent to respondents Education level.

Test Statistics[a,b]	
	Opinion about Problems & Challenges
Chi-Square	0.721
df	4
Asymp. Sig.	0.008
a. Kruskal Wallis Test	
b. Grouping Variable: Education Level	

Above table gives the test statistic value and corresponding P-value. The test statistics value is 0.721 and P-value is 0.008 as the P-value is less than 0.05, the null hypothesis is Rejected and hence it is concluded that Opinion about Factors influencing in purchasing OTC medicine is dependent to respondents Education level.

Discussion:

The above study reveals that there is almost equality in terms of the gender from the selected respondents from the Jaysingpur, as per age of the respondents maximum respondents are above 20 years of the age then according to the occupation of the selected respondents it shows that maximum respondents are self-employed with 50% from the total, in terms of the place of the residence maximum respondents are living in developed and developing area from the city, according to the income level of the respondents it is found that maximum respondents income level is up to 30,000 Rs. and at the last the education status of the respondents reveals that 80% respondents education level is graduate or above graduate.

In terms of Type of Common decease and type of medicine preferred it reveals that respondents were using OTC medicine mostly for cold & fever with 68% and 59% than the cough and body pains with 49% and 44% & maximum number of respondents was using Allopathic medicine with 64 % from the total than remaining type of Ayurvedic, Homeopathic & other.

As per influencing factor the study reveals that Curative time is the most influencing factor while purchasing OTC medicine with the highest mean of 4.21 while Reasonable Price, Own Recommendation, Easy availability are also highly influenced on the decision of the respondents with the mean above 4, then Company Reputation, Less Side effects, Quality of Product & Product safety are the moderately influenced on the purchasing decision of OTC medicine and Best value for Money, Other's Recommendation and Advertisement are the least influencing factors while purchasing decision of OTC medicine. From the above analysis it is been clear that people were mostly going with their own thinking ability, knowledge and convenience while purchasing OTC medicine. From the hypothesis testing it is concluded that Opinion about Factors influencing in purchasing OTC medicine is dependent to respondents Income Level & Education level.

Conclusion:

This research contributes to the understanding of factors influencing while purchasing OTC medicine by the people. From the above study it is been clear that people still sues the Allopathic medicine to cure the common diseases. The study also reveals that people believe on them self they purchase the medicine and use it without doctor's prescriptions. It shows in our country we still required the awareness about the correct practices to cure the diseases. People are trying to save the medical cost of the entire family but they should also thing on the point that they are playing with their lives. So by these research the ultimate massage given by the researcher is life is important than money follow the doctor's advice.

ABSTRACT

The emergence of a global movement that calls for a new model of teaching and learning for the 21st century, it has been argued that formal education must be transformed into enable new forms of teaching-learning that are needed to tackle complex global challenges. Researchers recognize that the use of lecture method is not effective method for teaching in 21st century students, still widespread use of lecture method is in use. In spite of worldwide agreement that learners need skills such as critical thinking and the ability to communicate effectively, innovate, and solve problems through collaboration, pedagogy has seldom adapted to address the noticed challenges. Modern Pedagogy is the need for 21st century to identify new competencies that students need to develop. This paper deals with the modern methods of teaching and learning for faculties and students which aims at futures of teaching & learning, explores pedagogies and learning environments that may contribute to the development and developing of 21st century competencies and skills, and advance the quality of teaching & learning. Also this study aims to develop a fuller understanding of the motivations that drive faculties to adopt the innovative approaches and the considerations they have when using it in the teaching and learning of corecontent.

Keywords*: 21st century, higher education, teaching, learning, pedagogy, classroom, students, achievement.*

HIGHER EDUCATION IN A FAST-CHANGING WORLD: AN INTRODUCTION

Higher education in the 21st century is about more than acquiring knowledge from a single discipline. Higher order skills, such as critical thinking, creative problem solving, teamwork, and communication, are becoming even more fundamentally valuable. As information and facts proliferate, the ability to navigate across a wide range of disciplines and to critically evaluate, extract and communicate meaning have become essential attributes for success in modern society. Increasingly, the most important element of modern pedagogy in higher education is not simply the teachers' transmission of information and the students' retention of facts. Now we must teach students how to handle and interpret concepts, evidence and ideas, how to think and act as experts and, ultimately, how to produce original insights and valuable knowledge for the benefit of society. As aresult, higher education is entering a new and exciting period. Leading universities now understand that they need to change pedagogy from fact-based traditional lecturing to interactive teaching with the aim of fostering durable skills such as critical thinking, developing and expert mind set, and problem-solving.

BACKGROUND STUDY

In order to achieve quality teaching and learning, greater attention must be paid to teaching and learning practice [1]. The literature leaves no doubt that the higher education sector must change and that change will be difficult and expensive. Trends indicate that universities must make decisions about their academic programs and as such, what students they want to attract. This will impact on how they change their structure and business model. Central to this will be how the university embraces technology and contemporary models of teaching andlearning

[4]. One of the many factors preventing teachers from doing so is a lack of technology training. Too often, teachers have not been provided with the necessary technology skills to create a modern learning environment. Teachers not only need to understand how to use technology in their teaching, they need to understand how to help student use technology to helpguidetheirownlearning.Teachersneedto

Researchers have proposed model on teaching-learning effectiveness for 21st century respectively. fig. 1 Innovations in Teaching & Learning for 21st Century.

INNOVATIONS IN TEACHING AND LEARNING

Innovations in teaching and learning practices can be done by providing exposure to new and different practices. It can also help educational institutions to think outside the box in response to new challenges. Preventing student drop-out and attracting disengaged or at-risk students can also lead teachers to innovate in order to better adapt to students'needs.

INNOVATIONS IN TEACHING

Within higher education, new technologies have enormous potential to effect change. They facilitate

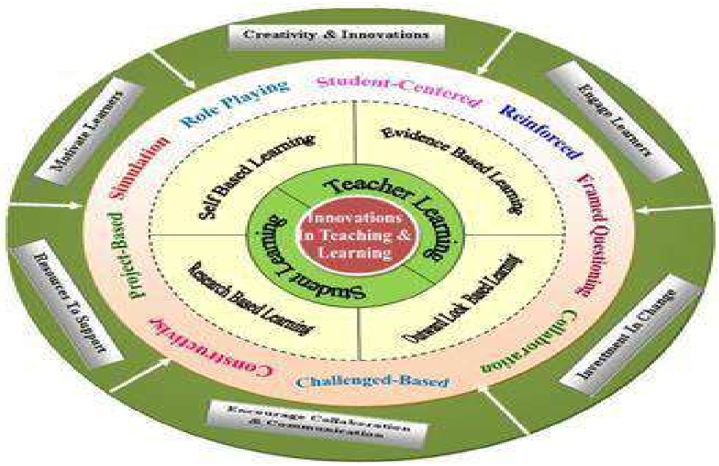

Fig: Innovative Teaching Learning Model for 21st Century

universities to meet a broader range of learners'provide students with the tools to learn both within and outside the classroom [5]. Today's students are fundamentally different than those of even a decade ago. The students we see in the classroom today are digital natives; they have grown up with technology around them rather than being forced to learn the technology later in life [6].needs, adapting traditional teaching methods and offering a mix of face to face and online learning possibilities that allow individuals to learn anywhere, anytime. They also create openings to engage in new kinds of collaboration and offer opportunities to distribute resources more effectively. Apart from the conventional "Chalk and Blackboard" method, different innovative teaching techniques used to improve the standard or quality of teaching. Effective teaching is necessary for quality enhancement of the students and this can only be materialized by interactive sessions. Interactive session means both sided communication in between the faculty and students. *Simulation* is nothing but imitation of real- world activities and processes in a safe environment. Aims to provide an experience as close to the 'real thing' as possible. Allows learners to develop experience of situations by applying wider learning and knowledge [2].*Role Playing* is representation of situations generated in the field of work, to experience the senses and roles that we are going to play. At work many emotions are generated, ranging from joy to tension, nerves and stress [2]. *Reinforced Teaching Method* is to break the conventional though process the teacher of the concerned subject arranges a tutorial class to be taken after completion of every chapter/module by a faculty from another section or a teacher who has taught the subject in the precedent semesters. This method not only gives them an exposure to different analogy based learning but also might give a boost on placement based preparations. *Framed Questioning Method* suggests dividing the students into groups and asking them to give presentations on certain topics. The others students have been seen to be more comfortable in asking questions and sharing their view to their fellow friends than to a teacher. *Collaboration Teaching* also termed as cooperative teaching or team teaching which involves educators working in tandem to lead, instruct and mentor groups of students. Onsomeoccasions, teachers from the same department or grade level may team teach to target multiple levels of learning or provide a greater variety of supervised activities for students to practice skills. *Constructivist Teaching* Encourages students to use active techniques to create knowledge and to reflect on and talk about what they are doing and how their understanding is changing. *Student-Centered Teaching* shift the focus of activity from the teacher to the learners. It includes active learning, in which students solve problems, answer questions, formulate questions of their own, discuss, explain, debate, or brainstorm during class; cooperative learning, in which students work in teams on problems and projects under conditions that assure both positive interdependence and individual accountability. *Project-Based Teaching* for students is a flourishing approach to learning that is extremely useful in promoting critical and analytical thinking, and in addressing the rapid technological changes and dynamic workplace of the 21st Century[3].

skills and deep knowledge using interactive teaching methods.

INNOVATION IN LEARNING

Digital and online technology can fundamentally redefine the nature of the classroom. If delivered appropriately and to a high standard, courses that blend pedagogically-sound learning technologies can be highly effective, and participating students derive high levels of satisfaction [8]. Classroom and laboratory time can be more interactive when study materials are available online before classes; teachers can get real-time information about students' learning; space and place can become flexible concepts, enabling participation from across campuses and across geographies; and international perspectives can be brought directly into the classroom. Blended and online learning environments can stimulate, enhance, and amplify interactive and participative learning and if applied well, enhance a sense of community and participation. *Research- Based Education* enables our students to become independent learners with the curiosity and drive to continue learning throughout their lives. It shows them to look for evidence before they act, work together across disciplines, manage ambiguity,accept*Challenged-Based Teaching* is collaborative and hands-on, asking all participants to identify Big Ideas, ask good questions, discover and solve Challenges, gain in-depth subject area knowledge, develop 21st-century skills, and share their thoughts with the world. (Challenge Based Learning A Classroom Guide,2010)

ACTIVE LEARNING COMMUNITIES

Modern pedagogy in higher education regards students as active participants in the shaping of the learning and teaching environment, not as passive absorbers of knowledge. Today's Students are bright and driven, and we believe they are superbly placed to be co-creators of our research and teaching innovations. Learning can actively shape and enhance own experience and that of their peers and be partners in our academic community. Students should get their own learning journey and empower them to develop practicalthat making mistakes is a crucial part of innovation, understand there are no simple answers to big problems, be confident in the face of uncertainty and understand that positive change frequently requires a challenge to the status quo. These highly applicable skills and attributes are valued by employers and will benefit students in any future career. *Self-Centered Education* Self-centered education also means giving students responsibility for their own learning. They will participate in setting their own goals, manage their own learning process and have the freedom to find their own direction in their education. They will become independent thinkers by developing the strategies and the confidence to learn by discovery, rather than simply memorizing factual information. *Evidence-Based* Helps to evaluate the impact and effectiveness of learning and teaching on the staff and the student experience, and students' study success and learning gains, to form own evidence base, publish results in peer reviewed journals and contribute to the 'second generation' of global evidence on interactive teaching. Establishing departmental expertise to build capacity in educational research within each discipline.*Collaborative Learning* New applications are making it easier for classroom teachers to be both innovative and interactive, and this trend is expected to growexponentially in the coming years. Example GoogleDocs to interactive whiteboards to new applications that create quizzes and activities, this is an exciting time for collaborative learning in higher education. *Outward-looking* Students will develop the ability to look outside the classroom and laboratory and to think about how their learning can be applied to respond to global challenges and for the benefit of society. Also to ensure that the content of curricula remains. Using authentic, real life examples and make clear the relationship between our students' learning and their world beyond the classroom. Teachers encourage and facilitate opportunities for students to engage in work basedlearning.

INNOVATION DRIVERS

Resources to support learning Provides learning resources online can be used to ensure that on-campus activities can be focused and the time well used. In Science and Medicine, some UTAS teachers should provide online laboratory preparation activities to reduce the cognitive load on students when they attend the laboratory. Class time is then used more productively, and questions from students are more focused on the learning outcomes of the laboratory class, rather than lower order procedural questions. A positive climate in classrooms and on- campus, alongside interactive teaching, can improve students' persistence in learning, their academic and emotional development, and their future professional engagement. *Technology enhanced* Future students are growing up in a societal context that is very different even from recent memory. They are more connected to each other and the world and they have access to more information from more sources than ever before. They expect personalized, digitally augmented, and meaningful interactions in all aspects of their lives. Digital and online innovations will be used to support and enhance more interactive ways of teaching. With blended learning, online and digital technology can replace lectures and classroom time can be used for interactive education experiences. Emerging evidence shows that together interactive learning and digital technology innovation are particularly successful in improving students' learning. *Investing in change* Policy makers should build on these solid foundations as work with different departments to apply these approaches toallprogrammes using methods that are most effective in the context of the individual discipline. Using an evidence-based approach will identify the most effective pedagogies and assessment methods to suit specific learning outcomes and particular disciplinary needs. The implementation of change will be an ongoing and evolutionary process, which will require investment across many different areas of staff resources and infrastructure over the next five to ten years. The change are aiming at implementing is substantial. Faculty will need training, time and incentives to engage. We also need to be aware of two potential barriers to change that are perhaps more at the level of emotions, but also important. The first is related to the fact that even though the argument that interactive teaching is more evidence-based should be compelling to academics, for some, the message may appear to be that they have been 'doing it wrong' for a long time. That can lead to resistance to the proposed changes. The second factor relates to the phenomenon that academic staff often derives their identity more from research than from teaching. For the successful implementation of our Learning and Teaching Strategy it is crucial that innovation in education is valued by the College and that faculty pride and identity can be derived from being an education innovator as much as from being a successful researcher. Research faculty sometimes doesn't dare 'come out' as education innovators [7], for fear that it will hinder their career. Careful change management and communication will be needed. Both types of subtle resistance can be overcome if leading the change is perceived as prestigious enough and if a substantial number of departments and faculty will engage and feel supported by the central leadership. *Funding for departments to review and re-design their curricula* in all departments should be supported to review their undergraduate and postgraduate taught curricula in line with the Learning and Teaching Strategy. Additional staff resources should be available to enable departments to undertake thisprocess.

CONCLUSION

Great teachers using digital technology with certified computing skills will be the most powerful educators in the 21st century. This research clearly shows that traditional, primarily lecture-based teaching does not
yield the best results in terms of learning gains, 21st century skills and student success. Educational techniques that best enable learning are more interactive, engage the students at different levels, increase their sense of personal and professional identity, improve all students' learning and create a stronger sense of community. A number of departments and teachers at many different departments already employ many of the emerging, evidence-based techniques. This strategy will build upon this foundation to introduce interactive, digitally enhanced teaching across the whole university.
