A study of attitude scale Pursuit of Vertigo between Law and Physical Education students in Solapur District

Shashikant Devidas Gadhave
R.S. Law College Barshi Dist. Solapur

Introduction:
Human being and animals are product of a long process of biological evolution. Their activities are highly complex in nature and directed from within. Since ancient times, philosophers have tried to understand why human being and other animals behave as they do. The origin of psychology is often traced to the Greek philosophers. The term psychology, is derived from two Greek words psyche; and logos, here in psyche means the soul of mind, and the meaning of logos is to talk about science or study. Thus the literal of soul. Greek philosophers believed that soul was responsible for various mental activities such as learning, thinking, feeling, etc., It was believed soul was the essence or true being of an organism, the case and the principles of life. As the relation of soul to the body and the functions of soul could be explained, some philosopher tried to define psychology as a science of mind.

Attitude is often thought to predict behaviour. Attitudinal responses are also evaluative in nature. They are significant in deciding the kind and extent of the learning that takes place and reflect the likes and this likes concerning specified objects of action. Attitude involves knowledge and beliefs. Attitude are developed through direct experience and interpersonal communication. Positive beliefs and values concerning physical activity result in development of good and positive attitudes, enabling the athlete to strive hard for better performance.

Definition of Important technical terms
Comparative study: - Involving comparison of two or more subject
Psychological factor: - Psychological factor are events of or relating to determined by psychology.
Psychology is the scientific study of mental functions function and behaviors

Pursuit of vertigo: - Pathological sensation of dizziness or abnormal motion resulting from a disorder of the sense of balance.

Objective: - The main purpose of the study was to analysis the attitudes scale Pursuit of vertigo between Law and Physical Education students in solapur Dist.
Hypothesis: - There will be no significant differences in attitudes scale Pursuit of vertigo between Law and Physical Education students in solapur Dist.
Sample: - A sample of subject consisting 240 Law Students and 240 Physical Education which were randomly selected from different Talukas in solapur district.
Tools of the Study: - Attitude scale adopted by Dr. Vishnu Pethkar (University of Pune) was used for measure the attitude scale questioner between Law and Physical Education students in solapur Dist. This inventory provide health fitness dimension.
Statistical procedure:
The data attained from inventory were statistically treated using Mean, S.D, and ‘t’ Test

Result:

Table No. 1
Comparison of pursuit of vertigo in Law and Physical Education.

<table>
<thead>
<tr>
<th>Variables</th>
<th>Student</th>
<th>N</th>
<th>Mean</th>
<th>S.D.</th>
<th>Degree of freedom</th>
<th>‘t’ ratio</th>
</tr>
