Abstract:
The present study makes an attempt to highlight the development of Tourism and initiatives taken by Government to promote Tourism in India and its impact. The main theme of paper is to analyze positive and negative impacts of Tourism Industry on the Economy. Tourism Industry in India is growing and it has vast potential for generating employment and earning large amount of foreign exchange besides giving a fillip to the country’s overall economic and social development. Data were collected through the websites and various research articles. The study implies to the depth of social, economical and environmental effects of the tourism industry. Most of the works that are focused on tourism industry in India.

Keywords: Foreign exchange, Tourism Industry, Development, Impact of Tourism, Constrains

Objectives
The following objectives are considered to highlight the theme
1. To know the tourism
2. To understand the Positive and Negative impact concern with various aspect

Data Collection and Methodology
Present research article is informative. The required information is collected through secondary sources of information.

Introduction
Tourism becomes the fastest growing service industry in the country with great potentials for its further expansion and diversification. Tourism is defined as the business of providing services for people who are travelling for their holiday. It is also defined as travel for recreational, leisure or business purposes. The statistical terms defined tourism as the activities of persons travelling to and staying in places outside their usual environment for not more than one consecutive year for leisure, business and other purposes not related to the exercise of an activity remunerated from within the place visited. Over the decades, tourism has experienced continued growth. Tourism Industries is one of the fastest growing economic sectors in the world. Tourism has become a thriving global industry with the power to shape developing countries in both positive and negative ways. No doubt it has become the fourth largest industry in the global economy. Similarly, in developing countries like India tourism has become one of the major sectors of the economy, contributing to a large proportion of the National Income and generating huge employment opportunities.

Development of Tourism
The development of tourism was taken up in a planned manner in 1956 coinciding with the Second Five Year Plan. The approach has evolved from isolated planning of single unit facilities in the Second and Third Five Year Plans. The Sixth Plan marked the beginning of a new era when tourism began to be considered a major instrument for social integration and economic development. But it was only after the 80’s that tourism activity gained momentum. The Government took several significant steps. A National Policy on tourism was announced in 1982. In 1988, the National Committee on Tourism formulated a comprehensive plan for achieving a sustainable growth in
tourism. In 1992, a National Action Plan was prepared and in 1996 the National Strategy for Promotion of Tourism was drafted. In 1997, the New Tourism Policy recognizes the roles of Central and State governments.

Features of Tourism

Tourism is the largest service industry in India, with a contribution of 6.23 percent to the national GDP and providing 8.78 percent of the total employment. India witnesses more than 5 million annual foreign tourist arrivals and 562 million domestic tourism visits. The Tourism Industry in India generated about US$100 billion in 2008 and that is expected to increase to US$275.5 billion by 2018 at a 9.4 percent annual growth rate. The Ministry of Tourism is the nodal agency for the development and promotion of tourism in India and maintains the "Incredible India" campaign. According to World Travel and Tourism Council, India will be a tourism hotspot from 2009-2018, having the highest 10-year growth potential. As per the Travel and Tourism Competitiveness Report 2009 by the World Economic Forum, India is ranked 11th in the Asia Pacific region and 62nd overall, moving up three places on the list of the world's attractive destinations. It is ranked the 14th best tourist destination for its natural resources and 24th for its cultural resources, with many World Heritage Sites, both natural and cultural, rich fauna, and strong creative industries in the country. India also bagged 37th rank for its air transport network. The India travel and Tourism Industry ranked 5th in the long-term growth and is expected to be the second largest employer in the world by 2019. The Commonwealth Games in Delhi are expected to significantly boost tourism in India further. Moreover, India has been ranked the "best country brand for value-for-money" in the Country Brand Index survey conducted by Future Brand, a leading global brand consultancy. India also claimed the second place in CBI's "best country brand for history", as well as appears among the top 5 in the best country brand for authenticity and art & culture, and the fourth best new country for business. India made it to the list of "rising stars" or the countries that are likely to become major tourist destinations in the next five years.

Impact of Tourism in India

Tourism Industry in India has several positive and negative impacts on Society, Economy and Environment. These are as follows.

Positive Impacts:

1. Tourism in India has emerged as an instrument of income and employment generation, poverty alleviation and sustainable human development. It contributes 6.23 percent to the national GDP and 8.78 percent of the total employment in India. Almost 20 million people are now working in the India’s tourism industry.

2. Tourism is an important source of foreign exchange earnings in India. This has favorable impact on the balance of payment of the country. The Tourism Industry in India generated about US$100 billion in 2008 and that is expected to increase to US$275.5 billion by 2018 at a 9.4 percent annual growth rate.

3. Tourism helps preserve several places which are of historical importance by declaring them as heritage sites. For instance, the Taj Mahal, the Qutub Minar, Ajanta and Ellora temples, etc, would have been decayed and destroyed had it not been for the efforts taken by Tourism Department to preserve them. Likewise, tourism also helps in conserving the natural habitats of many endangered species.

4. Tourism tends to encourage the development of multiple-use infrastructure that benefits the host community, including various means of transports, health care facilities, and sports
centres, in addition to the hotels and high-end restaurants that cater to foreign visitors. The development of infrastructure has in turn induced the development of other directly productive activities.

5. Honey and Gilpin suggested that the Tourism Industry can also help promote peace and stability in developing countries like India by providing jobs, generating income, diversifying the economy, protecting the environment, and promoting cross-cultural awareness. However, key challenges like adoption of regulatory frameworks, mechanisms to reduce crime and corruption, etc., must be addressed if peace enhancing benefits from this industry are to be realized.

Negative Impacts:

1. Tourism sometimes led to the destruction of the social fabric of a community. The more tourists coming into a place, the more the perceived risk of that place losing its identity. A good example is Goa. From the late 60's to the early 80's when the Hippy culture was at its height, Goa was a haven for such hippies. Here they came in thousands and changed the whole culture of the state leading to a rise in the use of drugs, prostitution and human trafficking. This had a ripple effect on the country.

2. Tourism can increase tension, hostility, and suspicion between the tourists and the local communities when there is no respect and understanding for each other’s culture and way of life. This may further lead to violence and other crimes committed against the tourists. The recent crime committed against Russian tourist in Goa is a case in point.

3. Tourism brought little benefit to the local community. In most all-inclusive package tours more than 80 percent of travelers’ fees go to the airlines, hotels and other international companies, not to local businessmen and workers. Moreover, large hotel chain restaurants often import food to satisfy foreign visitors and rarely employ local staff for senior management positions, preventing local farmers and workers from reaping the benefit of their presence. This has often created a sense of antipathy towards the tourists and the government.

4. One of the most important adverse effects of tourism on the environment is increased pressure on the carrying capacity of the ecosystem in each tourist locality. Increased transport and construction activities led to large scale deforestation and destabilization of natural landforms, while increased tourist flow led to increase in solid waste dumping as well as depletion of water and fuel resources. Flow of tourists to ecologically sensitive areas resulted in destruction of rare and endangered species due to trampling, killing, disturbance of breeding habitats. Noise pollution from vehicles and public address systems, water pollution, vehicular emissions, untreated sewage, etc. also have direct effects on bio-diversity, ambient environment and general profile of tourist spots.

The Tourism Industry in India can have several positive and negative impacts on the environment which are discussed below.

Positive Impacts:

1. Tourism can contribute directly to the conservation of sensitive areas and habitat. Revenue from park-entrance fees and similar sources can be allocated specifically to pay for the protection and management of environmentally sensitive areas. Special fees for park operations or conservation activities can be collected from tourists or tour operators.

2. The Indian government through the tourism department also collects money in more far-reaching and indirect ways that are not linked to specific parks or conservation areas. User
fees, income taxes, taxes on sales or rental of recreation equipment, and license fees for activities such as rafting and fishing can provide governments with the funds needed to manage natural resources. Such funds can be used for overall conservation programs and activities, such as park ranger salaries and park maintenance.

3. Sound environmental management of tourism facilities and especially hotels can increase the benefits to natural environment. By planning early for tourism development, damaging and expensive mistakes can be prevented, avoiding the gradual deterioration of environmental assets significant to tourism. The development of tourism has moved the Indian government towards this direction leading to improved environmental management.

4. Tourism has the potential to increase public appreciation of the environment and to spread awareness of environmental problems when it brings people into closer contact with nature and the environment. This confrontation heightens awareness of the value of nature among the community and lead to environmentally conscious behavior and activities to preserve the environment.

5. Tourism can significantly contribute to environmental protection, conservation and restoration of biological diversity and sustainable use of natural resources. Because of their attractiveness, pristine sites and natural areas are identified as valuable and the need to keep the attraction alive can lead to creation of national parks and wildlife parks. In India, new laws and regulations have been enacted to preserve the forest and to protect native species. The coral reefs around the coastal areas and the marine life that depend on them for survival are also protected.

Negative Impacts:

Natural resources

(i) Water: Water, especially fresh water, is one of the most critical natural resources. The Tourism Industry generally overuses water resources for hotels, swimming pools, golf courses and personal use of water by tourists. This can result in water shortages and degradation of water supplies, as well as generating a greater volume of waste water. In dryer regions like Rajasthan, the issue of water scarcity is of particular concern.

(ii) Local resources: Tourism can create great pressure on local resources like energy, food, and other raw materials that may already be in short supply. Greater extraction and transport of these resources exacerbates the physical impacts associated with their exploitation. Because of the seasonal character of the industry, many destinations have ten times more inhabitants in the high season as in the low season. A high demand is placed upon these resources to meet the high expectations tourists often have.

(iii) Land resources include minerals, fossil fuels, fertile soil, forests, wetland and wildlife. Increased construction of tourism and recreational facilities has increased the pressure on these resources and on scenic landscapes. Direct impact on natural resources, both renewable and nonrenewable, in the provision of tourist facilities is caused by the use of land for accommodation and other infrastructure provision, and the use of building materials. Forests often suffer negative impacts of tourism in the form of deforestation caused by fuel wood collection and land clearing e.g. the trekking in the Himalayan region, Sikkim and Assam.

Pollution

Tourism can cause the same forms of pollution as any other industry: air emissions, noise, solid waste and littering, releases of sewage, oil and chemicals, even architectural/visual pollution.
(i) Transport by air, road, and rail is continuously increasing in response to the rising number of tourist activities in India. Transport emissions and emissions from energy production and use are linked to acid rain, global warming and photochemical pollution. Air pollution from tourist transportation has impacts on the global level, especially from carbon dioxide emissions related to transportation energy use. And it can contribute to severe local air pollution. Some of these impacts are quite specific to tourist activities where the sites are in remote areas like Ajanta and Ellora temples. For example, tour buses often leave their motors running for hours while the tourists go out for an excursion because they want to return to a comfortably air conditioned bus. Noise pollution from airplanes, cars, and buses, as well as recreational vehicles is an ever-growing problem of modern life. In addition to causing annoyance, stress, and even hearing loss for humans, it causes distress to wildlife, especially in sensitive areas.

(ii) In areas with high concentrations of tourist activities and appealing natural attractions, waste disposal is a serious problem and improper disposal can be a major despoiler of the natural environment - rivers, scenic areas, and roadsides. In mountain areas of the Himalayas and Darjeeling, trekking tourists generate a great deal of waste. Tourists on expedition leave behind their garbage, oxygen cylinders and even camping equipment. Such practices degrade the environment particularly in remote areas because they have few garbage collection or disposal facilities.

(iii) Construction of hotels, recreation and other facilities often leads to increased sewage pollution. Wastewater has polluted seas and lakes surrounding tourist attractions, damaging the flora and fauna. Sewage runoff causes serious damage to coral reefs because it stimulates the growth of algae, which cover the filter-feeding corals, hindering their ability to survive. Changes in salinity and siltation can have wideranging impacts on coastal environments. And sewage pollution can threaten the health of humans and animals. Examples of such pollution can be seen in the coastal states of Goa, Kerela, Maharashtra, Tamil Nadu, etc.

Problems
The major problem in the development of tourism in India is the non-availability of adequate infrastructure including adequate air seat capacity, accessibility to tourist destinations, accommodation and trained manpower in sufficient number. Poor visitor experience, particularly, due to inadequate infrastructural facilities, poor hygienic conditions and incidents of touting and harassment of tourists in some places are factors that contribute to poor visitor experience.

Future Prospects:
1. The demand for travel and tourism in India is expected to grow by 8.2 per cent between 2016 and 2019 and will place India at the third position in the world.
2. India's travel and tourism sector is expected to be the second largest employer in the world, employing 40,037,000 by 2019.
3. Capital investment in India's travel and tourism sector is expected to grow at 8.8. The report forecasts India to get capital investment worth US$ 94.5 billion in the travel and tourism sector in 2019.
4. India is projected to become the fifth fastest growing business travel destination from 2016-2019 with an estimated real growth rate of 7.6 per cent. 1.3

Conclusion
1. Tourism Industry in India is growing and it has vast potential for generating employment and earning large amount of foreign exchange besides giving a fillip to the country’s overall economic and social development.
2. Eco-tourism needs to be promoted so that tourism in India helps in preserving and sustaining the diversity of the India's natural and cultural environments.

3. Tourism in India should be developed in such a way that it accommodates and entertains visitors in a way that is minimally intrusive or destructive to the environment and sustains & supports the native cultures in the locations it is operating in.

4. Tourism is a multi-dimensional activity, and basically a service industry
