Abstract

Today’s competitive world demands trained, certified and skilled manpower to address the challenges of growth and converting them into opportunities. This report focuses on the existing strategic and implementation models of Skills Development, both in India and across the world. Skills and knowledge are key drivers of macro-economic growth and socioeconomic stability. Appropriate policies for the skill development occupy a dominant place in the development of economy. According to five year plan, India has set aggressive goals for faster and sustainable economic growth of nation. With the demographic dividend, India needs to impart adequate skills to its workforce. Skill development has emerged as national priority for which a number of measures have been taken and in process for future. In this context, present paper studies and analyses the present status of skill development and the challenges India faces while implementation of different initiatives and strategies.

Key words: Skill, employment, demographic dividend, training.

1. Introduction

India is uniquely positioned in world due to demographic dividend as compared to developed countries whose population is aging. China, US, Western Europe, Japan and many countries in the world are grappling with an aging population. On the other hand, India with an average age of around 29 years and with a median age much below China and OECD countries. India’s 65% of the population is below 35 years of age and 70% of the population will be of working age by 2025. High population if employed, trained and productive can easily capitalize the advantage of demographic dividend and lead to sustainable development but same high unemployed, untrained and unproductive population can even turn demographic dividend into demographic liability.

It is estimated that India will face a demand of 500 million skilled workers by 2022. But India is still struggling with the supply of skilled workforce as presently only 2% of the total workforce in India have undergone skills training. According to the Government of India estimates, 93% of workforce employment is in the unorganized or informal sector, which is not supported by a structured skill development system. No training on employable skills is being given to young people who can provide them with employment opportunities as per current education system. Workers in the unorganized sector are often skilled informally or on-the-job. The information channels and skill development process are not understood or not clear.

2. Objective of the study

The study has been conducted mainly to:

1. Understand the present status of skill development in India
2. To understand the challenges in skill development in India
3. Skill development initiatives and strategies in India and its impact on India

3. Research methodology

The research paper is, based on the secondary data sourced from journals, magazines, articles and media reports.
3.1 Challenges with respect to skill development initiatives:

The current capacity of Government/private training institutes are quite low in number. It is only million per annum. The eligibility criteria under the current vocational training structure requires secondary education-class 8 th as mandatory which restricts a significant number of less educated or illiterate workers to enter the formal training system. The course pattern is not as per industry requirement and latest developments of market are not covered in the curriculum which effects employability as Companies have to re-train the apprentices at the time of hiring. The under quality of training program is also one of the issues. Apprenticeship training where students are trained at the company premises is also a failure in India because of inadequate private sector participation and administrative challenges arising from the distribution of power across various levels of governments (Government of India 2009:23).

The number of entrants in the non-farm sector is only increasing every year because of movement of labor from farm to non-farm sector. There has been no change in farm based jobs. The growth in skill training provided in sectors such as retail, customer services etc. have been uneven. Meeting the training requirement of such large workforce has remained a challenge. The under quality of training program offered and lack of interest by the private partners is a major disadvantage.

The World Bank (2006:6) has stated that vocational training is considered as stigma in India. It is considered to have a low status due to its linkage with manual work requirement. All these factors are affecting employability.

3.2 Measures taken by government of India:

The Government and industry are well aware of this reality and trying to figure out solutions for the challenges. National Skills Policy was formulated in 2009 by Government of India and special budget was also allocated in the FY 2011-12, 2012-13 with an ambitious target of imparting skills training to 500 million by 2022. A National Skill Development Corporation Board (NSDCB) and Prime Minister’s National Skill Development Council was established. NSDCB is based on Public Private Partnership (PPP) under the chairmanship of the Deputy Chairman of the Planning Commission. It formulates strategies based on the decisions of Prime Minister’s Council on National Skill Development. The setting up of autonomous body National Skill Development Agency (NSDA) was approved on 9th May 2013. The NSDA is mandated to work towards coordination and harmonization of skill development efforts of the central and state governments as well as the public and private- sector industries. It looks after policy changes, scheme reviews, new scheme strategies and engagement with PSUs and NGOs.

The Government is constantly working to bring the required machinery and infrastructure for training. Initiatives needs a considerable amount of innovative delivery approaches such as decentralized delivery, mobile training, distance learning/e-learning and web-based learning and capacity expansion. Special courses offering multiple skills have been initiated at ITIs under the Modular Employability Scheme. People who had informally-acquired skills can get certification by taking examinations at ITIs.

Public Private Partnership is also used quiet extensively where training programs are sponsored by private funding. Apprenticeship Act has also been implemented by the Government under which every company has to compulsorily hire a fix number of apprentices from ITI’s every year to work and train at the company. The apprentice learns theory at the college and gets hand on experience at the company. This approach helps in alignment of industry’s requirement for skilled talent as company’s hire the candidate and then train him as per industry’s requirement. Public training institutes are trying to promote expansion of public training institutes in difficult areas where private sector is not accessible. NSDC has set a target of at least 70% placement among students on completion of training program so that the relevance of training imparted by its partners can be understood by the students. To improve the dignity of labor, media campaigns...
have also been initiated by NSDC at the national level.

Government taking one step ahead has made some international collaboration with developed and industrialized countries like U.K, Germany, and Australia etc to exchange the ideas for delivery of skills training. UK Collaborations are: The UK Skills Forum (UKISF) India, an initiative by the UK India Joint Economic and Trade Committee (JETCO), The UK India Business Council acts as Secretariat for the UKISF. It is also the first point contact for UK skill providers, for India, it is FICCI. Since 1958, Germany has already been providing technical and financial assistance to develop institutes like Foreman Training Institute (FTI), National Instructional Media Institute, Chennai, or Central Staff Training and Research Institute (CSTARI).

A MOU has been signed between Singapore's Institute of Technical Education and the state government of the National Capital Territory of Delhi's Department of Training and Technical Education on the establishment of a world-class Skills Centre in Delhi.

3.3 Measures taken by private companies:

Ground reality is known by the Industry and is working to find out solutions to these challenges. Non-profit organizations in large numbers are being engaged in providing skill training to enhance employability among the weaker sections of society. Companies like Tata motors, Bosch India, Toyota etc. at their level are also trying to develop the workforce and have built up their own training infrastructure to re-train entry-level candidates. As part of a national mission, Bosch India along with National Skill Development Corporation (NSDC) is working to achieve its objective of fulfilling the growing need for skilled manpower across sectors in India. Funding from NSCD and skill development competence has join hands to develop and deploy a vocation training model for making underprivileged children employable. It will help in providing a pool of high quality skilled manpower to the industry. It will help the trained youth find employment (including in the Bosch automotive sales and service dealer network). From January to April 2013, the pilot program under this model was conducted in Bangalore. A second batch for girls was inaugurated exclusively with the aim of empowering them financially. Soon, the scope of the program will be extended to Nashik, Jaipur and Pune.

Some companies have adopted various trades at ITIs in a Public Private Partnership (PPP) model to make the students industry ready. Bharti -Walmart, a joint venture between Bharti Enterprises and Walmart, has established skill centers to train youth, free-of-cost, in retail skills to make them employable in a sector short of skilled manpower. Similarly Tata motors training institutes keep upgrading existing technical training institutes and establishing new technical training institutes. NSDC signed MOU with Tata Motors for skill development programs in automotive sector. Automotive skills will be taught to students in class 11 and 12 as a vocal subject in a few government schools for schools identified by Tata Motors. This pilot program will be introduced in 5 schools, teaching 50 students each. A total of 250 students will undergo this program and if it is a success, a full scale program will be launched. Volkswagen India also keeps investing on employment and education for locals.

Buhler India has implemented this approach at their plant in Bangalore. Every year apprentices are hired from ITIs. They are then enrolled under the vocational courses provided by Skill Sonics. Theoretical training is provided by government ITI teachers where as practical training at Buhler which has world-class training facilities where students and other entry-level employees are trained practically. The apprentices become multi-skilled professionals after two year vocational course, with dual certification and get the opportunity to work as employees in Buhler.

Conclusion:

Presently 80% of the workforce in India (rural and urban) doesn’t possess any identifiable and marketable skills. Therefore, bridging this gap through various skill development initiatives could make India the global hub for skilled manpower, and also result in a surplus of skilled manpower of approximately 47 million 2020 (FICCI). Despite various efforts and investments in shaping the skills of a huge labor force there
are grave drawbacks in the system. Even after the government investing a lot in training costs and infrastructure, creation of robust workforce for the industry is still a fantasy. Prime Minister in his maiden speech said, “Skill development should be accompanied by a spirit of 'Shram- evJayate' - giving dignity to labour.” Skill development and entrepreneurship is one of the topmost priorities of the new Government due to which first time an independent ministry has been created to take the mandate forward. Finally, it is important that the intended beneficiaries of the skill development program join training programs with an inspiration to learn and make them self-reliant to live a better life.
